CHB LGPS 002d	Checking for errors or inconsistencies in valuation extract report before submission to the Actuary	Officers review data quality prior to submission to the actuary. Additionally, member data is submitted separately from employer level cash flow data, which are held on two distinct management information systems. As a result, errors are more easily identified during the valuation process itself. For example, if the member data demonstrates that a given number of members belonging to a single employer retired during the valuation period then this should also be evident from the benefit payments reported in the cash flow data.
