CR21 Air Quality  07-Oct-2015 Jon Avern	<p><b>Cause:</b> Small particulate pollution has chronic health impacts from long term exposure at very low concentrations and is in evidence within the City and central London. There is also a health impact associated with long term and short term exposure to nitrogen dioxide.</p> <p><b>Event:</b> Under certain atmospheric conditions there is a higher probability of poor air quality within the City and it is more likely that residents, workers and visitors would suffer the acute consequences.</p> <p><b>Effect:</b> The consequences both acute and chronic may include:  An increase in hospital referrals placed upon both emergency services and the NHS for those already suffering from respiratory or cardiovascular conditions (it may also place a strain on City social services).  An increase in deaths, particularly of those already suffering from respiratory or cardiovascular conditions (both residents and workers).  Economic costs such as acting as a deterrent of businesses coming to London or staying and financial penalties for non-compliance with air quality limits.
