

APPENDIX 1

City of London Local Plan

**Draft for Planning & Transportation
Committee 27th November 2012**

&

**Draft for Policy & Resources
Committee 13th December 2012**

FOREWORD

The City of London Core Strategy was adopted on 8th September 2011. The Inspector undertaking the Core Strategy Examination in Public considered that the plan was fully in accordance with the Government's growth agenda.

The Core Strategy contains 22 policies which focus on the overall vision for planning the City and co-ordinate this vision with other City of London plans and strategies. Prior to its adoption, the City Corporation commenced work on more detailed development management policies intended to complement the Core Strategy by setting out more detailed considerations for determining applications for planning permission and related consents. These policies were intended to replace the remaining saved policies in the 2002 Unitary Development Plan and, together with the Core Strategy, comprise the City of London's Local Development Framework.

A first stage of consultation (Issues and Options) on the development management policies was carried out during July-September 2011. Copies of the comments received and the City Corporation's response to them have been published on the City's website.

In March 2012, the Government published the National Planning Policy Framework (NPPF), which replaced existing Governments guidance in Planning Policy Guidance notes and Planning Policy Statements. The NPPF also recommended that local authorities should consider adopting a single Local Plan to replace the series of plans envisaged under the Local Development Framework.

This document presents a draft Local Plan for the City of London. It comprises the text of the adopted Core Strategy, plus new development management policies.

A number of changes are proposed to the Core Strategy to bring it into line with the policy requirements in the NPPF and to reflect significant changes in development trends since its adoption in 2011. Text carried forward from the Core Strategy is shown in italics, with alterations shown by underlining and strikethrough.

The new development management policies are shown in a normal font and have regard to comments received during the Issues and Options consultation in summer 2011.

The Local Plan will be subject to public consultation between January and March 2013. Comments are sought only on the alterations to the Core Strategy and the policies and text of the new development management policies.

STRUCTURE OF THE LOCAL PLAN

| | <i>Core Strategy Policy</i> | <i>Core Strategy policy alteration</i> | <i>Development Management policies</i> |
|----|--|--|--|
| | <i>A World Financial and Business Centre</i> | | |

| 19 | Open Spaces and Recreation | — | # |
| 20 | Retailing | # | # |
| 21 | Housing | # | # |
| 22 | Social Infrastructure and Opportunities | — | # |

The above table shows the structure of the draft Local Plan – those adopted Core Strategy policies which are proposed to be altered and those Core Strategy policies that are complemented by more detailed development management policies.

INTRODUCTION

WHAT IS THE CORE STRATEGY LOCAL PLAN?

~~1.1 The Core Strategy is a planning document that sets out a spatial framework for how the City Corporation wants to see the City of London develop to 2026 and beyond. It takes account of projected changes in economic circumstances and numbers of people in work, transport needs, housing needs, the impact of climate change, the need to protect and enhance the City's historic legacy and the overarching need to improve the quality of life for all the City's communities (workers, residents and visitors). The Local Plan sets out the City Corporation's vision, strategy, objectives and policies for planning the City of London. It provides a spatial framework that brings together and co-ordinates a range of strategies prepared by the City Corporation, its partners and other agencies and authorities. It includes policies for deciding development proposals. It takes account of projected changes in the economy, employment, housing need, transport demand, and seeks to maintain the quality of the City's environment and its historic heritage. It provides the strategy and policies for shaping the City until 2026 and beyond.~~

THE LOCAL DEVELOPMENT FRAMEWORK

~~1.2 The Core Strategy is one of the documents that make up the City's Local Development Framework (LDF). Together these documents provide policies, guidance and feedback on how the City is developing. A more detailed explanation of the LDF system and the planning documents proposed in the City is set out in the City's Local Development Scheme. In summary, the City's LDF will comprise the following:~~

- ~~• Local Development Scheme — this describes the documents that make up the LDF and the timetable for preparing them;~~
- ~~• Statement of Community Involvement — sets out how we will consult the public on the LDF;~~
- ~~• Core Strategy Development Plan Document (DPD) — sets out strategic policies to guide development in the City;~~
- ~~• Development Management DPD — contains detailed policies for deciding planning applications;~~
- ~~• Supplementary Planning Documents (SPDs) — set out in more detail how some of the planning policies will be applied;~~
- ~~• Annual Monitoring Report (AMR) — reports progress being made on preparing and implementing the LDF.~~

~~1.3 The Core Strategy is accompanied by a Proposals Map, (in two parts) which shows where policies of the Core Strategy and Unitary Development Plan (see below) apply to specific locations.~~

~~1.4 Before the introduction of the Local Development Framework process the City was required to prepare a Unitary Development Plan (UDP) which was adopted in 2002. Most of the UDP's policies have now lapsed, but 55 will remain in force until the adoption of the Development Management DPD. A list of these policies is set out in Appendix 3.~~

THE WIDER POLICY CONTEXT

4.5 1.2 *The City cannot be planned in isolation. The ~~Core Strategy~~ Local Plan has been developed in the context of a range of other plans and strategies operating at the City, London and national levels.*

City Strategies

4.6 1.3 *The overarching strategy for the City is its sustainable community strategy The City Together Strategy: The Heart of a World Class City 2008-2014. The Strategy was drawn up and will be implemented by the City's Local Strategic Partnership (The City Together), which brings together businesses, residents, infrastructure and service providers. The Vision for the City Together Strategy is:*

"The City Together will work to support the City of London as a leading international financial and business centre in a way that meets the needs of its diverse communities and neighbours."

4.7 1.4 *The Vision is supported by five key themes for achieving a World Class City, which:*

- *is competitive and promotes opportunity;*
- *supports our communities;*
- *protects, promotes and enhances our environment;*
- *is vibrant and culturally rich;*
- *is safer and stronger.*

4.8 1.5 *This Vision and the five themes have been integrated into the Spatial Strategy, Vision, Strategic Objectives and policies of the ~~Core Strategy~~ Local Plan.*

4.9 1.6 *The City Together Strategy will be implemented through the ~~Core Strategy~~ Local Plan and a number of other local strategies prepared by the City Corporation or its partners, covering areas such as economic development, transport (the Local Implementation Plan), health and community services, crime and disorder, biodiversity, waste recycling, air quality and climate change. The ~~Core Strategy~~ Local Plan aims to bring together the spatial elements of these strategies and provide a focus for future development in the City.*

London and National Strategies and Policies

4.10 1.7 *A wide range of regional strategies, including those for planning, transport, economic development, housing, energy and air quality are prepared by the Mayor of London, and brought together in the London Plan-2011. The ~~Core Strategy~~ City's Local Plan, like those produced by the London boroughs, must be in general conformity with the London Plan. The London Plan, together with the City's Local Development Framework Plan, form the 'Development Plan' for the City of London. The ~~Core Strategy~~ Local Plan does not repeat policy in the London Plan, ~~or national guidance~~, except where more detail is required to reflect local circumstances.*

4.11 1.8 *In preparing the ~~Core Strategy~~ Local Plan, the City Corporation has ~~liaised closely~~ co-operated with a range of other bodies to ensure a co-ordinated approach in the development of its policies. These bodies include the Mayor of London, the Greater London Authority and its "family" of authorities, including Transport for London, London Boroughs with its (especially the neighbouring boroughs: Westminster, Camden, Islington, Hackney,*

Tower Hamlets, Southwark and Lambeth to ensure a coordinated approach, together with agencies responsible for transport, health and the environment.

4.12 1.9 The Core Strategy Local Plan must also reflect the national planning policy guidance. This is currently set out in a series of Planning Policy Statements (PPS) and Circulars, but will be replaced by a National Planning Policy Framework (NPPF) issued by the Secretary of State for Communities & Local Government. The NPPF establishes a presumption in favour of sustainable development, which the City Corporation will implement in making its planning decisions.

Presumption in favour of sustainable development

1) When considering development proposals the City Corporation will take a positive approach that reflects the presumption in favour of sustainable development contained in the National Planning Policy Framework. It will always work proactively with applicants jointly to find solutions which mean that proposals can be approved wherever possible, and to secure development that improves the economic, social and environmental conditions in the area.

2) Planning applications that accord with the policies in this Local Plan (and, where relevant, with policies in neighbourhood plans) will be approved without delay, unless material considerations indicate otherwise.

3) Where there are no policies relevant to the application or relevant policies are out of date at the time of making the decision then the City Corporation will grant permission unless material considerations indicate otherwise – taking into account whether:

- Any adverse impacts of granting permission would significantly and demonstrably outweigh the benefits, when assessed against the policies in the National Planning Policy Framework taken as a whole; or
- Specific policies in that Framework indicate that development should be restricted.

PREPARATION OF THE CORE STRATEGY LOCAL PLAN

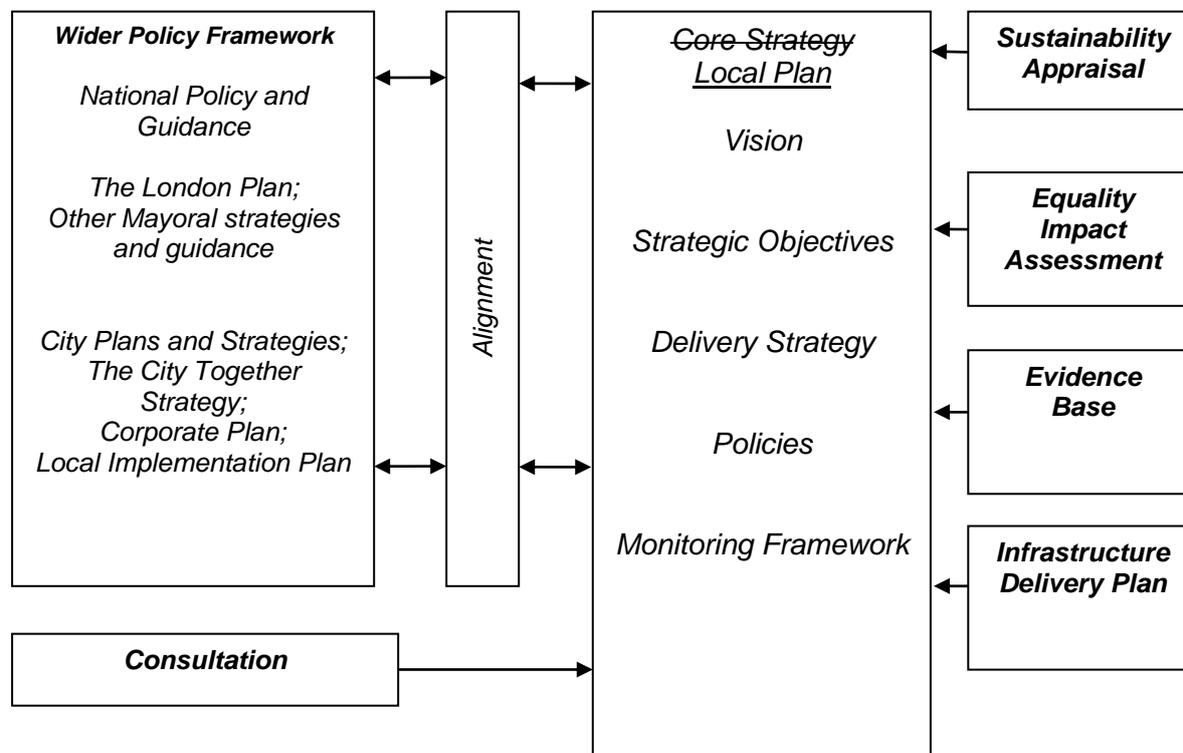

4.13 1.10 The development of the Core Strategy involved public consultation, information-gathering, research and sustainability appraisal. The principal supporting evidence and the conclusions of the sustainability appraisal are outlined under each policy. The Local Plan sets out the City Corporation's policies for planning the City in a single document. It incorporates the City of London Core Strategy, which was adopted in 2011. The Core Strategy contains the vision, strategic objectives and 22 key policies for shaping the City. The material carried forward from the Core Strategy has been reviewed and updated, but as it was recently prepared, only limited changes are required. Fourteen of the Core Strategy policies are supplemented by further development management policies.

1.11 The preparation of the Local Plan's policies involves public consultation and the development of an evidence base of research and information. Policy development has also been carried out in the light of a sustainability appraisal and an equalities impact assessment. All this evidence is made publicly available.

4.14 1.12 Although the Core Strategy Local Plan identifies the broad scale and location of development expected in the City up to 2026, the overarching strategic objectives provide a framework for development beyond this date. The City Corporation will keep the evidence

base under review and monitor the implementation of the ~~Core Strategy~~ Local Plan's objectives and policies. This monitoring will be reported annually ~~(to reflect changes in the Localism Bill)~~ and will highlight whether circumstances have changed sufficiently to require a review of the ~~Core Strategy~~ Local Plan in its entirety or a review of selected policies.

Figure 1: ~~Core Strategy~~ Local Plan Preparation

OTHER PLANNING DOCUMENTS

1.13 The Local Plan is accompanied by a number of other planning documents that provide policies, guidance and feedback on how the City is developing:

- Policies Map, (in two parts) which shows where the Local Plan's policies apply to specific locations
- Local Development Scheme – this lists and describes all planning policy documents and the timetable for preparing them;
- Statement of Community Involvement – sets out how we will consult the public in preparing planning policies;
- Supplementary Planning Documents (SPDs) – set out in more detail how some of the Local Plan's policies will be applied;
- Community Infrastructure Levy (CIL) – A charging schedule sets out how the CIL will be applied to various categories of development.

IMPLEMENTATION AND DELIVERY

4.15 1.14 Implementation of the ~~Core Strategy~~ Local Plan requires partnership working and co-operation with a range of organisations, including developers, businesses, residents,

community and amenity groups, transport and service providers, the Mayor of London and neighbouring boroughs.

~~4.16 1.15 A key mechanism for implementing the Core Strategy Local Plan is the consideration of planning applications through the development management process. The Core Strategy Local Plan should be read as a whole and applications for planning permission will be considered against all relevant policies in the Core Strategy Local Plan and those in the London Plan.—The City Corporation will provide more detailed planning policies in the Development Management DPD.~~

~~4.17 1.16 The City Corporation also uses its management of the public realm and environmental enhancement strategies to help deliver the vision and policies in the Core Strategy Local Plan. It will, where necessary, use its land and property ownership to assist with site assembly and use its compulsory purchase powers to enable the high quality development the City needs.~~

~~4.18 1.17 Under each policy topic of the Local Plan is a table setting out how the policy policies will be delivered, identifying the main delivery partners and processes. Key factors in delivery will be the detailed evaluation and prioritisation of proposals and the availability of funding. The City's Infrastructure Delivery Plan, which is summarised in Appendix 2, aims to identify and collate the investment plans of a range of infrastructure providers determining where there might be gaps in funding, or trigger points which require a step change in levels of infrastructure. Where gaps in the funding of infrastructure necessary to implement the Core Strategy Local Plan are identified, the City Corporation will seek alternative funding streams, including the use of the Community Infrastructure Levy and other contributions from development, and will consider the need to prioritise available funds. Where necessary funds cannot be secured, the City Corporation will also consider whether there is a need to review the Core Strategy Local Plan.~~

~~4.19 1.18 Alongside the Core Strategy Local Plan, the City Corporation has prepared a detailed Infrastructure Delivery Plan, which is available on the City Corporation's website. This Delivery Plan is a 'living' document which will be updated on an ongoing basis.~~

WHAT IF THINGS CHANGE?

~~4.20 1.19 The City Corporation will update the evidence base and Infrastructure Delivery Plan and monitor progress towards meeting the Core Strategy Local Plan's strategic objectives. Key areas where changing trends or uncertainty may result in a need to change policy include:~~

- Future levels of economic and employment growth;
- Transport and infrastructure capacity;
- The appropriate balance of uses in the City;
- Climate change;
- The security context;
- The availability of funding for the delivery of necessary infrastructure; and
- Changes in legislative requirements or Government guidance.

~~4.21 1.20 The Core Strategy Local Plan was prepared in the context of the most up to date and relevant information available. A range of projections and potential future scenarios were considered and a risk analysis undertaken for each policy area. However, unforeseen~~

events may prompt a need for review of some policies. The monitoring framework (Appendix 1) and the Infrastructure Delivery Plan (Appendix 2) that accompany the Local Plan provide the basis for identifying when a review will be required.

STRUCTURE OF THE CORE STRATEGY LOCAL PLAN

~~4.22~~ 1.21 The remainder of the Core Strategy Local Plan is structured as follows:

Section 2: Spatial Strategy, Vision and Strategic Objectives – ~~outlines the spatial strategy for the City, highlights the challenges it the City faces and outlines a spatial strategy and a vision for the future under five broad themes:~~

- A World Financial and Business Centre
- Key City Places
- City Culture and Heritage
- Environmental Sustainability
- City Communities

Section 3: Delivery Strategy – sets out policies to implement the spatial strategy and vision under 22 topics. The first policy under each topic is a Core Strategy policy, which addresses the strategic context, the relationship with other plans and strategies, and key planning issues. Fourteen of these policies are followed by additional development management policies that will be used in the consideration of applications for planning permission and related consents.

The Delivery Strategy contains maps and diagrams, which are for illustration only. The Policies Map that accompanies the Local Plan shows where its policies apply to geographical locations.

Section 4: Appendices

~~4.23~~ 1.22 The vision, delivery strategy and policies are intended to provide an integrated and co-ordinated approach to planning the City. The Core Strategy Local Plan should therefore be read as a whole.

SPATIAL STRATEGY, VISION AND STRATEGIC OBJECTIVES

THE CITY TODAY

2.1 The City of London is unique. Although little more than one square mile in size, it is densely developed and is the world's leading international financial, business and maritime centre. It is a leading driver of the London and national economies, contributing 12% of London's GDP and an estimated 8.5% of the UK's GDP. It provides employment for over 370,000 people who mostly use public transport to commute to work from across London and the surrounding regions. Offices make up over 70% of all buildings and many of them are occupied by financial and business services.

2.2 Alongside its primary business function, the City has many other roles:

- It is home to approximately 10,000 residents;
- It is a centre of learning with over 29,000 students;
- It provides national, regional and local health services;
- It is at the hub of an extensive regional public transport network;
- It houses arts and cultural facilities of international renown;
- It is a visitor destination with a distinctive, high quality environment that combines modern architecture and tall buildings with historic buildings and conservation areas within a rich historic environment.

2.3 The City's economic dynamism means there is a high rate of change and development, putting particular pressure on the City's transport and utility infrastructure. There are significant competing demands between the need to accommodate new office development alongside the need for new housing, social and community facilities and improved transport infrastructure. These pressures are felt City-wide and the ~~Core Strategy~~ Local Plan needs to respond accordingly.

SUSTAINABLE GROWTH – THE CENTRAL CHALLENGE

2.4 The central challenge facing the City, therefore, is the delivery of sustainable long-term economic growth to support the London and national economies, whilst at the same time providing for population growth and protecting and improving the environment and quality of life. The City is expected to see continued economic, employment and population growth in the medium to longer term, notwithstanding short-term economic cycles. Table 2.1 shows the scale of the projected growth in employment and population expected in the City over the period to 2026.

Table 2.1: Growth in Population and Employment 2006 - 2026

| | 2006 | 2011 | 2016 | 2021 | 2026 |
|-------------------------------|---------|---------|---------|---------|---------|
| Employment Projections | 332,000 | 373,000 | 401,000 | 423,000 | 428,000 |
| Population Projections | 8,900 | 9,700 | 10,400 | 11,400 | 12,100 |

Sources:

Working Paper 39: Borough Employment to 2031 GLA Economics November 2009
2010 Round Demographic Projections for the London Plan GLA February 2011

2.5 In turn, this growth will lead to further pressure for new offices, shops, homes and leisure facilities, and the services necessary to support them. A balance is needed between providing for this new development and retaining and improving the best of the current building stock. Table 2.2 illustrates the overall scale and phasing of development anticipated in the City over the next 15 years.

Table 2.2: Indicative Scale and Phasing of Growth in Main Land Uses 2011-2026

| Land Use | 2011-2016 | 2016-2021 | 2021-2026 | Total 2011-2026 |
|-------------------|------------------------|-----------------------|-----------------------|-------------------------|
| Offices | 650,000m ² | 250,000m ² | 250,000m ² | 1,150,000m ² |
| Retailing (A1-A5) | 52,000m ² * | 44,000m ² | 40,000m ² | 136,000m ² |
| Housing | 667 units | 430 units | 550 units | 1,647 units |

* Figures relate to the 2009-2016 period

2.6 The distribution of the development set out in Table 2.2 will reflect the City's primary business role and the expectation that offices will be acceptable development across the City unless indicated otherwise by policies in this ~~Core Strategy~~ Local Plan. Table 2.3 provides an illustration of the scale of development that could take place in each of the five Key City Place areas and the rest of the City through the implementation of the policies in this ~~Core Strategy~~ Local Plan and the development pipeline (sites under construction at March 2011 or with the benefit of planning permission). The figures are not prescriptive and are presented as percentage ranges.

Table 2.3: Indicative Distribution of Development (% of floorspace and % of residential units)

| | Offices | Retailing | Hotels | Housing |
|--------------------|---------|-----------|--------|---------|
| North of the City | 10-20 | 20-30 | 0-10 | 60-70 |
| Cheapside | 0-10 | 50-60 | 20-30 | 0 |
| Eastern Cluster | 50-60 | 10-20 | 0-10 | 0 |
| Aldgate | 0-10 | 0-10 | 0-10 | 0-10 |
| Thames & Riverside | 0-10 | 0-10 | 50-60 | 0-10 |
| Rest of the City | 20-30 | 0-10 | 0-10 | 10-20 |
| City of London | 100 | 100 | 100 | 100 |

SPATIAL STRATEGY

2.7 Although development pressures are felt City-wide, the Key Diagram identifies five key areas (the Key City Places) which face particular challenges over the next 20 years. The Key City Places do not have defined boundaries. The areas shown in Figure 2 and Figures 5-9 are indicative.

- **The North of the City** – addressing the impact of, and accommodating the growth resulting from, Crossrail, whilst maintaining the area's mix of uses and delivering sustainable development.
- **Cheapside and St Paul's** – guiding the delivery of significant increases in retail floorspace and enhancing the area's visitor/cultural offer to restore the area as the City's 'high street'.

- **Eastern Cluster** – providing a clear policy framework to guide business development, particularly tall buildings, whilst ensuring a safe and attractive environment.
- **Aldgate** – promoting social, environmental and business regeneration, particularly centred on the Mansell Street and Middlesex Street residential estates.
- **Thames and the Riverside** ~~improving vibrancy~~ protecting office floorspace, whilst encouraging a mix of uses which ~~retaining~~ retains existing tranquil areas, promoting environmental improvements, increasing accessibility on land and by river and managing and reducing flood risk.

VISION AND STRATEGIC OBJECTIVES

2.8 The following pages set out the key challenges facing the City, identifying the City Corporation's vision for how the City should develop over the period to 2026 and beyond, and the strategic objectives for achieving this vision. The vision and strategic objectives reflect the overarching vision and five key themes in *The City Together Strategy*.

Fig 2: Key Diagram

A World Financial and Business Centre

The Challenge....

The City is the heart of the world's leading international financial, business and maritime centre. It provides a major source of employment for London and its surrounding regions and is a vital asset to the national economy. The City's status as the primary global financial and business centre has strengthened in recent years, although competition is increasing from existing and emerging financial centres, including those in China, India and the Middle East. In addition, the fallout from ~~the recession in 2008/9~~ over the 2008-2012 period and a changing regulatory regime have created global uncertainty and new challenges. The City needs to continue to offer the right business conditions, built environment and infrastructure to allow its financial and business services sector to help the economy to flourish once again and to compete internationally as a global centre of business excellence.

Offices are the major land use in the City and the financial and business services sector is the main office occupier. This office stock will need to increase and improve in quality to meet future business needs. A good supply of high quality, modern and sustainable office accommodation is required to meet the needs of the City's commercial occupiers.

The City cannot function without the provision of adequate utilities, particularly high quality electronic trading and telecommunications facilities, which also place increased demand on electricity supplies. Space for utilities under the City's streets is limited and, while the supply of services is currently adequate, there is a challenge to meet increased demand as the economy grows whilst at the same time adapting to a low carbon economy.

The City is a safe place to live and work, but must recognise and address increasing concerns about global security. More locally, growth in ~~the night-time economy~~ entertainment is leading to concerns about anti-social behaviour. The challenge is to address these global and local concerns, whilst maintaining an attractive and accessible environment.

A World Financial and Business Centre

The Vision....

The City will remain the world's leading international financial and business centre and a driver of the national economy, continually innovating and developing new business areas, delivering growth and prosperity for its communities.

The quantity and quality of new development, particularly offices, will keep pace with growing business needs, allowing the continued clustering of businesses that is vital to the City's operation.

The provision of utilities and infrastructure will keep pace with, and anticipate, the demands set by this growth, funded in part by new development.

The City will remain a safe place to work, live and visit. Building design, servicing arrangements and management of the public realm will address wider security threats, whilst effective management of the night-time ~~economy~~ entertainment will reduce the potential for anti-social behaviour.

STRATEGIC OBJECTIVE 1

To maintain the City's position as the world's leading international financial and business centre.

Key City Places

The Challenge....

The North of the City

The north of the City contains a mix of areas and uses, including residential areas at the Barbican and Golden Lane, each with its own distinctive character. The construction of Crossrail will bring significant change and increased pedestrian flows. Careful planning is essential to retain the character and amenity of individual areas, whilst managing growth.

Cheapside and St Paul's

A substantial increase in retail floorspace is ~~under construction taking place~~ which, together with environmental improvements, ~~will restore~~ is restoring Cheapside's former position as the City's 'high street.' The challenge is to integrate these improvements with the established visitor attraction at St Paul's Cathedral and visitor flows across the Millennium Bridge.

Eastern Cluster

The east of the City has the highest density of business activity in the City and contains a cluster of tall buildings. New tall buildings are expected to be clustered in this area. The resulting significant increase in numbers of people either working in or commuting to this small area will put more pressure on public transport, streets, open spaces and services.

Aldgate

This area has significant potential for development but suffers from high traffic levels, pollution and a lack of street activity. Residents living on the Mansell and Middlesex Street Estates have lower levels of employment and poorer health than others in the City. Regeneration is needed to improve the environment and amenities, improve the health and well-being of local residents and provide further development and employment opportunities.

Thames and the Riverside

Now that the riverside walk is nearly complete, it is important to exploit fully the riverside's potential to provide recreation and enjoyment. The greater mix of uses requires careful planning to avoid the loss of important office floorspace and to avoid conflict with residential areas at the Temples and around Queenhithe. There is significant potential for increased transport use of the River, making greater use of existing piers for passenger services, the movement of construction materials and demolition waste, and continuing to make full use of Walbrook Wharf for the movement of materials including waste.

Key City Places

The Vision....

The North of the City

Passengers will emerge from new Crossrail stations to find a lively variety of restaurants and shops with attractive streetscapes and vistas. Attractive pedestrian routes will link pockets of well designed open space. Progressive building designs and sensitive refurbishments will mean residents, workers and visitors remain in a comfortable and safe environment that has adapted to climate change. Evening and night time activity will be well managed.

Cheapside and St Paul's

This area will be a vibrant office, retail and cultural destination attracting visitors seven days a week. It will provide a high quality pedestrian environment, including gathering spaces, pocket parks and seating for relaxation which supports the business City. Well signposted walking routes will link Cheapside with its surrounding attractions such as the Museum of London, the Barbican Complex, the Riverside and the Tower of London.

Eastern Cluster

Office and employment growth will be successfully accommodated by a cluster of attractive, sustainably designed tall buildings, providing an iconic image of London that will help to attract significant global investment. The area will be safe for workers and visitors, with a high quality street scene and environment, improving pedestrian movement and permeability, both within the area and outside to other parts of the City.

Aldgate

The area will be attractive and vibrant, with a mix of high quality offices, residential, retail, leisure and cultural facilities, catering for residents, workers, students and visitors. The health of residents will be good and they will be able to access training and job opportunities relevant to their needs. The physical environment will be pleasant, with an efficient street layout which minimises congestion and traffic pollution and improves accessibility. Green spaces will be created which enable people to relax and play and trees and green walls will be planted wherever possible.

Thames and the Riverside

The Thames and its riverside will provide well designed and managed public spaces, catering for a variety of uses, ranging from lively and vibrant areas, to areas of relative tranquility for relaxation and contemplation. ~~Employment, Residential, educational and recreational and employment~~ activity will be enhanced by high quality sustainable streetscapes which will address the challenges of climate change. The river will continue to be used for the transport of people and materials, including through the safeguarded Walbrook Wharf. The riverside will be easily accessible from other parts of the City and from the south side of the Thames.

STRATEGIC OBJECTIVE 2

To ensure that the challenges facing the five Key City Places are met, complementing the core business function of the City, contributing to its unique character and distinguishing it from other global financial districts.

City Culture and Heritage

The Challenge....

The City of London is a historical and cultural centre, and the City Corporation, as a major sponsor of the arts, makes a major contribution to the cultural life of London. The City provides facilities for arts and entertainment of international standing, including the Barbican complex and the Guildhall School of Music & Drama. It also contains important cultural assets such as the Museum of London, a range of lending and specialist libraries and many ~~churches~~ places of worship, which contribute to the spiritual life of the City. Alongside these assets are many other leisure facilities, including restaurants, bars and shopping facilities, all of which contribute to the City's attractions. Lively night-time ~~economy~~ entertainment is developing and needs to be actively managed.

The Square Mile is the original core from which London developed. It contains a valuable heritage of historic buildings, spaces and areas which make an important contribution to the City's distinctive identity. The City has 26 conservation areas, ~~nearly~~ over 600 listed buildings, and is one of the most archaeologically important areas in the country. Further development must not detract from these historic assets and their settings, or adversely affect significant views, especially of St Paul's Cathedral and the Tower of London.

The City's townscape combines leading modern architecture with a valuable heritage of historic buildings. Tall buildings within the City are a distinctive element of London's skyline and further tall buildings are likely to be needed to accommodate future growth. Tall buildings should make a positive contribution to the existing character of the City and beyond, by being of high architectural quality and appropriate to their context.

City Culture and Heritage

The Vision....

The City's arts, cultural, heritage and retail assets will be managed so that it continues to be a cultural and leisure destination for workers, residents and visitors.

World class architecture will continue to add to the City's environment and a high standard of design will be required for all buildings and the public realm, integrating sustainability into the construction and operation of buildings and spaces and delivering environmental improvements across the City. Further tall buildings will be allowed where they can make a positive contribution to their surroundings and the skyline, particularly adding to the tall building cluster in the east of the City.

The City's rich architectural and archaeological heritage will continue to be conserved or enhanced. New development will enhance the City's character and add value to the wider character and quality of London, whilst respecting the setting of St Paul's Cathedral and the Tower of London.

The City will offer equality of opportunity, accessibility and involvement so that everyone will have the chance to benefit from the many opportunities and facilities it offers. The City will be designed so that buildings, streets and spaces are functional, inclusive, interesting and legible, which will allow its diverse communities to enjoy the City to its fullest.

STRATEGIC OBJECTIVE 3

To promote a high quality of architecture and street scene appropriate to the City's position at the historic core of London, complementing and integrating the City's heritage assets and supporting the continued development of the City as a cultural destination for its own communities and visitors.

Environmental Sustainability

The Challenge....

The City is a heavy user of natural resources, especially energy. Its contribution to climate change needs to be minimised and measures are required to adapt to the inevitable consequences of climate change, such as increased temperatures. The City suffers from poor air quality, although much of the pollution originates outside the City, and its causes must be addressed strategically.

The City produces large quantities of waste, most of which is generated by City businesses and collected by private contractors. Waste collected by the City Corporation is currently sorted and partly recycled before transport by river barges from Walbrook Wharf. Although recycling rates have increased, the City's high density and the lack of space for sorting and processing make recycling and waste management a difficult challenge.

The City has the highest density of public transport provision in Britain. Over 90% of the City's workers commute by public transport. Additional capacity will be needed to accommodate future employment growth. Improvements to existing services are producing some additional capacity and Crossrail will deliver a significant improvement after 2018.

Within the City most movement is on foot. Although the congestion charge has reduced road traffic during the day, many City streets are still busy and pedestrians are confined to narrow footways. As the workforce and population grow, more space will be needed for pedestrians and more facilities required for safer and responsible cycling, whilst retaining road capacity for those who depend on motor vehicle access.

Most of the City is built on high ground and is at relatively low risk from flooding from the Thames or along the course of the former River Fleet. There is normally sufficient capacity within the sewer system to deal with rainfall, although in periods of heavy rain sewers can overflow directly into the Thames causing pollution. There is also some risk of localised surface flooding in small parts of the City.

Environmental Sustainability

The Vision....

Buildings will be highly sustainable, designed to minimise their impact on climate change, provide appropriate mitigation and be adaptable to its effects. Buildings will use resources more efficiently through passive design, combined cooling, heat and power networks, renewable energy, sustainable waste management and sustainable urban drainage.

The risk of flooding will be minimised by the incorporation of measures to reduce run-off and increase rain water recycling. The Thames Tideway Tunnel will be constructed as a means of greatly reducing storm discharges from the combined sewer system and improving the quality of the water in the River Thames.

Businesses and residents will reduce the amount of waste they produce and will increase the proportion of waste they recycle. A greater proportion of construction waste will be recycled in situ. Walbrook Wharf will continue to provide a facility for transferring materials, including waste, by river barge, thereby reducing lorry traffic in London.

More sustainable travel patterns and modes of transport will be promoted and public transport capacity increased, principally through improvements to the Thameslink service and construction of Crossrail. The City's streets will be managed to improve conditions for pedestrians and cyclists, while providing for essential private vehicle movements. Maximum use will be made of the River Thames to transport materials including construction and demolition materials, waste, freight and general goods. Greater use will be made of piers on the River Thames for the transport of passengers.

STRATEGIC OBJECTIVE 4

To ensure that the City of London remains at the forefront of action in response to climate change and other sustainability challenges that face high density urban environments, aiming to achieve national and international recognition for its sustainability initiatives.

City Communities

The Challenge....

The City has a diverse range of communities: business, workers, residents, students and visitors, each with different needs. Providing for all these needs in such a small area is unrealistic, so choices will need to be made and partnership working will be needed for appropriate provision.

The City has many, mainly small, open spaces and many indoor recreation facilities, most of them private. All are heavily used and the growth in the City's workforce and residential population will put even greater demands on them.

Retailing is an important amenity for workers, residents and visitors, although the quantity and quality on offer does not meet aspirations, and much is scattered across the City. Increasing the range and concentration of facilities will allow workers and residents to shop and relax near their place of work or home.

The City's residential population is small but growing and most housing is concentrated around the City fringes. Twenty-four hour business activity and high demand for office space mean that many areas are not suitable for residential development. Housing is expensive and beyond the means of some who need to live in the City, but the provision of affordable housing within the City is difficult due to the scarcity and cost of land.

The health of residents is generally good, although health inequalities exist, with pockets of poor health in the Portsoken and Golden Lane areas. The Index of Multiple Deprivation suggests that the east of the City (Portsoken) is deprived compared to the rest of the City and should be a focus for work to reduce health inequalities within the City. The small size of the residential population means that it is not viable to provide all necessary community services within the City and so some need to be supplied in co-operation with other authorities. Although St. Bartholomew's Hospital is located in the City, it mainly serves regional needs. A particular concern is the need to provide health and community facilities for the large and growing working population.

The City's schools and universities are attended by 29,000 students. The City has one primary school, but no state secondary schools, although the Corporation runs two independent schools in the City, the Guildhall School of Music & Drama and funds academies in neighbouring boroughs. As the residential population and student numbers grow, there will be increased competition for a limited number of places and a greater need for joint working with adjoining boroughs.

City Communities

The Vision....

The number of open spaces will be increased by encouraging owners of private amenity space to make it available for public access, the use of highways no longer needed for traffic and by the provision of green roofs and roof gardens. Biodiversity will be increased by the incorporation of wildlife-friendly features into open spaces, buildings and the river front.

The quality and quantity of retail facilities will be increased to meet the aspirations of the City's communities and to cope with rising demand. Retail growth will be focused in the five Principal Shopping Centres.

There will be a mix of dwelling types to meet identified needs, located ~~primarily in or near existing defined residential areas~~, which will provide a high quality living environment for residents. Housing will continue to be discouraged ~~in locations where~~ outside these areas because where it would conflict with the City's business role or provide poor residential amenity. Affordable housing will be achieved on some City sites and more will be provided outside the City, utilising funding generated by development in the City.

The City will have a network of high quality social and community facilities in accessible locations to foster cohesive and healthy communities. Links between the City residents and those of neighbouring boroughs will be strengthened and closer co-operation will provide a stronger sense of community and more efficient services.

The health and well-being of the City's population will be generally good, with improvements in the health of residents in the Portsoken and Golden Lane areas. Partnership working will effectively tackle the wider causes of poor health by promoting the recreational benefits of a healthy life style, reducing pollution and ensuring access to good quality open spaces and recreational opportunities.

The City's higher education institutions will continue to enjoy an international reputation for excellence. The City will work with partners to ensure high quality training and learning opportunities are accessible to all. City and City fringe residents will develop the skills needed to enter careers in the City and benefit from the City's prosperity.

STRATEGIC OBJECTIVE 5

To ensure the provision of inclusive facilities and services that meet the high expectations of the City's business, resident, student and visitor communities, aiming for continuous improvement in the City's rating in satisfaction and quality of life surveys.

TOPIC 1: OFFICES

3.1.1 The City of London is recognised as the world's leading international financial, business and maritime centre. Maintenance and expansion of this role is important to the national economy, the prosperity of London and surrounding regions. The City's financial services industry contributes about £42 billion to the UK's export earnings every year and adds an estimated 8.5% to UK GDP. The City thrives on continued innovation in financial and business services leading to the early identification and development of new markets and investment opportunities. Innovation is facilitated by a concentration of business skills, activities and contacts in or near the City, which gives the City and London an international competitive advantage. Providing additional office floorspace will help strengthen this advantage.

3.1.2 The London Plan supports the development of London as a leading 'world city'. The City lies within London's Central Activities Zone (CAZ) where expansion of commercial development is encouraged. Whilst ~~the 2008-2009 recession~~ recessionary conditions between 2008 and 2012 have resulted in job losses, GLA projections suggest that significant growth in the financial and business services sector will return in the medium to longer term. Between 2006 and 2026, projections indicate a growth in total employment in the City of 96,000, of which 67,000 (or 70%) will be office workers. The overall employment growth in the City is nearly 15% of London's total expected employment increase in all sectors over the same period. New and refurbished offices in the City will deliver the additional floorspace needed to sustain this growth, helping to retain and meet the changing needs of existing businesses. Policy CS1 indicates the scale of office floorspace required to meet the GLA's projected employment growth over the period to 2026 in 5 year periods and will be applied flexibly.

Figure 3: Employment specialisms in the City

3.1.3 The London Plan encourages the provision of mixed use office and housing development within the Central Activities Zone. The City of London, however, is identified as a strategically important globally-orientated financial and business services centre where the emphasis should be the provision of new and refurbished office floorspace. To sustain this cluster, a mix of office and other appropriate commercial uses will be encouraged. In addition, the London Plan supports the use of land use swaps and housing credits, which will deliver new housing within existing residential ~~clusters~~ areas inside the City and on appropriate sites outside the City.

3.1.4 Offices are the predominant land use in the City, providing approximately 70% of all floorspace and 80% of total employment, although there are areas where other uses, such as retailing and housing, are locally dominant. Table 2.3 shows the anticipated distribution of office development highlighting that the Eastern Cluster will be the main focus for offices, with 50-60% of growth planned to take place in the area. The North of the City will also see significant office growth (10-20% of the total), with the remaining growth distributed across other parts of the City.

3.1.5 The City contains a number of specialist business clusters within the broad definition of financial and business services (see Fig. 3). International financial and wholesale banking services have spread out from their established concentrations in the centre and east of the City near the Bank of England to other areas such as Bishopsgate, Broadgate, Fleet Street and Newgate Street. The maritime and insurance sector is concentrated in the east of the City, centred on the Lloyds insurance market. Legal and accounting services dominate the business services sector in the City and are largely clustered in the west of the City close to the Law Courts. Future office developments across the City will provide scope to reinforce

these specialist clusters and to strengthen the overall 'critical mass' of the City as a hub of financial and business services.

3.1.6 All types of office development need to be appropriate to the existing context and should not cause undue harm to the City's historic environment. It is important that the assembly of large sites is undertaken sensitively to avoid inappropriate loss of historic urban grain or street patterns.

3.1.7 The National Planning Policy Framework (paragraph 51) states that local planning authorities should normally approve planning applications for changes to residential use and any associated development from commercial buildings (including office development) where there is an identified need for additional housing in that area, provided that there are not strong economic reasons why such development would be inappropriate. Such strong economic reasons exist in the City, where a significant loss of office buildings and land to other uses would potentially harm the City's primary business function and jeopardise the City's capacity to provide sufficient office accommodation to meet the needs of projected long-term economic and employment growth.

CORE STRATEGIC POLICY

Policy CS1 Offices

To ensure the City of London provides additional office development of the highest quality to meet demand from long term employment growth and strengthen the beneficial cluster of activities found in and near the City that contribute to London's role as the world's leading international financial and business centre, by:

1. Increasing the City's office floorspace stock by 1,150,000m² gross during the period 2011–2026 to meet the needs of projected long term economic and employment growth, phased as follows:

2011 – 2016: 650,000m²

2016 – 2021: 250,000m²

2021 – 2026: 250,000m²

A pipeline of at least 750,000m² gross office floorspace with planning permission but not yet commenced will be maintained to provide office occupier choice.

2. Encouraging the assembly and development of large sites, where appropriate, to meet the accommodation needs of the City's biggest occupiers, protecting potential large office sites from piecemeal development and resisting development that would jeopardise the future assembly and delivery of large sites.
3. Encouraging the supply of a range of high quality office accommodation to meet the varied needs of City office occupiers.
4. Promoting inward investment and encouraging developers and businesses to invest and locate in the City.
5. Protecting existing office accommodation where there are strong economic reasons why the loss of offices would be inappropriate, including losses that would prejudice the primary business function of the City, and the variety of accommodation required by the business City.

5. 6. Managing short-term over supply in the office market through a flexible approach to alternative temporary uses for vacant offices and sites, where such uses would not prejudice the eventual return of the site to office use.

DEVELOPMENT MANAGEMENT POLICIES

Policy DM 1.1 Protection of office accommodation

To refuse the loss of existing (B1) office accommodation to other uses where the building or its site is considered to be suitable for office use and there are strong economic reasons why the loss would be inappropriate. Losses would be inappropriate for any of the following reasons:

- prejudicing the primary business function of the City;
- jeopardising the future assembly and delivery of large sites;
- removing existing stock for which there is demand in the office market or long term need;
- introducing uses that adversely affect the existing beneficial mix of commercial uses.

3.1.8 To meet the targets for the significant increase in office floorspace it is necessary both to encourage new office development and to protect existing office accommodation and sites. Proposals for change from offices will normally be refused if the building or site is considered to be suitable for office use in the long term. Applicants seeking an exception will need to show robust evidence relating to the current and long term unsuitability of the site for office use and that the proposed change would not adversely affect the existing beneficial mix of commercial uses in the area nor prejudice the primary business function of the City.

3.1.9 It is important that the City office market continues to offer a wide range of office types, sizes, cost and locations in order to meet the diverse needs of large and small prospective occupiers. It needs to have a healthy supply of new and refurbished offices including:

- large office buildings: offering large floorplates or space for single large occupiers or for headquarters;
- tall office buildings: offering high-profile accommodation for large firms or for smaller firms in multi-let accommodation;
- medium and small office buildings: providing space for small and medium sized enterprises, which form an important part of the City's business cluster. Such office space needs to be in a mix of new, refurbished and older stock to provide occupier choice over character and cost.

3.1.10 Offices are distributed throughout the City and it is important that they are protected both in the core and periphery to provide occupiers with choice of location and cost. Offices in the Key City Places contribute to the diversity of the City office market. The Eastern Cluster of tall buildings forms part of the City core. In the Cheapside and St. Paul's area offices complement its retail and visitor attractions. In the North of the City offices will benefit from the increasing accessibility provided by Crossrail. Along the Thames office buildings form a gateway from the south to the City's core and are protected by Policy CS9. Aldgate is an area with particular potential for office-led regeneration.

Policy DM 1.2 Assembly and protection of large office development sites

To promote the assembly and development of sites for large office schemes in appropriate locations. The City Corporation will:

- assist developers in identifying large sites where large floorplate buildings may be appropriate;
- invoke compulsory purchase powers, where appropriate and necessary, to assemble large sites;
- ensure that where large sites are developed with smaller buildings, the design and mix of uses provides flexibility for potential future site re-amalgamation;
- resist development and land uses in and around potential large sites that would jeopardise their future assembly, development and operation.

3.1.11 The City needs large sites to meet the accommodation requirements of the City's biggest office occupiers and for large trading floors. However, the supply of such sites is limited due to the City's relatively fragmented land ownership pattern and environmental considerations, including its distinctive pattern of streets, spaces and historic buildings. Some suitable sites may not be available if they are subject to piecemeal redevelopment or provide a campus of smaller buildings instead.

3.1.12 Where potential large sites are developed to provide a number of smaller buildings they may still meet the needs of large occupiers if they are mostly taken by a single occupier to provide campus-style accommodation. In these circumstances it will be important to ensure that the building design, mix of uses and tenure provide flexibility for site re-amalgamation on future redevelopment. For example, the introduction of housing as part of such a scheme would not be appropriate as it would be likely to prejudice the business activities of large occupiers or future site amalgamation. Careful consideration will also be given to proposed uses adjacent to potential large development sites to ensure that they would not adversely impact on the ability to deliver and operate large office buildings.

Policy DM 1.3 Small and medium sized business units

To promote small and medium sized businesses in the City by encouraging:

- new accommodation suitable for small and medium sized businesses;
- office designs which are flexible and adaptable to allow for sub-division to create small and medium sized business units;
- continued use of existing small and medium sized units which meet occupier needs.

3.1.13 Small and medium sized enterprises play a significant part in the City's success, providing support for larger companies and a seedbed for continued innovation and change. They need a mix of new, refurbished and older stock to provide occupier choice.

3.1.14 Small and medium businesses are broadly defined as those with not more than 50 and 250 employees respectively. They provide a range of professional, business other essential services to the City and wider business community. Larger City firms make frequent use of small local firms to take advantage of the quicker speed of service, the ease of face-to-face contact and specialist knowledge.

3.1.15 The City Corporation's Local Procurement Initiative supports regeneration in the City and its fringes by encouraging competitive procurement from small and medium sized enterprises in the City and in surrounding boroughs.

Policy DM 1.4 Temporary alternative use of vacant office buildings and sites

- 1) To permit the temporary use of vacant office buildings and sites by other uses where such uses would not produce unacceptable amenity conflicts nor prejudice the eventual return of the site to office use.
- 2) To refuse the temporary replacement of vacant offices with housing where it would adversely affect the existing beneficial mix of commercial uses.

3.1.16 Fluctuations in the economic cycle can result in short term over-supply in the office market and higher vacancy rates. There can also be short-term vacancy during the early stages of the site acquisition and redevelopment process. Measures aimed at bringing vacant buildings back into use can help manage the office market and can enhance the appearance and vitality of the City. Alternative temporary uses of vacant offices buildings and sites will be allowed provided that they do not lead to unacceptable amenity conflicts nor prejudice the eventual return to office use. For example, housing is not considered to be a suitable temporary use for vacant offices as it could adversely affect the existing beneficial mix of commercial uses.

3.1.17 Temporary uses will be expected to revert to offices and therefore are not protected by other policies of the Local Plan relating to permanent uses. Applications to extend the period of temporary use or make it permanent will be considered against the policies of the Plan as a whole.

Policy DM 1.5 Mixed uses in commercial areas

To encourage a mix of commercial uses within office developments which contribute to the City's economy and character and provide support services for its businesses, workers and residents.

3.1.18 Offices are the predominant land use in the City but they need to be complemented by other commercial uses to provide supporting activities and services. Complementary uses, including retailing, leisure, education and health facilities, contribute to the City's economy, character and appearance, and provide support services for its businesses, residents, workforce and visitors.

3.1.19 A mix of commercial uses can be particularly beneficial at street level where it enhances vitality and interest. Such vitality is an essential element of the character of many areas in the City, especially retailing areas, the Smithfield area and some conservation areas, such as Bow Lane and St Paul's. The nature of the proposed development and the existing characteristics and changing circumstances of the surrounding buildings and area will be taken into consideration when assessing the desirability of maintaining or enlivening street level activity. Some parts of the City have an established special land use or townscape character which would not benefit from the introduction of mixed uses at street

level and this will be respected. Such places include tranquil open spaces and buildings within Conservation Areas whose character would be harmed by conversion to other uses.

- ~~*Working Paper 39: Borough Employment Projections to 2031 Greater London Authority 2009*~~

~~• City of London Office Evidence Paper City of London 2011~~

~~3.1.7 The Sustainability Appraisal found that this policy is expected to have beneficial impacts locally against social objectives and nationally against economic objectives, but could result in regionally negative environmental impacts. Potential direct impacts on the historic street pattern, transport systems and secondary impacts arising from those systems, as well as potential impacts on climate change drivers and the use of resources e.g. water and waste arisings from offices. Mitigation measures are included in the Core Strategy to maintain or improve water and air quality, biodiversity and the historic environment and reduce overall resource use for increased office development.~~

RISK MANAGEMENT

~~3.1.8 3.1.20 The office floorspace targets reflect GLA (2009) triangulated employment projections that expect most growth during the decade 2006-2016. These are based on current trends, site capacity and transport accessibility. The London Office Policy Review (2009) develops these into linear projections on office based employment, from which the City's office floorspace targets are derived. The City Corporation is confident that it can meet most of the 2011-2016 target from developments currently under construction. Fluctuations in the economic cycle mean that there may be periodic short-term over supply of offices and higher vacancy rates. This is addressed through a flexible approach to temporary changes of use of office buildings and sites while protecting the long term potential of prime sites. The Development Management DPD will provide detailed policy guidance to ensure that temporary accommodation can be returned to office use.~~

~~3.1.9 3.1.21 Projected long-term office and employment growth will require improvements in the quality and capacity of public transport infrastructure. The City Corporation considers that short to medium term needs can be addressed by planned improvements to the capacity and management of the underground network and the significant enhancement to Thameslink. Longer term needs will be addressed by the development and opening of Crossrail. If Crossrail is delayed significantly beyond its scheduled opening in 2018 then a review of the Core Strategy may be needed in the longer term to take account of the potential impact on the ability of the City to absorb additional employment generating development.~~

~~3.1.10 3.1.22 Technological and social changes may provide further opportunities for working at home that may reduce the demand for office floorspace in some secondary locations. The City thrives on face-to-face meetings, informal networks and team working and there is no indication that this will change significantly in future, suggesting that more flexible working patterns will have a limited impact on future office requirements. Demand for offices will be kept under review.~~

MONITORING

~~3.11 Key monitoring indicators are:~~

- ~~• Office floorspace permitted, under construction and completed annually~~
- ~~• Number of employees~~
- ~~• Property satisfaction survey~~

TOPIC 2: UTILITIES INFRASTRUCTURE

3.2.1 The City relies on a range of utilities to function as a global financial and business centre and to meet the needs of its varied communities. Electricity, telecommunications, water, gas and heating and cooling via the Combined Cooling Heating and Power (CCHP) network are of particular importance. There are specific challenges to providing the infrastructure needed to support existing activity in the City and provide the infrastructure necessary to deliver the office, retail and housing growth envisaged in the period to 2026:

- The dense concentration of businesses means that high demand is concentrated in a restricted geographical area;*
- There is a legacy of congested cable routes under the City's streets;*
- Delivery of new infrastructure and improvements to existing networks could result in disruption to businesses, residents and visitors;*
- Energy demands are increasing, particularly to provide air conditioning to buildings to counter increased warming due to climate change, and to deliver the upgraded ICT networks required by the financial services sector possibly including the provision of data centres.*

3.2.2 Pipe subways under streets accommodate gas and water mains and electricity and telecommunications cables more efficiently than simply burying pipes and cables in the ground. There are several existing pipe subways in the City and the potential for constructing more is being investigated to provide greater capacity for pipes and cables, whilst reducing the need for disruptive street works in the future.

3.2.3 The City Corporation has strong links with the various infrastructure providers that service the City, including Thames Water, UK Power Networks, National Grid (Gas), Citigen CCHP station and BT Openreach. The continuation of this co-operative working relationship is key to ensuring delivery of this policy. Developers, landowners and building occupants also have a role to play in demand management, early engagement with utility providers and co-operative working to avoid disruption.

3.2.4 Further information on planned and necessary infrastructure improvements is set out in the City of London Infrastructure Delivery Plan.

CORE STRATEGIC POLICY

Policy CS2: Utilities Infrastructure

To co-ordinate and facilitate infrastructure planning and delivery to ensure that the functioning and growth of the City's business, resident, student and visitor communities is not limited by provision of utilities and telecommunications infrastructure, by:

- 1. Minimising the demand for power, water and utility services, requiring that demand management measures are incorporated within all development.*
- 2. Encouraging early engagement between developers and infrastructure providers to identify the infrastructure needs arising from new development and ensuring that these are addressed through building design and utility networks and connections in time to serve the proposed development.*
- 3. Protecting existing essential utilities and telecommunications infrastructure from development unless it is no longer required or will be adequately relocated.*
- 4. Working with infrastructure providers to minimise disruption to highways and businesses during major infrastructure upgrades and pipe subway construction.*
- 5. Promoting the provision and use of pipe subways, particularly in areas where there is extreme pipe and cable congestion under the streets.*

Figure 4: Electricity demand in London

DEVELOPMENT MANAGEMENT POLICIES

Policy DM 2.1 Infrastructure provision and connection

- 1) Developers will be required to demonstrate, in conjunction with utility providers, that there will be adequate utility infrastructure capacity both on and off the site to serve the development and that the development will not lead to capacity problems for existing users during its construction and operational phases.
- 2) Utility infrastructure and connections must be designed into and integrated with the development. As a minimum, developers should identify and plan for:
 - electricity supply to serve the intended use for the site, and identify, in conjunction with electricity providers, the estimated load capacity of the building and the substations and routes for supply;
 - reasonable gas and water supply considering the need to conserve natural resources;
 - heating and cooling demand and the viability of its provision via decentralised energy (DE) networks. Designs must incorporate access to existing DE networks where feasible and viable;
 - telecommunications network demand, including wired and wireless infrastructure, planning for dual entry provision, where possible, through communal entry chambers;

- separate surface water and foul drainage requirements within the proposed building or site, including provision of Sustainable Drainage Systems (SuDS), rainwater harvesting and grey-water recycling, minimising discharge to the combined sewer network;
- 3) In planning for utility infrastructure developers and utility providers must provide entry and connection points within the development which relate to the City's established utility infrastructure networks, utilising pipe subway routes wherever feasible. Sharing of routes with other nearby developments and the provision of new pipe subway facilities adjacent to buildings will be encouraged.
 - 4) Infrastructure provision must be completed prior to occupation of the development. Where potential capacity problems are identified and no improvements are programmed by the utility company, the City Corporation will require the developer to facilitate appropriate improvements, which may require the provision of space within new developments for on-site infrastructure or off-site infrastructure upgrades.

3.2.5 Utility infrastructure relates to the provision of electricity, gas, water, sewerage, sustainable drainage (SuDS), telecommunications, including wired and wireless infrastructure, decentralised energy networks and the pipe-subway networks that house such infrastructure.

3.2.6 Early engagement with infrastructure providers is essential to ensure that capacity is available in the wider infrastructure network, and that suitable connection layouts and future-proofing are considered at the design stage. In some circumstances it may be necessary for developers to carry out studies to ascertain whether the proposed development will lead to overloading of existing infrastructure. [Realistic projections of electricity demand should be provided in order to avoid over specification of infrastructure which may never be utilised.](#) The cumulative impact of proposed developments in the vicinity must be taken into account through discussions with utility providers and at pre-application meetings with the City Corporation. Co-ordination of infrastructure works is essential to minimise the level of disruption and impact on existing services associated with provision.

3.2.7 The Sustainability Statement or the Energy Statement which accompanies the application may be used to demonstrate the demand management measures that are to be incorporated and the availability of infrastructure capacity. This may be through the inclusion of a joint statement of intent endorsed by the relevant utility providers. S106 agreements may be used to ensure continued engagement regarding route planning and confirmation of load demands.

3.2.8 The volume of redevelopment in the City and the congestion of cables and pipes under the City's streets create a challenge for new utility infrastructure to be installed without disruption to the City's public realm and street network. Pipe subways provide a means of reducing the level of disruption during installation and maintenance of infrastructure and existing subways must be used whenever possible for the installation of utility infrastructure. Expansion and integration of pipe subway and decentralised energy networks is a long term aspiration of the City Corporation in order to minimise disruption due to utility works. Extensions to existing pipe subway networks will be sought where there is clear evidence that services to developments would be better integrated within an established pipe subway in the vicinity.

3.2.9 Best practice in the field of infrastructure provision is constantly evolving. The City Corporation has published the 'City Developer Guidelines for Incoming Utility Services', which provides guidance on best practice and should be used in the first instance for guidance on utility connections.

| Who will deliver | | |
|--|---|---|
| How we will make it happen | Who | When |

SUPPORTING EVIDENCE

- ~~Central London Infrastructure Study URS for Central London Forward 2009~~

- ~~• An assessment of the City's ICT Infrastructure SAMI Consulting for City of London 2009~~
- ~~• Energy Trends Data Department of Energy and Climate Change (DECC) 2005-2007~~

~~3.2.5 The Sustainability Appraisal concluded that this policy would have positive impacts when assessed against the environmental and economic objectives and was unlikely to influence the social objectives significantly.~~

RISK MANAGEMENT

~~3.2.6 3.2.10~~ Fluctuations in the economic cycle may reduce funding for infrastructure upgrades but will also impact on the need to expand infrastructure. The City Corporation will consider the demand for, and funding of, infrastructure improvements through the Infrastructure Delivery Plan, prioritising funds where necessary.

~~3.2.7 3.2.11~~ Climate change could alter demand patterns. For example, greater need for air conditioning in summer months would create more demand for electricity. The policy addresses this by requiring sustainable building designs.

~~3.2.8 3.2.12~~ Changing business practices, e.g. use of data centres, or changes in the City's business mix, may impact on the level of utilities required and the spatial distribution of demand and supply. Continued monitoring of trends will highlight any issues in this respect, identifying any need to review Policy CS2 or the Infrastructure Delivery Plan.

MONITORING

~~3.2.9~~ Key monitoring indicators are:

- ~~• DECC high level energy trends data~~
- ~~• The City of London Survey of Businesses and Strategic Infrastructure Plan update~~
- ~~• City of London highways disruption indicator~~

TOPIC 3: SECURITY AND SAFETY

3.3.1 The City is a safe place to live, work and visit, with low rates of crime. Ensuring the City remains safe and secure is paramount to promoting confidence in the City as a place to do business. As the world's leading international financial and business centre, addressing potential risks from economic crime and terrorism is of critical importance. The City has its own police force which enables it to focus on the priorities relevant to the City's circumstances, including:

- ~~Economic crime, including mortgage and bank fraud, identity fraud, insider fraud, credit card fraud;~~
- ~~Money laundering;~~
- ~~Anti-social behaviour associated with growth of the night-time economy.~~
 - protection from terrorism and extremism;
 - protection from fraud;
 - responding effectively to public disorder;
 - reducing levels of violent crime and theft;
 - reducing the number of injuries on the City's roads.

3.3.2 More people are killed or seriously injured through traffic accidents in the City each year than are harmed in violent crime and disorder. Therefore road safety is also a priority.

3.3.3 The City of London Police produce a three-year Local Policing Plan, which is updated annually to address changing local priorities. The annual Safer City Partnership Plan highlights ~~six~~ eight priorities for maintaining and improving the City's security: anti-social behaviour; domestic abuse; reducing re-offending; night-time entertainment issues; fraud and economic crime; counter terrorism; civil disorder; and victim-based acquisitive crime. ~~countering terrorism; economic crime; protecting people against crime; protecting vulnerable people; the night-time economy; and anti-social behaviour.~~ A range of initiatives are used to deliver these priorities, including: Safety Thirst, Ward Policing, Taxi Marshalling Scheme, ~~Strategic Youth Forum, Young City Safe Scheme,~~ Anti-Social Behaviour Working Group, Controlled Drinking Zones, Alcohol Strategy and the Domestic Abuse Delivery Group ~~Violence DVD.~~ In addition, the City's Statement of Licensing Policy provides guidance in determining applications for drinking establishments and other licensed premises.

3.3.4 There have been concerns about aspects of ~~night-time economy~~ entertainment in the City, particularly related to anti-social behaviour, with a number of hotspots around the City. The City's Statement of Licensing Policy deals with applications for new licences, applications to vary existing licences and applications to review licences.

3.3.5 The City is also home to the Central Criminal Court at the Old Bailey.

CORE STRATEGIC POLICY

Policy CS3: Security and Safety

To ensure that the City is secure from crime, disorder and terrorism, has safe systems of transport and is designed and managed to satisfactorily accommodate large numbers of people, thereby increasing public and corporate confidence in the City's role as the world's leading international financial and business centre, by:

- 1. Ensuring that the dense network of buildings and spaces, including the activities they contain, is designed to be safe, minimising the potential for crime and anti-social behaviour and providing for a mix of uses and natural surveillance of streets and spaces.*
- 2. Proactively managing ~~the night-time economy~~ entertainment to minimise disturbance to residents and workers.*
- 3. Implementing measures to enhance the collective security of the City against terrorist threats, applying security measures to broad areas such as the Traffic and Environmental Zone, major development schemes, or to the City as a whole.*
- 4. Ensuring that security and safety measures are of an appropriate high quality design.*
- 5. Developing area-based approaches to implementing security measures where a number of large developments are planned or are taking place at the same time, and in locations where occupiers have requested collective security measures. The character and distinctiveness of these areas needs to be taken into account in assessing their suitability for security measures.*
- 6. Promoting business continuity measures to ensure that businesses have the opportunity to recover quickly from terrorist attacks.*
- 7. Ensuring that transport systems help resolve conflicts between the high and growing volume of pedestrians and other road users, by considering safety within the design of routes, stops, stations and interchanges and creating more traffic-free and traffic-calmed areas for pedestrians and cyclists. Measures should contribute to an attractive public realm and will need to be self-enforcing and not rely unduly on police resources.*

DEVELOPMENT MANAGEMENT POLICIES

Policy DM 3.1 Self-containment in mixed use developments

Where feasible, proposals for mixed use developments must provide independent primary and secondary access points, ensuring that the proposed uses are separate and self-contained.

3.3.6 Providing the right mix of uses can generate greater activity and surveillance, but a mix of uses within individual buildings or developments may give rise to problems of security, management and amenity. This can cause difficulty in letting accommodation and lead to

pressure for the loss of uses for which provision has been made, so where feasible, the City Corporation will require the provision of independent primary and secondary access points in new and refurbished buildings.

Policy DM 3.2 Security measures in new developments and around existing buildings

To ensure that security measures are included in new developments, applied to existing buildings and their curtilage, by requiring:

- building-related security measures, including those related to the servicing of the building, to be located within the building or development site, wherever possible;
- measures to be integrated with those of adjacent buildings and the public realm;
- that security is considered at the design stage of all development proposals to avoid the need to retro-fit measures that impact on the public realm;
- developers to seek advice from the City of London Police Architectural Liaison Officer at the design stage. New development should meet Secured by Design principles;
- the provision of service management plans for all large development, demonstrating that vehicles seeking access to the building can do so without waiting on the public highway;
- an assessment of the environmental impact of security measures, particularly addressing visual impact and impact on pedestrian flows.

3.3.7 Security and safety are important to the quality of life of those who work, live and travel in the City and to protect its considerable economic investment. Many potential difficulties can be avoided by considering community safety and security issues at the design stage. Advice on these matters is given by the “Secured by Design” (SBD) scheme and developers are encouraged to seek the advice of the City of London Police Architectural Liaison Officer (ALO) and the City Corporation early in the design stage.

3.3.8 All applications should be accompanied by a Design & Access Statement setting out how security matters have been considered at the design stage. New development should incorporate SBD principles. The design should fully incorporate protective security requirements within the site boundary, as far as practicable. Building designs should provide for a high level of natural surveillance of all surrounding public areas and highway.

3.3.9 Incorporating security measures early in the design of new development or the refurbishment of existing buildings will avoid the need for later retro-fitting security measures, which can impact on the architectural quality and design of the development.

3.3.10 All new developments need to maximise the level of security provision to reduce the risk of impact. It is not always possible to provide security measures wholly within the building or development site, particularly when there is a need to provide stand-off distances to protect against potential vehicle-borne attacks, or where the building line is immediately bounded by public highway. Security features on the public highway should be considered as a last resort when all other alternative proposals have been exhausted.

Policy DM 3.3 Crowded places

On all large developments, applicants will be required to satisfy principles and standards that address the issues of crowded places and counter-terrorism, by:

- conducting a full risk assessment;
- keeping access points to the development to a minimum;
- ensuring that public realm and pedestrian permeability associated with a building or site is not adversely impacted, and that design considers the application of Hostile Vehicle Mitigation measures at an early stage;
- ensuring early consultation with the City of London Police on risk mitigation measures;
- providing necessary measures that relate to the appropriate level of crowding in a site, place or wider area.

3.3.11 Incorporating security measures at an early stage of the development process will require consideration of the companies involved, where known, who may have their own servicing strategies. Developments that impact on or involve provision of open spaces and landscaping should incorporate collective security measures and not be retro-fitted. Early consultation with the City of London Police ALO is essential. Developers should engage the Police as advisers on counter-terrorism measures for public projects, including open spaces. Where the development has an impact on heritage assets, early contact with English Heritage is recommended.

3.3.12 A risk assessment should be submitted for approval by the City Corporation as part of a planning application or transport proposal and should include:

- assessment of the risk of structural damage from an attack;
- identification of measures to minimise any risk;
- how the perimeter is treated, including glazing.

3.3.13 Designing the public realm taking into account Hostile Vehicle Mitigation measures, will ensure that the correct level of protection is provided without compromising the ability to create aesthetic and functional public spaces. Proposals should not impose undue restrictions on other occupiers in the area.

Policy DM 3.4 Traffic management

To require developers to implement traffic management and highways security measures, including addressing the management of service vehicles, by:

- consulting the City Corporation on all matters relating to servicing;
- restricting vehicular access, where required;
- implementing public realm enhancement and pedestrianisation schemes, where appropriate;
- using traffic calming to limit the opportunity for hostile vehicle approach.

3.3.14 The management of traffic and control of servicing and delivery vehicles are key elements of effective security measures and may include restricted vehicular and access gates, timed management of service vehicles and local traffic management schemes.

3.3.15 The City Corporation will use conditions on planning applications, Section 106 and Section 278 agreements and the Community Infrastructure Levy to ensure implementation of appropriate measures. Further information on City Corporation standards is set out in the

guidance note, "Standard Highway and Servicing Requirements for Developments in the City of London".

Policy DM 3.5 Night-time entertainment

- 1) Proposals for new night-time entertainment and related uses and the extension of existing premises will only be permitted where it can be demonstrated that:
 - there is no unacceptable impact on the amenity of residents or upon community safety;
 - there is no unacceptable impact on environmental amenity, taking account of the potential for noise, disturbance and smells arising from the operation of the premises, customers arriving and exiting the premises and the servicing of the premises;
 - there is no cumulative impact arising from the proposed development and existing use which would result in unacceptable disturbance or adverse impact on environmental or residential amenity or community safety.
- 2) Applicants will be required to submit Management Statements detailing how these issues can be addressed through the operation of the premises.

3.3.16 Night-time entertainment and related uses in the City include restaurants and cafes (A3), drinking establishments (A4), hot food takeaways (A5) and other entertainment uses falling outside A use classes, where the primary activity is, for example, a nightclub or discotheque, or a mix of uses.

3.3.17 To safeguard quiet times and amenity, particularly for residents and other existing noise-sensitive uses, the City Corporation will seek to control hours of operation. Further information on noise and noise-related impacts is set out in the City of London Noise Strategy.

3.3.18 Proposals for new and extended night-time entertainment and related uses must be accompanied by a Management Statement, which includes:

- details of how the premises will operate and be managed, particularly where there is a mix of uses at different times of the day;
- hours of operation;
- noise mitigation plans related to both internal and external noise and including measures to reduce sound transfer, including sound-proofing and noise controls;
- a timed programme for deliveries and collections;
- door control for entry and exit from the premises;
- a dispersal scheme for customers, including transport arrangements, in co-operation with taxi firms;
- security arrangements;
- maximum number of clientele;
- measures to deal with the emission of smells;
- location of ventilation ducts and plant.

3.3.19 Assessment of the Management Statement will be undertaken in consultation with the City Corporation's Department of Markets and Consumer Protection and will have regard to the provisions of the City of London Statement of Licensing Policy.

3.3.20 To prevent serious adverse effects on amenity or the environment, conditions may be imposed to control night-time entertainment. The City Corporation will attach conditions, where necessary, to control such matters as:

- opening hours;

- the number of customers (depending on size of venue and fire regulations);
- mitigation measures / arrangements to be made to safeguard amenity and prevent smells, noise disturbance (including from ventilation / air conditioning plant) from premises;
- servicing arrangements;
- arrangements for the storage, handling and disposal of waste and customer litter;
- activities within the same use class, including ancillary uses;
- compliance with submitted management statements.

SUPPORTING EVIDENCE

- ~~Crowded Places: The Planning System & Counter Terrorism Home Office/CLG 2010~~
- ~~Safer City Partnership Plan 2009–2012: Working Together For a Safer City City of London Safer City Partnership 2009~~
- ~~City of London Police Local Policing Plan 2010–2013 City of London Police 2010~~
- ~~City of London Corporation Licensing Act 2003: Statement of Licensing Policy City of London 2011~~

~~3.3.6 The Sustainability Appraisal notes that this policy is expected to have beneficial impacts locally and nationally against the relevant social, environmental and economic objectives.~~

RISK MANAGEMENT

~~3.3.21 The City continues to be at risk from terrorism. The terrorist threat is unpredictable and an attack could have significant consequences for the City. The City Corporation will seek to ensure, through partnership working, that the most effective counter-terrorism measures are maintained within the City and plans are put in place to ensure business continuity. These measures will be kept under continual review to ensure the safety of businesses, residents and visitors.~~

MONITORING

~~3.3.8 Key monitoring indicators are:~~

~~Crime and safety / terrorism~~

- ~~To produce an annual Safer City Partnership plan~~
- ~~Protection against Terrorist Attacks~~

~~Transport safety~~

- ~~Pedestrian crossings fully accessible to the public~~

- ~~Road Traffic Casualty Indicator (LIP)~~

- ~~Cycle parking for commuters~~

TOPIC 4: PLANNING CONTRIBUTIONS

~~3.4.1 The City Corporation imposes conditions on planning permissions and seeks planning obligations (also known as S106 agreements) from developers, to secure the best use of land and a properly planned environment in the City. S106 agreements are legal agreements linked to planning permissions that regulate the way a development is undertaken and are used where it is not possible to regulate the permission by means of a condition. They may be in the form of in kind benefits, or a financial contribution, and may be used to prescribe the nature~~

~~of a development, compensate for loss or damage created by a development, or mitigate the impacts associated with the development. The Government's current approach to planning obligations is set out in Circular 05/2005, as amended by the Community Infrastructure Levy Regulations, 2010 and 2011. Under this guidance, a planning obligation may only constitute a reason for granting permission if the planning obligation is:~~

~~i) necessary to make the development acceptable in planning terms;~~

~~ii) directly related to the development; and~~

~~iii) fairly and reasonably related in scale and kind to the development.~~

~~3.4.2 The compact nature of the City and the intensification of development and employment place demands on the City's services, infrastructure and environment. The City Corporation attaches planning conditions and negotiates planning obligations with developers to mitigate the impact of these demands. The nature and level of any contribution sought takes account of the demands created by the development concerned, existing levels of provision within the City, the City Corporation's priorities and the impact of the obligation upon the viability of the development proposed.~~

~~3.4.3 The scale and type of benefits sought must be related to the demands created by the development. Large developments have effects that spread beyond the immediate site, creating demand for labour, transport, housing and amenities, and they have an impact on the wider environment. Some of these effects may be mitigated by the direct provision of infrastructure or services by a developer, others may require a financial contribution. Where a financial contribution is sought, it may be necessary to pool some contributions in order to address some of the wider development impacts. The pooling of contributions from several planning permissions to form an investment pot is particularly relevant to the provision of affordable housing, training and local community facilities. Increasingly, infrastructure and environmental improvements are being delivered through area-based improvement strategies and it is intended that, where feasible, planning contributions in the City will contribute towards the delivery of these area based improvement strategies.~~

~~3.4.4 While planning obligations in the City are principally sought from office led commercial development, other forms of development will also be expected to make a contribution. Contributions towards affordable housing will be sought from both commercial and residential development.~~

~~3.4.5 In determining priorities, the City Corporation has had regard to the regional priorities set out by the Mayor in the London Plan, including the provision of additional funding to assist delivery of Crossrail.~~

~~3.4.6 The 2008 Planning Act sets out the legislative basis for the Community Infrastructure Levy, and the enabling regulations came into effect in April 2010. These provide for the setting and collection of a statutory charge levied on development intended to address the~~

infrastructure needs arising out of the implementation of the Local Development Framework. S106 agreements have been retained but will be scaled back to focus on site specific mitigation in line with the three tests outlined in paragraph 3.4.1. The regulations allow for a transition period until 2014, within which s106 agreements can be retained to deliver wider planning benefit, pending the adoption of a Community Infrastructure Levy.

3.4.7 Planning contributions under this policy include both S106 agreements and the Community Infrastructure Levy that will replace it in part.

3.4.1 The compact nature of the City and the intensification of development and employment place demands on the City's services, infrastructure and environment. The City Corporation utilises the Community Infrastructure Levy (CIL), attaches planning conditions and negotiates planning obligations (also known as S106 agreements) with developers, to secure the best use of land and to mitigate the impact of these demands.

Community Infrastructure Levy

3.4.2 The 2008 Planning Act and Community Infrastructure Levy Regulations 2010 (as amended) set out the legislative and regulatory basis for the CIL. They provide for the setting and collection of a statutory charge levied on development, intended to address the infrastructure needs arising out of the implementation of the Local Plan. CIL is the primary mechanism for seeking contributions from developers towards the provision of new infrastructure. Infrastructure is defined broadly in the Act to include transport, flood defences, schools and other educational facilities, medical facilities, sporting and recreational facilities and open spaces. The City Corporation will publish on its website a list of the types of infrastructure or infrastructure projects that may be funded in part or in whole by CIL (Regulation 123 list). This list will reflect the priorities set out in this Plan. Details of the CIL rates applied in the City of London and any exemptions from CIL will be set out in the City of London Community Infrastructure Levy Charging Schedule.

Planning Obligations

3.4.3 CIL Regulations indicate that planning obligations may only constitute a reason for granting permission if the planning obligation is:

i) necessary to make the development acceptable in planning terms;

ii) directly related to the development; and

iii) fairly and reasonably related in scale and kind to the development.

3.4.4 Planning obligations are legal agreements linked to planning permissions that regulate the way a development is undertaken and are used where it is not possible to regulate the permission by means of a condition. They may be in the form of in kind benefits or a financial contribution, and may be used to prescribe the nature of a development, compensate for loss or damage created by a development, or mitigate the impacts associated with the development. The level of any obligation is subject to consideration of the impact of the obligation on the viability of the development proposed.

3.4.5 In line with legislative and regulatory requirements, planning obligations in the City will be sought for immediate site mitigation, for affordable housing, the provision of training and skills programmes and to ensure delivery of non-financial benefits, such as the City Corporation's Local Procurement Initiative. Planning obligations in the City are sought principally from commercial development, but other forms of development will also be expected to make a contribution. Contributions towards affordable housing will be sought from both commercial and residential development.

3.4.6 Details of the thresholds used for planning obligations and the required levels of contribution will be set out in a revised Planning Obligations Supplementary Planning Document.

3.4.7 Funding priorities for CIL and planning obligations are set out in Core Strategic Policy CS4. In determining priorities, the City Corporation has had regard to the regional priorities set out by the Mayor in the London Plan, including the provision of additional funding to assist delivery of Crossrail. Crossrail funding will be delivered through the Mayor's Crossrail s106 Planning Obligations and the Mayor's Community Infrastructure Levy.

CORE STRATEGIC POLICY

Policy CS4: Planning Contributions

To manage the impact of development, seeking appropriate contributions and, for s106 planning obligations having regard to the impact of the contributions on the viability of development, by:

1. Requiring contributions on or off site, in kind, or through financial contributions, which address the City of London's priorities, including:

- (i) local community facilities;
- (ii) environmental improvements, including street scene improvements;
- (iii) measures to adapt to climate change or mitigate its impacts;
- (iv) affordable housing delivery;
- (v) transport and utilities infrastructure and service improvements;
- (vi) training, skills provision and local procurement in the City and City Fringe.

2. Requiring qualifying development to make an additional contribution to meeting the costs of Crossrail construction in accordance with the provisions of the London Plan.

| Who will deliver | | |
|--|---|---|
| How we will make it happen | Who | When |
| Further policy guidance in <u>Community Infrastructure Levy Charging Schedule Development Management DPD and Planning Contributions Obligations SPD</u> | City Corporation | Development Management DPD, 2012 <u>CIL Charging Schedule and Planning Contributions Obligations SPD 2014</u> (date to be confirmed) |
| Negotiation on individual development proposals | City Corporation- Mayor of London- Development Industry | Ongoing |

SUPPORTING EVIDENCE

- ~~Planning Obligations Supplementary Planning Guidance City of London June 2004~~
- ~~Supplementary Planning Guidance: Use of Planning Obligations in the Funding of Crossrail Mayor of London July 2010~~

~~3.4.8 The Sustainability Appraisal notes that this policy will result in positive social and environmental impacts. There are possible uncertainties in respect of economic factors due to the costs associated with planning obligations. This is recognised in the policy by ensuring that the scale and nature of the benefits is relevant to the development proposed and to the impact on economic viability.~~

RISK MANAGEMENT

3.4.9 The level of development in the City varies with economic cycles. The provision of in-kind benefits, facilities or financial contributions depends on the number and scale of developments and whether outstanding planning permissions are implemented. Future changes in economic viability may require a review of policy CS4, the City CIL Charging Schedule or the Planning Obligations SPD.

3.4.10 Where insufficient funding is provided through CIL or S106 agreements, additional sources of funding may be required. The availability of this additional funding will depend upon the priorities attached to proposed schemes by other funding organisations and the availability of funds. In the short to medium term, public sector funding restraint may mean there are insufficient funds for all identified schemes to progress. In these circumstances, the City Corporation will prioritise the allocation of funds so that some schemes can progress.

~~3.4.11 The introduction of the Community Infrastructure Levy will alter the legal and procedural basis for seeking planning contributions. The publication of further legislation and guidance on CIL and planning obligations and a replacement to Circular 05/2005 may require a future review of the this planning contributions policy in the Core Strategy to ensure that policy it continues to provide a basis for the provision of contributions. and/or a revision of other policies to reflect the changing funding context.~~

3.4.12 Future reviews of the Mayor's planning obligations and CIL requirements for Crossrail or other strategic transport infrastructure ~~The introduction of planning obligations and Community Infrastructure Levy requirements for Crossrail may impact on the ability to meet City Corporation priorities expressed through this policy. This may require a review of the planning contributions policy CS4, the City CIL Charging Schedule or the Planning Obligations SPD. or its application in the City through the proposed Development Management DPD or Planning Contributions SPD.~~

MONITORING

3.4.13 Key monitoring indicators are:

- ~~Amount and distribution (by priority area) of S106 agreements and Community Infrastructure Levy Contributions secured~~
- ~~Amount of S106 agreements and Community Infrastructure Levy Contributions secured to fund Crossrail~~

TOPIC 5: THE NORTH OF THE CITY

Figure 5: The North of the City

3.5.1 The construction and operation of Crossrail will bring major benefits to the City, but the implications for the northern part of the City will need to be carefully managed so that its full advantages are realised. Two Crossrail stations ~~will be~~ are being constructed in the City, with entrances at Farringdon, Lindsey Street, Moorgate and Liverpool Street, with works sites around these points and at Finsbury Circus during the construction phase (2010 – 2018). The completion of Crossrail, together with increased capacity of Thameslink services at Farringdon, will increase the area's attractiveness to new development and will result in many more pedestrians walking to and from the Crossrail stations through surrounding areas.

3.5.2 Whilst acknowledging the need for sustainable design throughout the City, this area has the potential to lead the way as an 'eco design' district within the City, capitalising on its mixed use character, improved public transport, low car ownership levels, opportunities for improved cycle infrastructure and the combined heat and power network in the area. Specific challenges include the need to reduce rainwater run-off ~~in critical drainage areas~~, and climate change mitigation and adaptation, particularly in this area's numerous listed buildings, many of which are residential.

3.5.3 The north of the City contains over 50% of the Square Mile's residential population, with the highest concentration at the Barbican Estate and Golden Lane. Approximately 60 - 70% of new residential development in the City is expected to take place in the north of the City, ~~principally through two major developments within the Barbican residential area~~ (see Table 2.3). The north of the City also contains the Barbican complex, which is Europe's largest multi-arts and conference venue.

3.5.4 The Smithfield area has a distinctive mixed use character with a residential component, dominated by the wholesale meat market but supporting a range of other activities. The market is expected to remain in Smithfield although the General Market building in Farringdon Street is no longer occupied by meat traders. A short distance from the market, redevelopment at St. Bartholomew's Hospital will result in provision of a new cardiac and cancer specialist centre and hospital consolidated onto a single site. The release of surplus buildings presents opportunities for change and particularly for the encouragement of small and medium sized businesses, such as professional consultants. A thriving and expanding night time economy adds to the challenges for the Smithfield area.

3.5.5 The London Plan identifies Farringdon/Smithfield as an Area for Intensification, where opportunities should be taken to accommodate growth in employment of 2,500 jobs and 850 new homes. The City Corporation considers that the majority of this growth should be accommodated in the neighbouring parts of Camden and Islington Boroughs, with some growth within the wider northern and western areas of the City. The area around Bishopsgate is included within the London Plan's draft City Fringe Opportunity Area, where growth of 70,000 new jobs and 7,000 new homes is proposed in the wider City fringe areas of Islington, Hackney and Tower Hamlets. The City Corporation will work with the Mayor and ~~these~~ neighbouring boroughs to agree appropriate targets for the City as a contribution to meeting these wider targets.

CORE STRATEGIC POLICY

Policy CS5: The North of the City

To ensure that the City benefits from the substantial public transport improvements planned in the north of the City, realising the potential for rejuvenation and “eco design” to complement the sustainable transport infrastructure, by:

- 1. Ensuring that disruption to the City is minimised during construction of Crossrail and requiring the restoration of worksites to deliver enhancement of biodiversity and the public realm, open space provision and integration with other transport modes.*
- 2. Implementing proposals for the rejuvenation of Farringdon, Moorgate and Holborn jointly with neighbouring boroughs in the Farringdon / Smithfield Area for Intensification, and through the City Fringe Opportunity Area Planning Framework, taking account of urban design studies and area enhancement strategies.*
- 3. Requiring improvements to pedestrian and cycle routes to maintain effective and efficient pedestrian and cycle flows, including for disabled people, within and through the north of the City.*
- 4. Ensuring the retention and improvement of pedestrian permeability and connectivity, at ground and high walk level through large sites such as Smithfield Market, Barbican, Golden Lane and Broadgate, whilst preserving privacy, security and noise abatement for residents and businesses.*
- 5. Identifying and meeting residents’ needs in the north of the City, including protection of residential amenity, community facilities and open space.*
- 6. Safeguarding the Citigen combined cooling heating and power (CCHP) network and ensuring that, where feasible, all new development is designed to enable connection to the CCHP network.*
- 7. Requiring the incorporation of sustainable urban drainage solutions, such as green roofs, into development.*
- 8. Requiring developers to make use of innovative design solutions to mitigate and adapt to the impacts of climate change, particularly addressing the challenges posed by heritage assets whilst respecting their architectural and historic significance.*
- 9. Further enhancing the distinctive character of the Smithfield area by retaining a range of buildings suitable for accommodating a mix of uses, whilst recognising the particular challenges arising from the 24 hour character of the area.*
- 10. Recognising and supporting the continued presence of both Smithfield Market and St Bartholomew’s Hospital.*

~~3.5.6 The Sustainability Appraisal supports the identification of this area and demonstrates the sustainability benefits of considering the impact of Crossrail across the north of the City. Any negative impacts as a result of increased development will be mitigated through Policies CS15 'Sustainable Development and Climate Change' and CS12 'Historic Environment'.~~

RISK MANAGEMENT

~~3.5.7 3.5.6 Crossrail will produce significant improvements in transport capacity necessary to deliver long term economic growth. The City Corporation considers that short to medium term needs can be addressed by planned improvements to the capacity and management of the underground network and the significant enhancement to Thameslink. If Crossrail is delayed significantly beyond its scheduled opening in 2018 then a review of the Core Strategy may be needed to take account of the potential impact on employment growth.~~

MONITORING

~~3.5.8 Key monitoring indicators are:~~

Crossrail

- ~~• Construction progress considered against published project plans published by Crossrail Ltd~~

Pedestrian Movement

- ~~• Pedestrian flows around Crossrail stations and across the north of the City~~
- ~~• Number of Street Scene enhancement projects implemented~~

Eco-design

- ~~• Number of connections to decentralised energy networks~~
- ~~• Number of green roofs and walls in the north of the City~~
- ~~• BREEAM assessments in the north of the City~~
- ~~• Number of street scene enhancement strategies in progress or completed~~

Mixed use

- ~~Analysis of planning permissions, buildings under construction and completions~~

TOPIC 6: CHEAPSIDE AND ST PAUL'S

Figure 6: Cheapside and St. Paul's

3.6.1 Cheapside is one of the five Principal Shopping Centres (PSCs) in the City. Although the area has been the City's principal market place and high street since Saxon times, during the twentieth century its position declined as shops were displaced by offices. In recent years there has been a revival with, in 2010, a major increase in the amount of shopping floorspace either ~~under construction~~ constructed or proposed since 2010. Much of this growth ~~will be~~ is within the One New Change development which, *although completed in October 2010, is included within the retail floorspace growth targets set out in Policy CS6.* The majority of the remaining floorspace is likely to be completed by 2017. Once completed, Cheapside will provide a critical mass of retailing, while continuing to provide office accommodation on upper floors, making it a major destination for workers, residents and visitors, seven days a week and re-establishing it as the City's High Street.

3.6.2 Alongside new development there is a continuing need for the area to be well managed and promoted in the long term to deliver an attractive retail environment, ensuring future success and providing the potential for further development. The Cheapside Initiative has been established by the City Corporation, as a voluntary partnership including key landowners and developers, to co-ordinate the development and improvement projects and to promote the area and its many attractions.

3.6.3 Some of the City's most prominent visitor and cultural attractions and heritage assets lie within and around the Cheapside area. St Paul's Cathedral stands at the western end of the area and the Royal Exchange at the east, while other attractions, such as the Museum of London and the Barbican complex, are only a short walk away. There is potential to enhance the area's cultural offer and vibrancy, through better promotion, including making better use of existing facilities such as local churches and events such as the Lord Mayor's Show, as well as delivering improved pedestrian links particularly from the Millennium Bridge. Further hotel provision will be acceptable in the Cheapside and St Paul's area, in line with the findings of the City of London Hotel Study, where it supports the business city and enhances the area's attractiveness as a visitor destination. ~~notes that Cheapside and St Paul's would be a suitable location for further hotel provision and that such uses would further increase the vibrancy of the area.~~

3.6.4 The area has a high level of accessibility by public transport and has the potential to achieve sustainable growth through the efficient use of this infrastructure, together with safer and responsible cycling and improvements to the pedestrian environment. There are high levels of traffic and significant congestion at peak times at Bank Junction, which are identified in the 2010 Retail Study as constraints to growth. In the longer term, improvements will be required to pedestrian, underground and surface transport to ensure a safe, less congested environment.

CORE STRATEGIC POLICY

Policy CS6: Cheapside and St Paul's

To develop the Cheapside and St Paul's area as the City's 'high street' and key visitor destination, increasing the amount of high quality retailing, promoting the City's unique cultural and leisure activities and heritage and improving the pedestrian environment, by:

1. *Increasing the overall amount of retail floorspace across the Cheapside and St Paul's area by over 41% between 2010 and 2017.*
2. *Prioritising A1 floorspace fronting Cheapside, Poultry and Bow Lane, resulting in an increase in total floorspace in the Cheapside Principal Shopping Centre from 21,000m² in 2010 to 43,000m² by 2017.*
3. *Encouraging a mix of retail unit sizes, including large units fronting onto Cheapside and facilitating the development of smaller retail units in surrounding streets, particularly in the Guildhall and Bow Lane Conservation Areas.*
4. *Enhancing pedestrian links:*
 - (i) *from the Millennium Bridge to St Paul's and Cheapside and onwards to the Museum of London and the Barbican complex;*
 - (ii) *to and from residential and employment clusters and leisure and recreation areas.*
5. *Promoting visitor attractions in and around Cheapside, including museums and art galleries such as the Guildhall Art Gallery, churches and other heritage assets, cultural events, including the Lord Mayor's Show and exploring the potential for street markets.*
6. *Improving visitor information, including use of the Visitor Information Centre, signage and the "square miler" volunteers.*
7. *Permitting hotel development that supports the primary business function of the City and enhances the attractiveness of the area as a visitor destination.*
8. *Enhancing the environment for pedestrians, shoppers, public transport users and, where appropriate, motor vehicle users. Improving safety, accessibility and inclusivity through the development of area-based improvement strategies.*
9. *Maintaining and improving on the current low levels of crime and anti-social behaviour.*

SUPPORTING EVIDENCE:

- ~~City of London Retail Study CBRE 2006~~
- ~~City of London Retail Study (Capacity) Nathaniel Lichfield & Partners for the City of London 2010~~
- ~~Cheapside Background Evidence City of London 2009~~
- ~~Cheapside Area Strategy City of London 2009~~
- ~~Cheapside Initiative Action Plan City of London 2007~~
- ~~City of London Hotel Study Cushman & Wakefield for City of London 2009~~

~~3.6.5 The Sustainability Appraisal notes positive social and economic benefits to developing Cheapside as a retail and cultural destination. Environmental mitigation is required due to increased resource use and waste. This is provided in the relevant thematic policies.~~

RISK MANAGEMENT

~~3.6.6 3.6.5 Fluctuations in the economic cycle may reduce the funding available from developers to fund and implement environmental, public transport and pedestrian enhancements. Priority will be given to those schemes integral to the delivery of the policy such as the Cheapside Area Strategy. External funding sources will also be investigated.~~

~~3.6.7 3.6.7 Fluctuations in the economic cycle could also affect the amount of vacant retail floorspace in the Cheapside area. This will be monitored and if vacancy levels are significantly above the 11% target set in the Local Plan's Monitoring Framework this would trigger a review of the Retailing and Cheapside policies or policies in the Development Management DPD as well as an update of the Cheapside Initiative Action Plan.~~

MONITORING

~~3.6.8 Key monitoring indicators are:~~

~~Retailing~~

- ~~Amount of retail floorspace permitted, under construction and completed~~
- ~~Amount of A1 floorspace fronting Cheapside and Bow Lane~~
- ~~Accessibility of retail units, including door and step access~~
- ~~Retail occupancy data~~

~~Vibrancy and culture~~

- ~~Footfall, particularly at weekends~~
- ~~Number of visitors to tourist attractions in the area~~
- ~~Number of hotels completed~~

~~Environment and transport~~

- ~~Number of environmental enhancement schemes completed or underway in the area~~
- ~~Number of cycle racks~~

~~Safety~~

- ~~Number of thefts from shops and persons~~
- ~~Number of pedal cycle thefts~~
- ~~Numbers killed and seriously injured in road accidents~~

TOPIC 7: EASTERN CLUSTER

Figure 7: Eastern Cluster

3.7.1 In the east of the City a cluster of tall buildings forms a distinctive element in the skyline. This cluster contains the greatest density of businesses and jobs in the Square Mile, principally offices in banking and insurance use, but there are also other land uses, including open spaces and retailing at Leadenhall Market. The Eastern Cluster has potential to accommodate more development and jobs and has fewer constraints on the development of tall buildings. In the future the Eastern Cluster will contain more tall and large buildings and an even larger workforce. Table 2.3 shows that the majority of new office space will be built in the Eastern Cluster, accounting for 50-60% of all projected City office space.

3.7.2 There are a number of key issues for the Eastern Cluster. These include increased demand for large offices and tall buildings, leading to greater demand for vehicle servicing on the street and utilities under the street; greater numbers of commuters walking to work from stations and bus stops, including new Crossrail stations; greater pedestrian movement from the cluster to facilities, particularly retail, elsewhere in the City; and greater security risks, principally terrorism, due to the number of high profile buildings and occupiers and increased numbers of workers.

3.7.3 New tall and large buildings should contribute positively to their surroundings and must not harm the City's environment, including its historic environment. The greatly increased numbers of pedestrians must be provided with safe and attractive walking routes, both within the area and linking to other parts of the City. The growth in the workforce will need to be complemented by improvements to retail and leisure facilities and the improvement of existing, and provision of new, open spaces. The challenge facing the Eastern Cluster is to accommodate the many demands generated by growth while creating a safe, efficient, uncongested and attractive public realm of streets and open spaces.

CORE STRATEGIC POLICY

Policy CS7: Eastern Cluster

To ensure that the Eastern Cluster can accommodate a significant growth in office floorspace and employment, while balancing the accommodation of tall buildings, transport, public realm and security and spread the benefits to the surrounding areas of the City, by:

1. Increasing the provision of sustainable, energy-efficient, attractive, high quality office floorspace in a range of accommodation types, that meet the varied needs of office occupiers and achieve modernisation of office stock.
2. Promoting the Eastern Cluster as a location for inward investment, providing assistance to potential developers, investors and occupiers.
3. Delivering tall buildings on appropriate sites that enhance the overall appearance of the cluster on the skyline and the relationship with the space around them at ground level, while adhering to the principles of sustainable design, conservation of heritage assets and their settings and protected views.

4. *Ensuring the safety of businesses, workers, residents and visitors, promoting natural surveillance of buildings, open spaces and streets and protecting against crime and terrorism.*
5. *Enhancing streets, spaces, and the public realm for pedestrians, providing new open and public spaces where feasible, increasing connectivity with surrounding areas and improving access to facilities and services, particularly in the Cheapside and Aldgate areas and towards the City Fringe.*
6. *Ensuring the provision of high quality utilities (including CCHP where feasible) and communications infrastructure, encouraging early engagement and joint working between developers and utility providers and maximising the space under the streets, particularly through the use of pipe subways.*
7. *Delivering improvements to public transport to cope with the demands of the growing numbers of workers and visitors, implementing street and traffic management measures and ensuring that improvements do not compromise the quality of the environment.*

| Who will deliver | | |
|--|---|---|
| How we will make it happen | Who | When |
| <p>Offices <i>Providing guidance and assistance to developers and occupiers seeking to locate and expand in the Eastern Cluster; promoting inward investment, prime sites and opportunities in the City Fringe.</i></p> <p><i>Requiring a sustainability statement to ensure that proposals will be sustainable, energy efficient, viable and accessible for all and do not have a negative impact on the historic environment. SUPPORTING EVIDENCE

- ~~City of London Tall Buildings Evidence Paper City of London 2010~~
- ~~City of London Office Evidence Paper City of London 2011~~
- ~~London View Management Framework Supplementary Planning Guidance Mayor of London 2010~~
- ~~Enhancing the Public Realm in the Eastern City Cluster Lovejoy for the City of London 2005~~
- ~~St Helen's Square and Vicinity – Enhancing the Public Realm Lovejoy for the City of London 2007~~

~~3.7.4 The Sustainability Appraisal supports the identification of this area and notes that this policy is expected to have beneficial impacts locally against social objectives and nationally against economic objectives. There is uncertainty at a regional scale against environmental objectives, with an increase in resource use and waste production and potential for overcrowding on the transport network, with clustering of buildings potentially adding to the heat island effect. However this policy does include promotion of sustainable new buildings. Mitigation measures are included in the Core Strategy to improve local water quality, air quality, biodiversity and the historic environment.~~

RISK MANAGEMENT

~~3.7.5 3.7.4 Economic cycles lead to periods of over and under-supply of office accommodation. This can result in short term delays to development. Policy CS1 seeks to protect large floorplate office sites, while allowing flexibility for alternative temporary uses.~~

~~3.7.6 3.7.5 An increased concentration of tall building development in the Eastern Cluster could exacerbate the problem associated with wind turbulence. This will be mitigated by carrying out wind assessments on planning applications and requiring appropriate amendments to be made to schemes or measures to be implemented to eradicate problems.~~

~~3.7.7 3.7.6 While security measures are being carefully considered in major schemes in the Eastern Cluster, terrorism is unpredictable. The City will ensure that the most effective counter-terrorism measures are maintained and enhanced throughout the Eastern Cluster.~~

MONITORING

~~3.7.8 Key monitoring indicators are:~~

- ~~Number of office schemes permitted, under construction and completed~~
- ~~Number of tall buildings permitted, under construction and completed~~
- ~~Compliance with LVMF protected views~~
- ~~Utilities and communications improvements~~
- ~~Number of public transport enhancement schemes planned and implemented~~
- ~~Number of commuters exiting from underground stations within and around the Cluster~~

- ~~• Thefts from a person or a building~~
- ~~• Number of environmental enhancement projects planned and implemented~~

TOPIC 8: ALDGATE

Figure 8: Aldgate area

3.8.1 The Aldgate area is positioned between the City's eastern cluster of tall buildings and London's East End. Tower Hamlets, one of the most deprived boroughs in England, adjoins the area. Although there is significant potential for development, environmental concerns, including traffic levels, pollution and a lack of street-level activity, mean that the area is not as attractive for new business investment as other areas of the City. The City Corporation aims to regenerate Aldgate by developing it into a vibrant, safe and distinctive office location, whilst remaining a sustainable place in which to live, work and learn. Residential development will be encouraged in or near to existing residential areas clusters in the Aldgate area.

3.8.2 Aldgate is home to parts of the London Metropolitan University, two housing estates – Middlesex Street Estate and Mansell Street Estate – and the City's only primary school, Sir John Cass. The area is within walking distance of several major visitor attractions including the Tower of London, Brick Lane, Petticoat Lane Market and Spitalfields Market. The Aldgate area suffers from a lack of publicly accessible open space and has a relatively deprived residential population with poor access to retail facilities, high levels of unemployment, poorer than average standards of health and relatively high numbers of residents who need help to improve language skills. The Aldgate area is within Portsoken Ward, which is amongst the 25% most deprived areas of the country.

3.8.3 The predominant land use in the Aldgate area is good quality, recently built or refurbished office stock, dating from the 1960s to the 1990s. Although it has experienced limited recent development activity, the Aldgate area is capable of accommodating large-scale office development that can provide space for company headquarters or business support functions, while other sites will be more appropriate for mixed use or residential development. Tall buildings may be appropriate on certain sites.

3.8.4 The City Corporation participates in a number of cross-border partnership programmes which aim to bring lasting social, economic and physical regeneration to the boroughs bordering the City. Future development in Aldgate will depend upon these cross-border initiatives and will need to take account of emerging guidance from the Mayor through the City Fringe Opportunity Area Planning Framework (CFOAPF), and proposals from Tower Hamlets. The draft CFOAPF helps co-ordinate the regeneration strategies of the four local authorities within whose areas the City fringe lies, and is particularly focused on overarching issues such as access, open space, and the scale of buildings, which are central to the area's identity. The London Plan proposes growth of 70,000 new jobs and 7,000 new homes within the City fringe areas of Islington, Hackney and Tower Hamlets. The City will work with the Mayor and these neighbouring boroughs to agree appropriate targets for the City as a contribution towards meeting the wider City fringe targets.

3.8.5 The Aldgate area has benefitted from public realm improvement works that have taken place outside of the City through the Tower Hamlets Aldgate Masterplan, including the replacement of the Aldgate Gyratory with a more pedestrian-friendly street layout, and the new open space at Braham Street.

CORE STRATEGIC POLICY

Policy CS8: Aldgate

To regenerate the amenities and environment of the Aldgate area for businesses, residents, workers, visitors and students, promoting development and investment, by:

1. *Promoting the Aldgate area as an attractive office and residential location to assist in its regeneration.*
2. *Identifying and meeting residents' needs, particularly on the Middlesex and Mansell Street Estates, utilising a range of funding sources to:*
 - (i) maximise training, education and employment opportunities for residents;*
 - (ii) maximise opportunities for delivering health, community and educational services and facilities for residents;*
 - (iii) create additional publicly accessible open space and additional accessible play space for children;*
 - (iv) encourage local retail facilities.*
3. *Improving transport connections and pedestrian links, especially between the housing estates and Aldgate Station and Sir John Cass School and between Aldgate and Aldgate East stations:*
 - (i) replacing the Aldgate Gyratory (St. Botolph's section) with a two way street system providing additional public open space;*
 - (ii) improving Aldgate Bus Station to deliver improved access for pedestrians to and from community facilities, housing estates, open spaces and retail facilities;*
 - (iii) improving signage for visitors from Liverpool Street Station to Tower Hill and from Aldgate to Cheapside.*
4. *Enhancing the public realm of the Aldgate area, its streets and spaces and implementing improvement schemes at Middlesex Street and St. Botolph's House. Identifying opportunities for urban greening schemes, congestion and pollution reduction measures, particularly in the vicinity of Sir John Cass School and Middlesex Street and Mansell Street Estates.*

SUPPORTING EVIDENCE

- ~~Working in Partnership with our Neighbours City of London 2008~~
- ~~Supporting Economic Regeneration in the City Fringe City of London 2007~~
- ~~Draft City Fringe Opportunity Area Planning Framework Mayor of London 2009~~
- ~~Commercial Land and Property Study, Aldgate BBP Regeneration for Tower Hamlets 2007~~

~~3.8.6 The Sustainability Appraisal of this policy notes that there would be positive social, economic and environmental benefits.~~

RISK MANAGEMENT

~~3.8.7~~ 3.8.6 Delivery of many of the improvements sought will rely upon sufficient s106 monies being made available through the development management process Community Infrastructure Levy or s106 planning obligations contributions being made available. The level of developer activity and potential developer funding will vary according to the economic cycle. If insufficient funding is available in future, the City Corporation will investigate the potential to use other, public, funding sources and prioritise improvements to deliver maximum benefit to residents, workers and visitors.

~~3.8.8~~ 3.8.7 Fluctuations in the economic cycle may reduce the demand for new office accommodation. The Local Plan Core Strategy policy framework is flexible enough for suitable temporary uses to be allowed without harming the long term prospects of the business City.

MONITORING

~~3.8.9 Key monitoring indicators are:~~

Office location

- ~~Number of offices permitted, under construction and completed~~

Identifying and meeting residents' needs

- ~~Community facilities provided~~
- ~~Amount of s106 funding~~
- ~~Leisure facilities provided~~
- ~~Additional open space provision~~
- ~~Health of residents~~

~~Improving connections and linkages~~

- ~~Monitoring indicators established in the City of London Local Implementation Plan~~

~~Identifying opportunities to enhance the public realm~~

- ~~Pedestrian and cyclist counts and classifications~~
- ~~Pedestrian and cyclist route and attitude surveys~~
- ~~Before and after street and walkway condition assessments, including the PERS2 (pedestrian environment review system) and Living Streets Community Street Audit method~~

TOPIC 9: THAMES AND THE RIVERSIDE

Fig A. Thames and the Riverside (alteration to Core Strategy Fig 28)

3.9.1 The River Thames forms the southern boundary of the City and has historically played a major role in its prosperity and everyday life. The riverside provides a breathing space from the busy environment which characterises the rest of the City, as well as a traffic-free walkway on the north bank of the Thames. In developing the riverside's potential it is important to balance the river's functional uses for the movement of people and materials with its role in providing for the recreational needs of residents, workers and visitors. The presence of offices on the riverside makes a valuable contribution to the City's varied office stock, which in turn contributes to the wider economic prosperity of London. Minimisation of flood risk and respect for the riverside's rich archaeological heritage, which includes the Queenhithe Dock scheduled ancient monument, are also important considerations.

3.9.2 The City's topography with the land rising from the riverside means that most of the City is at low risk from flooding. Nevertheless this risk needs to be managed, particularly in the face of climate change.

3.9.3 A series of strategies help to shape the riverside. These include the London Plan, which requires the designation of a Thames Policy Area, whose identification includes consideration of areas and buildings that have historic, archaeological and cultural association with the Thames; and the Mayor's Riverside Strategy, which emphasises links between central London and the Thames riverside to the east. The Environment Agency's Thames Estuary 2100 Plan and Thames River Basin Management Plan address flood risk and water quality issues for the Thames. Thames Water's proposal to build the Thames Tideway Tunnel is intended to capture and divert storm overflows, including the Fleet Combined Sewer Outflow (CSO) at Blackfriars, to Beckton Sewage Treatment Works, to avoid discharging them into the River. The City's Riverside Walk Enhancement Strategy sets out the City's plans for street scene enhancement along the riverside, and the riverside walk forms part of Natural England's Thames Path National Trail. The River Thames is designated as a Site of Metropolitan Importance for Nature Conservation.

CORE STRATEGIC POLICY

Policy CS9: Thames and the Riverside

To ensure that the City capitalises on its unique riverside location, sustaining the river's functional uses in transport, navigation and recreation, whilst minimising risks to the City's communities from flooding, by:

1. Designating the Thames Policy Area and preparing and keeping under review an area appraisal which identifies the attributes of the area and gives guidance on development within this area.
2. Ensuring that buildings and spaces on or near the riverside contribute to sustainable economic growth and further the aims of the Riverside Walk Enhancement Strategy, particularly through:
 - (i) maintaining the office presence on the river frontage between Water Lane and Queenhithe which forms a gateway from the Thames bridges to the City's commercial core;
 - (ii) protecting public access and river views along the riverside walk and securing completion of the riverside walk at Queenhithe;

- (iii) improving access to the river and riverside walk from the rest of the City and the Thames bridges;
 - (iv) improving the vibrancy of the riverside by encouraging a mix of appropriate commercial uses particularly at ~~Three Quays, the Millennium Bridge, and Blackfriars,~~ whilst preserving privacy, security and ~~noise abatement~~ amenity for residents, businesses and other stakeholders;
 - (v) improving opportunities for biodiversity, in line with the City of London Habitat Action Plan for the Thames foreshore.
3. Supporting and safeguarding sites for the construction of the Thames Tideway Tunnel, including connection of the Fleet combined sewer outflow, resulting in reduced storm water discharges into the River Thames and improved water quality.
4. Promoting the functional uses of the River Thames and its environs for transport, navigation and recreation particularly through:
- (i) retaining Walbrook Wharf for waterborne freight traffic;
 - (ii) encouraging the use of the River Thames for the transport of construction and demolition materials and waste;
 - (iii) retaining Blackfriars Pier, Swan Lane Pier and access to Tower Pier, and encouraging use of these facilities for river transport. Applications to remove these facilities will be refused unless suitable replacement facilities of an equivalent or higher standard are provided;
 - (iv) maintaining London Bridge, Tower Bridge, Blackfriars Bridge, Southwark Bridge and the Millennium Bridge;
 - (v) ~~resisting~~ refusing development on or over the River, including ~~permanently moored vessels,~~ except for structures which specifically require a waterside location for river-related uses;
 - (vi) resisting the permanent mooring of vessels; if moored vessels are exceptionally permitted they must be of national importance, have a special connection with the City and the River Thames and be used for a river related purpose;
 - (vii) maintaining access points to the River Thames foreshore, from both land and water, for public or private use as appropriate.
 - ~~(vii) encouraging the use of the River Thames for the transport of construction and demolition materials and waste.~~
5. ~~Permitting residential and hotel development within the Thames Policy Area as long as flood risk issues can be adequately addressed, with particular emphasis on:~~
- ~~(i) allowing clustering of housing along the riverside, particularly close to the existing residential development at Queenhithe~~
 - ~~(ii) maintaining residential uses in the Inner and Middle Temples;~~
 - ~~(iii) encouraging clustering of hotels close to visitor attractions and in areas of vibrancy.~~

TOPIC 10: DESIGN

3.10.1 *The City has a unique and distinctive built environment characterised by a great variety and high quality of buildings which, individually and together, comprise a townscape that is renowned nationally and internationally, as well as containing lesser known buildings and spaces. This townscape is characterised by a diversity of building type, age, materials and architectural design, both historic and modern. The rich and diverse patterns of buildings and spaces which have become established have, to varying degrees, the following common characteristics:*

- human scale reflected in the relationship between buildings and their surroundings;
- interlinking pedestrian routes and intimate open spaces;
- close-knit mixtures and concentrations of building styles, materials and periods.

There are many open spaces and a complex pattern of streets of medieval and Roman origin. The rich variety of buildings means that the character of areas can contrast greatly within local areas. The townscape of the Square Mile reflects both its long economic and trading history and its modern role as a world-leading financial and business centre. Good design is key to maintaining and enhancing the quality and interest of the City's townscape.

3.10.2 *The City is predominantly commercial in nature and this is reflected in its buildings, their design, the activities they contain and the density of development. The rate of change and rebuilding in the City presents challenges and opportunities to ensure that new development contributes positively to the townscape. The City's position at the heart of London and its world status demand the highest standards of design and sustainability for buildings, spaces and the street scene. The diversity of the townscape means that different design considerations apply to each site and these need to be carefully assessed to take account of each building's context. This should not constrain design approaches, and a range of solutions may be appropriate. To ensure that sound design principles are followed, the City Corporation will issue further advice in ~~the Development Management DPD~~, SPDs and other documents.*

3.10.3 *Outdoor advertising has a strong impact on the appearance of buildings, the street scene and, in particular, the historic environment. The City's approach to the control of advertisements in terms of size, location, materials and illumination is restrained to safeguard the high quality of the City's environment.*

3.10.4 *The City has a large workforce whose numbers are expected to grow substantially. Most journeys within the Square Mile are on foot and this movement is particularly high during morning and evening peak times. Despite redevelopment throughout its history, the City has retained much of its dense street pattern, which provides convenient walking routes and allows for a high degree of pedestrian permeability. At the same time, the pattern of narrow streets and alleyways poses challenges in terms of accessibility, way-finding, safety and increased pressure on the pedestrian environment. The City has numerous small open spaces, which provide valuable amenities, and many are of historic importance. The location and design of these small spaces requires innovative and sensitive solutions which respect their settings and create high quality, accessible areas for all the City's communities. The City's streets also provide space for public enjoyment, and the City Corporation has an extensive programme of street scene projects to improve the quality, sustainability, inclusivity and amenity of the public realm.*

3.10.5 *The City provides a great range of employment and leisure opportunities that should be widely accessible, including to disabled people. Accessibility to new and existing buildings and spaces must be maximised to create an inclusive environment. Adaptation of historic buildings presents particular challenges and requires careful design solutions. The*

~~City Corporation has an active programme of implementing access adaptations and will prepare a SPD to give guidance to developers.~~

CORE STRATEGIC POLICY

Policy CS10: Design

To promote a high standard and sustainable design of buildings, streets and spaces, having regard to their surroundings and the character of the City and creating an inclusive and attractive environment, by:

- 1. Ensuring that the bulk, scale, massing, quality of materials and height of buildings are appropriate to the character of the City and the setting and amenities of surrounding buildings and spaces.*
- 2. Encouraging design solutions that make effective use of limited land resources.*
- 3. Ensuring that development has an appropriate street level presence and roofscape and a positive relationship to neighbouring buildings and spaces.*
- 4. Requiring the design and management of buildings, streets and spaces to provide for the access needs of all the City's communities, including the particular needs of disabled people.*
- 5. Ensuring that new development respects and maintains the City's characteristic dense network of streets and alleyways.*
- 6. Delivering improvement in the environment, amenities and enjoyment of open spaces, play areas, streets, lanes and alleys through schemes in accordance with public realm enhancement strategies.*
- 7. Ensuring that signs and advertisements respect the restrained character of the City.*

DEVELOPMENT MANAGEMENT POLICIES

Policy DM 10.1 New Development

To require all developments, including alterations and extensions to existing buildings, to be of a high standard of design and to avoid harm to the townscape, by ensuring that :

- the bulk and massing of schemes are appropriate in relation to their surroundings and have due regard to the general scale, height, building lines, character, urban grain and materials of the locality and relate satisfactorily to the character of streets, squares, lanes, alleys and passageways;
- all development is of a high standard of design and architectural detail and, where appropriate, a convincing degree of depth and modelling to the elevations;
- appropriate, high quality and durable materials are used;
- development has attractive and visually interesting street level elevations, providing active frontages wherever possible to maintain or enhance the vitality of the City's streets;

- the design of the roof is visually integrated into the overall design of the building when seen from both street level views and higher level viewpoints;
- plant and building services equipment are fully screened from view and integrated in to the design of the building. Installations that would adversely affect the character, appearance or amenities of the buildings or area will be resisted;
- servicing entrances are designed to minimise their effects on the appearance of the building and street scene and are fully integrated in to the building's design;
- there is provision of appropriate hard and soft landscaping, including appropriate boundary treatments;
- there is provision of amenity space, where appropriate;
- there is the highest standard of accessible and inclusive design.

3.10.6 The network of routes and spaces, the scale, form, architectural expression and detailed design of buildings, together with the use of particular building materials, and the contribution of these elements to the composition of street blocks are characteristic of and combine to produce the close-knit and intricate townscape of the City. It is important that new buildings and alterations respect and reinforce this general character. The City has dynamic, striking and internationally acclaimed architecture as well as more contextual buildings appropriate to their townscape setting.

3.10.7 In assessing development schemes detailed consideration will be given to the bulk and massing and special characteristics of its locality. All development proposals are expected to have a high standard of design and detailing.

3.10.8 In most buildings, the ground floor elevation has the most effect on the public's amenity, so its design should be given particular attention to ensure that it is legible, visually attractive and provides active frontages, where appropriate, and that unattractive features are avoided, such as blank frontages, service entrances and ventilation louvres.

3.10.9 The City's significant number of public and private viewing galleries and its tall buildings mean that many workers, residents and visitors see the townscape from above. Special consideration needs to be given to the roofscape as a "fifth" elevation that is integrated into the architectural design of the building. Attention should be given to the form, profile and general appearance of the roofscape to ensure that it complements the building as viewed from surrounding buildings as well as from the ground.

3.10.11 The design and execution of extensions and alterations to buildings, such as entrances and windows, are of considerable importance since they have a cumulative effect on the overall character and appearance of the City. Extensions or alterations should be considered in relation to the architectural character of the building, designed to minimise their impact and integrated with the design of the building. Alterations and extensions should achieve a successful design relationship with their surroundings, taking full account of the local context and the setting of the building.

3.10.12 Servicing entrances can have a detrimental impact on the appearance of the building and its immediate setting and can harm otherwise attractive pedestrian routes. The City Corporation expects innovative design solutions for servicing entrances and adjacent areas to minimise their visual impact and to enable them to be integrated into the design of the building. Design solutions must respect the sensitive nature of listed buildings and conservation areas. Gates and doors should be well designed and should be kept closed when the entrance to the service bay is not in use.

3.10.13 Additional roof top plant for an existing building should be satisfactorily integrated into the form and design of the existing roof. Roof top plant should be enclosed and covered

where it would otherwise harm the appearance of the building, the general scene, or views from other buildings. Where feasible, plant should be located at basement level. Consideration should be given to the use of external heating and cooling supplies from combined heat and power systems, where available, as these may avoid or reduce the need for roof top features such as boiler flues, cooling towers and plant rooms, as well as providing wider environmental benefits.

3.10.14 Ventilation or extraction systems should be routed internally and extensive or unsightly external ducting will be resisted. In new development, provision must be made within the building for services and ducting to and from all uses, including retailing. Ventilation louvres should not be sited adjoining footways.

3.10.15 Developers will be encouraged to provide suitable rooftop ventilation for the City's sewer network, where appropriate, which should be integrated into the design of buildings.

Policy DM 10.2 Design of Green Roofs and Walls

- 1) To encourage the installation of green roofs on all appropriate developments. On each building the maximum practicable coverage of green roof should be achieved. Extensive green roofs are preferred and their design should aim to maximise the roof's environmental benefits, including biodiversity, run-off attenuation and climate change adaptation.
- 2) To encourage the installation of green walls in appropriate locations, and to ensure that they are satisfactorily maintained.

3.10.16 Green roofs bring many benefits, including enhancing biodiversity, moderating the urban "heat island effect", reducing rain water run-off into the sewer system, improving building insulation and reducing noise and dust, as well as creating a visually attractive roofscape for occupiers of the building and others that overlook it. Extensive green roofs, which do not have deep substrates, are the most effective at achieving these goals and, being relatively lightweight, are easy to install and require little maintenance. To optimise the benefits, the greatest feasible proportion of the roof should be greened. The biodiversity value, visual attractiveness and other benefits can be further enhanced by varying the depth of the substrate across the roof and using native plant species.

3.10.17 Where developers prefer to install intensive green roofs with deeper substrates, these are expected to be of high quality design. The developer should consider biodiversity as well as visual amenity.

3.10.18 Green walls can bring many of the benefits of green roofs, and can improve the appearance of locations where there is limited opportunity for planting. To be successful they require careful design and installation and regular maintenance.

Policy DM 10.3 Roof Gardens and Terraces

- 1) To encourage high quality roof gardens and terraces where they do not:
 - immediately overlook residential premises;
 - adversely affect rooflines or roof profiles;

- result in the loss of historic or locally distinctive roof forms, features or coverings;
- impact on identified views.

2) Public access will be sought where feasible in new development.

3.10.18 Roof gardens and terraces are becoming increasingly common in the City. Public and private roof gardens and terraces present an opportunity to create new viewpoints of the City and the surrounding areas and reinforce London's cultural and historic attractions.

3.10.19 Roof terraces and gardens should be publicly accessible where possible and entrances should not result in safety or security concerns or adversely impact on the environmental quality at street level. Opening hours may be managed by condition.

Policy DM 10.4 Environmental Enhancement

The City Corporation will work in partnership with developers, Transport for London and other organisations to design and implement schemes for the enhancement of highways, the public realm and other spaces. Enhancement schemes should be of a high standard of design, sustainability, surface treatment and landscaping, having regard to:

- the predominant use of the space, surrounding buildings and adjacent spaces;
- connections between spaces and the provision of pleasant walking routes;
- the use of natural materials, avoiding an excessive range and harmonising with the surroundings of the scheme and materials used throughout the City;
- the inclusion of trees and soft landscaping and the promotion of biodiversity, where feasible linking up existing green spaces and routes to provide green corridors;
- the City's heritage, retaining features that contribute positively to the character and appearance of the City;
- sustainable drainage and co-ordinating the design with adjacent buildings in order to implement rainwater recycling;
- the need to provide accessible and inclusive design, ensuring that streets and walkways remain uncluttered;
- the need for pedestrian priority;
- the need to resist the loss of routes and spaces that enhance the City's function, character and historic interest;
- enhanced pedestrian permeability;
- the use of high quality street furniture to enhance and delineate the public realm;
- lighting which should be sensitively co-ordinated with the design of the scheme.

3.10.20 The City Corporation will actively promote schemes for the enhancement of the street scene and public realm, in appropriate locations. All works should conform to the City Streets Manual Supplementary Planning Document and have regard to the Mayor of London's Streetscape guidance, which sets out the requirements for street upgrades and maintenance.

3.10.21 High quality natural materials are characteristic of the City of London and add greatly to the character and identity of streets, courts and spaces. Wherever possible, the City Corporation will retain these surface materials and will carry out repairs to match and extend their use. Elsewhere, the City Corporation will encourage a limited palette of materials, providing continuity in the street scape.

3.10.22 The City Corporation will undertake street enhancement works through specifically targeted projects or in association with general street maintenance and vehicle, cycle and pedestrian traffic management schemes. The City Corporation will use the Community Infrastructure Levy or s106 planning obligations to deliver enhancement works.

3.10.23 All projects should be inclusive in design so that they provide access for all.

3.10.24 The incorporation of artworks or integral decorative features, such as sculptures, fountains and schemes included in the City Arts Initiative to create animated spaces, will be encouraged where appropriate and their design, management and maintenance regime should be considered at an early stage of the design.

Policy DM 10.5 Shopfronts

To ensure that shopfronts are of a high standard of design and appearance and to resist inappropriate designs and alterations. Proposals for shopfronts should:

- respect the quality and architectural contribution of any existing shopfront;
- respect the relationship between the shopfront, the building and its context;
- use high quality and sympathetic materials;
- include signage only in appropriate locations and in proportion to the shopfront;
- consider the impact of the installation of louvres, plant and access to refuse storage;
- incorporate awnings and canopies only in locations where they would not harm the appearance of the shopfront or obstruct architectural features;
- not include openable shopfronts or large serving openings where they would have a harmful impact on the appearance of the building and/or amenity;
- resist external shutters and consider other measures required for security;
- consider the internal treatment of shop windows (displays and opaque windows) and the contribution to passive surveillance.

3.10.25 Shopfronts are important elements in the townscape and can contribute significantly to the attractive quality of any street scene. The design of a shopfront should recognise this and be appropriate to, or enhance the building and its location. It should respect the design of the building and not obscure, or result in damage to, existing architectural features.

3.10.26 Existing shopfronts that contribute to the appearance or special interest of a building or the street scene, particularly in listed buildings or conservation areas, or that are of design or historic significance in their own right or as part of a group, should be retained. Any modifications necessary should be sympathetic to the original design.

3.10.27 New shopfront proposals should consider the relationship with the upper floors of the building and surrounding buildings and include high quality materials and finishes. The City Corporation will seek a reduction in the size of fascias of excessive dimensions (height, width and depth), which are out of proportion or scale with the shopfront or considered to have a detrimental effect on the appearance of the building or the street scene. The design of new shopfronts should include a signage zone that is consistent across a parade of shops of matching or similar design.

3.10.28 Modification required to shopfronts and shopfront designs incorporating louvres, plant or refuse accommodation should be undertaken in a manner sympathetic to the design and character of the shopfront and the building if they cannot be accommodated in less sensitive elevations. Awnings and canopies should be integrated into the design of the shopfront in relation to size, location and materials.

3.10.29 Openable shopfronts and large serving openings are not normally acceptable as they create a void at ground floor level that could harm the appearance of buildings and create potential amenity issues.

3.10.30 Security measures should be internal to limit their visual impact on shopfronts. External shutters are normally not acceptable while internal shutters should be perforated to enable visibility into the shop and passive surveillance. To enliven frontages and enable passive surveillance, all retail frontages should provide good visibility and glazing should not be blanked out. The installation of security glass and steel reinforced frontages will be considered in the context of the impact on the appearance and historic significance of shopfronts.

3.10.31 Retail entrances should be designed with level entrances to enable inclusive access by all; access measures and movable ramps should only be used where this is not feasible.

Policy DM 10.6 Advertisements

- 1) To encourage a high standard of design and a restrained amount of advertising in keeping with the character of the City.
- 2) To resist excessive or obtrusive advertising, inappropriate illuminated signs and the display of advertisements above ground floor level.

3.10.32 In order to protect and enhance the dignified character of the City's streets, the City Corporation considers that advertising material should be restrained in quantity and form. It has for many years sought to exercise careful control over the display of advertisements and seeks improvements where appropriate. The City Corporation will exercise advertisement control having regard to visual amenity and public safety.

3.10.33 Advertising hoardings and advertisements on street furniture will not normally be permitted as these detract from the restrained character of the City. The display of poster advertisements on construction site hoardings will be resisted unless directly related to the development site. Further guidance is contained in the City Corporation's 'Hoardings Advice Note.' The design of advertising material should respect its locality and use appropriate materials of high quality. Advertisements should be appropriate to the frontage served and should avoid static or moving projection of images beyond the frontage, such as laser projections and projections on building façades in order to protect visual amenity and public safety. Any illumination of advertisements should be discreet and incorporate LEDs, where possible to reduce the overall bulk and energy use of signage. Advertising flags and banners will not normally be permitted except, where appropriate, for cultural institutions. Rotating advertisements will be resisted as these detract from the City's character.

3.10.34 Particular care will be necessary with retailing advertisements on or in the settings of listed buildings and within conservation areas. Internal illumination of adverts will not normally be permitted.

3.10.35 Advertisements above ground level are detrimental to the appearance and visual amenity of the street scene and can detract from the character and qualities of individual buildings by obscuring architectural features. While there are exceptions, such as traditional or historic signs, signs in an elevated position will not usually be permitted.

3.10.36 Appropriate action will be taken to have unauthorised advertisements removed.

Policy DM 10.7 Daylight and Sunlight

- 1) To resist development which would reduce noticeably the daylight and sunlight available to nearby dwellings and open spaces to unacceptable levels, taking account of the Building Research Establishment's guidelines.
- 2) The design of new developments should allow for the lighting needs of intended occupiers and provide acceptable levels of daylight and sunlight..

3.10.37 The amount of daylight and sunlight received has an important effect on the general amenity of dwellings, the appearance and enjoyment of open spaces and streets, and the energy efficiency of all buildings

3.10.38 The Building Research Establishment (BRE) has issued guidelines that set out several methods of assessing changes in daylight and sunlight arising from new developments. The City Corporation will apply these methods consistent with BRE advice that ideal daylight and sunlight conditions may not be practicable in densely developed city-centre locations. When considering proposed changes to existing lighting levels, the City Corporation will take into account the cumulative effect of development proposals. Where appropriate, the City Corporation will take into account unusual existing circumstances, such as development on an open or low rise site and the presence of balconies or other external features, which limit the daylight and sunlight that a building can receive.

3.10.39 Planning considerations concerning daylight and sunlight operate independently of any common law rights and any light and air agreements which may exist. If a development is considered acceptable in planning terms and has planning permission, but is not proceeding due to rights to light issues, the City Corporation may consider acquiring interests in land or appropriating land for planning purposes to enable development to proceed.

Policy DM 10.8 Access and inclusive design

To achieve an environment that meets the highest standards of accessibility and inclusive design in all developments (both new and refurbished), open spaces and streets, ensuring that the City of London is:

- inclusive and safe for of all who wish to use it, regardless of disability, age, gender, ethnicity, faith or economic circumstance;
- convenient and welcoming with no disabling barriers, ensuring that everyone can experience independence without undue effort, separation or special treatment;
- responsive to the needs of all users who visit, work or live in the City, whilst recognising that one solution might not work for all.

3.10.40 It is imperative that the built environment is safe, accessible and convenient as this is fundamental to improving the quality of life for all City users and particularly for disabled and older people. Despite progress in building a more accessible City, some people still experience considerable barriers to living independent and dignified lives as a result of the

way the built environment is designed, built and managed. The outcome of embracing inclusive design should be a City where people want to live, work and visit.

3.10.41 Developers will be required to submit Design and Access Statements which demonstrate a commitment to inclusive design and engagement with relevant user groups. Design and Access Statements should include details both on how best practice standards have been complied with and how inclusion will be maintained and managed throughout the lifetime of the building.

3.10.42 The City Corporation manages the Considerate Contractors Scheme and encourages all those undertaking building and civil engineering work within the City to sign up to this scheme. This encourages them to carry out their operations safely and considerately and with due regard to all passing pedestrians and road users regardless of age or disability.

WHO WILL DELIVER

| How we will make it happen | Who | When |
|---|---|----------------|

SUPPORTING EVIDENCE

- ~~City Street Scene Manual City of London 2005~~*
- ~~Designing an Accessible City City of London 2006~~*
- ~~Conservation Areas in the City of London, a general introduction to their character City of London 1994~~*

~~3.10.6 The Sustainability Appraisal noted that this policy would deliver positive social, environmental, and economic effects.~~

RISK MANAGEMENT

~~3.10.7 3.10.43 Fluctuations in the economic cycle could result in pressure for a reduction in design quality due to cost cutting measures. The City Corporation will continue to require a high quality of design in planning applications in accordance with the aims of the policy.~~

~~3.10.8 3.10.44 Fluctuations in the economic cycle may also impact on the level of planning contributions available to deliver environmental, play space, sports facilities and signage improvements. In the event of a reduction in contributions, the City Corporation will prioritise schemes and seek alternative sources of funding where possible.~~

MONITORING

~~3.10.9 Key Monitoring Indicators are:~~

- ~~The number of architectural, heritage and environmental awards, commendations or notifications received by development carried out in the City~~*
- ~~The number of awards, commendations or notifications for public realm improvements in the City~~*
- ~~Access to shops and services~~*
- ~~Number of wheelchair-accessible hotel bedrooms~~*

TOPIC 11: VISITORS, ARTS AND CULTURE

3.11.1 Cultural facilities and events in the City attract millions of visitors each year, complementing the City's business role and contributing to its vibrancy. The City's historic environment also attracts many visitors who come to enjoy the historic urban form and heritage assets. The City Corporation operates a visitor information centre near St. Paul's Cathedral as well as a number of visitor attractions including the Barbican complex, the Monument, Guildhall Art Gallery and Tower Bridge, and contributes to the provision of others, including the Museum of London. The Barbican complex is Europe's largest multi-arts and conference venue with a diverse range of art, music, theatre, dance, film and education events. It is also home to the London Symphony Orchestra and the Guildhall School of Music & Drama. The Barbican complex is recognised by the Mayor of London as one of a number of internationally important cultural institutions and is designated as one of London's Strategic Cultural Areas.

3.11.2 The City has a range of lending and specialist libraries serving the local community and housing collections of national and international significance. The City also has many churches which contribute to the cultural and spiritual life of its communities and, along with the livery halls, are used for concerts and exhibitions. Encouraging arts and culture in the City benefits workers, residents and attracts visitors, contributing to London's role as an international tourist and business destination. This assists job creation within the City and in neighbouring boroughs. The City Corporation is the third biggest sponsor of arts in the UK and provides an extensive programme of arts and cultural events.

3.11.3 The City Corporation has developed an approach to promote art and culture in the City through the City Arts Initiative, a multi-departmental group which acts as a single point of contact for external organisations wishing to locate public art within the City. The City Arts Initiative seeks to enhance the City's international commercial and financial identity through the development of visual and public art projects.

3.11.4 The City Corporation has prepared a Visitor Destination Strategy '~~Visit the City~~' which promotes the City as a high quality visitor destination, particularly for business visitors, in a way that complements the needs of the business City. It also seeks to target visitor activity to deliver increased visitor numbers and make full use of the City's cultural facilities.

3.11.5 The London Plan promotes London's hotels, cultural and arts facilities and fosters their contribution to both local regeneration and London's global economic offer. The Plan also seeks to protect and enhance the Barbican Strategic Cultural Area. The number of hotels in the City has increased significantly in recent years. The Mayor of London's 2006 Hotel Study encouraged an increase in London's hotel provision and set targets for each borough. ~~which the~~ The City has also met these targets. The City of London Hotel Study concluded that there is capacity for further hotel development in the City ~~particularly in the area around the Tower of London, the Millennium Bridge and around Cheapside~~ to meet the needs of City businesses and visitors.

CORE STRATEGIC POLICY

Policy CS11: Visitors, Arts and Culture

To maintain and enhance the City's contribution to London's world-class cultural status and to enable the City's communities to access a range of arts, heritage and cultural experiences, in accordance with the City Corporation's Destination Strategy, by:

- 1. Providing and supporting a wide range of cultural facilities, including the Barbican complex, the Guildhall Art Gallery and City libraries and encouraging and promoting other facilities including the Museum of London. Encouraging the use of churches, livery halls and other venues, including the Bridewell Theatre, for cultural events alongside their primary uses.*
- 2. Maintaining the City's existing collection of public art and culturally significant objects, pursuing opportunities to commission new, high-quality pieces in appropriate locations.*
- 3. Protecting existing cultural facilities where they are needed, ensuring there is no net loss of cultural facilities in the City.*
- 4. Providing visitor information, increasing awareness of the City's cultural and heritage assets and encouraging the City's communities and visitors to make full use of its cultural and heritage facilities.*
- 5. Allowing hotel development where it supports the primary business or cultural role of the City and refusing new hotels where they would compromise the City's business function or the potential for future business growth. Hotels should not be located where they would create amenity problems for existing residential areas ~~clusters~~.*

Figure 10: Visitor Attractions

DEVELOPMENT MANAGEMENT POLICIES

Policy DM 11.1 Protection of visitor, arts and cultural facilities

- 1) To resist the loss of existing visitor, arts and cultural facilities unless:
 - replacement facilities are provided on-site or within the vicinity which meet the needs of the City's communities; or
 - they can be delivered from other facilities without leading to or increasing any shortfall in provision, and it has been demonstrated that there is no demand for another similar use on the site; or
 - it has been demonstrated that there is no realistic prospect of the unit being used for a similar purpose in the foreseeable future.
- 2) Proposals for the redevelopment or change of use of visitor, arts and cultural facilities must be accompanied by evidence of need for those facilities. Loss of facilities will only be permitted where it has been demonstrated that the existing floorspace has been actively marketed as a visitor, arts or cultural facility at reasonable terms for public visitor, arts or cultural floorspace.

3.11.6 The City's cultural infrastructure is important to the distinctive character of the Square Mile. The international reputation and high quality of this cultural activity is acknowledged as having a critical part to play in the vibrancy of the working environment of the City. Cultural facilities include a wide range of uses such as arts venues, theatres, cinemas, public galleries and community centres.

Policy DM 11.2 Public Art

To enhance the City's public realm and distinctive identity by:

- protecting existing works of art and other objects of cultural significance and encouraging the provision of additional works in appropriate locations;
- ensuring that financial provision is made for the future maintenance of new public art; requiring the appropriate reinstatement or re-siting of art works and other objects of cultural significance when buildings are redeveloped.

3.11.7 Art can contribute significantly to the quality of the environment, particularly where it enhances a sense of place. Public art can mitigate the impacts of development by the creation of works giving visual pleasure and helping to re-establish local identity and sense of place. In this way public art is a form of community infrastructure.

3.11.8 Objects of cultural significance can include blue plaques, statues, monuments, fountains, memorials, parish boundary markers and other similar heritage assets.

3.11.9 Opportunities for public art in open spaces should be considered at an early stage to ensure that they are satisfactorily integrated into the design. Where works of public art are sited in the public realm, they should be endowed to secure their appropriate maintenance in perpetuity and their retention will be secured by conditions in planning permissions, undertakings or agreements. Where works of art form part of a development or are on private land it is expected that those pieces to be maintained to a high standard by the land owner.

Policy DM 11.3 Location of Hotels

Proposals for new hotel and apart-hotel accommodation will only be permitted where they:

- contribute to the balance and mix of uses in the immediate locality;
- do not result in adverse impacts on the amenity of neighbouring occupiers, including cumulative impacts;
- provide satisfactory arrangements for pick-up/drop-off, service delivery vehicles and coaches, appropriate to the size and nature of the hotel or apart-hotel;
- are inclusive, providing at least 10% of hotel rooms to wheelchair-accessible standards;
- ensure continuing beneficial use for historic buildings, where appropriate.

3.11.10 The City's central location makes it attractive for hotel development. While hotels may create jobs and support the visitor and business economy, it is important to ensure that other planning objectives are also met, in particular, ensuring that hotels do not prejudice the achievement of other priorities such as office growth, securing a balance of use, protecting residential amenity and addressing local traffic and servicing impacts. Large hotels with

substantial facilities may be inappropriate in some locations due to the adverse impact on amenity and traffic.

3.11.11 Hotel development will be assessed taking into account the impact of existing and proposed development, to ensure that the amenities of surrounding residents and businesses are not adversely affected, for example by noise nuisance and traffic congestion and an over-concentration of hotels is avoided. Night clubs and other facilities in hotels can cause nuisance to neighbours and restrictions may be imposed on their operation.

3.11.12 This policy applies to apart-hotels as well as standard hotel accommodation, both of which fall within Use Class C1. Apart-hotels differ from temporary sleeping accommodation (see policy DM 21.6) and serviced apartments in the level of facility they provide. To assist in distinguishing these uses, it should be noted that apart-hotels provide accommodation for short or medium-term stays and generally provide more amenities for daily use (such as a small kitchenette) than standard hotel accommodation. They operate in a similar way to standard hotel accommodation in that they have a reception area where customers can access services without pre-booking and are available on a nightly basis without a deposit being required against damages.

SUPPORTING EVIDENCE

- ~~One Square Mile: A Destination Strategy for the City of London City of London 2009~~
- ~~City of London Hotel Study Cushman & Wakefield for City of London 2009~~
- ~~City of London Cultural Strategy City of London 2010~~
- ~~City of London Olympic Strategy City of London 2009~~

~~3.11.6 The Sustainability Appraisal of this policy notes that it is likely to result in beneficial social effects. Potential negative environmental and economic effects due to increased visitor numbers will be mitigated by the City of London Destination Strategy encouraging people to visit lesser known attractions outside of 'peak' hours, and by encouraging sustainable tourism. Policy CS3 seeks to minimise anti-social behaviour.~~

RISK MANAGEMENT

~~3.11.7 3.11.13 Visitor numbers may fluctuate due to economic and other factors. The Development Management DPD Local Plan will allow some flexibility for visitor and cultural attractions to change use if no longer required. If visitor numbers increased significantly the action plan in the Destination Strategy would be reviewed to address the relevant issues and the need for a review of the ~~Core Strategy~~ Local Plan policy would be considered.~~

MONITORING

~~3.11.8 Key monitoring indicators are:~~

~~Promoting cultural activities~~

- ~~Cultural activity will be monitored through the City of London Cultural and Visitor Strategies~~

~~Encouraging communities to use cultural facilities~~

- ~~Visitor Attraction Trends published by VisitBritain~~
- ~~Number of new facilities permitted, under construction and completed~~

~~Encouraging an increase in hotels~~

- ~~Number and location of hotels and bedspaces permitted, under construction and completed~~

TOPIC 12: HISTORIC ENVIRONMENT

3.12.1 The City's unique townscape of historic buildings, streets and open spaces juxtaposed with contemporary modern buildings creates a varied, attractive and lively environment which attracts companies and visitors who support the services which contribute to its cultural vibrancy. The City contains a large number of heritage assets which include almost over 600 listed buildings, 26 conservation areas, 48 scheduled ancient monuments and 4 historic parks and gardens. There are many protected trees in conservation areas and with Tree Preservation Orders. Historic buildings characteristic of the City include notable buildings such as Mansion House, Guildhall and St Paul's Cathedral, livery company halls and a large number of churches. In addition, the Tower of London, which lies just outside the City boundary, is inscribed by UNESCO as a World Heritage Site of universal significance and its protection includes a buffer area which is partly within the City.

3.12.2 The City is the historic core from which the rest of London developed. Its townscape is derived from its historical development and role as a centre of commerce and trade. The street pattern comprises medieval lanes and alleyways, overlain by later, wider streets. The dense nature of development is ameliorated by the many green spaces, including a high number of small open spaces such as former churchyards, as well as larger gardens.

3.12.3 The City is characterised by many historically important buildings and collections of buildings. Its varied townscape includes areas of formal layout, those with a more domestic and small scale character, as well as larger building complexes such as Smithfield and Leadenhall Markets. There is a close proximity of very different historic areas with a common purpose and business function, which contributes to the special character of the townscape. The City can claim to have one of the greatest concentrations of church buildings of outstanding architectural quality in the country, with 42 places of worship, all but one of which are listed. The City also possesses a modern architectural heritage including, for example, the listed Barbican and Golden Lane Estates.

3.12.4 The City is one of the most important areas in the country in terms of archaeology. Its unique archaeological heritage dates back to the Roman settlement and has evolved through Saxon, medieval and later periods. Many Roman, Saxon and medieval remains still survive in the City today, including buried as well as visible remains, such as the Roman amphitheatre below Guildhall, the Roman and medieval London wall and the reconstructed Temple of Mithras in Queen Victoria Street. Archaeological investigation is an important aspect of development proposals.

CORE STRATEGIC POLICY

Policy CS12: Historic Environment

To conserve or enhance the significance of the City's heritage assets and their settings, and provide an attractive environment for the City's communities and visitors, by:

- 1. Safeguarding the City's listed buildings and their settings, while allowing appropriate adaptation and new uses.*
- 2. Preserving and enhancing the distinctive character and appearance of the City's conservation areas, while allowing sympathetic development within them.*
- 3. Protecting and promoting the evaluation and assessment of the City's ancient monuments and archaeological remains and their settings, including the interpretation and publication of results of archaeological investigations.*
- 4. Safeguarding the character and setting of the City's gardens of special historic interest.*
- 5. Preserving and, where appropriate, seeking to enhance the Outstanding Universal Value, architectural and historic significance, authenticity and integrity of the Tower of London World Heritage Site and its local setting.*

Figure 11: Conservation areas

DEVELOPMENT MANAGEMENT POLICIES

Policy DM 12.1 Managing change affecting all heritage assets and spaces

- 1) To protect and enhance heritage assets, their settings and significance.
- 2) Development proposals should be accompanied by supporting information to assess and evaluate heritage assets and the impact of development.
- 3) The loss of routes and spaces that contribute to the character and historic interest of the City will be resisted.
- 4) Development will be required to respect the character, scale and amenities of surrounding heritage assets and spaces.
- 5) Proposals for sustainable development, including the incorporation of climate change adaptation measures, must be sensitive to heritage assets.

3.12.5 Development proposals will be required to include supporting information describing any heritage assets that will be affected and the contribution made by their setting.

3.12.6 The pattern of streets, lanes, alleyways and other open spaces such as squares and courts is a distinctive element of the City's townscape and is of historic significance. The City Corporation will seek to maintain the widths and alignments of streets, lanes, and other

spaces where these have historic value or underpin the character of a location or their surroundings.

3.12.7 Developers should provide supporting information on:

- how existing trees will be affected by a proposed development;
- how gardens, surface treatment and landscaping will be affected by a proposed development;
- relevant landscaping, surface and street materials that relate positively to the City's urban environment and the character of a heritage asset and its setting;
- consideration of tranquillity and positive soundscapes;
- the types and suitability of historic materials in the public realm to complement the built fabric.

3.12.8 Developers should take account of the City Corporation's Conservation Area Character Summary & Management Strategy SPDs, Barbican and Golden Lane Listed Building Management Guidelines, Planning Advice Notes and Tree Strategy SPD, where relevant.

Policy DM 12.2 Development in conservation areas

- 1) Development in conservation areas will only be permitted if it preserves and enhances the character or appearance of the conservation area.
- 2) The loss of heritage assets that make a positive contribution to the character or appearance of a conservation area will be resisted.
- 3) Applications for demolition of non-heritage assets in conservation areas will be subject to a condition preventing demolition prior to the approval of detailed plans of any replacement building, and will normally be subject to a condition that the developer has secured the implementation of the construction of the replacement building.

3.12.9 The designation of a conservation area carries with it the statutory duty to consider how an area or areas can be preserved and enhanced. The City Corporation will take the opportunity presented by development proposals within a conservation area to strengthen the special character of that conservation area and its setting .

3.12.10 In the design of new buildings or alteration of existing buildings, developers should have regard to the size and shape of historic building plots, existing street patterns and the alignment and the width of frontages, materials, vertical and horizontal emphasis, layout and detailed design, bulk and scale, including the effects of site amalgamation on scale, hard and soft landscaping, all of which are often critical to the character of conservation areas and their settings. Regard should be paid to the richness, variety and complexity of the architectural form and detailing of buildings within conservation areas and to the broader character of area.

3.12.11 Conservation Area Consent is required to demolish unlisted buildings in a conservation area. A significant number of buildings in conservation areas, whilst not being listed, contribute positively to the character of these areas. Any application to demolish a building in a conservation area will be considered in terms of the contribution the building makes to the character or appearance of the area concerned.

Policy DM 12.3 Listed buildings

- 1) To resist the demolition of listed buildings.
- 2) To grant consent for the alteration or change of use of a listed building only where this would not detract from its special architectural or historic interest, character and significance.

3.12.12 Particular care and attention are required in planning works to listed buildings; even quite minor changes can have a significant effect on their overall character and appearance. The list description may not refer to all features of significance, and the interiors and plan forms of listed buildings are of importance. An inspection will therefore be necessary to identify the special interest and significance of the building and its curtilage.

3.12.13 Any extensions should be located where they minimise the effect on the listed building concerned, such as the rear of the building or light-wells, and should always be appropriate in scale and character. The bulk, height, location and materials of roof extensions will be particularly critical and should be appropriate to the period and style of the building and its setting.

3.12.14 Where listed buildings are no longer used for their original or previous function, it is important to find alternative uses that safeguard their future. Alternative uses must be compatible with the character of the building and should not entail alterations or the introduction of servicing arrangements which are detrimental to the building's special interest. In the Barbican and Golden Lane estates, developers should take account of the Listed Building Management Guidelines SPDs.

3.12.15 Where alterations are acceptable, the City Corporation may require recording of features that may be affected or revealed during the course of work, and a programme for implementation. Developers are required to notify the City Corporation of works to allow access to record buildings before alterations take place. This ensures that the Historic Environment Record is updated correctly. These circumstances would include occasions where the exterior of a building is likely to be radically changed as a consequence of major repairs, alteration or extension, or where interior work of significance would be lost, affected by sub-division, or substantially rebuilt.

Policy DM 12.4 Ancient monuments and archaeology

- 1) To require planning applications which involve excavation or ground works on sites of archaeological potential to be accompanied by an archaeological assessment and evaluation of the site, including the impact of the proposed development.
- 2) To preserve, protect, safeguard and enhance archaeological monuments, remains and their settings in development, and to seek a public display and interpretation, where appropriate.
- 3) To require proper investigation and recording of archaeological remains as an integral part of a development programme, and publication and archiving of results to advance understanding.

3.12.16 All of the City is considered to have archaeological potential, except where there is evidence that archaeological remains have been lost due to deep basement construction or other groundworks. The City Corporation will indicate the potential of a site, its relative importance and the likely impact on archaeology at an early stage so that the appropriate assessment and design development can be undertaken.

3.12.17 Planning applications that involve excavation or ground works must be accompanied by an archaeological assessment and evaluation of the site, including the impact of the proposed development. An evaluation should include trial work in agreed, specific areas of the site to provide more information and inform consideration of the development proposals by the City Corporation.

3.12.18 In some cases, a development may reveal a monument or archaeological remains which will be displayed on the site, or reburied. On sites where important monuments or archaeological remains exist, development must be designed to enhance physical preservation and avoid disturbance or loss. This can be done by the sympathetic design of basements, raising ground levels, site coverage, and the location of foundations to avoid or minimise archaeological loss and securing their preservation for the future, accepting that they will remain inaccessible for the time being.

3.12.19 The interpretation and presentation to the public of a visible or buried monument and enhancement of its setting should form part of the development proposals. Agreement will be sought, where appropriate, to achieve reasonable public access. The City Corporation will refuse schemes which do not provide an adequate assessment of a site, make any provision for the incorporation, safeguarding or preservation in situ of nationally or locally important monuments or remains, or which would adversely affect those monuments or remains.

3.12.20 A programme of archaeological work for investigation, excavation and recording and publication of the results to a predetermined research framework and by an approved organisation, should be submitted to and approved by the City Corporation, prior to development. This will be controlled through the use of conditions and will ensure the preservation of those remains by record.

Policy DM 12.5 Historic parks and gardens

- 1) To resist development which would adversely affect gardens of special historic interest included on the English Heritage register.
- 2) To protect gardens and open spaces which make a positive contribution to the historic character of the City.

3.12.21 The City contains numerous open spaces, gardens and churchyards which are of historic importance. Four parks and gardens are included on English Heritage's Register of Parks and Gardens of special interest: Barbican; Finsbury Circus; Inner Temple; Middle Temple.

3.12.22 Development proposals that may affect all the City's historic parks and gardens will be assessed to ensure that overshadowing does not occur, that their historic character is maintained, and that the setting, enjoyment, and views into and from these gardens are respected.

12.5.3 Schemes that include gardens of special historic interest within the development site should include proposals for their interpretation and presentation. They should also take account of the sensitivity of the gardens to climate change.

- ~~Draft Statement of Outstanding Universal Value DCMS February 2011~~

~~3.12.5 The Sustainability Appraisal of this policy notes that it is expected to result in positive social, economic and environmental impacts, locally and regionally.~~

RISK MANAGEMENT

~~3.12.6~~ 3.12.23 Increased pressure for development in the City has a potential impact on the historic environment, when not properly and carefully considered. Implementation of ~~this policy~~ these policies will seek to manage this risk, ensuring that new development and the historic environment can complement each other to benefit the City's image.

~~3.12.7~~ 3.12.24 The UNESCO World Heritage Committee has in the past considered placing the Tower of London on the Endangered List of World Heritage Sites, regarding the balance between conservation and development and the impact on views of the Tower from given locations. This is addressed through the Tower of London World Heritage Site Management Plan and is also acknowledged in the English Heritage document "Seeing the History in the View" and the GLA's Supplementary Planning Guidance "World Heritage Sites – Guidance on Settings" which seeks to strengthen the Tower's dynamic visual position.

~~3.12.8~~ 3.12.25 Future implementation of the Tower of London World Heritage Site Management Plan will have a significant impact on some major development proposals, particularly within the setting of the Tower of London. However the Management Plan also includes the requirement to provide a tool to help deliver an assessment of the local setting of the Tower and guidelines for managing the public realm which will inform future development proposals.

~~3.12.9~~ 3.12.26 Circular 07/2009 "Protection of World Heritage Sites", has implications with regard to the call-in procedure and the designation of "buffer zones" or "immediate settings" of protected buildings. This will again impact on future development proposals.

MONITORING

~~3.12.10~~ Key monitoring indicators are:

~~City heritage~~

- ~~• English Heritage: At Risk Register~~
- ~~• Composite heritage assets indicator including conservation areas and historic assets at risk~~
- ~~• Heritage assets protected from inappropriate development activity~~
- ~~• Number of mature trees / Tree Preservation Orders~~

~~World Heritage Site~~

- ~~• Heritage assets (including World Heritage Sites)~~
- ~~• Enhancement by / quality of developments in the local setting of the Tower of London~~

TOPIC 13: PROTECTED VIEWS

3.13.1 The City and its surrounding area contain many famous landmarks that are visible from viewpoints across London. Views of the City's skyline from the River Thames are especially notable and certain local views of St. Paul's Cathedral have been protected successfully by the City Corporation's 'St. Paul's Heights' code since the 1930s. Landmarks such as St. Paul's Cathedral, the Monument and the Tower of London are internationally renowned and add to the City's "world class" status. These views are protected by an integrated range of national, regional and local policies.

3.13.2 The London Plan sets out the overall view protection requirements which apply to Strategically Important Landmarks. The Mayor of London's View Management Framework (LVMF) SPG (2010/2012) provides more detail, including detailed management plans for each protected view of landmarks such as St. Paul's Cathedral and the Tower of London. The LVMF defines a Protected Vista for the Tower of London. Any development in the Wider Setting Consultation Area in the background of this Protected Vista should preserve or enhance the viewer's ability to recognise the landmark and appreciate its Outstanding Universal Value. City sites have the potential to be intrusive in the view because of their relative proximity to the Tower. It is likely that proposed new development in the City which exceeds the threshold plane will not be acceptable as it will not preserve the view.

3.13.3 The Tower of London has additional view protection, implemented through the Tower of London World Heritage Site Management Plan (2007). This defines and protects a range of "settings" of the Tower World Heritage Site, which includes its relationship to historic features that are visible in the urban landscape. All new buildings in the setting of the Tower should contribute to the quality of views both of and from the Tower.

3.13.4 The Design Council/CABE and English Heritage Guidance on Tall Buildings provides advice to local authorities and developers on the process of assessing development proposals that have protected views implications.

CORE STRATEGIC POLICY

Policy CS13: Protected Views

To protect and enhance significant City and London views of important buildings, townscape and skylines, making a substantial contribution to protecting the overall heritage of the City's landmarks, by:

1. Implementing the Mayor's London View Management Framework SPG to manage designated views of strategically important landmarks (St. Paul's Cathedral and the Tower of London), river prospects, townscape views and linear views.
2. Protecting and enhancing: local views of St. Paul's Cathedral, through the City's "St. Paul's Heights" code; the setting and backdrop to the Cathedral; significant local views of and from the Monument; and views of historic City landmarks and skyline features.
3. Securing an appropriate setting of and backdrop to the Tower of London World Heritage Site, which adjoins the City, so ensuring its Outstanding Universal Value, taking account of the Tower of London World Heritage Site Management Plan (2007).

Figure 12: Protected views

- ~~St. Paul's and Monument Views Supplementary Planning Guidance City of London 2002~~
- ~~Tower of London World Heritage Site Management Plan Historic Royal Palaces 2007~~

~~3.13.5 The Sustainability Appraisal notes that this policy is expected to result in positive social and environmental impacts, locally and regionally. Economic impacts are uncertain as there could be a restricted supply of floorspace in tall buildings. This impact will be mitigated by Policy CS14.~~

RISK MANAGEMENT

~~3.13.6 3.13.5 The protection and enhancement of views is dependent on development proposals in relevant areas coming forward.~~

MONITORING

~~3.13.7 Key monitoring indicators are:~~

~~Strategically important views~~

- ~~Number of developments that improve or are contrary to the London View Management Framework protected vistas~~

~~Local views~~

- ~~Number of developments that improve or infringe the 'St Paul's Heights' views~~

TOPIC 14: TALL BUILDINGS

3.14.1 The City contains many tall buildings (defined as those which significantly exceed the height of their general surroundings), particularly in a cluster of the tallest buildings in the east (see Policy CS7). Tall buildings that achieve a world class standard of architectural quality and whose context and layout are carefully considered can help to enhance the City's environment and economy, and contribute to London's world city role.

3.14.2 Guidance issued by Design Council/CABE and English Heritage encourages local planning authorities to consider the scope for tall buildings as part of strategic planning and to identify locations where tall buildings are, and are not, appropriate. The London Plan requires Local Development Frameworks Plans to identify areas that are appropriate, sensitive or inappropriate to tall buildings and sets out criteria for assessing the suitability of proposals against which planning applications in the City will be considered. The City Corporation is required to refer applications for buildings over 150 metres in height (25 metres in the Thames Policy Area) to the Mayor of London. The Mayor's London View Management Framework Supplementary Planning Guidance (see Policy CS13) explains the London Plan's policies in more detail.

3.14.3 While tall buildings are a characteristic element of the skyline, the City's unique environment and built heritage means that particular consideration should be given to their impacts throughout the City. Areas outside of the City may also be sensitive to the development of tall buildings within the City. The location and impact of future tall buildings therefore needs to be carefully considered.

Figure 13: Tall buildings

CORE STRATEGIC POLICY

Policy CS14: Tall Buildings

To allow tall buildings of world class architecture and sustainable design in suitable locations and to ensure that they take full account of the character of their surroundings, enhance the skyline and provide a high quality public realm at ground level, by:

1. Permitting tall buildings on suitable sites within the City's Eastern Cluster.
2. Refusing planning permission for tall buildings within inappropriate areas, comprising: conservation areas; the St. Paul's Heights area; St. Paul's protected vista viewing corridors; and Monument views and setting, as defined on the ~~Proposals~~ Policies Map.
3. Elsewhere in the City, permitting proposals for tall buildings only on those sites which are considered suitable having regard to: the potential effect on the City skyline; the character and amenity of their surroundings, including the relationship with existing tall buildings; the significance of heritage assets and their settings; and the effect on historic skyline features.
4. Ensuring that tall building proposals do not adversely affect the operation of London's airports.

- ~~City of London Tall Buildings Evidence Paper City of London 2010~~

~~3.14.4 The Sustainability Appraisal notes that this policy is expected to result in positive social, economic and environmental impacts, locally.~~

RISK MANAGEMENT

~~3.14.5 3.14.4 The recession of 2008-2009 has Economic conditions since 2008 have impacted on development, slowing down or delaying tall building proposals across the City. The City Corporation will monitor take up of planning applications and completions for tall buildings and, if a long term reduction in such development is evident, will consider whether a change to the Core Strategy Local Plan is required.~~

MONITORING

~~3.14.6 Key monitoring indicators are:~~

- ~~Number and location of tall buildings permitted, under construction and completed~~

TOPIC 15: SUSTAINABLE DEVELOPMENT AND CLIMATE CHANGE

3.15.1 The City of London is a sustainable location, with good public transport, a high density of development and many small open spaces, making best use of the available land. All development takes place on previously developed land. Future development must contribute to improving this approach.

3.15.2 The drivers for sustainable development are increasing, affecting global and local businesses, workers, residents and visitors. The pace and prestige nature of development in the City presents opportunities to incorporate innovative eco-design in both new and existing buildings including the numerous historic buildings in the City. Particular issues for the City include:

- **Energy consumption:** Electricity consumption in the City is high and rising to service IT needs and associated cooling in the City's expanding office stock;
- **Air quality:** Nitrogen dioxide and particulate (PM10) levels in the City are high. Areas of greater vulnerability to poor air quality include residential areas, the City's schools and St Bartholomew's Hospital;
- **Urban heat island and climate change:** The City can experience temperatures up to 10°C higher than the countryside around London. This will get worse with climate change and adaptation is imperative if the City is to remain a comfortable place to live, work and visit.

3.15.3 The London Plan contains comprehensive policies on sustainable design and climate change, setting targets for substantial carbon emission reduction. The London Plan seeks a 60% reduction in emissions by 2025. The London Plan is complemented locally by the City of London's Energy, Noise, Air Quality and Climate Change Mitigation and Adaptation Strategies and Codes of Practice.

Figure 15: Area served by the CHP network

CORE STRATEGIC POLICY

Policy CS15: Sustainable Development and Climate Change

To enable City businesses and residents to make sustainable choices in their daily activities creating a more sustainable City, adapted to the changing climate, by:

1. Requiring all redevelopment proposals to demonstrate the highest feasible and viable sustainability standards in the design, construction, operation and "end of life" phases of development. Proposals for major development should aim to achieve a BREEAM rating of "excellent" or "outstanding". Residential development should aim to achieve a minimum standard of Code for Sustainable Homes level 4, rising to level 6 by 2016 or in line with government targets.
2. Requiring development to minimise carbon emissions and contribute to a City wide reduction in emissions:
 - (i) adopting energy-efficiency measures;
 - (ii) enabling the use of decentralised energy, including the safeguarded Citigen CCHP network, CCHP-ready designs in areas where CCHP networks are not yet available, and localised renewable energy technologies;

(iii) adopting offsetting measures to achieve the Government's zero carbon targets for buildings.

3. *Avoiding demolition through the reuse of existing buildings or their main structures, and minimising the disruption to businesses and residents, using sustainably sourced materials and conserving water resources.*
4. *Requiring development to positively address:*
 - (i) local air quality, particularly nitrogen dioxide and particulates PM₁₀ (the City's Air Quality Management Area pollutants);*
 - (ii) protection of the City's quiet areas and quiet times of day for businesses (daytime) and residents (night time);*
 - (iii) the need to limit the City's contribution to 'sky glow';*
 - (iv) water quality and flood risk particularly in areas at risk of sewer flooding;*
 - (v) land contamination, ensuring development does not result in contaminated land;*
 - (vi) the need to enhance biodiversity and provide for its conservation and enhancement, particularly for the City's flagship species and the City's priority habitats (urban green spaces, churchyards and cemeteries, built structures and the tidal Thames).*
5. *Incorporating climate change adaptation measures into development and the City's infrastructure, including street scene, transport and utility infrastructure, social and emergency infrastructure, and heritage assets, having regard to the need to protect their historic significance.*

DEVELOPMENT MANAGEMENT POLICIES

Policy DM 15.1 Sustainability requirements

- 1) Sustainability Statements must be submitted with all planning applications in order to ensure that sustainability is integrated into designs for all development.
- 2) For major development (including new development and refurbishment) the Sustainability Statement should include as a minimum:
 - BREEAM or Code for Sustainable Homes pre-assessment;
 - an energy statement in line with London Plan requirements;
 - demonstration of climate change resilience measures.
- 3) BREEAM or Code for Sustainable Homes assessments should demonstrate sustainability in aspects which are of particular significance in the City's high density urban environment. Developers should aim to achieve the maximum possible points to address the City's priorities.
- 4) Innovative sustainability solutions will be encouraged to ensure that the City's buildings remain at the forefront of sustainable building design. Details should be included in the Sustainability Statement.
- 5) Planning conditions will be used to ensure that Local Plan assessment targets are met and the development accords with them.

3.15.4 Sustainability Statements should be used to provide comprehensive evidence of the sustainability of each development, demonstrating that the design meets the highest feasible standards unless it can be demonstrated that such standards make the development unviable. For major development, standard methods of assessment, such as the Building Research Establishment Environmental Assessment Method (BREEAM) and Code for Sustainable Homes (CfSH) should be used wherever possible. The City Corporation will identify priority credits, through a supplementary planning document which developers should aim to achieve. A summary sheet showing the achievement of BREEAM or Code for Sustainable Homes credits should be included in the sustainability statement.

3.15.5 Although minor development may only provide limited opportunities for the incorporation of sustainability features it is important that sustainability is considered at the design stage for all projects. For most minor development inclusion of information in the Design and Access Statement will suffice.

Policy DM 15.2 Energy and CO₂ emissions assessments

- 1) Development design must take account of location, building orientation, internal layouts and landscaping to reduce likely energy consumption.
- 2) For all major development energy assessments must be submitted with the application demonstrating:
 - energy efficiency – showing the maximum improvement over current Building Regulations to achieve the required Fabric Energy Efficiency Standards;
 - carbon compliance levels required to meet national targets for zero carbon development using low and zero-carbon technologies, where feasible;
 - where on-site carbon emission reduction is unviable, offsetting of residual CO₂ emissions through “allowable solutions” for the lifetime of the building to achieve national targets for zero-carbon homes and non-domestic buildings. Achievement of zero carbon buildings in advance of national target dates will be encouraged;
 - anticipated residual power loads and routes for supply.

3.15.6 Emissions of carbon dioxide and other greenhouse gases must be minimised in order to reduce the contribution that the City’s buildings make to climate change,. National targets require all new homes built from 2016 and all new non domestic buildings from 2019 to be Zero Carbon. The definition of Zero Carbon consists of three elements:

- energy efficiency;
- carbon compliance;
- “allowable solutions” or carbon offsetting.

3.15.7 In developing energy strategies to achieve carbon compliance developers must take account of the particular opportunities and constraints that exist in the City. Building design, orientation and layouts can assist in minimising energy requirements through the positioning of rooms that require heating where they will benefit from passive solar gain, and by locating temperature-sensitive rooms, such as server rooms, where they will avoid overheating. Decentralised energy networks represent the most effective option for limiting carbon emissions in high density urban environments such as the City.

3.15.8 The City is an air quality management area for NO_x and fine particulates and it is important that renewable energy technologies such as biomass and biofuel use do not

exacerbate this problem. Where combustion-based renewable technologies are proposed developers will need to provide evidence that their use will not result in the deterioration of air quality.

3.15.9 Ground Source Heat Pumps (GSHP) may provide a suitable source of low carbon heat and cooling in some parts of the City. Developers must liaise with the Environment Agency to ascertain the suitability of this option for their site and obtain the necessary licences ensuring long term protection of underground resources.

3.15.10 Other low and zero carbon technologies should be considered. The technologies most likely to be suitable in the City include photovoltaic and solar thermal and air source heat pumps. However, in this fast-evolving field the use of innovative new technologies should be investigated.

3.15.11 In preparing energy statements developers should make use of guidance provided by the GLA. Energy statements should identify the anticipated power loads that the building is being designed to provide for, and anticipated routes for supply.

Policy DM 15.3 Low and zero carbon technologies

- 1) For development with a peak heat demand of 100 kilowatts or more developers should investigate the feasibility and viability of connecting to existing decentralised energy networks. This should include investigation of the potential for extensions of existing heating and cooling networks to serve the development and development of new networks where existing networks are not available. Connection routes should be designed into the development where feasible and connection infrastructure should be incorporated wherever it is viable.
- 2) Where connection to offsite decentralised energy networks is not feasible, installation of on-site CCHP and the potential to create new localised decentralised energy infrastructure through the export of excess heat must be considered.
- 3) Where connection is not feasible or viable, all development with a peak heat demand of 100 kilowatts or more should be designed to enable connection to future decentralised energy networks.
- 4) Other low and zero carbon technologies must be evaluated. Non combustion-based technologies should be prioritised in order to avoid adverse impacts on air quality.

3.15.12 The most effective means of reducing carbon emissions for high density urban environments such as the City is through combined heat and power networks, where excess heat from power generation is used to provide heat (and cooling, through tri generation). The City of London heat mapping study shows that there is sufficient heat and cooling load to support a comprehensive decentralised energy network throughout the City.

3.15.13 The existing Citigen CCHP network in the north of the City could be expanded to cover a wider area, but there is also a strong case for the development of additional CCHP networks in other parts of the City. This can be achieved through the installation of localised CCHP infrastructure serving groups of buildings with complementary heat demands; for example, office development which requires daytime heat can be paired with hotels and residential premises which require more heat at night. Developers should use the London Heat Map to investigate possible opportunities for connection to existing networks or for the

development of new networks in the vicinity of their development sites. The installation of decentralised energy network infrastructure at building development stage will enable cost and carbon savings and contribute to security of supply for the lifetime of the building. As more developments connect, the viability of the City's CCHP networks will improve leading to greater incentives for existing properties to connect.

3.15.14 The London Plan requires developers to prepare an energy assessment. This should provide details of the feasibility and viability of connection to existing heating and cooling networks as required by both the London Plan and the Local Plan.

Policy DM15.4 Offsetting of carbon emissions

- 1) All feasible and viable on-site or near-site options for carbon emission reduction must be applied before consideration of offsetting. Any remaining carbon emissions calculated for the lifetime of the building that cannot be mitigated on-site will need to be offset using "allowable solutions".
- 2) The City Corporation will require a financial contribution, negotiated through a S106 planning obligation to be made to the City's Carbon Offsetting Fund.
- 3) Offsetting may also be applied to other resources including water resources and rainwater run-off to meet sustainability targets off-site where on-site compliance is not feasible.

Figure B Possible allowable solutions for offsetting carbon emissions (see Appendix 4)

Source: Allowable solutions for tomorrow's new homes July 2011 Zero Carbon Hub

3.15.15 There are many factors which influence the level of carbon emissions from commercial and residential buildings, including heating, cooling and ventilation, use of information technology, lighting and catering. However, building design is a major contributing factor in creating environments where carbon emissions can be minimised through energy efficiency, low and zero carbon energy supply and demand management.

3.15.16 The City of London has been at the forefront of building design which enables occupants to reduce their carbon emissions. However, the City's high density environment means that it is not always feasible or viable to meet zero-carbon standards on-site. In such cases, offsetting provides a mechanism to achieve zero net emissions from the building over its lifetime through investment in carbon reduction elsewhere. The City Corporation will require a financial contribution to its Carbon Offsetting Fund, negotiated through a s106 planning obligation, which will be used to deliver local carbon-offsetting projects that reduce the overall emissions from the City. Further details will be provided in a Supplementary Planning Document.

Policy DM 15.5 Climate change resilience and adaptation

- 1) Developers will be required to demonstrate through Sustainability Statements that all major developments are resilient to the predicted climate conditions during the building's lifetime.

- 2) Building designs should minimise any contribution to the urban heat island effect caused by heat retention and waste heat expulsion in the built environment.

3.15.17 The City of London Climate Change Adaptation Strategy concludes that the City is likely to experience effects including hotter, drier summers, milder, wetter winters and more frequent extreme high temperatures and heavy downpours of rain.

3.15.18 Buildings that are being planned now will experience these changed climate conditions during their lifetime and must be designed to be resilient to a wider range of weather conditions than existing buildings. BREEAM and Code for Sustainable Homes assessments do not currently include climate change adaptation and resilience; therefore, the City Corporation will expect this aspect to be addressed through the Sustainability Statement. As a minimum, developers will be expected to consider the potential for:

- solar shading to prevent solar gain through glazing;
- High thermal mass of the building fabric to moderate temperature fluctuations;
- design of “cool roofs”, installation of green roofs and green walls to prevent overheating;
- urban greening to improve the micro climate and benefit biodiversity;
- rainwater attenuation / SuDs to prevent surface water flooding;
- flood risk assessment and mitigation to prevent flooding from other sources;
- biodiversity protection and enhancement to enable wildlife to survive changed climate conditions;
- air quality impact assessment to ensure that buildings and services will not contribute to worsening vulnerability to photochemical smog;
- passive ventilation and heat recovery.

Policy DM 15.6 Air quality

- 1) Developers will be required to consider the impact of their proposals on air quality and, where appropriate, provide an Air Quality Impact Assessment.
- 2) Development that would result in deterioration of the City’s nitrogen dioxide or PM₁₀ pollution levels will be resisted.
- 3) Major developments will be required to achieve maximum points for the pollution section of the BREEAM or Code for Sustainable Homes assessment relating to NO_x emissions.
- 4) Developers will be encouraged to install non-combustion low- and zero-carbon energy technology. A detailed air quality impact assessment will be required for combustion-based low- and zero-carbon technologies, such as CHP plant and biomass or biofuel boilers, and necessary mitigation must be approved by the City Corporation.
- 5) Demolition, construction and the transport of construction materials and waste must be carried out in such a way as to minimise air quality impacts.
- 6) Air intake points should be located away from existing and potential pollution sources (eg busy roads and chimneys). All chimneys should terminate above the roof height of the tallest building in the development in order to ensure maximum dispersion of pollutants.

3.15.19 Air quality can be affected by a range of factors including smoke, fumes, gases, dust, steam and odours. The City Corporation will consider the individual and cumulative impact of development on local air quality and the wider impacts, particularly of transport-related emissions, on regional air quality. Buildings are responsible for 31% of total NOx emissions and 14% of PM₁₀ emissions in the City. The development process provides an opportunity to reduce this level of emissions by reducing direct emissions from buildings and by reducing the emissions associated with traffic which serves the building. The Environmental Impact Assessment or Sustainability Statement should be used to provide evidence of the air quality impact of development. The City of London Air Quality Strategy provides detailed information on the air quality issues facing the City of London and is a useful reference document when preparing air quality evidence to accompany planning proposals. The City of London Code of Practice for Deconstruction and Construction Sites provides guidance on procedure to be adopted to minimise air quality impacts of these activities.

Policy DM 15.7 Noise pollution

- 1) The layout, orientation and use of buildings should be designed such that operational noise does not adversely affect neighbours, particularly noise-sensitive land uses such as housing, hospitals, schools and quiet open spaces.
- 2) Any potential noise conflict between existing activities and new development should be minimised. Where the avoidance of noise conflicts is impractical, mitigation measures such as noise attenuation and restrictions on operating hours will be implemented through appropriate planning conditions.
- 3) Noise and vibration from deconstruction and construction activities must be minimised and mitigation measures put in place to limit noise disturbance in the vicinity of the development.
- 4) Developers will be required to demonstrate that there will be no increase in background noise levels associated with new plant and equipment.

3.15.20 Although the City is busy and densely built up, there nevertheless needs to be protection from excessive noise for the general business environment, quiet areas, such as open spaces, and noise-sensitive uses, such as hospitals and housing, and the City's ambient noise levels should not increase. For example, heating and ventilation plant should be designed so that it does not adversely affect nearby open spaces which are valued for their quiet environment. The level of noise emitted from any new plant should be below the background level by at least 10dBA.

3.15.21 Policy DM 3.5 provides guidance on the location and control of night-time entertainment and related uses.

3.15.22 The City of London Noise Strategy identifies the strategic approach to noise in the City and the City's Code of Practice for Deconstruction and Construction provides guidance on procedures to be adopted to minimise the noise impacts of development. The use of planning conditions or obligations will be considered where this could successfully moderate adverse effects, for example, by limiting hours of operation.

Policy DM 15.8 Contaminated land and water quality

Where development involves ground works, developers will be expected to carry out a detailed site investigation to establish whether the site is contaminated and to determine the potential for pollution of the water environment. Suitable mitigation must be identified to remediate any contaminated land and prevent potential adverse impacts of the development on land or water quality.

3.15.23 When a site is developed and ground conditions change there is potential for contaminants to be mobilised, increasing the risk of harm. Site investigation should establish whether the proposed use is compatible with the land condition.

3.15.24 Pre-application discussions should be used to identify the particular issues related to environmental protection that are relevant to each development site. The City of London's Air Quality, Noise and Contaminated Land Strategies provide details of the issues likely to be encountered in different parts of the City and should be used for reference by developers.

WHO WILL DELIVER

~~3.15.4 The Sustainability Appraisal found that this policy is likely to have beneficial impacts when assessed against social and environmental objectives, and uncertain economic impacts. This policy provides essential mitigation against possible negative impacts of many other options.~~

RISK MANAGEMENT

~~3.15.5 3.15.25 Climate change impacts may be greater than anticipated, requiring additional mitigation and adaptation. By keeping up to date with emerging trends the City Corporation will be well placed to adjust its policy approach to address such trends. This could be implemented via the future Development Management DPD policies setting appropriate standards responding to changing circumstances.~~

~~3.15.6 3.15.26 Increased electronic trading may require greater data processing capability, with high electricity demand leading to an increase in the City’s carbon footprint. The City will continue to explore innovative solutions to offset such trends, e.g. increased use of decentralised and renewable energy, improved IT infrastructure design. If energy trends data shows continued escalation in electricity consumption then changes in legislation may be needed to enable energy providers to invest in new infrastructure ahead of demand.~~

MONITORING

~~3.15.7 Key monitoring indicators are:~~

Sustainable Design

- ~~Proportion of major developments achieving BREEAM “excellent” or “outstanding”~~
- ~~Proportion of residential development achieving a minimum of Code for Sustainable Homes (CSH) Level 4~~

Resource use and carbon footprint

- ~~Amount of floorspace on previously developed land~~
- ~~Production of secondary/recycled aggregates~~
- ~~Energy trends data published by DECC~~
- ~~renewable energy capacity by type~~

Environmental protection

- ~~NI 194 Air quality—levels of Nitrogen Dioxide and PM10s~~
- ~~Amount of contaminated land~~
- ~~Net change in the number of open spaces~~

Climate change and urban heat island

- ~~NI 188 “Adapting to Climate Change”~~

TOPIC 16: PUBLIC TRANSPORT, STREETS AND WALKWAYS

3.16.1 The City is served by an extensive public transport network with six mainline railway stations, 12 underground and DLR stations and 54 bus routes within the City and stations such as London Bridge just outside its boundary serving large numbers of City commuters. Public transport also links the City to the five London airports and the Channel Tunnel rail network for international travel.

3.16.2 Nearly 90% of journeys to work are made by public transport, with only 6% by private car. Car ownership among City residents (38%) is the lowest of any local authority area in the United Kingdom.

3.16.3 The strategic importance of the City's public transport network has been recognised by national and regional government through the approval and investment in Crossrail, Thameslink and London Overground (~~the East London Line extension~~). The City Corporation strongly supports these schemes and is contributing significant funding to Crossrail.

3.16.4 Increased public transport capacity, coupled with higher employment levels, will increase pedestrian numbers on the City's already busy streets. Climate change may result in further impacts through localised flooding and high urban temperatures. These impacts must be addressed to provide efficient, safe and attractive walking routes through the City's streets, lanes and walkways.

3.16.5 In contrast to other parts of London, taxis and goods vehicles comprise a high proportion of the City's motor vehicle traffic with private vehicles comprising less than 30% of this traffic. Congestion remains an issue in some locations at certain times of the day. Traffic management measures that aim to improve journey time reliability form an important element in tackling this.

3.16.6 In common with the rest of central London the City has been designated as an air quality management area for particulate matter and nitrogen dioxide, much of which comes from road traffic, and an air quality action plan has been adopted to address this issue. The role of buses in enabling efficient use of road space, thereby reducing air pollution and congestion, forms an important element of the City's transport mix.

3.16.7 The Mayor's Transport Strategy provides regional policy guidance on transport, which is implemented at a local level through the City's Local Implementation Plan. Transport providers serving the City also publish plans and strategies that influence investment and management decisions affecting the City's transport network.

Figure 16: Highway Hierarchy

Figure 17: Public Transport

CORE STRATEGIC POLICY

Policy CS16: Public Transport Streets and Walkways

To build on the City's strategic central London position and good transport infrastructure to further improve the sustainability and efficiency of travel in, to, from and through the City, by:

- 1. Securing increased public transport capacity through support for Crossrail (including safeguarding land as shown on the ~~Proposals~~ Policies Map), and the completion upgrading of the Thameslink programme. ~~and the completion of London Overground (the East London Line extensions).~~*
- 2. Facilitating further improvements to public transport capacity and step-free access at existing mainline rail and London Underground stations including Aldgate, Bank ~~Cannon Street~~ and St Paul's, subsurface and Northern Line upgrades and planning for possible longer term improvements such as the westward extension of the Docklands Light Railway beyond Bank and the City Tram scheme.*
- 3. Improving conditions for safe and convenient walking and cycling, incorporating adaptation to the City's anticipated future climate:
(i) improving access routes and the streetscape around stations, with particular focus on Bank and the proposed Crossrail station entrances at Farringdon, Lindsey Street, Moorgate and Liverpool Street;
(ii) designing and implementing environmental enhancement strategies that encourage pedestrian and cycle travel, taking account of the needs of disabled people;
(iii) supporting London-wide schemes such as the cycle hire scheme and cycle superhighways, in parallel with initiatives to improve cycle parking in the City;
(iv) working with TfL to reinstate two-way working and surface-level pedestrian crossings in place of the Aldgate (St Botolph's section) gyratory.*
- 4. Minimising congestion and reducing vehicle emissions:
(i) directing through traffic within the City onto appropriate streets in accordance with the Highway Hierarchy. Bus routes will continue to serve customer needs throughout the City and will not be subject to the highway hierarchy;
(ii) continuing to facilitate intermediate modes (coaches, car clubs, taxis and private hire vehicles) and to provide for essential motor vehicle traffic, including addressing the servicing of City buildings and the needs of disabled people, whilst minimising the environmental impact of these modes;
(iii) encouraging the provision of infrastructure for alternative-fuel vehicles, such as off-street electric vehicle recharging points;
(iv) using traffic management measures and street works permits to improve journey time reliability on the City's roads;
(v) requiring developers to demonstrate, through transport assessments, construction logistics plans, travel plans and delivery/servicing plans, how the environmental impacts of travel and servicing will be minimised, including through the use of river transport.*

DEVELOPMENT MANAGEMENT POLICIES

Policy DM 16.1 Transport impacts of development

- 1) Development proposals that are likely to have effects on transport must be accompanied by an assessment of the transport implications during both construction and operation, in particular addressing impacts on:
 - pedestrian environment and movement;
 - cycling infrastructure provision;
 - public transport;
 - the street network.
- 2) Transport Assessments and Travel Plans should be used to demonstrate adherence to the City Corporation's transportation standards.

3.16.8 Development has the potential to create significant changes in transport demands and patterns which must be assessed at an early stage. Any adverse impacts must be minimised or mitigated through building design and management of operational activities. The thorough assessment of transport impacts will provide developers with the opportunity to demonstrate compliance with the City Corporation's required standards. Guidance on transport assessments is available in Transport for London's Transport Assessment Best Practice Guidance .

3.16.9 Transport Assessments and Travel Plans will be required for all major development (over 1000sq m or 10 or more residential units) and any other development that will cause significant transport impacts over the local or wider area (Table 16.1). Transport Assessments and Travel Plans should take account of transport infrastructure, transport services, transport capacity constraints and how the impact of the development on the transport system can be mitigated. In particular, assessments and plans should give consideration to pedestrian movement associated with the development and impacts on the bus, underground and railway networks. The needs of cyclists and parking for the disabled should form part of the Transport Assessment. Travel Plans must maximise the use of active transport modes (principally walking and cycling) and public transport. For developments that will have a lesser transport impact a Transport Statement will be required.

3.16.10 Delivery and Servicing Plans will be required for all major development and any other development that will cause significant transport impacts on the local or wider area, through operational deliveries and servicing.

3.16.11 Construction Logistics Plans will be required for all major development and for any development that will cause significant transport impacts during its construction phase.

| Land use | Threshold | |
|--------------------------|-------------------------------------|--|
| Offices | 1000 sq m | |
| Residential | 10 units | |
| Retail | 1000 sq m | |
| Hotel | 10 bed spaces | |
| Health | 1000sq m | |
| Transport infrastructure | >500 additional trips per peak hour | |
| Mixed use | 1000 sq m | |

Table 16.1 Thresholds for Transport Plans

3.16.12 Where practicable, Transport Assessments, Travel Plans and other statements should be combined into a single document. Applicants should discuss the scope of the transport documentation required early in the pre-application phase to ensure that it provides an assessment relevant to the City's specific circumstances.

3.16.13 Mitigation for adverse impacts should be detailed in assessments and plans. Where flexible permissions are granted which allow a range of uses, interim assessments and plans should be prepared at application stage and updated when occupants and uses are finalised.

Policy DM 16.2 Pedestrian movement

- 1) Pedestrian movement must be facilitated by provision of suitable pedestrian routes through and around new developments, by maintaining pedestrian routes at ground level, and the upper level walkway network around the Barbican and London Wall.
- 2) The loss of a pedestrian route will normally only be permitted where an alternative public pedestrian route of at least an equivalent standard is provided having regard to:
 - the extent to which the route provides for current and all reasonably foreseeable future demands placed upon it-, including at peak periods;
 - the shortest practicable routes between relevant points.
- 3) Routes of historic importance should be safeguarded as part of the City's characteristic pattern of lanes, alleys and courts, including the route's historic alignment and width.
- 4) The replacement of a route over which pedestrians have rights, with one to which the public have access only with permission will not normally be acceptable.
- 5) Public access across private land will be encouraged where it enhances the connectivity, legibility and capacity of the City's street network. Spaces should be designed so that signage is not necessary and it is clear to the public that access is allowed.
- 6) The creation of new pedestrian rights of way will be encouraged where this would improve movement and contribute to the character of an area, taking into consideration pedestrian routes and movement in neighbouring areas and boroughs, where relevant.

3.16.14 The capacity of the City's streets and lanes to accommodate movement and to provide social space is under pressure in many parts of the City and at certain times of the day due to increasing numbers of pedestrians. Employment growth and new public transport infrastructure such as Crossrail will increase pressure on the City's streets. New pedestrian routes should be provided wherever feasible, including through the provision of enhanced public access to private spaces and routes.

3.16.15 In considering proposals for new pedestrian routes, the City Corporation will have regard to the width of proposed routes. The City Walkway network provides an important means of pedestrian access to some parts of the City. It is important that the integrity of the City Walkway network is maintained in and around the Barbican complex, where it is an integral element of pedestrian movement. ~~and~~ It is important that lift access, for people with restricted mobility, is maintained or provided in new developments.

Policy DM 16.3 Cycle parking

- 1) On-site cycle parking must be provided in accordance with the local standards set out in Table 16.2 or, for other land uses, with the standards of London Plan.
- 2) On-street cycle parking in suitable locations will be encouraged to meet the needs of cyclists.

| Land Use | Minimum Number of Cycle Parking Spaces |
|------------------------------|--|
| B1 business | 1 space per 125 m ² of gross floorspace (gross external area) |
| Mainline railway termini | 1 space per 600 morning peak hour exits |
| Mainline railway non-termini | 1 space per 1,000 morning peak hour exits |
| Bus stations | 1 space per 50 morning peak hour alighting passengers |

Table 16.2: Local Minimum Cycle Parking Standards

3.16.16 Cycle parking must be provided within new developments and refurbishments. On-street cycle parking and the Mayor of London's cycle hire scheme are public facilities and are not to be regarded as substitutes for private on-site cycle parking and will not be included within the cycle parking requirement for any development.

Policy DM 16.4 Facilities to encourage active travel

- 1) Ancillary facilities must be provided within new and refurbished buildings to support active transport modes such as walking, cycling and running. All commercial development should meet the minimum requirements shown in table 6.3, wherever feasible and viable.
- 2) Where facilities are to be shared with a number of activities they should be conveniently located to serve all proposed activities.
- 3) Showers, changing areas, lockers/storage and drying facilities should be designed to a high standard and include facilities for people with disabilities.

| Facility | Threshold – Gross External Area (GEA) | Level of provision |
|-----------------------------------|---------------------------------------|---|
| Changing area | 1000m ² | 10m ² per 1000m ² GEA |
| Showers | 1000m ² | 1 per 750 m ² GEA |
| Lockers or other clothing storage | 1000m ² | 10 per 1000m ² GEA |
| Drying facilities | 1000m ² | 10m ² per 1000m ² GEA |

Table 16.3 Provision of ancillary facilities

Policy DM 16.5 Parking and servicing standards

- 1) Developments in the City should be car-free except for designated Blue Badge spaces. Where other car parking is exceptionally provided it must not exceed London Plan's standards.
- 2) Designated parking must be provided for Blue Badge holders within developments in conformity with London Plan requirements and must be marked out and reserved at all times for their use. Disabled parking spaces must be at least 2.4 m wide and at least 4.8 m long and with reserved areas at least 1.2 m wide, marked out between the parking spaces and at the rear of the parking spaces.
- 3) Except for dwelling houses (use class C3), whenever any car parking spaces (other than designated Blue Badge parking) are provided, motor cycle parking must be provided at a ratio of 10 motor cycle parking spaces per 1 car parking space. At least 50% of motor cycle parking spaces must be at least 2.3m long and at least 0.9m wide and all motor cycle parking spaces must be at least 2.0m long and at least 0.8 m wide.
- 4) On site servicing areas should be provided to allow all goods and refuse collection vehicles likely to service the development at the same time to be conveniently loaded and unloaded. Such servicing areas should provide sufficient space or facilities for all vehicles to enter and exit the site in a forward gear. Headroom of at least 5m where skips are to be lifted and 4.75 m for all other vehicle circulation areas should be provided.
- 5) Coach parking facilities for hotels (use class C1) will not be permitted.
- 6) All off-street car parking spaces and servicing areas must be equipped with the facility to conveniently recharge electric vehicles.
- 7) Taxi ranks are encouraged at key locations, such as stations and hotels. The provision of taxi ranks should be designed to occupy the minimum practicable space, using a combined entry and exit point to avoid obstruction to other transport modes.

3.16.17 The availability of public transport in the City negates the requirement for private car use in most circumstances making lower car parking levels than the London Plan standards appropriate for some use classes. In exceptional circumstances the provision of car parking may be justified by the exceptional requirements of businesses. The London Plan's coach parking standards for hotels will not be applied in the City.

3.16.18 The low numbers of private motor vehicles mean that delivery and service vehicles have a relatively greater impact on traffic congestion and air quality. Efficient off-street servicing and delivery arrangements are vital to keep the City's traffic moving. In order to reduce vehicle impact on air quality, electric vehicle fast-charging infrastructure needs to be available in convenient locations. Guidance is contained in the City Corporation's "Standard Highway and Servicing Requirements for Developments in the City of London".

Policy DM 16.6 Public car parks

No new public car parks will be permitted in the City, including the temporary use of vacant sites. The redevelopment of existing public car parks for alternative land uses will be encouraged where it is demonstrated that they are no longer required.

3.16.19 The City's public car parks were mostly constructed during the 1960's when car use was encouraged. They are underused and provide an opportunity for conversion and redevelopment for other uses.

Policy DM 16.7 Aviation landing facilities

No heliports will be permitted in the City. Helipads will only be permitted where they are essential for emergency or security purposes.

3.16.20 The noise and disturbance associated with helicopters would result in disproportionate disruption to the City's businesses and residents. The need for helipads would only be permitted for emergency or security purposes where the need for the facility is certified by the emergency services and cannot be met elsewhere.

Policy DM 16.8 River transport

- 1) River piers, steps and stairs to the foreshore, the Walbrook Wharf safeguarded site, and other river-based transport infrastructure will be safeguarded.
- 2) Development adjacent to or over the River Thames must be supported by a Transport Assessment and a Construction Logistics Plan addressing the potential for the use of the river for the movement of construction materials and waste.

3.16.21 New river piers must be publicly accessible. The City Corporation will expect construction and waste materials from developments on or near the river to be transported by river barge.

WHO WILL DELIVER

| <i>How we will make it happen</i> | <i>Who</i> | <i>When</i> |
|--|---|--------------------------------|
| <i>Public Transport</i> | | |
| <i>Crossrail: partnership working with Crossrail Ltd to secure implementation of Crossrail through the City and provision of additional funding, including through s106 agreements <u>and CIL</u>.</i> | <i>City Corporation- Crossrail Ltd- Mayor of London- Developers</i> | <i>Completion 2017<u>8</u></i> |

| | | |
|--|--|---|

SUPPORTING EVIDENCE

- ~~Crossrail Context Report for the City of London Crossrail 2009~~
- ~~Supplementary Planning Guidance: use of planning obligations in the funding of Crossrail Mayor of London July 2010~~
- ~~City of London Rail Strategy City of London 2009~~
- ~~Street Scene Enhancement Strategies and Area Delivery Plans City of London 2005–2010~~
- ~~City of London Cycling Plan City of London 2005~~
- ~~Cycle Parking Strategy City of London 2010~~
- ~~City of London Local Implementation Plan City of London 2007~~
- ~~TfL Investment Programme 2009/10 to 2017/18 Transport for London 2010~~

~~3.16.8 The Sustainability Appraisal concluded that this policy is expected to result in beneficial social, environmental and economic impacts. There could be negative impacts including the loss of a Site of Importance for Nature Conservation associated with Crossrail construction. This is mitigated through Policy CS5 which requires restoration of worksites to deliver enhanced biodiversity. Possible impacts on historic buildings are mitigated through Policy CS12 and potential water quality impacts resulting from greater use of river transport are mitigated through Policy CS15.~~

RISK MANAGEMENT

~~3.16.9 3.16.22 Although funding for the major passenger rail schemes has been secured, funding of the complementary enhancements to the City's streets and walkways may be difficult to secure in the short to medium term. To address this, the City Corporation will seek funding from other stakeholders and partners and prioritise public realm schemes that deliver the greatest benefits and complement transport improvement phasing.~~

~~3.16.10 3.16.23 Crossrail will produce significant improvements in transport capacity necessary to deliver long-term economic growth. The City Corporation considers that short to medium term needs can be addressed by planned improvements to the capacity and management of the underground network and the significant enhancement to Thameslink. If Crossrail is delayed significantly beyond its scheduled opening in 2017 then a review of the Core Strategy may be needed to take account of the potential impact on employment growth.~~

~~3.16.11 3.16.24 Climate change impacts could affect the viability, reliability and comfort of long-distance commuting. Monitoring will highlight trends and identify possible impacts on the City's business role.~~

MONITORING

~~3.16.12 Key monitoring indicators are:~~

Public Transport

- ~~TfL published data on numbers of underground, bus and river passenger journeys~~
- ~~Progress on Crossrail and other major public transport schemes~~
- ~~Number of stations with step free access~~

Walking & Cycling

- ~~Number and quality of public realm enhancement schemes~~
- ~~Number of cycle parking spaces~~

- ~~Number of pedal cycle thefts~~
- ~~Percentage of people commuting to work by cycle~~
- ~~Number of pedestrians, cyclists and motorcyclists seriously injured or killed~~

~~Congestion and Air Quality~~

- ~~Motor vehicle congestion — COL bi-annual journey time survey~~
- ~~Pedestrian Flows survey data~~

TOPIC 17: WASTE

3.17.1 Waste management in the City is unusual in that a high proportion of the City's waste comes from commercial rather than domestic premises. Much of this commercial waste is collected and managed by private contractors, who work across local authority boundaries, so the exact amount of waste produced in the City is difficult to verify. The London Plan projects that the City's total waste arisings for 2026 will be 558,000 tonnes.

3.17.2 Waste collected by the City Corporation is known as municipal waste, 90% of which is waste from commercial premises. The City's municipal waste is taken to Walbrook Wharf enabling sustainable onward transport by river rather than road. The City's Municipal Waste Management Strategy 2008-2020 shows that recycling rates for municipal, construction and demolition waste are increasing significantly. Municipal waste is taken to ~~It also identifies use of the riverside energy-from-waste facility in the London Borough of Bexley as the preferred option for the management of the City's municipal waste, which was formerly sent to a landfill site in Essex.~~ This minimises the carbon impact of waste transport by using sustainable transport and contributes to the London Plan objective of managing London's waste within London.

3.17.3 Major infrastructure projects such as Crossrail and the Thames Tideway Tunnel will generate large quantities of waste and recyclables during construction which will need to be transported to appropriate facilities outside of the City.

3.17.4 The London Plan and the Mayor's Municipal Waste Management Strategy set the framework for waste management in London. These strategies promote the waste hierarchy: prevention, preparing for reuse, recycling, other recovery, and disposing only as a last resort. The London Plan has set a waste apportionment figure requiring the City to identify sites with capacity to manage 100,000 tonnes of waste annually until 2031. This figure represents the City's contribution to meeting the Mayor's target of 100% net self-sufficiency in the management of London's waste by 2031. The London Plan sets out criteria for the selection of waste management sites, which the City of London Waste Capacity Study 2009 has used to evaluate potential sites in the City. This study shows that, with current technologies and economic considerations, there is no viable waste management capacity within the Square Mile and that the City will not be able to satisfy the London Plan waste apportionment within its boundaries. The City Corporation is therefore working with the London Borough of Bexley, utilising spare waste management capacity in Bexley, to ensure that the City's waste apportionment can be met. In the future, changing economics and new waste management technologies may mean that small scale waste management becomes viable within the City. Such changes will be identified through regular review of the City's Waste Capacity Study.

3.17.5 The London Plan sets out borough apportionments for land-won aggregates which should be reflected in borough ~~DPDs~~ Local Plans. No apportionment is made for the City of London and there is no requirement to include a policy for minerals within this ~~Core Strategy~~ Local Plan.

CORE STRATEGIC POLICY

Policy CS17: Waste

To support City businesses, residents and visitors in making sustainable choices regarding the minimisation, transport and management of their waste, capitalising on the City's riverside location for sustainable waste transfer and eliminating reliance on landfill for municipal solid waste (MSW) by:

1. *Enabling waste minimisation and adherence to the waste hierarchy:*
 - (i) *requiring the provision of facilities for waste segregation, handling and management within new developments;*
 - (ii) *increasing the proportion of municipal solid waste recycled to at least 45% by 2015 in line with the City of London Municipal Waste Management Strategy;*
 - (iii) *promoting improved waste management choices for businesses and residents.*
2. *Enabling waste to be managed at the nearest available suitable location:*
 - (i) *identifying waste management capacity in the City, or elsewhere in London, to meet the City's London Plan waste apportionment target, including through partnership working with the London Borough of Bexley.*
 - (ii) *safeguarding Walbrook Wharf as a waste handling site and investigating the potential for waste management, alongside its waste transfer function.*
3. *Enabling the sustainable transport of materials including waste and recyclables by river:*
 - (i) *safeguarding Walbrook Wharf as a wharf suitable for river transport of materials including waste;*
 - (ii) *exploring the potential for further use of waterways for the transport of waste and construction materials subject where appropriate, to the potential impact on Natura 2000 sites.*

Figure 18: Walbrook Wharf safeguarded site

DEVELOPMENT MANAGEMENT POLICIES

Policy DM 17.1 Provision for waste in development schemes

- 1) Waste facilities must be integrated into the design of buildings, wherever feasible, and allow for the separate storage and collection of recyclable materials, including compostable material.
- 2) On-site waste management, through techniques such as recycle sorting or energy recovery, which minimises the need for waste transfer, should be incorporated wherever possible.

3.17.6 Waste storage and collection facilities must be considered at an early stage in the design of developments in order to avoid the problems created by the placing of waste on the highway. Adequate provision must be made for the volume and types of waste and recyclables expected to be generated, especially the amount of paper and packaging generated by offices. On large sites opportunities for waste minimisation and on-site waste

management, in line with the London Plan's definition of waste management, should be explored in order to minimise the transport of waste within and beyond the City. The need to avoid health hazards associated with waste from catering establishments, the waste storage and collection needs of street traders, the separate storage of recyclable waste and the special arrangements required for the storage and transportation of clinical and hazardous waste should be considered, where necessary.

3.17.7 Waste and recyclables should be capable of collection from off-street service areas which are integrated into the design of buildings. The provision of such areas may not be practicable in small developments or refurbishments and may conflict with the protection of listed buildings and conservation areas. In such cases waste stores within the site near the highway, are preferable to the presentation of waste and recyclables on the pavement. Residential developments must be provided with ground floor waste and recyclables storage and collection facilities, with direct access to the highway for collection purposes.

3.17.8 The City Corporation will attach appropriate planning conditions relating to waste storage and collection, but may also make use of its other regulatory powers to control waste in the City. Pre-application consultation on suitable waste storage and collection facilities is encouraged. Compliance with the City of London's operational waste requirements should enable BREEAM or Code for Sustainable Homes waste credits.

Policy DM 17.2 Designing out construction waste

New development should be designed to minimise the impact of demolition and construction waste on the environment through:

- reuse of existing structures;
- building design which minimises wastage and makes use of recycled materials;
- recycling of demolition waste for reuse on site where feasible;
- transport of waste and construction materials by rail or river wherever practicable;
- application of current best practice with regard to air quality, dust, hazardous waste, waste handling and waste management.

3.17.9 Construction and demolition waste forms a significant proportion of the waste generated in the City due to high levels of redevelopment. The process of designing out waste must begin early in site development and must include all those involved throughout the planning and construction of the development. Particular attention should be given to the sensitivity of the area surrounding the site to air quality and transport disruption.

3.17.10 For development on large sites the feasibility of recycling demolition waste for reuse on site should be investigated taking account of the requirements of the City of London's 'Code of Practice for Deconstruction and Construction Sites'. Sustainable transport of waste off site should be demonstrated through Construction Logistics Plans.

Policy DM 17.3 New waste management sites

When new facilities for waste management, handling and transfer are proposed developers will be required to demonstrate through design and sustainability statements that the benefits of the proposed development outweigh any adverse impacts and particularly that:

- the development will handle waste which has been generated locally;

- access arrangements, mode of transport and transport routes will minimise the potential for congestion and environmental impacts, including local air quality impacts and carbon emissions. Use of the river for transport of waste and recyclables will be encouraged;
- the carbon impact of the development will be minimised. New waste facilities should comply with the Mayor's Carbon Intensity Floor (CIF);
- the development is designed with resilience to natural and man-made safety and security challenges.

3.17.11 The profile of waste management in the City differs from other local authority areas in that the majority of the waste is generated from commercial rather than residential premises. Most of this waste is collected by private contractors, who determine where it is finally managed. In order to reduce the distance that waste travels for management, the Mayor has set a target for London to be self-sufficient in the management of its waste by 2031. This will require the provision of additional waste management facilities within London.

3.17.12 Although the City is unlikely to be able to accommodate large waste management facilities within its boundary, changes in technology and waste transport costs may make small scale facilities viable in the future. The criteria set out in this policy will be used, alongside other policy considerations, to evaluate the suitability of proposed waste facilities and appropriate conditions will be applied to ensure that any new facility is suitable for the City's high density urban environment.

Policy DM 17.4 Development affecting waste management sites

- 1) Development in the vicinity of waste management sites should not compromise the waste management operations on the site or create an unacceptable land use conflict.
- 2) Noise-sensitive development adjacent to the existing waste site at Walbrook Wharf and development which would compromise the use of the river for waste operations will be resisted.

3.17.13 Any proposed development which might prejudice the operation of the existing safeguarded waste site at Walbrook Wharf (Fig E) will be resisted. Assessment of potential conflicts such as noise, vibration, odour, visual impact, pedestrian access and road or river transport will be taken into account in consideration of proposals. Mitigation may be necessary to allow development to proceed where a potential conflict is identified.

Fig C Safeguarded Walbrook Wharf

WHO WILL DELIVER

| How we will make it happen | Who | When |
|---|---|---|
| Waste Hierarchy | | |
| <i>Requiring sustainability statements to address waste management in new development.</i> | City Corporation-Developers | Ongoing |
| <i>Improving recycling services in line with the City's Municipal Waste Management Strategy and promoting uptake of City recycling services.</i> | City Corporation- Waste contractors- City businesses- Residents | 45% by 2015 |
| <i>Sponsoring and promoting waste initiatives and awards schemes such as the Clean City Awards and Sustainable City Awards.</i> | City Corporation- City businesses- Residents | Annually |
| <i>Improving the collection of data on waste to inform implementation and future review of relevant strategies and the Core Strategy.</i> | City Corporation- Environment Agency- Defra- Mayor of London- Waste contractors | 5 yearly review of City's Waste Capacity Study |
| Waste Apportionment | | |
| <i>Joint working to meet the City's London Plan waste management apportionment target on sites elsewhere in London.</i> | City Corporation- Other London boroughs- Mayor of London | In line with London Plan waste management apportionment targets |
| <i>Reviewing the City of London Waste Capacity Study every five years and, <u>if necessary</u>, implementing any identified changes in viability of waste management within major developments through review of the Development Management DPD-Local Plan</i> | City Corporation | By 2016 |
| <i>Set out assessment criteria for new waste management sites in the Development Management DPD.</i> | City Corporation | 2012 |
| Waste Transport | | |
| <i>Upholding of Ministerial Direction safeguarding Walbrook Wharf and maintaining it as a wharf suitable for the river-based movement of materials, including waste.</i> | City Corporation | Ongoing |
| <i>Requiring site waste management plans and construction logistics plans to consider transport of materials, including waste, via river or canal. Detailed requirements will be defined in the Development Management DPD.</i> | City Corporation- Developers | Ongoing 2012 |

SUPPORTING EVIDENCE

- ~~Waste Arisings in the City of London AEA for the City of London 2008~~
- ~~Waste Management Capacity in the City of London AEA for the City of London 2009~~
- ~~Waste Apportionment – investigation of the potential for joint working with other boroughs City of London 2008 and 2009~~
- ~~London Waste Apportionment Study Jacobs Baktie for the Mayor of London 2006~~
- ~~London Waste Apportionment Study Update and further sensitivity testing Jacobs Baktie for the Mayor of London 2007~~

- ~~City of London Municipal Waste Management Strategy AEA for the City of London 2008~~

~~3.17.6 The Habitats Regulation screening highlighted the potential of using waterways for the movement of waste to affect Natura 2000 sites. Therefore specific reference to such sites has been included in the policy. The Sustainability Appraisal identified potential transport impacts of changes in waste collection. This is mitigated by Policy CS16 which promotes the use of alternative fuelled vehicles to reduce emissions and Policy CS19 which promotes enhancement of biodiversity particularly on the River Thames.~~

RISK MANAGEMENT

~~3.17.7 3.17.14 The viability of different waste management activities could change due to external factors such as changes in markets for recycled products. Improved data and monitoring will identify trends and associated issues in a timely manner. Encouragement to use recycled products at individual, business and building design levels is important in creating a market for recycled products. Review of the City of London Waste Capacity Study will highlight any changes in viability and further policy guidance will be provided through future in the Development Management policies DPD or a Supplementary Planning Document.~~

MONITORING

~~3.17.9 Key monitoring indicators are:~~

~~Waste Hierarchy~~

- ~~Clean City Awards & Sustainable City Awards — participation rates~~
- ~~Amount of municipal waste arising and percentage of this which is recycled~~
- ~~NI 191 Household waste collected per head~~

~~Waste Apportionment~~

- ~~Capacity of new waste management facilities by type~~

~~Waste Transport~~

- ~~Capacity for waste management and transfer at Walbrook Wharf~~
- ~~Total waste transported by river~~

TOPIC 18: FLOOD RISK

3.18.1 Although the City stands beside the Thames, it is built on relatively high ground and so is at low risk of flooding. Two natural watercourses, the River Fleet and the Walbrook, flow through the City, but both these rivers have been fully canalised and now form part of London's extensive sewer network.

3.18.2 The City is protected by local flood defences along the Thames riverside and by the Thames Barrier at Woolwich as part of the wider protection of London. The zone at risk of flooding, in the unlikely event of flood defence breach or over-topping, is confined to an area close to the Thames. ~~Critical drainage areas~~ Surface water flood risk hotspots, which are at risk of sewer flooding in extreme circumstances, extend along the Thames riverside and up the former Fleet Valley towards Smithfield. Some neighbouring boroughs contain extensive low-lying areas close to the City and flooding in these could adversely affect the City's transport, communications and essential services. It is therefore important that flood risk is considered strategically.

3.18.3 Uncertainties exist in predicting the future flood risk due to the effects of climate change, such as sea level rise and an increase in extreme weather events. The Environment Agency is carrying out extensive research to inform future plans for flood protection of Thames Estuary and tidal Thames areas, including modelling for climate uncertainties. Future UK Climate Projections (UKCP) will inform reviews of all assessments and strategies related to flood risk.

Fig F Flood risk areas (Alteration to Core Strategy Fig 19)

3.18.4 Government guidance (~~currently set out in PPS25~~) sets out requirements for planning and development in relation to flood risk. In accordance with this guidance, the City of London has published its Strategic Flood Risk Assessment (SFRA), which identifies areas of the City that are at risk of flooding from a range of sources. It has also prepared a Climate Change Adaptation Strategy, which highlights the actions required to adapt to the increased flood risk due to climate change.

CORE STRATEGIC POLICY

Policy CS18 Flood Risk

To ensure that the City remains at low risk from all types of flooding, by:

1. Minimising river flooding risk, requiring development in the City Flood Risk Area to seek opportunities to deliver a reduction in flood risk compared with the existing situation:
 - (i) applying the sequential test and exception test as set out in ~~PPS25~~ the NPPF and associated technical guidance on flood risk and requiring Flood Risk Assessments to be submitted, in support of all planning applications in City Flood Risk Area (Environment Agency Flood Zones 2 and 3 and ~~critical drainage areas~~ surface water flood risk hotspots) and for major development proposals elsewhere;
 - (ii) protecting and enhancing existing flood defences along the riverside, particularly those identified as fair or poor in the current City of London SFRA. Development adjacent to the River Thames must be designed to allow for maintenance of flood defences.
2. Reducing the risks of flooding from surface water throughout the City, ensuring that development proposals minimise water use and reduce demands on the combined surface water and sewerage network by applying the London Plan drainage hierarchy.

3. *Reducing rainwater run-off, through the use of suitable Sustainable Urban Drainage Systems (SUDS), such as green roofs and rainwater attenuation measures particularly in critical drainage areas: throughout the City.*
4. *Ensuring that wider flood defences afford the highest category of protection for the City, participating in the development and implementation of the Environment Agency's Thames Estuary 2100 project.*
5. *Reviewing and updating the City of London's Strategic Flood Risk Assessment at least every 5 years or more frequently if circumstances require, to ensure that changes in flood risk are identified and suitable responses implemented.*

DEVELOPMENT MANAGEMENT POLICIES

Policy DM 18.1 Development in Flood Risk Areas.

- 1) Where development is proposed within the City Flood Risk Area evidence must be presented to demonstrate that:
 - the site is suitable for the intended use, in accordance with Environment Agency and Lead Local Flood Authority advice;
 - the benefits of the development outweigh the flood risk to future occupants;
 - the development will be safe for occupants and visitors and will not compromise the safety of other premises or increase the risk of flooding elsewhere.
- 2) Development proposals, including change of use, must be accompanied by a site-specific flood risk assessment for:
 - all sites within the City Flood Risk Area as shown on the Policies Map; and
 - all major development elsewhere in the City.
- 3) Site specific flood risk assessments must address the risk of flooding from all sources and take account of the City of London Strategic Flood Risk Assessment. Necessary mitigation measures must be designed into and integrated with the development and may be required to provide protection from flooding for properties beyond the site boundaries, where feasible and viable.
- 4) Where development is within the City Flood Risk Area, the most vulnerable uses must be located in those parts of the development which are at least risk. Safe access and egress routes must be identified.
- 5) For minor development outside the City Flood Risk Area, an appropriate flood risk statement may be included in the Design and Access Statement.
- 6) Flood resistant and resilient designs which reduce the impact of flooding and enable efficient recovery and business continuity will be encouraged.

3.18.5 The City Flood Risk Area is shown on the Policies Map and includes areas at risk both from river flooding and surface water and sewer flooding. Where development is proposed within this area, pre-application discussions with the City Corporation, the Environment Agency and other interested parties should explore the suitability of the site for the intended use. Where incompatibility between the intended use and the flood risk

vulnerability classification is identified (Tables 18.1 and 18.2), the developer should investigate whether there is a reasonably available site outside the City Flood Risk Area which would be more suitable for the intended use. Where no alternative site is available, the developer must demonstrate, through the Exceptions Test, that the benefits of the development outweigh any risk from flooding and that the development will be safe without increasing flood risk elsewhere. The designation of parts of the development for particular uses may be necessary. Basement and ground floor areas that are liable to flooding should be allocated for less vulnerable uses, and access and egress routes must be provided through areas which are not susceptible to flooding.

3.18.6 Site-specific flood risk assessments must address flood risk from the River Thames and the former River Fleet and River Walbrook, sewer flooding and its interaction with fluvial flooding, groundwater flooding and surface water flooding. The City of London Strategic Flood Risk Assessment identifies actions which will result in reduced flood risk or increased resilience. Further guidance on potential mitigation measures will be included in the City of London Flood Risk Strategy.

| Flood Risk Vulnerability classification | Essential Infrastructure | Water Compatible | Highly Vulnerable | More Vulnerable | Less Vulnerable |
|--|---------------------------------|-------------------------|--------------------------|--------------------------|------------------------|
| EA Zone 1 | ✓ | ✓ | ✓ | ✓ | ✓ |
| EA Zone 2 | ✓ | ✓ | Exceptions Test required | ✓ | ✓ |
| EA Zone 3a | Exceptions Test required | ✓ | ✗ | Exceptions Test required | ✓ |
| EA Zone 3b | Exceptions Test required | ✓ | ✗ | ✗ | ✗ |
| SFRA Surface water/sewer flood risk hotspots | Exceptions Test required | ✓ | ✗ | Exceptions Test required | ✓ |

Key: ✓ Development is acceptable ✗ Development is not acceptable

Table 18.1 Suitability of development in different parts of the City Flood Risk Area

| | |
|---------------------------------|--|
| Essential Infrastructure | <ul style="list-style-type: none"> Essential transport infrastructure (including mass evacuation routes) which has to cross the area at risk, strategic utility infrastructure, including electricity generating power stations and grid and primary substations. |
| Highly Vulnerable | <ul style="list-style-type: none"> Police, ambulance and fire stations and command centres and telecommunications installations required to be operational during flooding. |

| | |
|------------------------|---|
| | <ul style="list-style-type: none"> • Emergency dispersal points • Basement dwellings • Installations requiring hazardous substances consent |
| More Vulnerable | <ul style="list-style-type: none"> • Hospitals • Residential institutions such as care homes and hostels • Dwelling houses, student halls of residence, drinking establishments, nightclubs and hotels • Non-residential uses for health services, nurseries and educational establishments • Sites used for waste management facilities for hazardous waste |
| Less Vulnerable | <ul style="list-style-type: none"> • Retailing, offices, general industry, storage and distribution, non-residential institutions not included in 'more vulnerable' and assembly and leisure. |

Table 18.2 Flood risk vulnerability classifications relevant to the City

Policy DM 18.2 Sustainable drainage systems (SuDS)

- 1) The design of the surface water drainage system should be integrated into the design of proposed buildings or landscaping and should follow the SuDS management train (Fig I) and London Plan drainage hierarchy.
- 2) SuDS designs must take account of the City's archaeological heritage, complex underground utilities, transport infrastructure and other underground structures, incorporating suitable SuDS elements for the City's high density urban situation.
- 3) SuDS should be designed to maximise contributions to water resource efficiency, biodiversity enhancement and the provision of multifunctional open spaces.

3.18.7 From 2013 all proposals which affect surface water discharges must be approved by the SuDS approval body (SAB). The application for SAB approval can be made as a joint Planning / SAB application. SuDS designs must comply with the SuDS National Standards. Pre-application discussion with the SAB and consultation with the Environment Agency, Thames Water and other interested parties will ensure that SuDS designs are suitable for the proposed site. Designs should follow the SuDS management train (Fig I) and drainage hierarchy.

Fig E SuDS Management Train

Policy DM 18.3 Flood protection and climate change resilience

- 1) Development must protect the integrity and effectiveness of structures intended to minimise flood risk and, where appropriate, enhance their effectiveness.
- 2) Wherever practicable, development should contribute to an overall reduction in flood risk within and beyond the site boundaries, incorporating flood alleviation measures for the public realm, where feasible.

3.18.8 The City of London is locally protected from flooding by flood defence walls along the River Thames. Development adjacent to these flood defences must maintain their integrity and effectiveness for the benefit of the whole City. The Thames Estuary 2100 project recognises the need for the raising of flood defences by up to 0.5 metres by 2065 and 1m by 2100. Development on the riverside should be designed to enable this future defence raising without adverse impacts on river views and pedestrian movement along the riverside walk. Discussions with the Environment Agency will be required to establish the most effective designs for improved flood defences.

3.18.9 In some parts of the City there is a risk of flooding due to surcharging of sewers during periods of heavy rainfall. Adherence to the SuDS National Standards for all development will assist in alleviating this flood risk. Developers, in conjunction with the Environment Agency and the City Corporation, should explore the contribution that their developments can make to improving the wider flood risk beyond their site boundaries.

WHO WILL DELIVER

| How we will make it happen | Who | When |
|---|---|---|
| River Flood Risk | | |
| <i>Manage development to ensure adherence to Government guidance (currently set out in PPS25) <u>the NPPF and associated technical guidance on flood risk and consult the Environment Agency according to current Standing Advice.</u> Detailed requirements will be defined in the Development Management DPD.</i> | City Corporation- Developers- Environment Agency | Ongoing 2012 |
| <i>Liaison with Environment Agency on proposed flood defence improvements.</i> | City Corporation- Developers- Landowners- Environment Agency | Annual review SFRA to be updated every 5 years |
| Surface water | | |
| <i>Preparation and implementation of Surface Water Management Plans <u>a Flood Risk Strategy for the City and Camden through the Drain London Project.</u></i> | City Corporation- LB Camden- Drain London Forum | SWMP to be completed by 2011 <u>2015</u> |
| <i>Application of the London Plan drainage hierarchy for surface water management in the built environment.</i> <i>Detailed requirements will be defined in the Development Management DPD.</i> | City Corporation- Developers- Thames Water | Ongoing. Associated with all built development 2012 |
| Wider Flood Risk | | |
| <i>Contributing to consultations and implementation of the TE 2100 Action Plan.</i> | City Corporation- Developers- Environment Agency | TE 2100 Action Plan 2010 |
| <i>Review of neighbouring boroughs' <u>LDF-Local Plans and DPDs</u> to ensure adequate wider protection.</i> | City Corporation- Neighbouring | As LDF documents are issued |

| | | |
|--|---|--------------------------------|
| | <i>boroughs</i> | <i>for consultation</i> |
| Climate Change | | |
| <i>Review of the City's SFRA according to EA guidance.</i> | <i>City Corporation- Environment Agency</i> | <i>By 2012 <u>2017</u></i> |

SUPPORTING EVIDENCE

- ~~Environment Agency - Thames Estuary 2100 Flood Risk Management Plan Environment Agency 2009~~
- ~~City of London Climate Change Adaptation Strategy Acclimatise for the City of London 2008 and Action Plan Update 2010~~
- ~~UK Climate Projections 09 Key Findings for London Climate Impacts Programme 2009~~

~~3.18.5 The Sustainability Appraisal found that this policy is likely to have beneficial impacts both locally and regionally against the relevant social, environmental and economic objectives.~~

RISK MANAGEMENT

~~3.18.6-3.18.10 Climate change prediction through UKCP may identify different impacts that need to be addressed, including issues beyond the City's boundaries. Keeping the City's SFRA up to date will ensure timely identification of these impacts.~~

MONITORING

~~3.18.7 Key monitoring indicators are:~~

River flooding

- ~~Number of permissions granted contrary to EA advice~~

Surface Water

- ~~NI 189 - agreed actions regarding Surface Water Management~~
- ~~Number of green roofs~~

Wider flood risk

- ~~NI 189 - Agreed actions from the TE 2100 Action Plan~~

Climate change

- ~~Changes in flood risk, identified through review of the Strategic Flood Risk Assessment~~

TOPIC 19: OPEN SPACES AND RECREATION

3.19.1 *The City of London is densely built up and is in a GLA-defined ‘area of deficiency in access to nature’. Despite this it has a large number of small open spaces. These include both private and public spaces – approximately 70% of all open space in the City is publicly accessible. Many open spaces are of historic value, such as churchyards, whilst others are of more recent origin, created by the City Corporation and others to increase the amount of open space. These spaces are well used by workers, residents, students and visitors. Open spaces provide opportunities for relaxation and recreation and help to achieve healthy lifestyles. Green open space, as well as other environmental features such as trees and green roofs, contribute to the network of green infrastructure throughout the City.*

3.19.2 *Providing enough publicly accessible open space to meet the needs of the daytime population in the densely developed City has long been a challenge, which will be made increasingly difficult by the predicted growth in the workforce. The City of London Open Space Strategy and Play Strategy identify current open spaces and recreational facilities and highlight areas of need. At present, there are 0.06 hectares of publicly accessible open space per thousand daytime population and it is important that this ratio should not fall as the daytime population grows. Publicly accessible open space provision needs to increase, especially in the eastern sector of the City, where current provision is lowest and the greatest increase in workers and density of development is expected. The City Corporation has been actively working through its environmental enhancement programme Street Scene Challenge² to enhance highways and existing spaces to create high quality, publicly accessible civic open spaces, catering for a variety of different uses.*

3.19.3 *The City has a number of public and private sports facilities, such as gyms and swimming pools, which are well used and operating at near capacity levels. The growth in the working and residential populations, as well as the promotion of healthy lifestyles ~~and emphasis on the Olympic Games~~ are likely to result in an increased demand for these facilities. Play facilities are also needed by children for both those living in and visiting the City. It is important, therefore, that further play spaces are provided near to residential and tourist areas.*

3.19.4 *The City’s open spaces also include a number identified as “Sites of Borough and Local Importance for Nature Conservation” by the GLA. The City Biodiversity Action Plan outlines how biodiversity will be enhanced, including target species and habitats.*

3.19.5 *Although the policy addresses open space in the City, the City Corporation also manages over 4,000 hectares of open spaces for the benefit of London as a whole (including Epping Forest, the North Downs Commons, Burnham Beeches, Stoke Common Highgate Wood and Queen’s Park, Hampstead Heath, West Ham Park and Bunhill Fields).*

CORE STRATEGIC POLICY

Policy CS19: Open Spaces and Recreation

To encourage healthy lifestyles for all the City's communities through improved access to open space and facilities, increasing the amount and quality of open spaces and green infrastructure, while enhancing biodiversity, by:

1. *Seeking to maintain a ratio of at least 0.06 hectares of high quality, publicly accessible open space per 1,000 weekday daytime population:
 - (i) *protecting existing open space, particularly that of historic interest, or ensuring that it is replaced on redevelopment by space of equal or improved quantity and quality on or near the site;*
 - (ii) *securing public access, where possible, to existing private spaces;*
 - (iii) *securing additional publicly accessible open space and pedestrian routes, where practical, particularly in the eastern part of the City;*
 - (iv) *creating additional civic spaces from underused highways and other land where this would not conflict with other strategic objectives;*
 - (v) *encouraging high quality green roofs, particularly those which are publicly accessible.**
2. *Improving access to new and existing open spaces, including those in neighbouring boroughs, promoting public transport access to nearby open space outside the City and ensuring that open spaces meet the needs of all of the City's communities.*
3. *Increasing the biodiversity value of open spaces, paying particular attention to sites of importance for nature conservation such as the River Thames. Protecting the amenity value of trees and retaining and planting more trees wherever practicable.*
4. *Improving inclusion and access to affordable sport, play and recreation, protecting and enhancing existing facilities and encouraging the provision of further facilities within major developments.*

Figure 20: Open Spaces

Figure 21: Environmental Enhancement Schemes

DEVELOPMENT MANAGEMENT POLICIES

Policy DM19.1 Additional open space

- 1) Major commercial and residential developments should provide new and enhanced open space where possible. Where on-site provision is not feasible, open space should be provided near the site, or a financial contribution made to facilitate the provision of new open space or the enhancement of an existing open space elsewhere in the City.
- 2) New open space should:
 - be publicly accessible where feasible; this may be achieved through a legal agreement;
 - provide a high quality environment;
 - incorporate soft landscaping and Sustainable Drainage Systems, where practicable;

- have regard to biodiversity and the creation of green corridors.
- 3) The use of vacant development sites to provide open space for a temporary period will be encouraged where feasible and appropriate.

3.19.6 The design of open space should incorporate as much soft landscaping as practicable; provide for biodiversity; incorporate planting, which should be resilient to a range of climate conditions; incorporate sustainable drainage; be sustainable; take account of "designing out crime principles; be accessible to all; be appropriate to the space's context and the character of its surrounding area; enhance tranquillity; and minimise noise levels by installing sound-based public art, such as fountains, which positively enhance tranquillity.

3.19.7 Where it is not feasible to provide new open spaces within a development site, or a site in the vicinity, the City Corporation will seek a financial contribution, principally through the Community Infrastructure Levy, to fund new provision or enhancement works elsewhere.

3.19.8 Developers will be required to maintain newly created public open spaces on private land, as set out in relevant legal agreements.

3.19.9 New public space will be particularly encouraged where it connects with other green spaces to form green corridors. These corridors create a wider network with other green spaces, and so strengthen, enhance and build a green network of public open space.

3.19.10 Whilst the emphasis is on the provision of publicly accessible open space, private open space and amenity space is valuable in developments where occupiers of the building can access the space or view it. This type of space can be incorporated as internal courtyards, large balcony space or roof gardens.

3.19.11 During times of temporary vacancy, the use of land for temporary open space and recreational uses will be encouraged, where it would not prejudice the eventual return to office (or other) use. Where temporary green spaces are provided, it may be appropriate for trees and plants to be planted within moveable containers, so as not to prevent or deter future development on site, and so that any green infrastructure can be utilised elsewhere.

Policy DM19.2 Biodiversity and urban greening

Developments should promote biodiversity and contribute to urban greening by incorporating:

- green roofs and walls, soft landscaping and trees;
- features for wildlife, such as nesting boxes and beehives;
- a planting mix which encourages biodiversity;
- planting which will be resilient to a range of climate conditions;
- maintenance of habitats within Sites of Importance for Nature Conservation.

Fig F Sites of Importance for Nature Conservation (SINCs)

3.19.12 The City has several Sites of Importance for Nature Conservation (SINCs), but is identified as an area of deficiency in nature conservation by the GLA. It is important that opportunities are taken to improve greening and biodiversity throughout the City, and in particular in areas where this would improve green corridors or biodiversity links.

3.19.13 Climate change is recognised as an increasingly significant environmental challenge. Central London is likely to suffer from the adverse effects of the urban heat island effects and be more susceptible to stormwater flooding. The introduction of additional green infrastructure, such as soft surfaces, green roofs and street tree planting, has the potential to cool and improve air quality in the City and reduce the risk of surface water flooding, in addition to enhancing the biodiversity and attractiveness of the urban environment.

3.19.14 When considering proposals for urban greening within and around conservation areas and other areas and buildings of heritage or other special character, the City Corporation will have regard to the potential visual impact on its architectural or special character.

3.19.15 When planting green walls consideration should be given to the use of plants which are suitable for local conditions, pollution and wind effects as well as climate change. The City Corporation will require management arrangements for the proposed green infrastructure to ensure its long term sustainability and lasting contribution to the urban environment.

3.19.16 Where existing green infrastructure is disturbed, removed or damaged as a result of development, it must be replaced with good quality urban greening. There should be no net loss of green infrastructure.

Policy DM19.3 Sport and recreation

- 1) To resist the loss of public sport and recreational facilities for which there is a continuing demand, unless:
 - replacement facilities are provided on-site or within the vicinity that meets the needs of the users of that facility; or
 - necessary services can be delivered from other facilities without leading to, or increasing, any shortfall in provision; or
 - it has been demonstrated that there is no demand for sport and recreation facilities which could be met on the site.
- 2) Proposals involving the loss of sport and recreational facilities must be accompanied by evidence of a lack of need for those facilities. Loss of facilities will only be permitted where it has been demonstrated that the existing floorspace has been actively marketed for sport or recreational use at reasonable terms for sport and recreational use.
- 3) The provision of new sport and recreation facilities will be encouraged:
 - where they provide flexible space to accommodate a range of different uses/users;
 - in locations which are convenient to the communities they serve;
 - near existing residential areas;
 - as part of major developments subject to an assessment of the scale, character, location and impact of the proposal on existing facilities and neighbouring uses;
 - where they will not cause undue disturbance to neighbouring occupiers.
- 4) The use of vacant development sites for a temporary sport or recreational use will be encouraged where appropriate and where this does not preclude return to the original use or other suitable use on redevelopment.

3.19.17 There are numerous private gyms and sports clubs in the City which mostly serve the needs of the day-time working population. While these facilities are important in meeting sport and recreation needs it will not always be necessary to prevent their change of use, due to the fluid nature of the private market.

3.19.18 Publicly accessible rooftops can provide valuable space for the provision of leisure and sports facilities.

Policy DM19.4 Play areas and facilities

- 1) The City Corporation will protect existing play provision and seek additional or enhanced play facilities or space, particularly in areas identified as deficient, by:
 - protecting existing play areas and facilities and, on redevelopment, requiring the replacement of facilities either on-site or nearby to an equivalent or better standard;
 - ensuring that, where the creation of new play facilities is not feasible, financial contributions, principally through the Community Infrastructure Levy, are required to enable new provision, or enhance existing provision nearby;
 - requiring external play space and facilities as part of new residential developments which include 20 or more family units (those with 3 or more bedrooms) or 10 or more affordable units of 2 or more bedrooms;
 - promoting opportunities for informal play and play within open spaces where it is not possible to secure formal play areas.
- 2) Play areas and facilities should not be located where they would cause undue disturbance to neighbouring occupiers.

3.19.19 Play is essential for the healthy development of children and takes place in both formal and informal spaces. Formal play spaces include areas specifically designed and designated for play. Informal play spaces are those not designated solely for that purpose but which contain features that can be used for imaginative play. The City of London Play Strategy identifies the residential estates and the east of the City as areas which are deficient in play facilities.

3.19.20 Play spaces should be appropriate in terms of size and scale, have natural daylight and sunlight, meet the needs of various age groups, be accessible to children with disabilities and provide for safe and secure environments incorporating natural surveillance.

WHO WILL DELIVER

| How we will make it happen | Who | When |
|---|---|-----------------------------|
| Increase amount of open space | | |
| Negotiate access agreements in accordance with the City's Open Spaces Strategy. | City Corporation | Ongoing |
| Ensure developments incorporate open space or contribute towards open spaces through developer <u>financial</u> contributions. | City Corporation-Developers | Ongoing |
| Improve quality of open spaces through the City's Open Spaces Delivery Strategy and Management Plans for City gardens. | City Corporation | 2012 <u>Ongoing</u> |
| Implement environmental enhancement strategies that provide increased open spaces on highways, creating links to neighbouring boroughs and taking into account sports uses. | City Corporation- TfL | Ongoing |
| Further policies on the quality, quantity and accessibility of open spaces will be provided in the Development Management DPD. | City Corporation | 2012 |
| Access to open spaces | | |
| Using City Corporation land ownership and management of open spaces to ensure they are safe and accessible. | City Corporation | Ongoing |
| Partnership working with neighbouring boroughs to improve open spaces. | City Corporation-Neighbouring boroughs- City Fringe Agencies | Ongoing |
| Improve Biodiversity | | |
| Implementing the Biodiversity Action Plan. | City Corporation- City Biodiversity Action Plan- Steering Group | 2009–2014 <u>Ongoing</u> |
| Using tree preservation orders to protect trees. Further detail on trees in the City is <u>will be</u> given in the <u>City of London Tree Strategy SPD</u> . | City Corporation | 2012 <u>Ongoing</u> |
| More detail on incorporating biodiversity into open spaces and new developments will be given in the Development Management DPD. | City Corporation | 2012 |
| Access to Sport and Play | | |
| Delivering improved play spaces and improved sports facilities through the Play Strategy Action Plan, Open Spaces Strategy and Sports Strategy. | Play Partnership and Sports-Strategy Steering Group- City Corporation | 2007-2015 <u>Ongoing</u> |
| Improving and refurbishing Golden Lane Leisure Centre. | City Corporation | 2012 |

SUPPORTING EVIDENCE:

- ~~Open Spaces Strategy City of London 2008~~
- ~~Biodiversity Action Plan 2010-2015 City of London 2009~~
- ~~Draft Sports Strategy City of London 2010~~
- ~~Street Scene Manual City of London 2005~~
- ~~Play Strategy 2007-2010 City of London 2007~~

~~3.19.6 The Sustainability Appraisal of this policy notes that it is likely to result in beneficial environmental, social, and economic effects, although there may be slight conflict with transport, particularly in terms of creating more congestion and lower air quality. This is mitigated by Policy CS16.~~

RISK MANAGEMENT

~~3.19.7 3.19.21 Many open spaces are created in partnership with developers and are dependent in their timing on enabling development proceeding. Changes in the economic cycle can lead to short term variations in the availability and amount of developer contributions that can be used for the creation of further open spaces. Where development is reduced and contributions are slow coming forward, funding will be sought from other sources.~~

~~3.19.8 3.19.22 Climate change could result in increased water use in summers, the inability of plants to cope with increased heat stress and increased need for open spaces to mitigate its impacts. This will be addressed through regular updates of the Open Spaces Strategy.~~

MONITORING

~~3.19.9 Key monitoring indicators are:~~

Open Spaces

- ~~The amount of open space in hectares~~
- ~~People's opinions on open spaces in the City of London~~
- ~~The quality of street scene schemes in the City of London~~

Biodiversity

- ~~The number of Sites of Local Importance for Nature Conservation in the City~~
- ~~Monitoring through the City's Biodiversity Action Plan~~
- ~~Number of green roofs completed~~

Sport, recreation and play

- ~~the number of completed recreation and play facilities in the City~~
- ~~Usage of the Golden Lane Leisure Centre (as a proxy for leisure centre usage in the City)~~
- ~~Residents' use of facilities (sport, libraries, recreation)~~

TOPIC 20: RETAILING

3.20.1 Retailing contributes to the City's vitality and provides an important service for all the City's communities – workers, residents and visitors. Consultation has shown that many workers and residents would like a better range and quality of shopping. Retail demand is dominated by the local working population, with footfall concentrated over weekday lunch-times, resulting in a five day trading pattern with relatively few shops open at weekends. This has discouraged some major retailers from locating in the City. However, the above-average spending power of the City's growing working and residential populations and the Square Mile's high accessibility by public transport creates significant opportunities for improvement to the retail offer.

3.20.2 The City has five Principal Shopping Centres (PSCs), which provide a variety of comparison and convenience shopping: Cheapside, Moorgate, Fleet Street, Liverpool Street and Leadenhall Market. Of these, Cheapside is considered to be the City's main high street. The PSCs are recognised in the London Plan as 'CAZ frontages'. Each of these centres has its own distinctive amenity, diversity and character. Outside these concentrations there are large numbers of scattered retail units which form convenient local centres and isolated units.

Fig G Principal shopping centres and retail links (*Alteration to Core Strategy Fig 22*)

3.20.3 This retail distribution currently has benefits of local convenience for workers and residents, but lacks focus, making it unattractive to some retailers and shoppers. The City's strategy is to strengthen the status of the five PSCs, enhancing the retail offer in the City and supporting its primary business function, whilst also drawing in shoppers from outside the Square Mile. Improving pedestrian links between the PSCs would encourage shoppers to move between the PSCs.

3.20.4 New retail development should have regard to the retail hierarchy in the City and adopt a sequential approach to site selection, whilst ensuring that it does not compromise the City's primary business function. Major shopping developments should locate within the PSCs and other retail uses should be located within the PSC links Retail Links (shown on figure 22) to create attractive routes. Active retail frontages, (defined as a cluster of retail units that interrelate and provide a valuable service) which are scattered throughout the City, will be maintained and should comprise a balanced mix of retail uses, with a significant element of A1 (shops) at street level. Elsewhere in the City local facilities should be maintained, but not significantly expanded.

CORE STRATEGIC POLICY

Policy CS20: Retailing

To improve the quantity and quality of retailing and the retail environment, promoting the development of the five Principal Shopping Centres and the linkages between them, by:

1. Focusing new retail development on the Principal Shopping Centres, so that they become attractive shopping destinations. Encouraging movement between the Principal Shopping Centres by enhancing the retail environment in the Retail Links ~~between them~~. Achieving a gross increase in retail floorspace within the PSCs and Retail Links of at least 136,000m² by 2026.

2. *Requiring developers of major shopping proposals to demonstrate a sequential approach to site selection, looking firstly at locations within the Principal Shopping Centres, secondly at sites immediately adjoining the PSCs and in the Retail Links ~~between centres~~ and, thirdly, other areas in the City.*
3. *Giving priority to shops (A1 uses) within the Principal Shopping Centres, with other retail ~~facilities~~ uses directed to the peripheries of the centres and the Retail Links ~~between them~~, resulting in an increase in the total A1 floorspace of 66,000m² by 2026.*
4. *Enhancing the environment of Principal Shopping Centres and the Retail Links ~~between them~~, specifically focusing on improving conditions for pedestrians, improving accessibility for all and ensuring a safe and secure retail environment.*
5. *Maintaining a scattered distribution of convenient local services elsewhere in the City by protecting existing retail facilities unless it is demonstrated that they are no longer required.*

DEVELOPMENT MANAGEMENT POLICIES

Policy DM 20.1 Principal shopping centres

- 1) Within Principal Shopping Centres (PSCs) the loss of retail frontage and floorspace will be resisted and additional retail provision will be encouraged. Proposals for changes between retail uses within the PSC will be assessed against the following considerations:
 - maintaining a clear predominance of A1 shopping frontage within PSCs;
 - the contribution the unit makes to the function and character of the Principal Shopping Centre; and
 - the effect of the proposal on the area involved in terms of the size of the unit, the length of its frontage, the composition and distribution of retail uses within the frontage and the location of the unit within the frontage.
- 2) Proposals for the change of use from shop (A1) to financial and professional service (A2) and catering (A3) use at upper floor and basement levels will normally be permitted, where they do not detract from the functioning of the centre.

3.20.5 The five PSCs are defined on the Policies Map. Concentrating major new retail development in and adjoining PSCs provides an opportunity to focus retail facilities in the most appropriate areas of the City, enhancing these as shopping destinations for City residents, workers and visitors.

3.20.6 Retailing comprises several uses, including shops (A1), financial and professional services, such as banks (A2), restaurants and cafes (A3), drinking establishments (A4) and hot food takeaways (A5). When considering proposals for changes between retail uses, the City Corporation will aim to maintain at least 70% of retail frontage within a PSC in A1 use. It will also assess the contribution the unit makes to the shopping character of the PSC as a whole and its frontage; for example, units that are large or in prominent locations should be retained in shop use (A1).

3.20.7 Shop (A1) units at upper floor and basement levels may contribute to the retail provision of PSCs. However, it is recognised that by locating other retail uses at non-ground level, pressure on ground floor shop units may be reduced. Changes of use from shops to other retail uses at upper floors or basements will be assessed in relation to the contribution the unit makes to the character of the Principal Shopping Centre and with regard to the effect of the proposed entrance and use on the ground floor frontage. This policy refers to retail units facing PSC frontages and not to multi-level shopping centres.

Policy DM 20.2 Retail links

To encourage the provision and resist the loss of retail frontage and floorspace within the Retail Links. A mix of shops and other retail uses will be encouraged in the Links, ensuring that the location and balance of uses does not adversely affect the function of the Link, any nearby PSC or their surrounding areas.

3.20.8 Retail Links connect the City's PSCs and provide connections to neighbouring boroughs' retail frontages, transport hubs, areas with high footfall and residential areas, providing City workers and residents with important services and leisure facilities. The mix of uses in the Links should include A1 shops, but a variety of other retail uses will be permitted. Proposed A3/A4/A5 uses, will be resisted where they have a detrimental effect on the amenity of neighbouring residential premises, such as noise, disturbance, smell, including cumulative effects .

Policy DM 20.3 Retail uses elsewhere in the City

To resist the loss of isolated and small groups of retail units outside the PSCs and Retail Links that form an active retail frontage, particularly A1 units near residential areas, unless it is demonstrated that they are no longer needed.

3.20.9 Isolated retail units outside of PSCs and Retail Links provide local facilities for the City's workforce, enhance the City's vibrancy, and may serve the City's residential communities. The City Corporation will generally resist the change of use from retail to other uses, particularly near residential areas, but the loss of such units will be permitted where it is demonstrated that there is no longer a need for the unit in the locality, demonstrated through active marketing for a minimum of 12 months at reasonable terms.

3.20.10 In many parts of the City, retail units are grouped together to form active retail frontages which comprise a mix of retail uses and provide valuable services. The frontages should generally include A1 shops, but other retail uses will be acceptable provided that an active frontage is retained. When considering proposals to change from shops to other retail uses or for the loss of retail uses, particular consideration will be given to the contribution that individual units make to the locality, having regard to:

- the size of a unit and the length of its frontage;
- the composition and distribution of retail uses locally;
- the location of the unit within the identified frontage;
- the length of vacancy and active marketing.

Policy DM 20.4 Retail unit sizes

- 1) Proposals for new retail uses should provide a variety of unit sizes compatible with the character of the area in which they are situated.
- 2) Large retail units (over 1,000m²) will be encouraged in PSCs and, where appropriate, in the Retail Links in accordance with the sequential test.

3.20.11 The City Corporation wishes to ensure that adequate provision is made for all retail uses. Various retail sub sectors have different floorspace requirements and the provision of a range of unit sizes encourages a variety of retail uses. However, the shopping areas in the City have different characteristics. A proportion of large units is needed to attract a balanced mix of retailers. Retail premises in the City are, on average, smaller than elsewhere in London and small shops are a distinctive part of the character of some streets. The imposition of standard unit sizes within an area or development may not be a suitable response to these characteristics.

SUPPORTING EVIDENCE:

- ~~City of London Retail Study CBRE 2006~~
- ~~City of London Retail Study (Capacity) Nathaniel Lichfield for City of London 2010~~

~~3.20.6 The Sustainability Appraisal notes that this policy will lead to more people travelling to the City at weekends resulting in an increased need for servicing and delivery and increased waste and litter. How the City intends to address these issues is outlined in Policies CS16 and CS17.~~

RISK MANAGEMENT

~~3.20.7 3.20.12 Retail demand and development activity is dependent upon variations in the economic cycle. An economic downturn will lead to a reduction in the number of new retail units, an increase in the vacancy rate and decreased vibrancy in the City. The effect of the economic cycles will be monitored within the City to ensure the risk is sufficiently mitigated. If floorspace targets are not achieved this will trigger a review of retail policy in the Core Strategy or the detailed application of policy through the Development Management DPD.~~

~~3.20.8 3.20.13 Reduced retail activity will reduce developer contributions towards service and environmental improvements. The City will address this by seeking alternative funding sources and prioritising street scene enhancement strategies.~~

~~3.20.9 3.20.14 Focusing retailing, including bars, in particular areas may have implications for anti-social behaviour and the way in which the area is managed. It is important that the City Corporation continues to work with the Safer City Partnership and the licensing committee to ensure safety. If safety is found to be significantly affected this would trigger enhanced partnership working with the City of London Police to develop new safety measures.~~

MONITORING

~~3.20.10 The City corporation will monitor the vitality and viability of the PSCs through its three yearly retail survey. Key monitoring indicators are:~~

Retailing

- ~~Amount of A1 retail use permitted, under construction and completed within the PSCs and the PSC links~~
- ~~Number of A1 retail units outside of PSCs and the linkages between them~~
- ~~Percentage of A1 units within each PSC~~

- ~~Ratio of convenience to comparison goods units~~
- ~~Retail vacancy rate~~
- ~~Accessibility to shops, in terms of step and door access~~
- ~~Retail needs study kept up to date~~

Environmental Enhancement

- ~~Number of street scene enhancement projects within PSCs and their immediate surrounds and links~~

TOPIC 21: HOUSING

3.21.1 A thriving residential community adds to the City of London's vitality and makes it livelier and safer outside working hours. The residential population of approximately 10,000 is small in comparison to the daily working population, but is growing. The GLA's 2010 based projections suggest that the City's population will increase to approximately 12,000 by 2026. The City's housing is concentrated around the edge of the City in four estates (the Barbican, Golden Lane, Middlesex Street and Mansell Street) and also in Smithfield, the Temples, ~~near the River~~ parts of the riverside, Fleet Street, and Carter Lane and Botolph Lane. Most residential units developed in the City are flats with one or two bedrooms. There have also been a number of units developed for short-term lets temporary sleeping accommodation, which are considered to fulfil more of a 'hotel' role for the City's business community.

3.21.2 In recent years most new residential development has been located in ~~or near~~ existing residential ~~concentrations~~ areas. This allows greater opportunities for creating peaceful areas and a high quality residential environment. It avoids potential conflict with commercial and office uses, and the ~~concentrations~~ areas are more easily serviced with facilities required by residents. The density of residential ~~Residential~~ development will be guided by the Density Matrix in the London Plan.

3.21.3 The Strategic Housing Market Assessment (SHMA) supports the need for additional housing in the City, including affordable units. Research commissioned by the City Corporation indicated that there was sufficient capacity to provide over 800 housing units during the next decade from small-scale windfall sites in the City. Together with large sites in the development pipeline, there is sufficient capacity to meet the London Plan annual average monitoring target of 110 additional homes between 2011 and 2021 (the Housing Trajectory is shown in Figure 24). On the basis of past trends it is anticipated that there will be a sufficient supply of housing to achieve targets up to 2026. References to housing include market and affordable housing, hostels, sheltered and special needs housing and non-self-contained accommodation, in accordance with the London Plan's definition.

3.21.4 The size and commercial character of the City mean that new housing development has come through 'windfall' development rather than through the allocation of sites. Most housing developments in the City are either redevelopment, conversion or change of use of existing buildings and the majority of new housing comes forward on sites of under 10 units. Evidence demonstrates that the reliance on windfalls has delivered a steady stream of new housing, meeting and exceeding target requirements ~~(City of London Schedules of Development)~~. There is no reason to suppose that windfalls will not, in the future, continue to deliver the required level of housing.

3.21.5 There is a presumption that new affordable housing should be provided on site. However, as land within the City is an expensive and limited resource, the City Corporation also works with housing partners to deliver new affordable housing on sites in the City fringe and in neighbouring boroughs utilising commuted sums from commercial and housing developments within the City. This approach is supported by the London Plan and provides affordable housing in locations in or near the City that meet local housing need, whilst making the best use of City land for strategically important commercial activity. ~~Since 2000, approximately 500 affordable homes have been provided in neighbouring boroughs and 43 within the City through this mechanism.~~ An Affordable Housing Viability Study has been undertaken to support the implementation of the affordable housing targets set out in this policy.

3.21.6 The Mayor of London ~~prepares~~ ~~has completed~~ a Strategic Housing Land Availability Assessment (SHLAA) for London, providing guidance on the amount of land potentially available in the City for residential development. The East London Housing Partnership, of which the City is a member, has published a SHMA, looking at housing need in the East London region and updating the City's Housing Need Study. ~~The SHMA indicates a need for an affordable housing tenure split of 70:30 (social rented: intermediate housing).~~

3.21.7 The London Boroughs' Gypsy and Traveller Accommodation Needs Assessment (2008) carried out for the Mayor indicates that there is no requirement to provide gypsy and traveller pitches or accommodation for travelling showmen in the City.

Fig M Residential Areas (Alterations to Core Strategy Fig 23)

CORE STRATEGIC POLICY

Policy CS21 Housing

To protect existing housing and amenity and provide additional housing in the City, concentrated in ~~or near~~ identified existing residential areas communities, as shown in Figure 2.3, to meet the City's needs, securing suitable, accessible and affordable housing and supported housing, by:

1. Exceeding the London Plan's minimum annual requirement of 110 additional residential units in the City up to 2026:
 - (i) ~~guiding new housing development to~~ and near identified residential areas existing communities;
 - (ii) protecting existing housing;
 - (iii) ~~refusing new housing where it would prejudice the primary business function of the City and the comprehensive redevelopment of potential large office sites;~~
 - (iv) exceptionally, allowing the loss of isolated residential units where there is a poor level of amenity.
2. Ensuring sufficient affordable housing is provided to meet the City's housing need and contributing to London's wider housing needs by requiring residential developments with the potential for 10 or more units to:
 - (i) provide 30% affordable housing on-site ~~or~~;
 - (ii) ~~exceptionally, provide 60% equivalent of affordable housing units off-site, (aiming to achieve an overall target of 30% affordable housing across all sites). These targets should be applied flexibly, taking account of individual site and scheme viability; or~~ equivalent cash-in-lieu, if a viability study demonstrates to the City Corporation's satisfaction that on-site provision is not viable. These targets should be applied flexibly, taking account of individual site and scheme viability;
 - (iii) provide 60% of affordable units as social rented housing and 40% as intermediate housing, including key worker housing.
3. Providing affordable housing off-site, including the purchase of existing residential properties on the open market to meet identified housing needs, such as large units for families.
4. Requiring all new and, where possible, converted residential units to meet Lifetime Homes standards and 10% of all new units to meet Wheelchair Housing Standards (or be easily adaptable to meet these standards).

DEVELOPMENT MANAGEMENT POLICIES

Policy DM 21.1 Location of new housing

- 1) New housing should be located on suitable sites in identified residential areas. New housing will only be permitted where development would not:
 - prejudice the primary business function of the City;
 - jeopardise the future assembly and delivery of large office sites;
 - remove existing office stock for which there is demand or long term need;
 - adversely affect the existing beneficial mix of commercial uses; and
 - result in poor residential amenity due to excessive noise or disturbance to existing residents.
- 2) Within residential areas, a mix of appropriate residential and commercial uses will be permitted.

3.21.8 New housing includes permanent housing (use class C3), temporary sleeping accommodation, serviced apartments, student accommodation and housing for the elderly.

3.21.9 There are advantages for people living in the City to access workplaces and reduce travelling times. In recent years most new housing development has been located in identified residential areas. This allows greater opportunities for avoiding potential conflict with commercial and office uses and for providing better residential amenities.

3.21.10 Where residential development is exceptionally permitted outside identified residential areas, this development will not be considered to have formed a new residential area.

Policy DM 21.2 Loss of housing

The loss of existing housing units will not be allowed except where:

- they provide poor amenity to residents which cannot be improved;
- they do not have a separate entrance;
- large scale office development would be prejudiced by the retention of isolated residential units.

3.21.11 Isolated units can suffer poor amenity and can be adversely affected by the operation of the business City. Housing units outside identified residential areas are more likely to suffer noise nuisance and other disturbance due to other non-residential uses being permitted in close proximity, including clubs and pubs.

Policy DM 21.3 Residential environment

- 1) The amenity of existing residents within identified residential areas will be protected by:
 - resisting other uses which would cause undue noise disturbance, fumes and smells and vehicle or pedestrian movements likely to cause disturbance;
 - requiring new development near existing dwellings to demonstrate adequate mitigation measures to address detrimental impact.
- 2) Noise generating uses should be sited away from residential uses, where possible. Where residential and other uses are located within the same development, adequate noise mitigation measures must be provided and, where required, planning conditions will be imposed limiting the hours of operation.
- 3) All development proposals should take account of the privacy, outlook, daylighting and sunlighting levels to existing adjacent residential accommodation.
- 4) All new residential development proposals must demonstrate how potential adverse noise impacts on and between dwellings will be mitigated by housing layout, design and materials.
- 5) The cumulative impact of individual developments on the amenity of existing residents will be considered.

3.21.12 The City is predominately a centre of business, with activity taking place 24 hours a day, 7 days a week. This sometimes results in noise and disturbance to residents. While the City Corporation will endeavour to minimise noise and other disturbance to residents it is inevitable that living in such a densely built-up area will result in some disturbance from a variety of sources. The potential for such disturbance should be considered by developers when proposing new residential development.

3.21.13 The avoidance of overlooking of residential accommodation is a consideration in the design and layout of both new residential buildings and other development. However due to the density of development in the City avoidance of overlooking may not always be possible.

Policy DM 21.4 The Temples

Within the Temples adjustments between professional and residential accommodation will be permitted where:

- the overall balance of residential and professional chambers is maintained;
- it is important to the functioning or character of the Temples, or to the continuing use of their buildings.

3.21.14 The Inner and Middle Temples are two of the Inns of Court which provide accommodation for the legal profession in the south west of the City between Fleet Street and the River Thames. The Temples mainly contain barristers' chambers (about a quarter of which are in residential use) together with other buildings for members of the Bar. The area has a strong "collegiate" atmosphere and is of great historic interest and high environmental quality.

3.21.15 In determining applications the City Corporation will have regard to the importance of the continued existence of a residential element in the Temples and of the contribution that this makes to their special character. However, the need of the Temples to rationalise and refurbish chambers in order to maintain an efficient business and professional community is recognised.

Policy DM 21.5 Housing quality standards

All new housing must be designed to a standard that facilitates the health and well-being of occupants, and:

- takes account of the London Plan's space standards and complies with the London Plan's Density Matrix standards;
- provides acceptable daylight to dwellings commensurate with a city centre location;
- meets standards for Secured by Design certification;
- maximises opportunities for providing open and leisure space for residents.

3.21.16 All new housing will be expected to provide well designed, high quality living environments, both internally and externally, incorporating principles of inclusive, secure and sustainable design.

3.21.17 Housing development should take account of the requirements in the London Plan and the Mayor's London Housing Design Guide. The layout should incorporate sufficient storage space and facilities for recycling and reuse.

3.21.18 Amenity space for residents could include gardens, roof top gardens, balconies and the provision of new sports facilities. These amenity spaces could be private, shared or have public access.

Policy DM 21.6 Temporary sleeping accommodation

- 1) Temporary sleeping accommodation will not normally be permitted where it is mixed with permanent residential accommodation within the same building.
- 2) Permanent residential accommodation will not normally be permitted to change use to temporary sleeping accommodation.
- 3) Where temporary sleeping accommodation is permitted, conditions may be imposed to control any later changes to permanent accommodation in order to:
 - ensure the provision of affordable housing;
 - prevent permanent residential use in unsuitable accommodation or locations.

3.21.19 Under the Greater London Council (General Powers) Acts 1973 and 1983, planning permission is required for the use of housing for temporary sleeping accommodation occupied by the same person for less than 90 consecutive nights. Temporary sleeping accommodation can help to meet the accommodation needs of business visitors and will normally be considered suitable within identified residential areas, subject to consideration of policy DM21.1.

3.21.20 The change of use of temporary sleeping to permanent residential accommodation will normally be permitted within identified residential areas, where housing and amenity

standards are met. Where there are 10 or more units, a change of use to permanent residential accommodation will only be permitted where provision is made for affordable housing.

Policy DM 21.7 Student housing and hostels

- 1) Proposals for new student accommodation and hostels will be refused where it would:
 - prejudice the primary business function of the City;
 - jeopardise the future assembly and delivery of large office sites;
 - result in the loss of existing office buildings and sites for which there is demand in the office market or long term need;
 - adversely affect the existing beneficial mix of commercial uses;
 - result in an excessive concentration of student housing and/or hostels;
 - have an adverse impact on the residential amenity of the area;
 - involve the loss of permanent residential accommodation.
- 2) Proposals for student housing must be supported by identified further or higher educational institutions operating in the Central Activities Zone and provide accommodation for their own students.
- 3) Self-contained student housing will be expected to contribute to the supply of affordable housing in accordance with Policy CS21.
- 4) The loss of existing student housing and hostels will be resisted unless:
 - the accommodation is being relocated within a reasonable distance and it meets identified need in London;
 - the accommodation is required to meet residential needs as part of a published strategy by a local service provider;
 - it is vacant and has been actively marketed as student or hostel accommodation at reasonable terms and there is no demand from another organisation for a hostel in that location.

3.21.21 The demand for student accommodation in London continues to grow. This type of housing may represent an opportunity lost for other housing needs in residential areas and therefore will only be permitted when supported by an identified further or higher educational institution for the housing of its own students. A section 106 agreement will be required which limits occupation to students studying at the stated further or higher education institution.

3.21.22 Student/hostel accommodation that supports business uses located in, or affiliated to, the City will be supported. Student housing which is self-contained and is not affiliated to an institution will be treated as permanent residential accommodation. Self-contained accommodation is defined as a unit whereby an occupant would not have to share a kitchen, WC or bathroom.

WHO WILL DELIVER

| How we will make it happen | Who | When |
|---|--|--|
| Targets and locations | | |
| Monitoring the net gain in housing in the City, offsetting the loss of housing units against new supply. The Development Management DPD will set out more detailed policies on the protection of existing housing in appropriate locations and for new residential units not in or near existing residential concentrations. | City Corporation-Developers | Ongoing 2012 |
| Affordable housing | | |
| Deliver affordable housing targets through s106 agreements and planning contributions. | City Corporation-Developers-RSLs | Ongoing |
| Using planning contributions related to commercial development in the City and joint ventures to provide affordable housing in areas outside the City and purchase suitable properties off the open market. | City Corporation-Joint Venture Partners-Developers-Space Check | Consultants currently advising on possible joint ventures Ongoing |
| Type of Housing | | |
| Detailed policies for determining the appropriate location (including guidance on residential clusters), mix and type of housing and consideration of residential amenity issues will be included in the Development Management DPD. | City Corporation | 2012 |

SUPPORTING EVIDENCE

- ~~City of London Strategic Housing Market Assessment City of London 2010~~
- ~~Mayor of London: The London Strategic Housing Land Availability Assessment and Housing Capacity Study Mayor of London 2009~~
- ~~City of London Affordable Housing Viability Study City of London 2010~~
- ~~Study of Additional Residential Development Capacity for the City of London 2007-2017 London Development Research 2005.~~

~~3.21.8 The Sustainability Appraisal notes that this policy is expected to result in positive social impacts. Potential negative environmental impacts due to the increased use of resources and increase in waste production would be mitigated through Policy CS15 and Policy CS17. Uncertain economic impacts on developers resulting from affordable housing requirements would be mitigated by applying the affordable housing element of the housing policy in accordance with viability assessments.~~

RISK MANAGEMENT

~~3.21.9-3.21.23 All housing sites in the City are windfall sites, making the City's housing sector vulnerable to the economics of development. It is expected that a reasonable supply of housing will continue to be delivered during the lifetime of the Core Strategy Local Plan, as demonstrated by the Housing Trajectory in Figure 24.~~

~~3.21.10-3.21.24 Fluctuation in the economic cycle may lead to a reduction in planning contributions and a fall in residential development, impacting on the City's ability to meet the annual requirement and affordable housing target. In the event of a substantial reduction in residential development and affordable housing provision, the City will seek amendments to~~

the targets set out in the London Plan, seek alternative funding sources to finance affordable housing provision, or review the ~~Core Strategy~~ Local Plan.

MONITORING

~~3.21.11 Key monitoring indicators are:~~

~~Housing targets and locations~~

- ~~• Number, type and location of residential completions~~
- ~~• Housing Trajectory~~
- ~~• Housing Quality~~

~~Affordable housing~~

- ~~• Number and location of affordable housing completions~~
- ~~• Affordable housing units purchased on the open market~~

TOPIC 22: SOCIAL INFRASTRUCTURE AND OPPORTUNITIES

3.22.1 *The City of London has a large daily working population and a comparatively small, but growing, residential population. Changes to the way healthcare is accessed means that the demand for health facilities from the City's working population may increase significantly. In order to deliver accessible and affordable social, community and educational facilities the City Corporation must make the best use of existing facilities and work jointly with neighbouring boroughs, health providers and organisers and other providers. Existing and new facilities should be multi-use and, where possible, cater for the needs of both residents and workers.*

3.22.2 *There are large numbers of privately run health facilities in the City which mainly cater for the needs of the working population. Although such facilities are encouraged, they are difficult to plan for as provision will reflect demand from City workers and businesses, rather than be determined by the health needs of the residential population. Not all NHS-commissioned health services for residents can be provided within the City, but out-of-borough services must be accessible for City residents. There is currently one GP practice located within the City, and NHS East London and the City is working to ensure GP and community health service provision is accessible to the increasing residential population of the City of London.*

3.22.3 *'Care Closer to Home' sets out the vision for the development of primary care clinical networks in City and Hackney. Within these plans, City residents will be part of the South West network, and served by a new Primary Care Resource Centre based at the current St. Leonard's Hospital Site. The Bart's and the London NHS Trust is implementing a major redevelopment programme to transform the existing Bart's Hospital site into a Cancer and Cardiac Centre of Excellence, incorporating services from the London Chest Hospital in Bethnal Green, alongside other local facilities.*

3.22.4 *There are a number of educational institutions in the City that provide learning and training opportunities to support local job creation and growth for the local community, particularly in the City fringe where there are high levels of deprivation. The London Metropolitan University and Guildhall School of Music & Drama provide higher education, while institutions such as the Bishopsgate Institute provide adult education courses. The Cass Business School and City University are located just outside the City's boundary. These institutions run many courses aimed specifically at the needs of the City business community.*

3.22.5 *The City has one primary school, Sir John Cass, and several independent schools. The City Corporation facilitates the provision of primary and secondary school places outside the City, including part-funding the Moreland Primary School in Islington, as well as funding secondary education through the sponsorship of academies in Southwark, Islington and Hackney. Demand for school places generated by City residents is currently met. The City Corporation has carried out a Social Infrastructure Audit which details relevant facilities both in and outside the City.*

3.22.6 *There is a thriving volunteering sector involved in the City of London that seeks to combat poverty, disadvantage and discrimination and improve the quality of life for communities and individuals. City.comm was launched in 2006 to support voluntary and community groups and help them achieve their aims and objectives, share their ideas, skills and experience and influence local policy making.*

Figure 25: Social and community infrastructure

CORE STRATEGIC POLICY

Policy CS22: Social Infrastructure and Opportunities

To maximise opportunities for the City's residential and working communities to access suitable health, social and educational facilities and opportunities, while fostering cohesive communities and healthy lifestyles, by:

- 1. Maximising opportunities for delivering services and facilities for the City's communities, particularly residents:
 - (i) continuing to work in partnership with neighbouring boroughs to deliver accessible additional educational, health and community services and facilities;*
 - (ii) promoting opportunities for training and improving residents' business and other skills;*
 - (iii) supporting the development and capacity of the voluntary sector.**
- 2. Providing adequate health care facilities and services for City residents and workers and creating healthy urban environments:
 - (i) protecting and enhancing existing public health facilities and providing new facilities where necessary;*
 - (ii) encouraging the provision of private health facilities;*
 - (iii) supporting the continued presence and improvement of St. Bartholomew's Hospital in the City;*
 - (iv) ensuring that the use, design and management of new development and spaces help deliver healthy outcomes, particularly for more deprived residents.**
- 3. Protecting and enhancing existing community facilities and providing new facilities where required, whilst allowing flexibility in the use of underused facilities, including places of worship. There should be no overall loss of community facilities (~~D1~~) in the City, where a need exists.*
- 4. Improving the skills and education of all the City's communities:
 - (i) providing adequate educational facilities and services to meet the community's needs;*
 - (ii) protecting and enhancing existing education facilities including schools, adult and higher education premises, and ensuring that new facilities are sited in appropriate locations;*
 - (iii) continuing to provide and improve social and educational services through the City's libraries;*
 - (iv) ensuring adequate childcare facilities, including nursery provision and crèches. Encouraging nursery providers and businesses to establish additional childcare facilities, where a need exists.**

DEVELOPMENT MANAGEMENT POLICIES

Policy DM 22.1 Location and protection of social and community facilities

- 1) To resist the loss of social and community facilities unless:
 - replacement facilities are provided on-site or within the vicinity which meet the needs of the users of the existing facility; or
 - necessary services can be delivered from other facilities without leading to, or increasing, any shortfall in provision; or
 - it has been demonstrated that there is no demand for another similar use on site.
- 2) Proposals for the redevelopment or change of use of social and community facilities must be accompanied by evidence of the lack of need for those facilities. Loss of facilities will only be permitted where it has been demonstrated that the existing floorspace has been actively marketed as a social and community use at reasonable terms for public social and community floorspace.
- 3) The development of new social and community facilities should provide flexible, multi-use space suitable for a range of different uses and will be permitted:
 - where they would not be prejudicial to the business City and where there is no strong economic reason for retaining office use;
 - in locations which are convenient to the communities they serve;
 - in or near identified residential areas, providing their amenity is safeguarded;
 - as part of major mixed-use developments, subject to an assessment of the scale, character, location and impact of the proposal on existing facilities and neighbouring uses.
- 4) Developments that result in additional need for social and community facilities will be required to provide the necessary facilities or contribute towards enhancing existing facilities to enable them to meet identified need.

3.22.7 Social and community facilities contribute to successful communities by providing venues for a wide range of activities and services. As such they make a significant contribution to people's mental and physical well-being, sense of community, learning and education. Library and educational facilities for children and those that support the City's business role are particularly important and will be protected where there is a demand for these facilities. It is recognised that there may be advantages of locating organisations together so that they can share resources.

3.22.8 Social and community accommodation will be protected, unless it can be demonstrated to the City Corporation's satisfaction that there is no demand from social and community users for this floorspace or that the loss of floorspace is part of a published asset management plan, in the case of non-commercial enterprises.

3.22.9 Where existing social and community floorspace is to be relocated, the replacement floorspace should be within the City. However, for services that serve a wider catchment area, relocation outside the City, but within a reasonable distance, might be acceptable.

3.22.10 Where rationalisation of services as part of asset management plans would result in either the reduction or relocation of social and community floorspace, the replacement floorspace must be of a comparable or better standard.

Policy DM 22.2 Provision of public toilets

A widespread distribution of public toilets which meet public demand will be provided by:

- requiring the provision of a range of public toilet facilities in major retail and leisure developments, particularly near visitor attractions, public open spaces and major transport interchanges. This includes the provision of pop-up toilets in suitable areas with concentrations of night-time activity;
- supporting an increase in the membership of the Community Toilet Scheme;
- resisting the loss of existing public toilets unless adequate provision is available nearby and requiring the provision of replacement facilities;
- taking the opportunity to renew existing toilets which are within areas subject to major redevelopment schemes and seeking the incorporation of additional toilets in proposed developments where they are needed to meet increased demand.

3.22.11 Public toilets are important facilities for everyone who visits, works or lives in the City, particularly for the elderly, people with disabilities and chronic illnesses and carers with small children. Areas of the City with concentrations of night-time entertainment require adequate toilet provision to prevent fouling of the streets.

3.22.12 The City Corporation provides public toilets and aims to provide a distribution which effectively meets public demand, but this needs to be supplemented by provision in major retail and leisure development. Where it is not feasible for major development to provide toilets, it is expected that the Community Toilet Scheme will be implemented in the development. The City Corporation provides attended toilets equipped with baby changing units and facilities for disabled people, while automatic toilets provide a 24-hour service. The Community Toilet Scheme allows the public to use toilet facilities in participating businesses.

3.23.13 Public toilets should be clearly sign-posted to ensure they are easily found. Facilities should be maintained by the owner as part of the overall maintenance of any development.

WHO WILL DELIVER

| <i>How we will make it happen</i> | <i>Who</i> | <i>When</i> |
|--|---|--------------------|
| <i>Delivering services and facilities</i> | | |
| <i>Implementation of the Community & Children's Services Department Business Plan.</i> | <i>City Corporation-Neighbouring boroughs-Partnership organisations</i> | <i>Ongoing</i> |
| <i>Implementing the City of London Community Toilet Scheme.</i> | <i>City Corporation</i> | <i>Ongoing</i> |
| <i>Residents' meetings and consultation.</i> | <i>City Corporation</i> | <i>Ongoing</i> |

- ~~City of London Community and Children's Services Business Plan 2007-2010, City of London 2009~~
- ~~City of London Childcare Sufficiency Statement City of London 2008~~

3.22.7 The Sustainability Appraisal notes that this policy is likely to result in beneficial environmental, social and economic effects.

RISK MANAGEMENT

~~3.22.8~~ 3.23.14 The City's small residential population means that it is likely that an adequate provision of social and community services and facilities will continue to be delivered during the lifetime of the Local Plan~~Core Strategy~~. There is likely to be an increased demand for private health facilities and increased pressure on the redevelopment of existing facilities to meet the needs of the financial and business sectors. Monitoring will be used to identify loss of facilities and the need for review of the ~~Core Strategy~~ Local Plan.

MONITORING

~~3.22.9~~ Key monitoring indicators are:

~~Opportunities for delivering services and facilities~~

- ~~• Surveys of resident and worker satisfaction levels~~
- ~~• NI 7: Environment for a thriving Third Sector~~

~~Healthcare facilities and services~~

- ~~• Reported satisfaction of City residents with primary care services~~

~~Social facilities and services~~

- ~~• Number of community facilities~~

~~Skills and education and facilities~~

- ~~• Number of City of London residents studying at level 2 and level 3~~
- ~~• Number of childcare facilities in the City~~
