

Water	Nos Species Found	Summary
Connaught Water	Pike 2 Bream 2 Carp 2 Tench 28 Roach 49 Perch 20	Both Carp were removed. Tench doing extremely well now on this lake plenty of young fish shows they are breeding. So many silver fish seen but difficult to catch as they were moving into the margins under cover of the new marginal plant beds. The habitat around this lake is improving year on year.
Earls Path	Tench 19 Rudd 82 Crucian Carp 6 Chub 1 Brown Goldfish 5 Brown Goldfish/Crucian 6 Goldfish 2 Crucian/King carp 1	All Brown Goldfish and hybridised fish removed. Best pond in the forest for Rudd and for the size of water Tench doing well also. Surprised at a Chub being found as this is normally found in a river. Have not removed the Chub as doing well.
Hawcock	Crucian Carp 27 Crucian/King Carp 1	A real surprise. Hawcock has been a strong hold in the Forest for pure Crucian's, but the pond is slowly becoming silted up and covered with Duck Weed. The amount of Crucian's still around is a very pleasant surprise. Crucian/King Carp removed. Work needs to be done to open up around pond and remove Duck Weed. 2015/16
Highams Park	Perch 42 Tench 1 Roach 1 Carp 3 Eel 2	Perch were by the far the most predominant species both seen and caught. Nice to see this lake with Eels. Overall we expected to see more fish however the aquatic plants are limited in this water both out in the open water and in the margins. Work needs to be done to improve this. Before any stocking takes place. There is a resident Cormorant on this water.
Hollow Pond	Perch 36 Pike 15 Tench 2 Bream 1	Good result for Perch and Pike. All Pike removed due to high numbers. Although one Bream caught saw a large shoal going around the lake. Bedwell Fish farms has offered to donate some Roach as none found.
Jubilee Pond	Gudgeon 50 Tench 31 Rudd 23 Golden Tench 1	Good results for Gudgeon, Tench and Rudd for size of lake. Fish congregating in and around coir rolls and fence posts in water. Golden Tench removed.
Knighton Lake	Crucian Carp 344 Tench 3 Roach 7 Crucian/Brown Goldfish 2	Excellent result for Crucian's one of the best locations in forest now for this species. Brown Goldfish removed. Results for other silver fish poor, but due to location of pond it is important that we focus on the Crucian population as this

		could be a stock pond for this species in the local area.
Lower Forest	Tench 27 Crucian Carp 5 Roach 1 Rudd 1 Gudgeon 1 3 Spined Stickleback 1	Good result for both Tench and Crucian's, although not many caught plenty seen amongst the marginal plants. Concerns over numbers of silver fish. Lake to be Fyke netted in spring to get a more accurate result.
Oak Hill South	Brown Gold Fish 9	An extremely poor result, but an expected one. This pond needs to be dredged as some point. All fish were removed.
Ornamental Water	Carp 1 Pike 9 Tench 43 Perch 104 Bream 4 Rudd 23 Eel 5	All small Pike were removed. Very good results for Tench and Perch. Lake is very weedy so difficult to catch fish when stunned. Although only caught one Carp many were seen. This lake has been a very good source for Eels
Perch	Tench 48 Pike 8 Perch 34 Rudd 1	The quantity of Tench found in this water is very good as in previous years they have not been the predominant species found. Poor result for Rudd. Pike removed.
Wake Valley	Pike 5 Roach 30 Rudd 47 Perch 25	Plenty of silver fish seen hiding amongst the marginal plants, hiding from Cormorant. The large Pike caught had been hit by Cormorant. Carp seen but not caught. Good result for silver fish.
Warren Pond	Pike 13 Roach 47 Rudd 3 Tench 2	There were 1000's of silver fish found in the pond. Difficult to move boat around pond due to willow encroaching out into the water. But plenty fish seen but unable to catch. More than fair result for this pond.
