	<p>investigations to reach the next Gateway;</p> <p>2. Note the total estimated cost of the project at between £300,000 and £500,000 (excluding risk).</p> <p>3. Please note that no Costed Risk Provision is requested at this stage, although £120,000 of costed risks against asbestos and contamination are identified in the Project Risk Register. These will be reviewed at the next gateway following further investigations.</p>			
<b>2. Resource requirements to reach next Gateway</b>	<b>Item</b>	<b>Reason</b>	<b>Funds/ Source of Funding</b>	<b>Cost (£)</b>
	Staff Costs	Options Appraisal, liaison and management of investigations	Bridge House Estates 50-year Repair and Maintenance Fund	4,000
	Investigations	Preliminary investigation to identify asbestos and other contamination risks		6,000
	<b>Total</b>			<b>10,000</b>
<b>3. Governance arrangements</b>	<ul style="list-style-type: none"><li>• Planning and Transportation Committee are the Service Committee responsible for the project</li><li>• The Senior Responsible Officer will be Paul Monaghan (Assistant Director Engineering)</li><li>• Project Board is not considered necessary for a low complexity maintenance project of this value and low risk</li></ul>			

### **Project Summary**

<b>4. Context</b>	<ul style="list-style-type: none"> <li>The two “fixed” (or “shore”) spans of Tower Bridge include large covered service trenches in both footpaths, in order to service the North and South Towers, with a total length of trench approximately 300m.</li> </ul>
-------------------	--

*This document can only be considered valid when viewed via the CoL Intranet website. If this is printed into hard copy or saved to another location, you must check that the effective date on your copy matches that of the one on-line.*

	<ul style="list-style-type: none"> <li>• The cast iron service covers have reached the end of their serviceable life and require replacement, due to pitting corrosion and other age-related defects leading to brittle fracture. Temporary replacements to a number of covers have been necessary in recent years due to structural failure upon removal for isolated maintenance works</li> <li>• The existing covers are extremely heavy and difficult to lift manually and/or without damage. The opportunity is being taken to consider low or zero-maintenance lightweight alternatives in composite materials, that will facilitate future maintenance and assist with compliance with modern manual handling regulations</li> <li>• Silt and detritus has accumulated within the service trenches over many years, due in part to the logistical challenges of lifting the covers for regular maintenance cleaning. The opportunity will therefore also be taken to remove accumulated silt, detritus and redundant services from the trenches, in the interests of future maintenance and resilience</li> </ul>
<b>5. Brief description of project</b>	<p>The project involves the refurbishment of approximately 300m of service trenches on the fixed spans of Tower Bridge, including:-</p> <ul style="list-style-type: none"> <li>a) Replacement of service trench access covers that have reached the end of their serviceable life</li> <li>b) Removal of redundant services within the service trenches</li> <li>c) Removal of accumulated silt/debris from service trenches and clearing of drainage outlets</li> </ul>
<b>6. Consequences if project not approved</b>	<ul style="list-style-type: none"> <li>• Further brittle failures of covers during lifting or maintenance operations are anticipated, given the aged condition of the covers and apparent defects.</li> <li>• Isolated replacement of these on an individual basis as-and-when failures become apparent is not an economic strategy in the long term, due to the need to manufacture bespoke units in small quantities at inflated costs</li> <li>• The considerable weight of the existing covers is a considerable logistical challenge to maintaining the service trenches, allowing for manual handling considerations and current health and safety regulations</li> <li>• As a result, maintenance cleaning of the service trenches to remove silt and redundant services from the trenches has been limited, which is a risk to future services resilience and the drainage of the trenches.</li> </ul>

*This document can only be considered valid when viewed via the CoL Intranet website. If this is printed into hard copy or saved to another location, you must check that the effective date on your copy matches that of the one on-line.*

<b>7. SMART project objectives</b>	<ol style="list-style-type: none"> <li>1) Replacement of existing covers with alternatives that mitigate manual handling risks for maintenance operatives and facilitate regular future maintenance/cleaning of service trenches</li> <li>2) Replacement of existing covers with low or zero maintenance alternatives which reduce future revenue life-cycle costs</li> <li>3) Removal of redundant services and silt from service trenches to improve future servicing resilience</li> </ol>
<b>8. Key benefits</b>	<ol style="list-style-type: none"> <li>1) Reduction in revenue costs for maintenance of the service trenches</li> <li>2) Mitigation of health and safety manual handling risks to maintenance staff</li> <li>3) Facilitating efficient and economic future maintenance of the service trenches on regular basis</li> <li>4) Improving services resilience for Tower Bridge</li> </ol>
<b>9. Project category</b>	7b. Major renewals, typically of a one-off nature (supplementary revenue)
<b>10. Project priority</b>	B. Advisable
<b>11. Notable exclusions</b>	The existing proposals and project budget do not include for replacing the cast-iron bedding frames and concrete plinths which support the existing covers. These appear to be good condition and would not be expected to deteriorate within the service life of the new covers, particularly if lightweight materials are used

### **Options Appraisal**

<b>12. Overview of options</b>	<ol style="list-style-type: none"> <li>1) Retain existing covers and replace on an individual like-for-like or similar basis when further failures occur</li> <li>2) Replace all covers on a like-for-like or similar basis</li> <li>3) Replace all covers using alternative lightweight/composite materials</li> </ol>
--------------------------------	---

### **Project Planning**

<b>13. Delivery period and key dates</b>	<p><b>Overall project:</b> Expected completion in Q3/Q4 2020</p> <p><b>Key dates:</b></p> <table> <tr> <td>Estimated Gateway 3/4</td><td>Feb 2020</td></tr> <tr> <td>Estimated Gateway 5</td><td>June 2020</td></tr> </table> <p><b>Other works dates to coordinate:</b> Project to be coordinated with all Tower Bridge projects referenced in the 50-year plan, particularly Tower Bridge HV Replacement Scheme</p>	Estimated Gateway 3/4	Feb 2020	Estimated Gateway 5	June 2020
Estimated Gateway 3/4	Feb 2020				
Estimated Gateway 5	June 2020				
<b>14. Risk implications</b>	<p><b>Overall project risk:</b> Low</p> <p>The risk profile of this project is considered to be very low, as the project comprises only low complexity works to replace existing service trench covers, with associated silt removal and striping for redundant services from the service trenches.</p> <p>Further information available within the Risk Register (Appendix 2)</p>				
<b>15. Stakeholders and consultees</b>	<ol style="list-style-type: none"> <li>1) Tower Bridge Operations/Technical Team</li> <li>2) Tower Bridge Exhibition</li> <li>3) Transport for London</li> <li>4) Port of London Authority</li> <li>5) Local Planning Authorities (and Historic England)</li> <li>6) Local businesses and residents</li> </ol>				

### **Resource Implications**

<b>16. Total estimated cost</b>	<p><b>Likely cost range (excluding risk):</b> £300,000 to £500,000</p> <p><b>Likely cost range (including risk):</b> As above – no CRP requested at this stage</p>	
<b>17. Funding strategy</b>	Choose 1: All funding fully guaranteed	Choose 1: Internal - Funded wholly by City's own resource
	<b>Funds/Sources of Funding</b>	<b>Cost (£)</b>
	Bridge House Estates 50-year Repair and Maintenance Fund	£300k to £500k
	<b>Total</b>	£300k to £500k
	Funding to this maximum value is already identified in the currently approved 50-year plan for Tower Bridge	

*This document can only be considered valid when viewed via the CoL Intranet website. If this is printed into hard copy or saved to another location, you must check that the effective date on your copy matches that of the one on-line.*

<b>18. Investment appraisal</b>	Not applicable
<b>19. Procurement strategy/route to market</b>	Full consultation with City Procurement will be conducted prior to Gateway 3/4. However, given the low complexity of the project and the absence of any design elements, this project lends itself to construction under either the term contract or a competitively tendered traditional works contract.
<b>20. Legal implications</b>	None
<b>21. Corporate property implications</b>	<p>This meets the following Asset Management objectives of the Corporate Asset Management Plan;</p> <ul style="list-style-type: none"> <li>• Operational assets are fit for purpose and meet service delivery needs</li> <li>• Capital and revenue projects are affordable, sustainable, prudent and directed to the highest corporate priorities</li> <li>• Align asset management activity with Service Committee's business plans to deliver asset related corporate and business objectives</li> <li>• To seek to improve the efficiency and sustainability of operational assets in accordance with corporate objectives and statutory requirements</li> </ul>
<b>22. Traffic implications</b>	<p>Subject to agreement with Transport for London, phased temporary lane closures (possibly overnight or at weekends) are envisaged so that construction vehicles and mobile lifting plant can access the working areas to remove existing covers and silt from the footways</p> <p>Similarly, phased temporary footway closures are envisaged, with dedicated road crossing points provided to divert pedestrians to the opposite footway at each end of the fixed spans.</p>
<b>23. Sustainability and energy implications</b>	The use of replacement covers using lightweight composite materials from recycled material will be considered as part of the project development, in addition to low or zero-maintenance products for their design life.
<b>24. IS implications</b>	None
<b>25. Equality Impact Assessment</b>	Not applicable. An equality impact assessment will not be undertaken
