Monthly Investment Analysis Review
September 2014

City Of London Corporation

Monthly Economic Summary

General Economy

September was dominated by great volatility in the markets due to the much anticipated Scottish Referendum result which was 55.3% 'No' to independence. Following the result, sterling appreciated due to greater confidence within financial markets, alongside risk premium unwinding (with the focus returning to the strength of Britain's recovery). This caused the pound to strengthen against the euro to a two year high, which may cause the BoE to slow down the pace of interest rates hikes to help to rebalance the economy. Essentially, dovish policymakers are concerned with the weakness of exports with Britain relying heavily upon domestic demand to maintain the momentum of economic recovery. There is therefore increasing divergence between the euro and pound, with the ECB cutting interest rates to fight deflation which could potentially disrupt financial markets and pose downside risks to the UK.

The MPC minutes this month further reiterated the split in their decision to keep rates on hold, with two hawkish policymakers voting to raise rates to 0.75% for a second successive month. Nonetheless, the consensus decision still remains in favour of holding interest rates at their historic low of 0.5%, citing reasons such as declines in manufacturing, exports and housing activity, in conjunction with weaknesses within the Eurozone.

The Markit/CIPS purchasing managers' index (PMI) for construction has continued to rise, demonstrating its biggest monthly growth in the six months to July, increasing to 64.0 in August from 62.4 in July. These figures have been mainly driven by growth in housing, commercial and civil engineering markets. Similarly, Britain's dominant services sector, the major driving force of the UK economy, expanded at its fastest pace in a year increasing to 60.5 in August, largely exceeding market expectations. However, the services industry has been hit by turbulence stemming from the Ukraine crisis. This could create future threats in terms of slowing down the services and construction sector. This impact can already be seen in new orders and employment diminishing cumulatively across all three sectors this month. The manufacturing Markit PMI survey declined to 52.5 in August, the slowest rate in 14 months. Nonetheless, this is still above the 50 point threshold denoting growth. During Q2 2014, UK GDP grew 0.9% on the previous quarter (3.2% y/y), increasing from 0.7% in Q1.

Britain's trade deficit in goods rose for a successive month to £10.186 billion, the highest figure since April 2012, due to a considerable decline in export orders, stemming from a poor Eurozone performance, UK's largest trading partner.

The unemployment rate in Britain has demonstrated substantial improvement, with the ONS quoting the number of people in employment rising to a record high to 30.609 million in the three months through July; however, pay growth was weak. Nonetheless, despite this lack of wage growth, income tax receipts and social security payments have risen 1.6% from a year earlier. Subsequently, this data provides a positive indication that consumer activity should remain optimistic throughout the year despite the lack of wage growth. However, pay growth is still lagging behind inflation, which declined to 1.5% in July, a 5 year low. Although this indicates that the BoE will be unlikely to change their projections, Governor Mark Carney stated that, dependent upon the labour markets recovery, the central bank may decide to raise interest rates earlier than anticipated. Nonetheless, the current eight month run of consumer price inflation remains below the 2% target and this remains key to the BoE deciding to hold off raising rates.

British Retail Sales in September were reported to have grown at a relatively slower pace in comparison with August, with surveys signalling a decline in consumer confidence. The Confederation of British Industry's distributive trade's survey's retail balance fell to +31, down from +37 high in August, which may dampen the current rate of UK economic growth. Despite this, solid growth was still demonstrated in actual sales on the high street with the strongest growth demonstrated since April, retail sales volumes rising by 0.4% on the month despite real pay pressures and looming interest rate hikes. Nevertheless, wage growth remains remarkably weak which has become crucial to the BoE's decision of holding Britain's record low interest rates.

Public sector net borrowing in August was £11.6bn, up 6.1% from the previous year. This means that it will be much harder to hit the budgeted 10% reduction in borrowing this year after successive months this year with similar overshoots. The Government may, therefore, have to consider greater austerity measures to reduce the budget deficit if this situation does not improve during the rest of the year. This will be a key issue with the upcoming general election with deficit reduction becoming central to the economic policy of the Conservative led coalition.

Finally, in the US, the economy grew at a relatively optimistic pace in Q2, expanding at 4.6% annually, previously reported at 4.2%. This has been reflected somewhat during Q3, with strong growth seen in manufacturing, trade and housing and domestic demand. However; slow job growth can be accounted for during August with the unemployment rate falling to 6.1% due to more Americans giving up the search for work. However, robust job gains are indicative of strong labour market performance, deriving from a surge in gross domestic income. Nonfarm payrolls increased by 142,000 last month, the smallest increase in 8 months. In their recent meeting this September, the US Federal Reserve revised its economic forecast and individual interest rate expectations. With no change to expected employment and inflation, this would appear to justify a higher rate outlook with the first rise likely to be in Q1 next year.

Housing Market

In the earlier part of the year, Governor Mark Carney stated that housing was the biggest domestic threat to Britain's economic recovery, with many borrowers taking on more debt beyond their means. However, the BBA quoted mortgage approvals for house purchases have fallen to their lowest level in 12 months during August (down to 64,212), but were still up 5.2% compared to the previous year, so the housing market has slowed marginally over recent months. According to mortgage lender Nationwide, house prices fell to an eight month low, declining by 0.2% in September, after positive growth recorded at 0.8% in August. Nonetheless, the housing market should remain stable as increases to interest rates are likely to be fairly gradual over the next few years.

Forecast

Capita Asset Services kept its Bank Rate forecast unchanged this month, expecting the first increase in Q1 2015. Capital Economics did not alter their forecast this month.

Bank Rate	Dec-14	Mar-15	Jun-15	Sep-15	Dec-15

Rating Exposure

Historic Risk of Default

This is a proxy for the average % risk for each investment based on over 30 years of data provided by Fitch, Moody's and S&P. It simply provides a calculation of the possibility of average default against the historical default rates, adjusted for the time period within each year according to the maturity of the investment.

Chart Relative Risk

This is the authority's risk weightings compared to the average % risk of default for "AA", "A" and "BBB" rated investments.

Rating Exposures

This pie chart provides a clear view of your investment exposures to particular ratings.
