Accessing the virtual public meeting

Members of the public can observe all virtual public meetings of the City of London Corporation by following the below link:
https://www.youtube.com/@CityofLondonCorporation/streams

A recording of the public meeting will be available via the above link following the end of the public meeting for up to one civic year. Please note: Online meeting recordings do not constitute the formal minutes of the meeting; minutes are written and are available on the

City of London Corporation's website. Recordings may be edited, at the discretion of the proper officer, to remove any inappropriate material.

Whilst we endeavour to livestream all of our public meetings, this is not always possible due to technical difficulties. In these instances, if possible, a recording will be uploaded following the end of the meeting.

Ian Thomas CBE
Town Clerk and Chief Executive

AGENDA

NB: Certain matters for information have been marked * and will be taken without discussion, unless the Committee Clerk has been informed that a Member has questions or comments prior to the start of the meeting. These information items have been collated in a supplementary agenda pack and circulated separately.

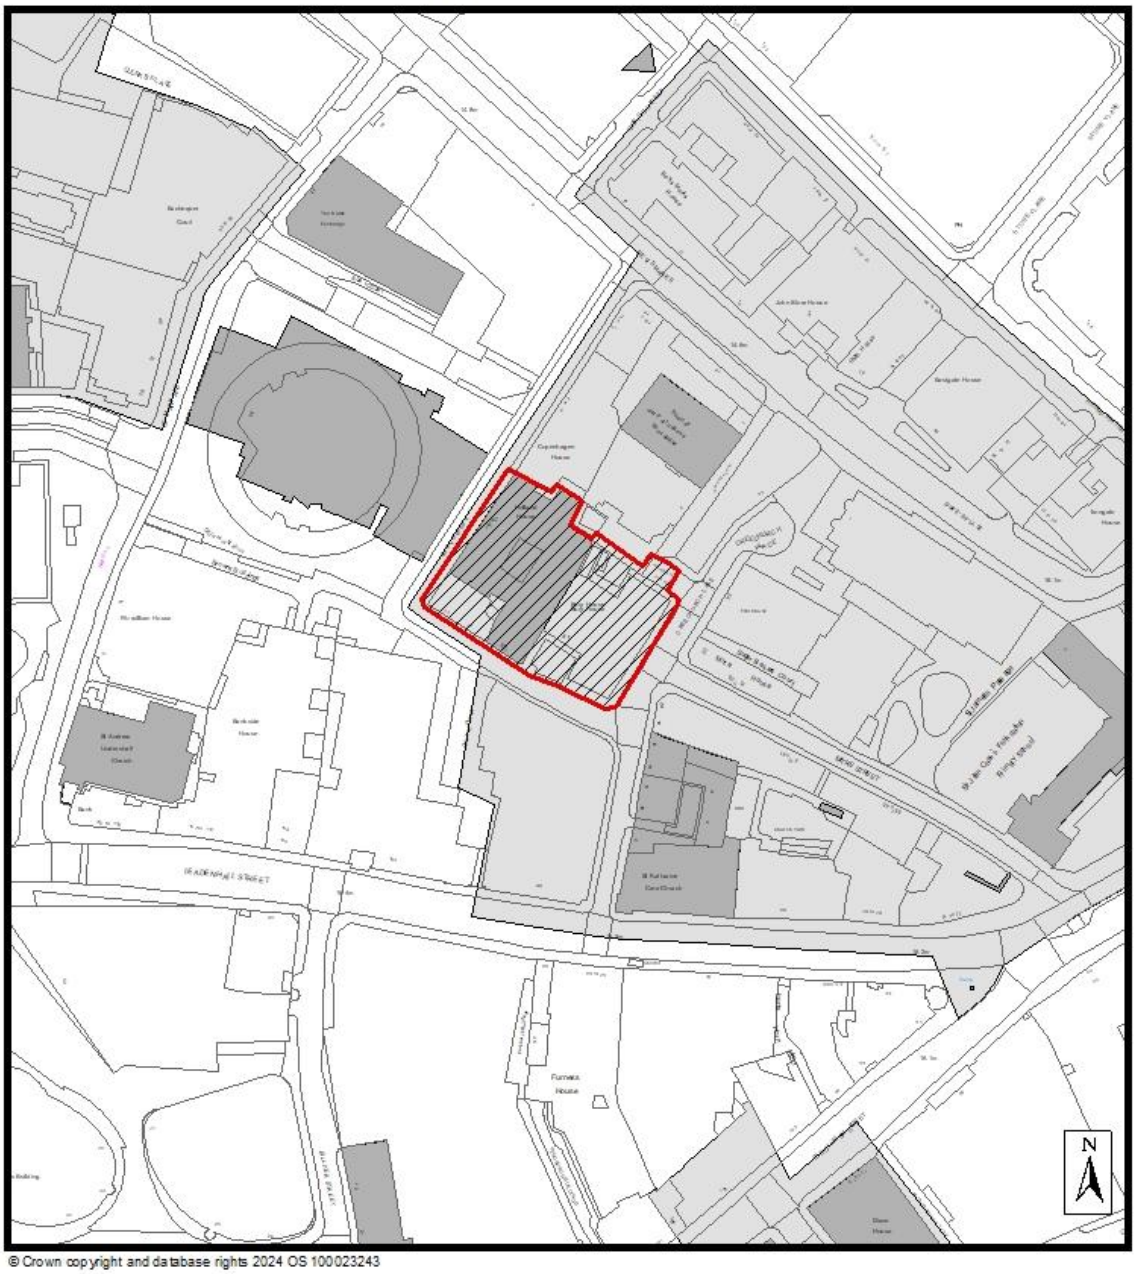
Report of: The Chief Planning Officer and Development Director and Comptroller and City Solicitor	**For Decision**

Summary



An EIA application (24/00024/FULEIA) proposing an office-led development through the demolition of Bury House and erection of a new building comprising of 4 basement levels, ground plus 43 storeys; partial demolition of Holland House and Renown House; restoration of existing and erection of four storey extension at Holland House and three storey extension at Renown House and interconnection of the three buildings, was previously presented at Committee on the 13th December 2024 with a recommendation to approve the application.

An associated Listed Building Consent (24/00011/LBC) application relating to the restoration works Holland House, partial demolition to facilitate interconnection with the neighbouring proposed new building and the construction of a four storey roof extension, was also presented at the same committee meeting with a recommendation to grant listed building consent.

At the committee meeting, Members took a different view to that of officers and resolved not to grant planning permission and listed building consent, with precise Reasons for Refusal to be formulated by officers and returned to Members for endorsement. Accordingly, this report recommends Reasons for Refusal to reflect the Committee's resolution on of 13 December 2024.

ENVIRONMENT DEPARTMENT

Main Report

Background of the applications

1. On 13 December 2024 the Planning Applications Sub-Committee considered the applications for planning permission (reference: 24/00021/FULEIA) and listed building consent (reference: 24/00011/LBC). The Committee resolved, by 14 votes to 8, to refuse planning permission (subject to the Mayor of London being given 14 days to decide whether to allow the City to determine the application) and instructed officers to report back to Committee regarding the Reasons for Refusal. This report proposes the Reasons for Refusal for both the planning permission and listed building consent, in accordance with the committee instructions.

Considerations based on the debate of the Committee of 13 December 2024

2. During the debate, Members of the Committee explained their views in relation to the applications. Some Members considered the development unacceptable, and they expressed their views regarding the reasons the applications should be refused. It is noted that the Minutes of the meeting are appended as part of this report for reasons of clarity and transparency.

3. A number of concerns were raised by Members. Based on a close reading and consideration of the Minutes, officers consider that the concerns that reflected the opinion of the majority of the Committee and which therefore constitute the reasons for refusal are as follows:

    - The overbearing and overshadowing impact of the development on the courtyard of the Synagogue.
    - The loss of daylight and sunlight within the Bevis Marks Synagogue.
    - The reduced ability to view the moon in the night sky from the Bevis Marks Synagogue courtyard.

4. The above-mentioned impacts were considered by Members of the Committee to adversely affect the setting of the Grade I listed Bevis Marks Synagogue, the ability to appreciate its architectural character and the ability of worshippers to practice their religion in faith.

5. Some other matters were raised by some Members of the Committee; however, these were not echoed by the majority of Members or appeared to be the subject of any consensus; and therefore, officers consider that they should not constitute Reasons for Refusal. These included the following:

    - Failure to preserve the character and appearance of the Creechurch Conservation Area.

- Adverse impact on the setting and Outstanding Universal Value (OUV)of the Tower of London World Heritage Site as experienced in LVMF view 10A.1 from the North Bastion of Tower Bridge.
- Failure to preserve the special architecture and historic interest of Holland House Grade II* listed building, by reason of the massing, height and bulk of the proposed extensions.

6. Following the Committee's decision on the Reasons for Refusal, the Mayor of London will be notified. The Mayor of London will then have 14 days to notify the City whether he is content for the City to determine the application in accordance with the proposed refusal. If no notification is received from the Mayor of London within 14 days, the decision notice may be issued by the City.

Consultations

7. Although no re-consultation has been carried out following the Committee Meeting on the 13th December 2024, an additional letter of support has been received. Furthermore, two consultee responses from Hackney Council, raising no objections and Lambeth Council, raising no comments, have been received. The representation and consultation responses do not change the initial officer recommendation to approve the applications, which remains unaltered.

Conclusion

8. Following the Committee's decision of 13 December 2024 to overturn the officer recommendation to approve the proposed development at Bury House 1 - 4, 31 - 34 Bury Street, officers have reviewed the reasons given by Members of the Committee and recommended the Reasons for Refusal set out in the Recommendation section to reflect those reasons on which there was consensus amongst members who did not support the application. The listed building consent is also recommended for refusal for the reason set out in the Recommendation section below.

Background papers

- Report and background papers of the Planning Applications Sub-Committee of the 13 December 2024 relevant to applications 24/00021/FULEIA and 24/00011/LBC.
- Minutes of the of the Planning Applications Sub-Committee of the 13 December 2024.

RECOMMENDATION for application reference 24/00021/FULEIA

The matters raised during the debate at the Committee meeting of 13 December 2024 have been taken in consideration and in the context of the relevant Development Plan policies and the officer recommendation to grant planning permission remained unaltered.

However, Members of the Planning Applications Sub-Committee of 13 December 2024 decided to refuse the application and therefore, the following Reasons for Refusal are recommended (subject to notification to the Mayor of London and the Mayor of London being content for the City to determine the application):

1. The development would, by reason its overbearing and overshadowing impact on the courtyard of the Synagogue, result in less than substantial harm to the setting and significance of the Grade I listed Bevis Marks Synagogue. The harm would not be outweighed by the public benefits. The development would be unacceptable and contrary to Local Plan Policies CS 12, DM 12.1, DM 12.3; Emerging City Plan Policies S11 and DE7; London Plan Policy D9 C (1; d) and HC1 and the National Planning Policy Framework.
2. The development would, by reason of the loss of daylight and sunlight within the Bevis Marks Synagogue, adversely affect the ability of worshippers to carry out religious traditions and practices and manifest their religion in worship, being as such unacceptable and contrary to Local Plan Policy CS10 (1); Emerging City Plan Policies DE7 and the National Planning Policy Framework.
3. The development would, by reason of its position, height and massing, reduce the ability to view the moon in the night sky from the Bevis Marks Synagogue courtyard to the detriment of the ability of the worshippers to carry out important religious traditions and practices and manifest their religion in worship, contrary to Local Plan Policy CS10 (1); Emerging City Plan Policy HL1; London Plan Policy GG1 and the National Planning Policy Framework.

RECOMMENDATION for application reference 24/00011/LBC

The matters raised during the debate at the Committee meeting of 13 December 2024 have been taken in consideration and in the context of the relevant Development Plan policies and the officer recommendation to grant planning permission remained unaltered.

However, Members of the Planning Applications Sub-Committee of 13 December 2024 decided to refuse the application and therefore, the following reasons for refusal are recommended:

1. The proposed development at Holland House, by reason of its inability to be carried out in the absence of an approved planning permission of the associated development as proposed under the terms of application 24/00021/FULEIA, would result in an incomplete and unsatisfactory appearance of the listed building, which would fail to preserve the special architectural and historic interest of and result in harm to the Grade II* listed building. The harm would not be outweighed by public benefits. The development would be unacceptable and contrary to Local Plan Policies CS 12, DM 12.1, DM 12.3; Emerging City Plan Policies S11; London Plan Policy HC1 and the National Planning Policy Framework.

Polly Dunn	-	Assistant Town Clerk
Callum Southern	-	Town Clerk's Department

1. **APOLOGIES**

Apologies were received from Ian Bishop-Laggett, Deputy Edward Lord, Judith Pleasance, Alderman Simon Pryke, Shailendra Umradia and Deputy Dawn Wright.

2. **MEMBERS' DECLARATIONS UNDER THE CODE OF CONDUCT IN RESPECT OF ITEMS ON THE AGENDA**

At Deputy Lord's request the following statement was read out by the Town Clerk.

"Having reviewed the papers for this Friday's meeting of PASC and taken independent professional advice, I understand that I continue to have a disclosable pecuniary interest in item 3, 1 Undershaft, due to a potential commercial relationship between the developer and the Leathersellers' Company, of which I am a member.

I will therefore not be present for that item.

As to item 4, Bury House, it is likely due to a duty as Deputy Governor of the Honourable the Irish Society, which is hosting the Freedom of the City for Lady Mary Peters LG DBE OLY, that I would be unable to remain for the full debate.

As a consequence, I must tender my apologies for absence for the whole meeting"

Deputy Lord was therefore not in attendance.

Jacqui Webster had also flagged the following:

"The Leathersellers Company have an interest in Agenda Item 1.

My organisation benefits financially from and has a relationship with the Leathersellers Company.

I sought brief advice for the July meeting.

However, further funding has been granted, and the relationship has deepened and in line with a review with my trustees this morning, the new Charity Governance Code and my organisation's declaration requirements, I am declaring an interest in agenda item 1."

Anthony Fitzpatrick declared that he would not be taking place in the vote on Item 3 – 1 Undershaft as when the plan was originally brought, the Alderman and Common Councillors for the ward of Lime Street had actively engaged in a round table that was hosted at Lloyds of London in February 2024. The Alderman and councillors had relayed the sentiments of businesses and individual votes and had a number of meetings with Eric Parry and the developers at Stanhope and had addresses a meeting of the ward club to present the new proposals. He now considered it inappropriate to take part in the debate and vote on this item and would therefore not do so.

Alistair Moss declared that he had a professional conflict with items 4 and 5 and would leave the room for those items.

Jaspreet Hodgson declared a non-pecuniary interest in Item 3 as it mentioned the Port of London Authority and informed she was a Member of the Ten Trinity Square Private Members' Club.

3. **1 UNDERSHAFT, LONDON, EC3A 8EE**

The Sub-Committee received a report which sought Planning Permission for the demolition of existing buildings at 1 Undershaft, the retention and partial expansion of existing basement plus construction of a ground, plus 73 storey building (plus plant) for office use; retail, food and beverage, public amenity space, publicly accessible education space and a viewing gallery at levels 72 and 73, public cycle hub, plus podium garden at level 11, the installation of a digital screen, public realm improvement works ancillary basement cycle parking, servicing, plant, highway works and other works associated with the proposed development.

The Chairman invited Officers to make a presentation to the Sub-Committee.

Officers presented the existing site plan to the Sub-Committee and stated that the application included a 28-storey vacant office tower, an area of space known as St Helen's Square and Undershaft. The development was bounded to the north by St. Helen's Bishopsgate, to the east by St. Mary Axe, to the west by the 'Cheese Grater' and to the south by Leadenhall Street.

Officers highlighted that Members deferred the scheme in July 2024 and had asked the applicant to look at making minor adjustments to the proposal in relation to the ground floor public realm. Officers stated that the applicant had since revised the lower levels of the building and an updated proposal was before the Sub-Committee.

Officers recapped on the details of the existing site and noted there were a number of heritage assets in the vicinity, notably St. Helen's Bishopsgate to the north, St. Andrew Undershaft to the east, the Lloyds Building to the south which were shown in purple on the presentation. Officers stated that a thin sliver of the north of the site was within the St Helen's Place Conservation Area and the site was within the City Cluster. The Officer presented an image of the Eastern / City Cluster policy area in the adopted and emerging Local Plans and explained this was an area of the City that had to work hard to accommodate growth to ensure that economic objectives and competitiveness were maintained. Officers further stated that the are wawas appropriate for tall buildings and the application site was represented by a red dot on the presentation and was broadly at the heart of the Cluster.

Officers presented an image of the aerial view of the existing site and stated it was a 1960s tower that was remodelled in the 1990s and was now subject to a certificate of immunity from listing. Officers noted the site did have an extant

consent for a new officer tower that was granted in 2019, and the 2019 scheme had recently been technically implemented through some demolition works on the site for context. Officers explained that the consented tower was 73 storeys at a height of 304.94m AOD and the proposed for consideration today was 74 storeys and 309.6m AOD.

Officers presented an image of the existing building from street level with a view of the front of the building and St. Helen's Square.

The Sub-Committee was also shown an image of the existing site from the west side of the building by Officers who described the area as an underutilised space dominated by bollards, railings and a ventilation shaft, as well as the Undershaft carriageway. Officers also presented a view of the existing site looking east along Undershaft toward the Gherkin and another view looking south along St. Mary Axe where Officers noted one could see the Lloyds Building in the background and the application site in the foreground. Officers also presented an image of the existing site looking west along Undershaft where Officers stated one could see the entrance to the servicing ramp for the existing building which was quite unsympathetic to the setting of the church.

Officers presented an aerial view of the proposed scheme and stated that the existing tower would be demolished and replaced with a 73-storey office tower that would deliver 153.602sqm of Grade A office floor space and supported 8,759 jobs. Officers told the Sub-Committee that the proposal was strategically significant to ensure the City maintained its economic competitiveness and would deliver, alongside the office space, complimentary public spaces, including the tallest viewing gallery at level 73, a high-level education space referred to as the classrooms in the sky at level 72, a restaurant at level 2, food and beverage offers at level 11, cultural spaces and a level 11 podium garden.

Officers stated that St. Helen's Square and the surrounding public realm would be transformed and the scheme would optimise the most strategic site in the Cluster.

An overview of how the massing of the building had changed since July 2024 was given by Officers who showed the Sub-Committee an image of the original scheme changes presented in 2024 and the revised building outline to the Sub-Committee. Officers noted that the focus had been on the lower levels of the building only and the upper levels would remain as previously proposed and highlighted that the green line represented the building outline proposed in July and could be seen in relation to the new outline from ground floor to level 3. Officers informed the Sub-Committee that the building would be set back by 10m which allowed more of St. Helen's Square to remain as public realm than previous proposed and there would be a reconfiguration of the building at level 11 which resulted in it coming further south by 7m.

Officers presented an image of the existing basement 3 and the proposed basement 3 and stated the existing basements would be retained, extended and reconfigured. Officers also presented an image of the existing and proposed basement 2 which accommodated policy compliant levels of long-

stay cycle parking and end of trip facilities. An image of the existing and proposed basement 1 was also presented by Officers who stated it would include a publicly accessible short-stay cycle hub that had been proposed in green and, as part of recent revisions to the scheme, a further area of basement would be extended as was shown in the blue outline.

The existing and proposed ground floor plan image was presented to the Sub-Committee by Officers who told the Sub-Committee that the proposed footprint would be bigger than the existing floor plan as it needed to work hard to deliver the necessary facilities to serve a building of the proposed size. Officers presented the original scheme changes from July 2024 and the revised building outline on the ground floor level which Officers stated clearly showed how the footprint of the building had changed with the 10m set back at the southern end and the massing redistributed to the west. Officers also presented an image of the ground floor amendments and stated that the previously proposed triple height lobby that would take people up to the level 11 podium garden was no longer proposed to allow the building line to be pushed back and office space would continue to be on the east side of the building, as was shown in yellow on the image, as well as an office reception, and a Changing Places toilet was proposed, as was shown in blue on the image. Officers stated that parking access would now be on the northwest corner of the building, as was shown on the image in pink, and the building would continue to be serviced from a new entrance at St. Mary Axe. Officers informed that enhancements were proposed to the public realm which surrounded the site. An image of the proposed ground floor entrances was also shown to the Sub-Committee by Officers who stated that it showed how the floor space reconfiguration would change the proposed entrance arrangements, and a single consolidated public entrance point was now proposed on the southwest side of the building. Officers told the Sub-Committee that users would take the lift or stairs to a new public lobby at level 1. From there, they would travel to the public spaces within the building and the revised positioning of the cycle parking entrance meant that cyclists did not have to pass through the public realm with their bikes.

Officers presented an image of the level 1 floor amendments and stated that a new public lobby was proposed that would accommodate space for the necessary lifting and security arrangements to allow people to access the public uses in the building.

An image of the proposed public podium floors at level 2 and level 3 were shown to the Sub-Committee by Officers who explained that, as part of the revision, the cultural and restaurant space had moved to levels 2 and 3 as, in previous proposals, levels 2 and 3 were office space and the culture and restaurant space was located at levels 9 and 10. Officers further stated that the positioning of those uses had been revised in order to better activate the lower levels of the building and make the public uses more visible from the surrounding public realm.

The Sub-Committee was presented with an image of the existing typical office floor plan and the proposed typical office floor plans for Zone 1 (levels 4-9) and Zone 2 (levels 14-29) by Officers who stated that it reflected how the building

form changed as it elevated. Officers also told the Sub-Committee that the office space would be suitable for a range of occupiers and an element of affordable workspace was proposed on the lower levels of the building. Officers further stated that the proposed office space would be befitting for the central cluster location and, in line with market demand and post COVID requirements, the office space would be complemented by generously sized and planted amenity terraces for the office occupiers. Officers presented the Sub-Committee with a CGI image of one of the proposed terraces.

Officers presented an image of the existing and proposed east elevation on to St. Mary Axe to the Sub-Committee and stated that the elevation images would show how the development would optimise the site through uplifting floor space and the increase and in height and massing would result in some daylight and sunlight impacts to nearby sensitive receptors. Officers considered this acceptable given the site context. Officers also presented the existing and proposed south elevation onto Leadenhall Street, the existing and proposed west elevation which faced the cheese grater, and the existing and proposed north elevation which faced onto Undershaft. Officers showed the Sub-Committee an image of the existing and proposed cross-section and stated one could see the public uses woven into the office space.

Officers stated to the Sub-Committee that the building would be contextual and would bring a series of interesting architectural approaches and high-quality design to the cluster which would range from the pale faience elevations which fanned out from the base to the podium garden which was shown to the Sub-Committee. Officers noted it would be suspended 42m above ground level and highlighted the zinc and enamel cladding of the main office tower. Officers further stated that it would be sustainable and would optimise circular economy principles through the reuse of the existing basement, the incorporation of facades optimised for shading, and it would be fully electric.

An image of the proposed crown of the building was presented to the Sub-Committee and Officers stated that the crown of the building would be picked out in subtle colour to reflect the civic functions of the top of the building and would form the apex to the cluster.

A presentation of the Tower of London from the existing and cumulative strategic view of LVMF 10A.1 was shown and Officers stated the development would have a striking and understated presence. Officers also presented a view of the cumulative development from Inner Ward in the Tower of London and told the Sub-Committee the development would be seen as essential to the modern skyline of the cluster and distinct and disassociated from the World Heritage Site.

Images of the existing and cumulative strategic view of Queen's Walk (LVMF 25A.1) were shown to the Sub-Committee. Officers told the Sub-Committee that the building would be the apex of the cluster with other towers descending from it.

Officers presented images of the previously proposed public spaces and cultural offer and the proposed public spaces and cultural offer and noted that more of the public uses would now be located at the lower levels of the building. Officers also presented an image of the public amenity floors and explained that the Museum of London education space would be a classroom in the sky at level 72 and, with the viewing gallery at level 73, both would be accessed from level 1 via the public lobby. Officers also presented images of the spaces in plan form and the classroom in the sky concept. They explained that the space would be curated by the Museum of London and would be a space where children could visit and learn about the City. Officers also stated that the Museum of London activity on the site would be complementary to that of its Smithfield site.

An image of the viewing galley was presented to the Sub-Committee and Offices stated it would offer different views to other viewing platforms in the City.

Officers presented an image and diagram of the level 11 podium garden and told the Sub-Committee it would be a significant architectural achievement and would be a generous, unparalleled public space that offered different views. They also noted it would be generously planted and have good microclimatic conditions. Images of the previously proposed, in July 2024, and proposed level 11 podium garden were shown to the Sub-Committee by Officers who explained that the floor space had been reconfigured while it still provided food and beverages and cultural and public spaces to complement its function. Officers further stated that as the public entrance point at ground level had changed, the arrival point on the podium had also changed, with people arriving on the west side of the terrace instead of the southern end. They also noted it was also proposed that the southern end would be a winter garden, that the public could use, which would increase the year-round appeal of the space.

Another image of the level 11 podium garden was shown to the Sub-Committee and Officers stated a feature of the podium garden would be the oculus, a circular area of walkway on structural glazing which would give views to ground level 42m below.

A diagram of the continuous city public realm was presented to the Sub-Committee by Officers who explained that the public realm would be enhanced and the north-south and east-west walking routes highlighted would be optimised and designs for St. Helen’s Square had been revised since July 2024. Officers stated that the revised proposal created Undershaft Square to the west of the building.

Officers also stated that the proposals included an extensive Section 278 agreement for the whole of St. Mary Axe and part of Leadenhall Street to the south which would be transformational and could include the rebuilding of the footway and carriageway to seek to improve the pedestrian environment. Officers also explained it presented an opportunity to remedy some issues on the street through a redesign and the street would be built in the City of London technical pallet of materials which would harmonise with the look of the

adjacent streets and public spaces. An image of St. Mary Axe of the proposed Section 278 works was shown by Officers to the Sub-Committee.

In reference to the ground level experience of the scheme, Officers presented a view of the existing and proposed building from Lime Street looking north and stated that one could see the introduction of a new screen and the podium of the oculus. Officers also showed an image of the existing and proposed building from Lime Street looking north from a closer angle and Officers noted that one could see the proposed base of the building in the proposed version which fanned out with the podium garden above.

Officers also presented images of the existing western public space, the proposed space in July 2024 and the proposed space for December 2024. They stated the area had been worked up in more detail and would become Undershaft Square with further landscaping and greening.

Images of St. Helen's Churchyard as it existed and as proposed were presented to the Sub-Committee and Officers stated there would a clear view to the public uses of the lower levels of the building.

An image of the existing and proposed views along St. Mary Axe were shown to the Sub-Committee.

Viewpoints of the existing servicing area view and the proposed view from Undershaft looking west were presented to the Sub-Committee by Officers who highlighted the carriageway moving northwards in the proposed view and the removal of the existing servicing entrance. Officers explained that, as shown in the image, servicing would take place from the corner of Undershaft and St. Mary Axe and deliveries would be consolidated and off-peak with final details being secured by a delivery and servicing management plan.

Officers presented the proposed cycle access and noted the cycle parking entrance would be at the western end of Undershaft.

Existing and proposed views across St. Helen's Square looking toward St. Andrew Undershaft were presented to the Sub-Committee by Officers who stated that the proposals would create a new civic space in the heart of the cluster. The existing steps, level changes, hard edges and planters shown in the existing image were to be removed and Officers further stated that the new space would be simplified completely at grade to make it more accessible and inclusive. Officers noted it would have a grove of trees and new seating.

The existing and proposed ground floor plan which showed the public space around the building was presented to the Sub-Committee by Officers who informed that the footprint of the proposed building would be bigger than as it existed as it worked hard to deliver what was required to make the building of the proposed size function. As a result, there would be some loss of St. Helen's Square. Officers showed diagrams of the existing square per mile area of St. Helen's Square, the proposal of July 2024 and the current proposal to the Sub-Committee and explained that the amount of the square that would be lost

would be smaller than that proposed in July 2024 as the southern edge of the building had been pulled back by 10m. Officers further stated, while they presented a diagram of the square per mile of the public realm at the podium garden, that when both the podium level garden and the ground level space was taken as a whole, the scheme would overall delivered an uplift in the quality and quantity of the public space.

Officers presented an image of the previously proposed scheme in July 2024 and the proposed St. Helen's Square and stated the existing level changes would be removed and more usable space would be created for trees and seating. Officers also told the Sub-Committee that the screen would activate the public realm and could be used to show art displays and sporting events and informed Members that the content of the screen would be controlled through a Section 106 agreement.

An image of the revised proposed new public entrance off St. Helen's Square was shown to the Sub-Committee by Officers who told Members it would be clearly defined with colour to match the way that the colour was used at the top of the building to denote civic use.

A visual of the proposed level 1 lift portal, which would be located off St. Helen's Square, adjacent to the main stairs, was also shown to Members by Officers who stated it was clearly defined in red.

Officers displayed another visual of the proposed St. Helen's Square viewed from Leadenhall Street.

Another visual of the proposed St. Helen's Square was shown by Officers who stated that it was the Undershaft square and would form part of the route between St. Helen's Square and Undershaft and further stated that one could see the relationship between the public uses within the building and the public realms.

Officers summarised that the proposed scheme delivered over 153,000 square metres of flexible, Grade A, best in class office floor space, which accommodated up to circa 8,759 jobs and it would be a significant strategic contribution of office floor of the utmost importance to the City's economic objectives to maintain its international competitiveness, as well as strengthening the economic base of the City Cluster. Officers further noted that it would be a scheme with the highest social and educational values and credentials and would deliver the highest elevated public cultural space and classroom space in Britain. Officers stated that the space would be curated by the London Museum at the apex of the City Cluster of tall buildings and would be free to visit and inclusive. They also stated that the proposals delivered a striking free to visit new public space in the form of a podium garden which was an unparalleled new elevated public space and created an iconic new destination at the heart of the cluster which would support the City's cultural 7 day and evening objectives. Officers further stated the proposal would be the totemic centrepiece and backbone of the cluster and would be an outstanding architectural moment at the heart of the City. Officers told the Sub-Committee

that the scheme would carry exemplary sustainability credentials, targeted a BREEAM 'Outstanding' rating and was designed with circular economy principles to address climate adaptation and mitigation. Officers also stated the scheme would provide significant improvements at ground floor level which included the transformation of Undershaft and St. Mary Axe and noted that there would be a reduction in the extent of the ground floor public realm as a result of necessary facilities needed to service a building of key strategic importance to the City to deliver the office floor space it needed. However, Officers stated that the new reimagined ground floor public realm would provide a significantly more enhanced, inclusive and flexible St. Helen's Square in quality terms and a reimagined public space at the heart of the cluster. Officers told the Sub-Committee that it was the single most strategic site in the cluster and the City and it was vital that optimised floor space capacity was sought on the site to remain internationally competitive in the years ahead. Officers noted the need to balance that with the provision of high-quality public realm and other planning considerations. Officers stated they firmly believed that the scheme achieved the balance and recommended approval of the proposals to the Sub-Committee.

The Chairman informed the Sub-Committee that there were no Objectors to the application and invited the Supporters to address the Sub-Committee.

The Town Clerk explained to speakers that they would have a total of 10 minutes to address the meeting with no one person being able to speak for longer than 5 minutes. The Town Clerk also explained the traffic light system to speakers.

Mr. Paul, from DP9, addressed the Sub-Committee and noted they had been hard at work since the last meeting when the Sub-Committee had asked for the approach to the public realm to be reevaluated and Mr. Paul stated they had done as asked. He noted that the work had taken place in consultation with those who attended the last Sub-Committee meeting on the proposal and a consensus had been reached. Mr. Paul referred to a letter from the Lime Street ward team, along with correspondence from neighbours at 122 Leadenhall Street, that supported the changes and further noted that Lloyds had also withdrawn their objection to the application. Mr. Paul informed the Sub-Committee that the outcome of the review had been a positive one and the overall design had benefitted from the critique. Mr. Paul thanked all those who were involved.

Mr. Hyde addressed the Sub-Committee and stated he was aware there may have been Members present were not present at the Sub-Committee meeting in July 2024 and informed Members he would brief summarise the proposals before he moved on to introduce the amendments that had been made. Mr Hyde also noted that Mr. Lim was in attendance who represented the owners. Mr. Hyde stated the owners had been instrumental in securing the 2019 planning consent and remained fully committed to taking the development forward. Mr. Hyde told the Sub-Committee that at just under 310m tall, the building would be the tallest in the City, London and the UK and it retained it totemic form from 2019. He informed Members that the two uppermost floors

were fully public spaces and was pleased to confirm continued collaboration since 2015 with the London Museum to provide the learning centre. He also told the Sub-Committee that the proposals would provide over 153,000sqm of the best-in-class office space with access to local terraces on the floors, as well as common landlord amenities and outdoor gardens at the main terraces. He explained this alone would represent around 10% of the forecasted occupier requirements in 2040as was evidence by the City's own research. Mr. Hyde stated that the office areas were of different sizes and characters and allowed for flexible occupation for the widest cross section of workplace requirements. A lot had been learned from other tall buildings, and the building would not only be lean in embodied carbon but would operate very efficiently. He continued that in addition to the contribution of space for business, the building epitomised the City's desire to be a destination for all and provided over 5000m^2 internal areas and around 6,500m^2 of external public paces at grade and level 11. Mr. Hyde drew attention to the elevated public garden and its own ecosystem of public amenities at level 11, as well as other public areas lower down the building which included a restaurant. He further stated that generous, vibrant, accessible and flexible public realm at grade had been proposed which fully supported the Eastern City BIDs' recently launched public realm strategy and had recently been endorsed by them. He further noted that there were extensive future Section 278 works to improve St. Mary Axe. Mr. Hyde concluded that a number of comments and questions regarding the spaces had been heard in July 2024 and hard work had been done through the summer, in collaboration with local ward Members and other stakeholders. Mr. Hyde indicated that the input had been appreciated and was pleased that they were now supportive of the proposals.

Mr. Parry addressed the Sub-Committee and told Members that it was a generous building and there was an aspiration for it to be a next generation classic of its kind, both for the public and for occupants. He stated that it had been modelled to provide a series of urban horizons at the street level, the elevated public garden amenity floors, the London Museum, classrooms and a viewing gallery at the apex of the building. He also told the Sub-Committee it was a building of character with facades designed for longevity and calibrated for performance and was not another glass tower. He added that the step massing provided a range of floor plates to attract future tenants in the sustainable development. Mr. Parry stated that the redesign of the lower levels had improved both the public realm and the engagement on the three active frontages; to the north, Undershaft with a reposition cycle hub entrance, along St. Mary Axe through improvements under Section 278, and the western pedestrian route which connected St. Helen's with Leadenhall Street. He added that the redesign for St. Helen's Square had been enlarged by setting back the base of the building by 10m, so 80% of the existing public space at ground level had been retained. This would allow more flexible use by the local communities in a fully accessible square with an enlarged grove of trees, more seating, and a new focus with a large public screen curated to support Destination City. Mr. Parry stated, secondly, that Undershaft Square, the current space behind the Leadenhall Building, could, by a relocation of the cycle hub entrance, be reimagined as a quiet space for nature and connected to the public garden above. Thirdly, Mr. Parry stated, in relation to public access, that a single public

entrance, which replaced the previously proposed two entrances, would now be directly off St. Helen's Square with a civic scaled stair and two fully accessible lifts which allowed entry to level 1, while the public lift served levels 2 and 3. He also noted the public garden at level 11, as well as the two lifts that served te top of the building and stated the public spaces had been designed for the flow of visitors and the provision of security screening that would be necessary. Mr. Parry added that by relocating both the restaurant and some cultural uses to lower podium levels, the predominantly glazed base of the building was now more animated and attractive and the elevated public garden would provide a natural respite from the busy city below. He further stated the level would give a unique experience of the notable architecture within the cluster and of St. Paul's and The Shard. Mr. Parry informed the Sub-Committee that the area of accessible public realm had been increased by up to 40% and he stated he was confident that these were all improvements and would further enhance the strong and compelling civic quality that was woven throughout the design which defined and set it apart as the cluster's totemic centrepiece.

Mr. Astrop addressed the Sub-Committee and thanked the policymakers of the City of London for an ambitious commitment to biodiversity. He stated he believed that the project was the beginning of a global paradigm shift and thanked Sub-Committee Members for their feedback. Mr. Astrop stated that the Sub-Committee had previously commented on the number of public benches which had been increased from 268 to 350 where the public could now take lunch breaks. He added that the public could now also take their lunch on the elevated public garden of 2,500sqm with 51 trees and biodiverse planting which was critical in helping to deliver more than 500% biodiversity net gain. Mr. Astrop also told the Sub-Committee that the garden also offered benches inside a free, and enclosed, garden room which ensured it would be pleasant to use all year round. He also noted that the Sub-Committee had commented on the ground floor, which had led to an optimised entrance for bicycles and a place had been designed for a place full of plants that would strive in those specific conditions. Mr. Astrop also stated that the Sub-Committee had commented on St. Helen's Square which would now have a step-free surface with access for all and a pavement that aligned and merged with adjacent public space. The space would also provide 17 mature native trees instead of 12 and the York stone would remain.

The Chairman invited Members to ask questions of the applicants.

A Member noted they had previously asked a question about the height of balustrades around the public area as they understood they were 2.5m tall and were made of glass, but sought clarity as the report referred to balconies that would incorporate balustrades of 1.5m high. The Member also queried whether a metal balustrade of 1.5m would be included with a 2.5m high glass balustrade. A supporter confirmed that 2.5m was the determined height as proposed and stated it was important there was a rail behind the balustrade to absolutely deter.

The Member also stated she understood that the scheme had come forward as the developer had previously said the trellis scheme floor plates were not

sufficient which was why the redesign had occurred and queried whether it was correct that the developer had now been able to incorporate a design by allowing the garden space with sufficient floor plates and whether it was larger than the previously agreed scheme. A supporter stated that was correct and the previous planning permission had been technically implemented since the last meeting the development was discussed at. The supporter further explained that the planning permission would have lapsed so a commercial decision was made to implement the consent rather than lose it and the CIL payment had been made. The supporter stated that the decision to apply the previously granted planning permission demonstrated a commitment to the site and believed that the application was the future for the site.

Another Member asked a question on who held responsibility for the running costs of the Museum of London classroom and queried how many classrooms in the sky were needed given one had been consented the week before and what analysis had been done on the number of children who needed to use the classrooms. A supporter stated they had been in discussion with the Museum of London for a significant amount of time and the intention was that the spaces would be self-sustaining. The supported added that the Museum was used to running spaces by allowing private hire to fund the spaces and the landlord would provide and fitout the space, so the operational costs were relatively small, and the same servicing would be used to get into the building. The supporter further added that there would be a mode which would be a blend of the money generated on site, any grants which were available and any contributions from London authorities which is where it was aimed to give every child in London the opportunity to visit it and any sponsorship that could be received. The supporter also stated that the landlord was fully supportive of the Museum to keep in operating. In regard to the question on how many children would use the classrooms, the supporter stated 3 or 4 classrooms had been proposed and that was based on being able to turn through all children at some point in their education, both at the secondary and primary level.

Clarity was sought by a Member on whether the expectation was that all children in London would visit one of the classrooms in the sky at some point. The supporter stated that it was the ambition and every one of London's children should have the opportunity to visit the classrooms. The Member queried whether detailed work had been carried out on the scale of children that would visit the classrooms. The supporter stated that it had been looked and now there was a seven-year journey to work out how it would be implemented. Another supported stated that the desire to learn about London through the London Museum was compelling for schools and the ambition was to enable every young person in their learning life to pass through the classroom in the sky. The supporter added that the unparalleled quality of experience delivered by the London Museum was hugely valued by schools as it was embedded in the London curriculum and hoped that would give Members assurance that the quality and mechanism to attract young people and schools to the classroom was strong.

A Member asked the develop to recommit that the public spaces would be public spaces once the building had been completed. The supporter stated that

the public ground space had been designed precisely to be publicly accessible and separate from the office space and told the Sub-Committee that if there was an element of potential privatisation in the future, it would have to return to the Sub-Committee for agreement as it had been set out in planning conditions and legal agreements and felt that was highly unlikely.

The Member also sought some clarity on St. Helen's Square being a place for nature as they understood how flora could be introduced through planting, but was unsure how fauna would be introduced. A supporter stated there would be a lot of native species of flora that would adapt to the local climate and attract birds.

The Member also sought to understand whether the height of the building at 310m was necessary as the Shard was 309.6m and felt the description of the building as 'totemic' was disappointing and considered whether it could have been a more modest height. The supporter told the Sub-Committee that it was at the centre of the cluster and felt it was an opportunity to build to the highest height. They added that they felt it was entirely appropriate in order to maximise the site.

A Member sought information on how many classes would go through the classroom in the sky in the course of a day, whether the area was solely for the use of the Museum of London and what would be done with the space at the end of the day when children had gone home. A supporter explained it would be mixed-use like the museum in Smithfield and there would be events for both adults and children and aimed for 300 pupils to come through the classroom every day. The supporter also explained that the amount of time classes could visit was constrained to the middle of the day and adults would visit outside of classroom hours. The supporter added that, to be sustainable, the museum needed to generate income, such as the provision of refreshments and shops, but stated it was absolutely about the public benefit and the museum was committed to that. The supporter told the Sub-Committee they would work through the details with the landlord and felt very assured that a compelling educational offer that benefitted the public would be created.

A question was raised by a Member on whether the Museum of London based at the development would recourse to funding from the City of London. The supporter confirmed it would not. The Member further queried whether the museum could be adequately funded through sales and the renting out of the space. The supporter stated that the fitout was supported by the landlord and, in terms of operational costs, the main building would be supported by the landlords which meant the museum would not have those costs. The supporter added that the staffing costs would be borne though the sustainable model developed with the proposed project.

The Chairman opened the floor to questions to the Officers.

The Chairman noted the refreshed National Planning Policy Framework (NPPF) issued by central government and asked Officers to clarify what aspects needed to be considered for the application and future applications. Officers

stated an addendum was circulated the day before which set out the changes to the NPPF and how it would impact on schemes before the Sub-Committee. Officers added that the changes did not significantly alter the assessment of the applications against the NPPF or the weight given to it and they did not have significant implications for the issues set out in the main reports for either scheme. Officers highlighted the main changes that had been made; a presumption in favour of sustainable development had been strengthened in some situations where policies were out of date, a new requirement had been added to recognise and address specific locational requirements of different sectors, the introduction of a vision-led approach to sustainable transport, greater emphasis in relation to developing brownfield sites and specific reference to the government's goal of meeting net zero by 2050, and for climate impact, urban heat and island flooding to be taken into account as relevant. Officers added that the addendum did set out where the issues had been covered in the main reports for each application and updated the references to the NPPF. Officers stated that in their view, the City Corporation's policies and practices were already ahead of the curve on those issues and added that Members would be aware that the starting point for determining applications remained the development plan and the NPPF which set out government policy, and was a material consideration to be taken into account alongside other material considerations.

A Member sought clarity on the mention of a Section 278 agreement with regard to the pedestrianisation of St. Mary Axe and a small section of Leadenhall Street. Officers told the Sub-Committee that the Section 278 area would include part of Leadenhall Street and the City Operations team were currently consulting on proposals for pavement widening and public realm improvements along the length of Leadenhall Street. Officers added that the scope for the works under the proposed application would be determined under a Section 278 agreement.

The Member also asked whether there was any opportunity for improvement at ground level at 122 Leadenhall Street. Officers informed the Sub-Committee that there had been scoping of enhancements to the ground floors and ideas were being developed. However, none of those ideas had been shared with Officers to date.

A question was also posed in regard to the corner of Undershaft and St. Mary Axe by the Member as they understood it would be a vehicle access, but there did not seem to be any inclusion of greening on the corner and asked whether there was scope to consider something. Officers stated there were practical constraints, but a valid point had been raised with the greening and they indicated this was something that could be explored through landscaping conditions recommended in the schedule.

A question was raised by a Member in relation to the amount of office space proposed in the development and whether it was the same as proposed in July and the office space had just been moved around. Officers

A Member asked, in relation to the amount of office space proposed in the development, whether it was the same as proposed in July, as objections were related to the effect on neighbouring light and the public realm, and further queried why it was not part of discussion about amendments if office space had just been moved around and not reduced. Officers stated that the changes to the floor space between the July 2024 application and the revised scheme as set out in paragraph 32 of the report did not that there was a small reduction in office space. Officers added it was a reduction from 154,156sqm in the July 2024 application to the application before the Sub-Committee which was 153,602sqm. Officers further stated it was partly due to some of the relocation of the public and amenity spaces which resulted in slight changes to the office across the podium floors, but Officers did not consider that it had significantly reduced it and it was still a significant quantum of office space proposed.

The Member further queried on the massing and whether things had been moved around as there had been mention of increasing the area of St. Helen's Square. The Member also asked whether the space would be added on somewhere else onto the building in terms of massing as it was difficult to follow what had happened in in terms of the lower levels of the building. Officers stated that from ground level to level 3, the building had been pushed back by 10m and some of that massing from the south had been moved around to the west side of the building and all the changes to those floor spaces, the movement of the uses and the implications were set out in the report.

A Member asked, in relation to the unsympathetic servicing ramp that had been mentioned, what Officers could the Sub-Committee was in the previously consented scheme in 2021 compared to the scheme that did not progress in the summer of July 2024. Officers stated it was largely the same as the proposed scheme, the road moved northwards and it would have built over the ramp. Another Officer stated that the previous scheme in 2021 had vehicle lifts on Undershaft as well.

Clarity was sought by a Member who stated that the tables seemed to have the figures for the whole life, carbon options table in metres squared, but not the figures for the total amount and questioned why that had been removed as it was a key figure in terms of the actual carbon impact in terms of the emissions. Officers stated that the table had been extended to show the absolute carbon emissions and the addendum showed that option 4 had a whole life carbon assessment (WCLA) impact of 310,847,000kg of CO_2 compared to option 1, the minor refurbishment option, of 158,094,000kg of CO_2.

The Member asked, if we looked at the major refurbishment against the option proposed, whether there was a differential rate in absolute carbon emissions between the July 2024 application and the proposed application and queried whether the 406,000 tonnes of CO_2 figure had removed the decarbonisation assumptions or whether it assumed the decarbonisation of the grid. Officers stated that the minor refurbishment had half of all the absolute carbon emissions of the new-build scheme, and the lowest carbon option was option 2, the major refurbishment option, that could reduce emissions significantly through the use of heat pumps and would be a quarter of the carbon emissions

of the proposed scheme. Officers added that the whole life cycle of carbon emissions were now calculated to be 390,481 tonnes of CO_2 and that was without decarbonisation as the GLA required. Officers further noted that once the grid decarbonised, it would reduce significantly. Officers added that operational carbon emissions had reduced from 746kg per square metre to 664kg per square metre which was due to the applicant further developing their model of the building from the July 2024 scheme and the total carbon emissions had been reduced from 2,247kg to 2165kg per square metre.

A Member sought assurance over the use of the classroom in the sky and balustrades as to whether they had been clarified in a condition that was watertight as a developer had previously misinterpreted a condition. Officers stated that the classroom in the sky would be secured through an obligation in the Section 106 agreement, not through condition, and they looked to seek agreement of the terms that had been discussed at the meeting through the Section 106 agreement. Officers added, in reference to suicide prevention, that there was a condition on the balustrades and would be condition 55 on approval. Officers further added that they would be drilling into the detail of the Supplementary Planning Document (SPD) and the requirements that were needed. Officers also told the Sub-Committee there was a condition on the balustrade of the doubling-up of requirements to ensure suicide prevention.

The Chairman moved to a debate of the Sub-Committee on the application.

The Chairman thanked the applicant, Officers, neighbours to the scheme, and ward Members and stated that the deferral of the decision in July was not a common action for the Sub-Committee to take. The Chairman added that the Sub-Committee did it on specific grounds around minor alterations to the ground floor and all parties had come together cooperatively in the last few months to deliver what was before the Sub-Committee.

A Member stated they were concerned with the design of the development, and it was an issue the heritage lobby had picked up as well. The Member added they commended the work put in, but felt the building at the lower level had a clear and detrimental effect on the quality of the public spaces around it. The Member further stated there was an increase in carbon footprint compared to what currently existed and there was a direct loss of a large section of the existing space that had a clear sky and no longer would. The Member further added that the heavy dominance of the building at the lower levels and it had a vast oversailing podium. The Member told the Sub-Committee that that it was compromising too and they had expected a reconsideration of not just what happened at a higher level of the building, which had improved, but the ground floor too. The Member added it had compromised the public realm far too much and he stated he could not support a building that was trying to do too much. The Member stated that it was a balance between optimisation and the public realm, and the public realm had to be valued. The Member concluded that the proposal was overselling the garden, and it was the wrong approach and he could not support it.

Another Member stated that not much had changed in terms of the actual figures with regard to the loss of the public realm which was a very rare large space of public realm at the ground level in the City and tiny pocket parks had been put forward as a public benefit. The Member added that the Officers worked incredibly hard to create pocket parks which had some genuine scale and further stated that the reduction in square metres from 4,669 to 3,850sqm was half the size of Manchester Cathedral at 704sqm which was a significant amount of loss. The Member told the Sub-Committee that it was losing when it had very little and endorsed what had been said by the previous Member.

A Member told the Sub-Committee they were not present for the initial consideration of the application but had opportunity to compare the two schemes and felt it was worth reflecting on the changing shape and size of the public realm that had been provided. The Member stated there was a reduction but, compared to the previous scheme, was less so and felt hat should be commended as a sign of being listened to. The Member added that it appeared to them that the classrooms in the sky would probably be cross subsidised by the footprint of the larger business model at the Museum of London which sounded entirely feasible and reasonable and it was the kind of thing that should be supported. The Member further stated that while another Member had described the new garden area as bolted on, he felt that it showed a willingness to compromise and adapt which was something he felt the Sub-Committee should encourage. The Member concluded that while there was some harm to the public realm and heritage views, he felt the economic benefit, the benefit from sustainability and the adaptability and compromise that had been made had drawn him to support the application.

It was stated by another Member that it was interesting to hear other Members use the word ‘compromise’ in regard to St. Helen’s Square and added that the point had been well made about the building trying to do too much. The Member commended the developers and designers for their work, but the ambition to achieve the height proposed, and the idea it was of significant strategic value, was nonsense. The Member further stated that the real strategic value was those buildings being close to a public transport hub. The Member added that their real concern was the natural environment, and the reality was there were a lot of failing green spaces around the City due to nature having to do things it could not do and stated that the idea that the space would flourish, be it for flora or fauna, was misleading. The Member concluded that if a public space was being created which was healthy and good for human beings, that needed to be carefully thought about.

Another Member stated they thought it was great that the development would be the tallest building and added it would be a great advert for the City, and to aim for anything less would be disappointing.

A Member stated that moving the space from the shadowed area in the west to the south which was sunnier was smart and a good move. The Member added, in terms of the building itself, it was not boring which was important and having a podium at 42m allowed the public an opportunity to view the iconic buildings around it as the architects had envisaged it. The Member noted that it was a

smart height to look at other buildings at rather than from above and felt the podium would be a great success. The Member concluded that the other advantage was the dedicated lift which meant the public could be at the podium in five minutes, have lunch, and come down again and indicated his strong support for the building.

Another Member told the Sub-Committee they disagreed on the benefit of having the highest public viewing platform, which was situated behind the previous highest viewing platforms. The Member also stated that the degradation of the public realm at street level was very concerning. The Member added that the ground level entrance looked like a cave and stated she did not think that an overshadowed square was going to be an attractive place to sit no matter how many benches were installed in it. The Member concluded that they would not be supporting the application.

A Member stated it was an unusual proposal and indicated she doubted whether or not the application would return to the Sub-Committee in time. The Member told the Sub-Committee she felt that if the applicant had a bit more time, they would have been able to revise and refine it to improve it. The Member added they had concerns about the loss of the ground floor space and whilst one could get a lift up and have lunch quickly, in practical terms it would be impossible as seen with other gardens in the sky where there had been long queues of visitors whilst those who lived or worked in the City would struggle to get up there in their lunchtime. The Member further stated that it was seen during Covid how crucial the open space was for those who had stayed in London and the City, and as people had come out of Covid, they had realised how important the natural environment was. The Member further added it was a shame that something would be lost which could not afford to be lost because the space was not available to be given away. The Member stated she was sure the architect could be creative and keep the open space while designing a building that was viable for the clients and would have preferred the developers to take a little more time rather than rush it through as they thought it could be refined a little bit more.

The Chairman stated the Sub-Committee had looked into the application in depth and acknowledged there were subjective differences of opinion on the architectural merits. The Chairman told the Sub-Committee that it was his feeling that the Sub-Committee should be bold and allow architects to be bold in their vision of what was delivered in the City. The Chairman added that it was important that there were features that were attractive and drew visitors above the ground floor. He stated that the winter garden that had been proposed offered a unique perspective in the heart of the cluster of tall buildings in the Square Mile. In reference to the ground floor, the Chairman added that a lot of work had been done on creating Undershaft Square and it as a vital element of the eastern cluster as there were not that many open spaces and was proud to see another 10m given over to the public realm. He further stated that as one came into the square, their eye was drawn to the London Museum and the public access into the building. The Chairman told the Sub-Committee that Officers had been working hard to ensure the building did feel open and accessible to all and, for those reasons, supported the application.

The Chairman moved the meeting to a vote.

The Town Clerk confirmed that Members were voting on Item 3 and the recommendations on Page 12 of the main agenda pack, with any relevant amendments set out in the addenda.

The Sub-Committee proceeded to vote on the recommendations before them.

Votes were cast as follows: IN FAVOUR – 16
OPPOSED – 7
There were no abstentions.

The recommendations were therefore carried.

RESOLVED – That, Members approved the following recommendations:

(1) That the Planning and Development Director be authorised to issue a decision notice granting planning permission for the above proposal in accordance with the details set out in the attached schedule subject to:

(a) The application be referred to the Mayor of London to decide whether to allow the Corporation to grant planning permission as recommended, or to determine the application himself (Article 5(1)(a) of the Town and Country Planning (Mayor of London) Order 2008);

(b) The application being referred to the Secretary of State pursuant to the Town and Country Planning (Consultation) Direction 2021 and the application not being called in under section 77 of the Town and Country Planning Act 1990;

(2) That the Department for Digital, Culture, Media & Sport (DCMS) be notified of the application and advised that the City Corporation intends to grant planning permission and that the Planning and Development Director be given delegated authority to consider any response received from DCMS, UNESCO or ICOMOS.

(3) That your Officers be instructed to negotiate and execute obligations in respect of those matters set out in “Planning Obligations” under Section 106 of the Town and Country Planning Act 1990 and any necessary agreement under Section 278 of the Highways Act 1980.

(4) That members note that land affected by the building which is currently public highway and land over which the public have a right of access may need to be stopped up to enable the development to proceed and, upon receipt of the formal application, officers may procced with arrangements for advertising and (subject to consideration of consultation responses) making of a Stopping-up Order under the delegated arrangements approved by the Court of Common Council.

(5) That your Officers be authorised to provide the information required by regulations 29 of the Town and Country Planning (Environmental Impact Assessment) Regulations 2017, and to inform the public and the Secretary of State as required by regulation 30 of those regulations.

4. **BURY HOUSE 1 - 4, 31 - 34 BURY STREET, LONDON, EC3A 5AR & 5. HOLLAND HOUSE 1 - 4, 32 BURY STREET, LONDON, EC3A 5AW - LISTED BUILDING CONSENT**

The Chairman stated that Agenda Items 4 and 5 would be taken together.

The Sub-Committee considered a report of the Chief Planning Officer and Development Director regarding Bury House 1 - 4, 31 - 34 Bury Street London EC3A 5AR specifically the demolition of Bury House and erection of a new building comprising of 4 basement levels, ground plus 43 storeys (178.7m AOD); partial demolition of Holland House and Renown House; restoration of existing and erection of four storey extension resulting in ground plus 8 storeys at Holland House (48.05m AOD) and three storey extension resulting in ground plus 5 storeys at Renown House (36.49m AOD); interconnection of the three buildings; use of the buildings for office (Class E(g)), flexible retail/café (Class E(a)/E(b)), and flexible community/education/ cultural/amenity (Class F2(b)/ F1(a)- (e)/ E(f)/ Sui Generis) uses; and provision of a new covered pedestrian route, cycle parking and facilities, landscaping and highway improvements, servicing and plant and all other ancillary and other associated works. The Sub-Committee also considered a report of the Chief Planning Officer and Development Director regarding Holland House, 1 - 4, 32 Bury Street, London, EC3A 5AW, specifically the restoration works to Holland House including removal and reinstatement of external faience together with the removal and replacement of existing concrete beam; partial demolition to facilitate interconnection with the neighbouring proposed new building and the construction of a four storey roof extension resulting in ground plus 8 storeys; together with internal alterations including truncation of the existing lightwell, reconfiguration of partitions, installation of a new staircase, servicing and all other ancillary and associated works.

The Officer stated that the presentation was a brief summary of a more comprehensive presentation which had been published. She added that two addenda had also been published to address additional representations and matters relevant to the new National Planning Policy Framework (NPPF).

The Officer stated that the application related to a site located to the northeast corner of Bury Street, northwest of Creechurch Lane. It comprised three buildings, namely Holland House, a grade two star listed building, Renown House and Bury House. It was within the recently designated Creechurch Conservation Area. Other designated heritage assets were located near the site, including the Bevis Mark Synagogue, a grade one listed building.

Members were informed that the site was located at the heart of the Eastern Cluster which contained the greatest density of businesses and jobs in the City.

It was also within the city cluster key area of change and the city cluster Tall Buildings Area as identified in the emerging City Plan 2040. In terms of the context of the area the site sat within a number of existing, consented and implemented tall buildings, including the Gherkin, 100 Leadenhall, 1 Undershaft, 24 Bevis Marks and 1 Creechurch.

The Sub-Committee was informed that Bury House was a seven-storey commercial building built in 1967. Members were shown existing floor plans and elevations of the building. Renown House was a five-storey office building, built in 1912. Although not a heritage asset, Renown House was a characterful survival of a small-scale office building. Members were shown the existing floor plans and elevations of the building. The Officer stated that Holland House was a grade two star listed building which was built to designs of Berlage in 1916. It was of expressionist style with vertical architectural form finished in distinctive grey green faience. Members were shown the floor plans and elevations of Holland House.

The Sub-Committee was advised that planning permission was sought for an office led development involving the demolition of Bury House and erection of a new building comprising four basement levels, ground plus 43-storey restoration works, Holland House and Renown House including extensions, interconnection of the three buildings and construction of a single core within Bury House to serve all three buildings.

The Officer advised that listed building consent was also sought for the external restoration works to Holland House, the partial demolition and construction of the four-storey roof extension, together with the internal alterations including truncation of the existing light well.

Members were informed that the proposed development had been designed to activate the ground floor and optimise inclusive public realm. The Renown House ground floor plate would be lowered to provide step-free access to both Renown House and Holland House. Step-free access would also be provided throughout James Court, Heneage Arcade and Bury Street. Access to the cycle parking would be off Creechurch Lane and Heneage Arcade. There would be one servicing point of Heneage Lane to serve the whole development with consolidated deliveries not exceeding 33 vehicles a day and a blue badge parking bay was also proposed within the designated servicing bay to serve the proposed development. 582 long stay and 85 short stay policy compliant cycle parking spaces were proposed within the lower ground and basement levels along with dedicated cycle repair space supporting the provision of new skills in the area providing training and jobs for young adults. Policy compliant end of trip facilities would be provided at basement level two.

The Officer highlighted the existing and proposed public realm arrangements. Despite the relatively small site footprint, the proposed building would provide over 600 square metres of new external public realm providing over 75% uplift. Members were shown a ground floor axonometric plan showing the ground floor arrangement and its proposed uses. Heneage Arcade would create a new thoroughfare, reintroducing a historic City route with flexible retail cafe uses and

incorporating public art. St James Court would be reimagined, providing a space available to the wider community that was accessible, inclusive and inviting.

Members were shown the proposed lower ground, ground and first floor plans. Alongside the office space, flexible, educational, cultural, community, sports, multi-faith spaces would be introduced which would be combined to create a compelling and inclusive public offer in the heart of the cluster, in line with the Destination City agenda. The proposal would also provide over 1,100 square metres of affordable workspace.

Members were shown the a section of the proposed Heneage Arcade at ground floor and the double-storey flexible auditorium to the upper floors. These multi-functional bookable spaces would attract a wide range of activities, including student visits for learning, educational, creative and skills workshops, rehearsals, performances, conferences, charity events, sports tournaments and faith events. The spaces would be available free of charge for community-based groups, non-profit organisations and schools for over 67 hours each week, along with the artwork proposed to be displayed along Heneage Arcade. The proposal would also involve the creation of an outer climbing wall on the facade of the tower fronting St James Court. This would be open to the public, encouraging health and well-being and supporting the provision of new sports and recreation facilities.

Members were shown the indicative floor plans of the proposed development, showing the variation of the floor plates, the introduction of roof terraces, the recessed extensions to the listed building, the tapering of the upper floors of the tower element, the proposed office floor space floor plates which ranged between 350 square metres and 580 square metres for businesses of 50 to 60 people, supporting smaller start-up businesses providing office tenants with their own private entrance and a gated floor space. An urban farm was proposed at the ninth floor of Holland House to be used as a rooftop classroom, providing a nurturing environment for learners to explore plus urban greening. Office tenants would also benefit from access to terraces which would provide a space of calm and engagement with nature.

The Officer stated that planning permission for the demolition of the building at 31 Bury Street and the construction of a 48-storey tower building was previously refused. The reasons for refusal included the adverse impact the development had on the setting and amenities of the grade one listed Bevis Mark Synagogue by reason of the overbearing and overshadowing impact of the development on the courtyard, and the adverse impact of the development on the Tower of London World Heritage Site by reason of the less than substantial harm caused to the LVMF 10A.1 from the Tower Bridge North Bastion.

Members were informed that the current proposal incorporated three buildings rather than Bury House alone. In terms of the tower element, this had been amended to reduce its height by 19 metres and by setting back the top eight

floors to reduce the massing towards the termination point of the tower.

Members were shown the existing and proposed elevations, showing the development within its context. In the southwest elevation the proposed development would be approximately 16 metres lower than the Gherkin. In the northeast elevation, the development would be approximately 84 metres lower than 100 Leadenhall. Members were also shown the northwest and southeast elevations, a closer view of the proposed development at Renown House and Holland House and the relationship with the proposed tower element. They were also informed by the Officer that the development would involve the demolition of the existing clumsy 1960s, 70s and 80s and 80s extensions and their replacement with three additional floors that were set back from the main facade providing a well-considered designed response. She commented that the overall design of the extensions to Renown House would maintain the existing qualities and its relationship with Holland House executed in a different style to continue to be read as two separate buildings. As could be seen from the historic and proposed illustrative view, the additional storeys would have a very limited visibility in the oblique views.

The Officer stated that the building was designed to have no negative impact on the ability to appreciate the historic facades. The proposed element would be a sophisticated new addition to the city cluster through the use of high-quality faience materials and detailing inspired by the immediate neighbours. The proposed building would be an appropriate and sympathetic neighbour in architectural terms.

Members were shown images of some of the different scenarios that had been tested for environmental impacts, including the baseline scenario, the future baseline and the cumulative including the proposed development. They were also shown a table outlining the daylight and sunlight impacts of the proposed development of the nearby receptors. These impacts had been independently reviewed and were assessed in detail in the report. Moderate daylight impacts on some nearby residential properties have been identified. These were considered acceptable considering the context of the City. Negligible effects have been identified in terms of sunlight.

The Officer showed the view of the proposed development from Bevis Marks Synagogue's courtyard with the reduction in height and massing from the previously refused application. Members were shown an image of the interior of the synagogue towards the Bimah and an image from the gallery. Photographs showed the synagogue had large sized windows to all four elevations. The daylight impacts of the proposed development in the synagogue showed an absolute reduction of 0.4% in the gallery and central room between the cumulative and future baseline scenarios, which was considered a minor adverse impact. Members were shown a slide outlining the sunlight impacts into the synagogue. It was noted that these meet the BRE criteria. Members were also shown a visual of the interior of the synagogue. The exhibition centre could be seen and it was to the south of the synagogue.

The application was supported by a qualitative assessment called a radiance

assessment, which showed the level of daylight in a room. 3D visuals were presented which showed the impact on the level of daylight would be localised and in a limited area in the gallery and it would be minimally noticeable. A comparison of the daylight and sunlight impacts from the previous scheme has been carried out by a third party on behalf of the Corporation. The results show that the daylight effects remained relatively comparable, and the sunlight effects of the proposed scheme represented a small improvement when compared to the refused scheme. Members were reminded that the daylight and sunlight impact into the interior of the synagogue was not a reason for refusal of the previous application.

Members were shown a visual of the layout of the synagogue's courtyard as it was in 1925, with a previous annex and as existing following the recent changes to include an exhibition centre with a new ramp and a permanent security and ticketing booths. In terms of overshadowing, the courtyard of Bevis Marks Synagogue would meet the BRE guidelines. Although not a BRE requirement, when considering the average sunlight availability in the courtyard the changes between the future baseline and cumulative were very limited and equated to a maximum of 19 minutes' reduction of sunlight in June. This reduction was not considered to preclude from continuing to use the space for religious events or in association with the visitor centre.

In terms of wind and thermal comfort, several scenarios had been tested and it had been found there would be no safety exceedances. Members were shown the existing wind condition scenario and were informed that with the proposed development built on site, conditions were suitable for their intended use. Landscaping mitigations were only required at the level seven terrace of the proposed development and with all cumulative schemes included, the wind conditions would still be suitable for their intended use and the conditions in the synagogue courtyard would remain suitable for frequent seating.

Members were informed of the importance of viewing the moon to enable the reciting of the Kiddush Levana prayer and stated this topic was subject to a number of objections. To respond to these objections, the applicant had carried out a study of a full lunar cycle. The assessment was based on the visibility of the moon from two observer points within the courtyard which were outlined. The results of the study were that in the existing conditions the moon was not visible at all for three months in the year and this was reduced by one more month in the future baseline scenario and this was due to the technically implemented 100 Leadenhall building. Although the proposed development would reduce the number of hours that the development would be visible from the observer points, it would not reduce the number of months that the moon would be visible when compared to the future baseline scenario. Members were informed that the City of London Corporation had taken positive steps to advance equality of opportunity by undertaking a detailed assessment of the impacts of the proposal on the use of the synagogue, and it was considered that the impacts of the development would not adversely affect the synagogue as a place of worship in order to warrant a ground for refusal.

Members were shown a number of townscape views. In the existing view from Tower Bridge South, with the proposed development and cumulative schemes, the proposed development would clearly form part of the cluster that was read as a distinctive entity from the World Heritage Site. From 10A.1, less than substantial harm was previously identified to the Tower of London by the previously refused development. As could be seen in the proposed and cumulative views the currently proposed development would appear at the east edge of the cluster, providing an eastern endpiece playing an important role in mediating between the cluster and the lower buildings to the east, particularly when compared to 100 Leadenhall and 1 Undershaft. In the view from Queen's Walk, in the existing, proposed and with cumulative schemes it was considered the observer would continue to recognise and appreciate the World Heritage Site as a strategically important landmark set apart from the City.

Members were shown the existing, proposed and cumulative views from the Tower of London Inner ward and the east of Devereux Tower and the local views from Bury Street. It was considered the proposed extensions to Holland House and Renown House would be architecturally designed to be recessive to the architecture of the Grade II* listed façade.

In the view from Bevis Mark Synagogue with the proposed development and with implemented schemes, the synagogue had commanding presence in the courtyard as the forefront of the view. There were existing tall buildings visible behind the synagogue, including 40 and 100 Leadenhall. It was from the courtyard entrance that they were the most visible. When moving into the courtyard closer to the synagogue, they quickly receded into glimpsed background elements. In the view from Creechurch looking northwest with the proposed development and cumulative schemes, the development could be seen as part of a dynamic, denser urban townscape fundamentally characterised by its proximity to other tall buildings.

Members were informed that Carbon Optioneering had been carried out to establish carbon impacts, opportunities and constraints for the environmental sustainability to inform the development proposals and this was independently reviewed. The energy strategy had been optimised for the site and a BREEAM excellent rating was targeted. Circular economy measures had been incorporated, such as retaining approximately 35% of the existing structures, as well as designing for longevity, adaptability and low maintenance. The development would also achieve a UGF of 0.32 which exceeded the policy requirements.

The Officer stated that when comparing the scheme to that previously refused, it was considered the amendments incorporated to the tower element to reduce its height and massing, would be sufficient to overcome the previous reason for refusal in terms of the impact on to the World Heritage Site.

To conclude, the Officer stated that the proposed development would secure a strategic office-led development within the City cluster that would provide land uses which would support the diversification, vitality and growth of the cluster as a 24/7 world class business destination. The provision of over 34,500 square

metres of Grade A office floor space and over 2,400 jobs would significantly contribute to the City of London's economic base. The provision of over 1,100 of affordable workspace free of charge for charities would provide an inclusive offer and attract small businesses. The flexible retail, educational, cultural community, sports, multi faith spaces would create a compelling and inclusive public offer in the cluster in line with the Destination City agenda. The development would result in a significant aesthetic enhancement to the Creechurch locality, and it would optimise the public realm offer. The proposed faience-clad tower would provide a sophisticated form of architecture and new architectural counterpoint to its glazed predecessors. The environmental impacts of the development had been extensively assessed in detail in the report and were considered acceptable by Officers. Officers recommended approval of the application subject to conditions and subject to the execution of planning obligations as set out in the agenda pack.

At this point, at 12.22pm, the Chairman adjourned the meeting for 15 minutes. The meeting resumed at 12.37pm.

At this point, the Chairman sought approval from the Sub-Committee to continue the meeting beyond two hours from the appointed time for the start of the meeting, in accordance with Standing Order 40, and this was agreed.

The Chairman then invited the objectors to speak.

Sir Michael Bear requested that as Rachel Blake MP was unable to attend the meeting as she was in Parliament, that Tilla Crowne as trustee be allowed to speak in her stead.

Sir Michael stated that it was unprecedented for a pro-growth, former Lord Mayor of the City of London to address Members as an objector but this particular application left him no choice. He stated that the City of London was an exceptional place from Roman times to mediaeval times to modernity. Interesting and fine buildings had made the city the unique and highly attractive place that it was. These traditions had created the world's leading financial centre. In 1985, rules were changed, allowing much denser and taller buildings, but this had always been counterbalanced by designating conservation areas, and these preserved the best of the past and had produced a vibrant mix of styles. He questioned how 31 Bury Street fitted into the exemplary planning decisions made by Officers and Members in the past, whether it respected the conservation area it was in and was designated less than a year ago and whether it respected listed buildings and views of the two principal heritage assets of St Paul's Cathedral and the Tower of London as well as the Bevis Mark Synagogue grade one listed building and Holland House grade two listed building. He stated that whilst he did not consider that it damaged St Paul's Cathedral, it did damage all of the other three buildings.

Sir Michael stated that Holland House was an exceptional grade two star listed building of the First World War era with a very unusual facade. He stated that the developer planned for extra floors and Historic England had stated they would not grant listed building consent.

Sir Michael stated that Bevis Mark Synagogue had been continuously occupied since its construction in 1701, it was older than St Paul's and built by the same school of constructors as the Wren churches. It was a unique piece of architecture, a living centre of an important minority community and something to be celebrated in the multicultural City. It was the only non-Christian place of worship in the Square Mile. It had religious rules such as not turning on electricity on the Sabbath, requiring views of the moon and having enough natural light to read the books of the law. Some of its traditions were unique in the world. Members were informed the technical issues about 31 Bury Street were clear. Firstly, there was no significant change in the design apart from a small reduction in height so the grounds of refusal of the first application still stood. Secondly, the current application was in direct conflict with the current City Plan where policy CS14 stated that the Corporation would refuse planning permission for tall buildings in conservation areas. He added that the City had rightly been granting consent for new buildings to deal with the demand for new modern space but as a developer, he knew the market very well, and the development world was in turmoil with no finance available for 13 of the 14 consented towers.

Sir Michael expressed concern that it was claimed that the proposals would preserve the setting and significance of the synagogue and that there would be an enhancement to the Creechurch Conservation Area and stated that the benefits were disingenuous. He stated the majority would apply to office buildings anywhere in the City and others were standard requirements. He queried who the community space was intended to serve and whether it would amount to anything with so many recent applications including similar provisions, and with these uses peppered around the City with no apparent demand or location strategy.

Sir Michael added that to degrade one established community space for a new one elsewhere was not reasonable and that the Officer recommendation completely disregarded the City traditions mentioned as well as the importance of multiculturalism and religious tolerance. He further added that he spoke as somebody who cared deeply about the City's heritage and traditions, and he urged Members to refuse this application as they did the previous one.

Ms Henrietta Gordon informed the Sub-Committee that she had worked as a solicitor in the City of London for over 25 years, she was not Jewish and had no links to Bevis Marks, its community or the wider Jewish community. In addition, no one had asked her to object, she had done so because she believed this was not just a planning application but she believed the Jewish people, their faith and their place of worship could continue to be discriminated against and the law could continue to be broken within the City of London. She stated that this was demonstrated by the ways in which St Paul's Cathedral and the Bevis Mark Synagogue were being treated. She commented that St Paul’s Cathedral opened in 1710 and was afforded a wealth of legal protection by the City of London Corporation and the Mayor of London.
No buildings whether offices or otherwise, encroached upon it. It was justifiably treated with reverence. Bevis Mark Synagogue, by contrast, had little or no

protection and was about to lose its last remaining daylight if this building project went ahead. Ms Gordon stated that the synagogue opened in 1701. It was the oldest synagogue in the UK in continuous use, and it was the only synagogue building in Europe that had held continuous services for more than 320 years. It was the main synagogue built after the readmission of Jews to England by Oliver Cromwell following the expulsion in 1290 and the synagogue continued to be an active place of worship. It was also the only non-Christian place of worship within the City of London.

Ms Gordon stated that St Paul's Cathedral and Bevis Mark Synagogue were both grade one buildings built within a few years of each other, in the early 18th century with almost identical historic and religious significance and yet Bevis Marks was not being offered the same protection that was given to St Paul's Cathedral. She stated that situation would be significantly aggregated if this application was allowed. She commented that the City of London Corporation was subject to the planning and the public sector equality duty in Section 149 of the Equality Act 2010. The principles in the decision of Brown v the Secretary of State for Work and Pensions, had become defining guidelines for the exercise of this duty. The Human Rights Act Articles 9 and 14 also required Christian and Jewish worshippers to be treated in the same way and their places of worship should not, therefore, be treated differently. Furthermore, the Corporation adopted the international definition of antisemitism in full on 5 December 2019. This included antisemitism directed towards Jewish individuals and all their property towards Jewish institutions and religious facilities. Ms Gordon commented that allowing this proposed building to remove the last natural light to Bevis Marks would in her view be a breach of the Corporation's equality duty, a breach of the human rights of the members of the synagogue and an act of discrimination and antisemitism.

Ms Gordon commented that there were approximately 250,000 Jewish people in the UK. They were therefore considered a minority group and, as such, were worthy of protection. She considered that if the application were approved, this would be acting contrary to this. She added that she was objecting because she was concerned at the possible perception of the Jewish faith being treated as worthy of less protection than her own faith and because as a lawyer of over 25 years, she was anxious at the prospect of the law being broken in relation to a Jewish place of worship of equivalent historic and religious significance to a Christian place of worship. Having worked within the City of London for her entire career, she was uncomfortable at the prospect of such discrimination taking place on her doorstep by an establishment that, she strongly felt, should be leading by example. She asked the Sub-Committee to avoid any such discrimination by refusing the planning application and thereby affording Bevis Marks Synagogue the same protection as St Paul's Cathedral.

Adrian Phillips, Director of Historical Palaces, the custodians of the Tower of London World Heritage Site stated they strongly objected to the Bury House application. He stated they firmly believed that the heightened massing of the proposed 43-storey building at the very eastern edge of the cluster would harm the setting of the Tower of London. Mr Phillips commented that it was one of the best examples of castle ever built anywhere in the world. Its landmark siting

and visual dominance on the river edge and the impressive skyline were key to its designation as a World Heritage Site. The setting of such a castle designated to project royal power over its surroundings, was crucial to its significance but the proposed development would fill the clear sky space beside the White Tower when seen from the strategically protected view of Tower Bridge and would erode the setting and value of the World Heritage Site.

The Chairman asked if Members of the Sub-Committee had any questions of the objectors.

A Member asked how the Kiddush Levana prayer was recited when the waxing moon was invisible on a series of cloudy nights and also if following the start of the prayer, it suddenly became cloudy whether the service would be completed. The objector stated that the prayer was said upon seeing the night sky. If that moon was obstructed, then the prayer could not be recited. The reduction in the amount of viewing hours was from 100 to 40 hours and functionally would reduce the number of months that this prayer could be said depending on the year, from four to six months. If someone had been there at the beginning and said the opening of the prayer and then a cloud passed by, they could continue, but this proposal would essentially create a perpetual cloudy sky and would diminish the ability to worship there.

A Member asked Mr Phillips from the Tower of London for more information on his concerns. He stated that whilst the principle of a cluster was supported, it was getting higher and encroaching on the tower. The views of the tower were so sacrosanct to the understanding of its significance and appreciating it as something that reigned over the City for many years. It was a key asset for the City which welcomed over 3 million visitors a year and that really supported the City and the Destination City Programme. The Tower was therefore an important asset that should be embraced and welcomed and it was considered that this development was too close.

A Member queried the UNESCO and ICOMOS concerns on the encroachment to the World Heritage Site and were advised that a state of conservation report had been received by government along with a technical review of Bury Street.

A Member asked a representative of the synagogue why they considered the development to be a major threat to the synagogue e.g. the impact on lighting levels and the ability of the synagogue to function. She also asked if there were any other heritage harm. She added that the scheme had changed since it was previously submitted and asked whether policy changes had impacted either positively or negatively. A representative from the synagogue stated that the functional impact was that the synagogue was a living community. It was probably the only Jewish community in the world today that had maintained continuity back to 1700. This made it a place of profound international and deep significance to the Jewish community and this development would have a meaningful and significant impact on the community's ability to continue to use the space and to worship. The development would create a perpetual cloudy evening, and the internal light levels would ensure a perpetual winter morning. These were real, tangible impacts.

Currently, nearly all the light daylight present, particularly in the ground floor of the synagogue, was a product of light reflected off the surrounding surfaces of the buildings of the courtyard around it. This made this building very unusual as it put it beyond the normal boundaries of the day lighting of buildings. Members were shown an indicative image which showed the creation of a huge degree of shading during parts of the day and it was stated that the report submitted to the Sub-Committee gave an empirical example of this and there was a comparison between the effect of One Creechurch and that of the proposed development. It was suggested that as the current methodology used for understanding the impact of day lighting and its reduction did not take into account the reflective characteristics of the surrounding buildings, as a result, the proposed methodology used was deficient and a significant part of the submission was to try and demonstrate that. As a result, it was considered that the Sub-Committee had not been given the full picture of how much harm was being done to the day lighting of the synagogue. An objector stated this was an exceptional grade one listed building that was essentially like a cathedral building and the courtyard of the building was an extension of the synagogue and was intrinsic to its heritage significance. The synagogue did not have a vestibule but had a courtyard and therefore the building and its courtyard were both of exceptional interest. The prominence of the synagogue was also intrinsic to the significance, and as could be seen in the images shown, this prominence would not be preserved. The light into the synagogue was essential for the synagogue to function as such. If that was somehow prohibited or diminished, then the significance of the synagogue as a working building would be put into question and this would cause a high level of heritage harm together with architectural impacts.

A Member stated that the Officer had stated there would be a minor adverse loss of daylight, that in the gallery, the loss of or the impact on daylight would be minimally noticeable and that there would be no adverse effects that would prevent the synagogue from remaining as a place of worship. The Member asked the objectors reasons for not accepting these statements.

A Member queried an objector's suggestion that Bevis Marks synagogue was comparable to St Paul's which he considered to be a slight distortion of history as Cromwell permitted the synagogue to be built on the basis of it being a discrete private place and it had never been open to the public or visible in the same way as St Paul's so he did not consider it fair to compare the two buildings. He stated they were both important buildings with Bevis Marks possibly more so in some ways as it was the only one in the City whereas St Paul's was one of many churches. The objector stated that St Paul's was so well protected by the City of London, not because it was open to the public, but because it was a place of reverence and a place of historic interest. It was a grade one listed building built at the same time as the synagogue.

A Member queried Ms Gordon statement that the proposal would remove the last natural light from Bevis Marks which was contradicted by Officers. Ms Gordon stated the Officer report confirmed that the light study carried out by the applicant did not take into account reflected light. The objectors had demonstrated with their study that the overwhelming majority of the light in the

synagogue was derived from reflected light. Without a study that took that into account, the loss that would occur could not be measured. The objectors' study had measured the loss that has occurred from One Creechurch, which was the same distance away, where only 20 storeys had caused the light levels to plummet by overshadowing the synagogue. It was stated that it was highly likely that the same plummeting of light levels would occur during the hours of 31 Bury Street obscured the sunlight over the synagogue.

A Member having clarified that Ms Gordon practiced law asked her to confirm that she had stated that if the application was approved, the law would be broken and that the Sub-Committee would be acting contrary to certain people's human rights. She responded by stating that in her understanding the Sub-Committee would be in breach of their duties of Section 149 of the Equality Act 2010, Articles 9 and 10, 9 and 14 of the Human Rights Act and would not be committing to the international definition of antisemitism which the Corporation had subscribed to on 5 December 2009, which meant that the Jewish community, its institutions and religious facilities, were supposed to be protected. By allowing this building to go ahead she considered this would be damaging a Jewish place of worship. The Member then asked Sir Michael Bear who had worked with many of the Members present if he understood how offensive such comments could be to certain people present. Sir Michael Bear stated that people were speaking from the heart and it was worth hearing their comments. He stated he was not there to judge and the campaign embarked upon had been an elegant, sophisticated and respectful one. The Member commented that the City was hosting a Hannukah reception the following week. Sir Michael Bear stated it was ironic this was the festival of light. The Member stated that it been mentioned that the building under consideration was not financed and that this was not a material planning consideration. Sir Michael Bear conceded with the point.

A Member asked given the continuous freedom of worship at Bevis Marks for the last 300 years, what impact this would have on that continued freedom. An objector stated the synagogue was built by Jews who found refuge in this country escaping the Spanish Inquisition. The City of London had protected the community for nearly 400 years and it would be tragic if the planning decision harmed the ability to continue to worship in the place where it was first guaranteed in this country.
The development would make it more difficult to read the prayers, if it is more difficult for us to say particular prayers and the synagogue would become simply a heritage asset and would cease to be the longest continuously operating synagogue in the world. This should be a source of pride and be preserved and protected.

A Member asked an objector to clarify the difference between the image of the real world impact and the expected image in relation to One Creechurch. Using the images, the objector outlined the differences with One Creechurch, having a substantial effect on the interior lighting of the of the synagogue. In relation to the Bury Street proposal, there would be a period of time in which the courtyard walls would be similarly shadowed as they were by 1 Creechurch Street so whilst the effect could not yet be given in absolute terms, in indicative empirical

terms there was a similar depreciation of the daylight levels within the synagogue.

The Town Clerk invited the applicants to speak. Alexander Morris stated he was speaking on behalf of the applicant who had been investing in developing in London for over 20 years and was the largest non-listed London Office Fund with real estate in Westminster, the City and Islington. He stated the application provided substantial economic, environmental and social benefits. The economic benefits of the new office space would deliver the strategic objectives of the draft 2040 City Plan. Mr Morris stated the environmental benefits of the scheme were consistent or better than recent applications approved by the Sub-Committee and advised that he was joined by six people to illuminate the substantial social benefits in their own words, representing some of the 250 groups that had been engaged with across education, multi-faith charities, sports and culture.

Mr Alex Feldman, Deputy Headteacher at Dairy Meadow Primary School in Southall stated that this was a state school that served an area of high deprivation in the Borough of Ealing. The majority of the children were first or second generation immigrants from South Asia. They did not have English as a first language and had parents that majorly work in the black or gig economy. He added that his passion as an educator was for children to dream big and realise that their background class, creed, colour or religion should not be barriers to future success. Having Holland House as a tangible resource in the City of London over the last three years had crystallised this, from visiting and seeing the grave of the Roman girl at the entrance travelling through the age of Empire and into a boardroom modelled on the Titanic, Holland House truly made the history curriculum come alive. All of the children at the school knew what CEOs were, but Holland House gave them a chance to sit at the head of the head of a boardroom table. Mr Feldman advised that world of work days had been held, primary school children had met individuals involved who contributed to the construction and the running of Holland House and there had been CV writing workshops and mock interviews. School counsellors had visited to know more about the City of London and could tangibly see now how they could be the next cog in the engine of the mercantile centre of the UK. He added that even by getting on the Elizabeth line to travel up to Holland House, the students got the idea that they could engage with the buildings and could see themselves as future city workers. The hands-on immersive experiences provided the children with real world examples of their learning. There were plans to work with the urban farm to build on ideas of sustainability and teamwork within the STEM sector. This enrichment could never occur within the constraints of the school. Thanks to the visits to Holland House, Mr Feldman had witnessed the children develop their own sense of self identity, learnt from the rich history that surrounded them and the cultural grounding of Holland House. He was confident in saying that the students could now see themselves as decision makers and hopefully future leaders.

Harshita Patel, City resident, parent carer of a teenager with autism and an advocate for families facing special education needs and disabilities (SEND) stated that through her work with the City Parent Carer Forum and the SEN

Board, she had witnessed the unique challenges that families encountered. As an access and inclusion consultant in the public realm, she had collaborated with organisations and this year she had applied for the Barbican Imagine Fund. Together, over 100 individuals had been supported in accessing free creative arts and sports, thereby enhancing their health and well-being in the Square Mile which had limited public spaces and bureaucratic hurdles that often left families isolated. There was a significant lack of safe areas for regular activities and essential facilities. Ms Patel stated there was a need for community centres that were grassroot led, providing structure and fostering a sense of belonging. It was crucial for City planning to consider the needs of families with SEND and other marginalised groups. A great example of inclusive design was Holland House. It prioritised accessibility, featured changing places toilets, sensory areas and spaces tailored for various needs. It created a new standard for accessibility environments, breaking down barriers to participation. Ms Patel added that creating inclusive spaces could profoundly impact the community by promoting dignity and by encouraging involvement, a stronger, more supportive environment could be created for everyone.

Ms Shahida Victor, from Greenhouse Sports charity, stated the charity developed young people through sports and mentoring. She stated that being a Muslim from Fiji, where cultures met, versatile values were united in harmony and she was delighted to learn of Holland House which was a house of hope where different faiths were celebrated. Differences were embraced and welcomed and the space would serve as a platform to unite people in cohesion and build bridges. Ms Victor stated she was speaking as a representative of both community and faith groups, a voice that transcended and united as with up to 150 Muslim men and women joining Friday prayers sessions at Holland House every week. She added that Aslam Baccus, trustee of Halls For Jamar had stated the venue supported multi-faith groups and community based projects in a cultural and professional space supporting diverse initiatives that promoted inclusivity and learning. She further added that this support was shared by Dharf Patel of the City Hindus Network and Param Singh of the City of Sikhs Network who welcomed the proposals, emphasising how activities could be expanded to engage more effectively, sharing their delight at discovering this affordable venue in the City and the opportunities to foster connections and strengthen community ties at Holland House. St Helen's Church in Bishopsgate had welcomed additional space provided at Holland House with Mandarin Christian groups Sunday School, podcast recording sessions and other activities benefiting from its inclusivity and accessibility.

Mr Troy and Ms Kuku Richards, founders of the Museum of Diversity stated they were speaking not just as advocates for this application, but as individuals committed to creating spaces where every voice mattered and every story was celebrated. They asked Members to imagine a young person visiting the City of London for the first time and feeling like an outsider, then stepping into Holland House, a vibrant cultural hub where they saw themselves reflected in the exhibitions, stories and workshops and finding reassurance in a space that whispered ‘you belong here’. Slowly their confidence would grow as they began to envision a future where they too could contribute to the City's legacy. Holland House was more than a building. It integrated the Museum of Diversity into the

City of London's fabric, forming a cultural hub that improvised underrepresented narratives and fostered connections. This renovation was vital to transforming the City's identity from a place once defined by its walls to one celebrated for inclusivity and cultural vibrancy.

Mr Richards stated the impact of the Museum of Diversity being in Holland House had been significant from initiatives such as the virtual reality museum collaborations with local schools and universities, as well as the project for the Commonwealth Secretariat that has reached over 2 million people globally. Events hosted at Holland House included art showcases, music performances and educational forums which engaged the community and deepened impact. Mr Richards added that this renovation would provide the permanent space needed to expand programmes, grow the museum and position London as a global cultural leader. Economically, this project would draw new visitors, boost tourism and support local businesses while redefining public spaces as inclusive and dynamic. This application was not just about renovating the building, it was about investing in London's future by supporting this project to ensure that this historic space became a vibrant cultural hub where diverse voices were celebrated and every individual felt they had a place in the story of the City.

Tessa Sanderson, CBE stated she had competed in six consecutive Olympic Games from 1976 to 1996, winning gold in 1984. She informed Members that forty years ago, she achieved the dream of Olympic gold becoming the first and only British athlete to win gold in a throwing event but she did not do it alone. It was the belief and support of key individuals that made it possible. She was speaking as an ambassador for the Museum of Diversity because hope and an opportunity was given to her and she was committed to sharing stories like hers which inspired, empowered and reflected the resilience and richness of communities.

The Deputy Chairman sought an explanation for how the lunar transit study was carried out, how it was validated and whether it had received a third-party expert review. A supporter stated the study was carried out by Dr. Axel Jacobs who had a PhD in light and lighting and it was reviewed by Dr Ticleanu, the Head of Lighting at the BRE. The supporter added that the information that had been used to undertake the calculations was publicly available and had been entirely peer-reviewed from both a technical side and through the onsite measurements.

The Deputy Chairman cited the support of staff to users in the community space that was frequently mentioned in letters in support of the application and asked, if the scheme was consented, whether the support would be continued and, if so, could details be provided of that. A supporter stated a lot of time had been spent talking to organisations about the requirements and the demand was significant already. He added that the plan was to offer the service, space and opportunities in perpetuity of the life of the asset and there was a number of supporters in attendance that had been heard from. The supporter further stated he would happily talk about some of the others who had used the space and would use the space continuously.

A Member stated the number of voluntary and community-sector organisations that had been engaged was interesting and questioned how many children and families from the Aldgate School had been engaged in the programme. The supporter responded that the Aldgate School had not been engaged and they had not used the space, but they had gone to schools across London rather than just specifically local. The supporter stated they had spoken to Canon Barnett Primary School and they had used the space quite a bit.

The Member also asked whether the St. Botolph's Aldgate Centre had been engaged and St. Joseph's Centre for Dignified Work. The Member added that the new Aldgate Centre was hiring a space at nearly £1,000 a day to keep the lights on. The supporter stated that the documentation clearly described who the developer had been able to consult with and were not sure they had consulted with the two organisations referred to.

A Member asked the applicants to address the issues of reflective light and the assertion made by an objector that the availability of light would plummet. A supporter responded that the studies undertaken had considered reflective light and the point had been made that they may not have considered sunlit reflected light off the back of the Courtyard. The supporter added that the skies in the UK were mostly cloudy, so sunlight proportion was about a third of the day and of that the third, the tower would only block a small portion which had been tested using the BRE methodology. The supporter further stated that the impact was determined to the negligible and the total sum of it meant that there would be an effect, but overall then changes had been considered to be minor.

The Member queried further on the use of the word 'plummet' by an objector. The supporter told Members that there were changes occurring all the time, every day and at different hours depending on things such as external obstructions, the height of the sun in the sky, cloudiness, and haziness. The supporter suggested the word 'plummet' was used to determine what was a temporary effect and the fact that if the tower blocked the passage of the sun, the light could not reflect back into the synagogue and, for a period of time, the light levels would drop. The supporter added that the studies of daylight ran for an entire year and the resulting studies which determined the significance of an effect were judged on balance throughout the whole year and not on a specific instance in a day.

A Member sought an explanation to understand the context of the application, as it was rejected in 2021, and of the developer's relationship with the synagogue as she did not understand how, after all those years, the relationship seemed to be in the same place with the whole Jewish community not in support of the application, especially as the paper said there was an intention to continue engaging with the Bevis Marks Synagogue. A supporter explained that their relationship with the Synagogue started around four and a half years ago in the original application where the very first meeting, in advance of the meeting with City Officers, had been with representatives of the Synagogue. The supporter added that the relationship continued all the way up to the application being submitted, the application going through consultation,

until a month later a number of objections had been received. The supporter stated he felt that it showed during the first application that, even though the application was refused, he continued the dialogue. He further noted that he told the first person he spoke to from the synagogue, who was not part of the current team, that he wanted to create an opportunity where they could work together and there were a number of official and unofficial meetings. The supporter also stated he had met with a number of people in attendance and had got to a point where they tried to reach a neighbourly agreement, as the developer was on one side with the space and the neighbour to the developer past the Valiant House was the Synagogue. The supporter told the Sub-Committee that they had tried to get to a point of agreement between the developer and the Synagogue which he believed was discussed at a trustee meeting and it was not agreed to. He further added that since that point, he had tried to keep the dialogue open and it would be fair to say that he and the Synagogue had not spoken this year other than one meeting on 13 November where he spoke with representatives of the synagogue, with the subject relating to the moon, daylight and sunlight. The applicant told the Sub-Committee that he, without a doubt, had kept a connection with the Synagogue and a lot of their consultants and apologised for having not reached a point of agreement.

The Member also asked if there was anyone on the development team who was an expert, or consultant, who understood the Jewish faith. The supporter stated that they did not have anyone sitting in the team who was an expert of the Jewish faith and felt that all the material provided by Bevis Marks Synagogue and their team, including talks and YouTube videos, had been helpful for the applicant side, as well as Members and Officers, to understand concerns and work out how to apply empirical analysis and methodologies and understand the impact from an empirical and numerical sense. The supporter added it was for Officers and Members to appreciate Bevis Marks Synagogue's concerns and consider whether they were empirical data impacts and what impact it would have on the ability to worship.

The Member also queried a detailed explanation as to what the benefits were, weighted proportionately to the lighting with the Synagogue, as it seemed that some of the benefits could be done without a new development. The Member in response to clarification from supporters on the question stated they were referring to the benefits in relation to the Section 106 funding and within the application as the Sub-Committee had been told they were quite remarkable and, whilst a lot of the things were included were good, they were not necessarily out of the ordinary. The Member added they wanted an explanation as to why they were exceptional benefits.

A supporter explained, in terms of the public benefits package weighed against the heritage harm and overall harms of the scheme, and the uniqueness would be relevant to the weight attributed to the benefit and made reference to a previous application where a classroom in the sky was presented as a 'unique' offer when there were already other classrooms in the sky. The supporter stated, in that sense, that they would not say it was unique, but that there were unique features about the overall package of benefits. The supporter added that one of the unique features was the degree of testing of the public use in

advance which meant that the individual spaces within Holland House and Creechurch Hall that were proposed responded to the engagement that had happened. A supporter indicated that three-on-three basketball, a classroom and an immersive space gallery had fed into the overall broad package of public benefits that would be unique in one sense, but not a single unique benefit.

The Member questioned how long the fabric of the building would last and how long the benefits would be locked in for. The supporter explained that buildings were now designed to a minimum of 60 years and that was linked to the design whole life cycle carbon and the building had been designed to be a loose-fit if it needed to be upgraded. However, the supporter indicated that there was no intention of the building being designed to be demolished, although it had to be as part of due process and expected the building to be there in perpetuity.

A Member stated it was brilliant to hear the space was currently being used by a number of organisations, including the Halls for Jumuah and Museum of Diversity, and sought confirmation that if the application was refused, the organisations would be able to continue using the space. The supporter told the Sub-Committee that in regard to the economics of the building, it was fair to say that there was a point in time where they would have to think of something different if there was a refusal. The supporter added that they had agreed, in the short-term, to three months of use by a number of individuals, whether it was sports or the Museum of Diversity. The applicant stated they needed to manage an economic position and he would have an empty building, which had been kept empty for the case, and he had made that investment and decision to deliver. The supporter further added that what they had been able to do was have a vast list of individuals doing different things within the space, so it was a decision from an economics perspective.

The Member queried why none of the presentation was about the building and whether there was a reason none of the 10 minutes had been used to tackle some of the points made by the Objectors. The supporter explained the reason they only spoke about the social benefits was because he felt the Officer's report had said everything and set out all the key parts of the economic and sustainability aspects. The supporter noted he was quite happy to answer any questions on other parts of the application.

Another Member told the Sub-Committee that everyone had to accept that the community of Bevis Marks believed that the building would severely damage their ability, if not completely stop, to worship in the Synagogue. The Member added that was the Synagogue's view of it and felt everyone needed to accept that. The Member added that it was difficult for them to understand how it could be suggested that the benefits that were applied to other people could, in some way, offset the damage done to another community as it should not be a competition between groups of who gets the benefit. The Member further stated that they found it unseemly that the supporter was trying to use the benefits to justify the damage that the Jewish community believed was going to be done. The supporter stated it was difficult to answer as to whether they accepted the damage that was referred to by an Objector and they had listened to the

Objectors, considered and talked to try to understand. The supporter indicated that they were not religious and could not walk into the Synagogue and respond to what an objector had said, but they could say that they had been through, with their team, a way to find a path of understanding to use empirical and technical information to try to understand what the concern was. The applicant told the Sub-Committee they believed they had done everything they could and had got a point where there was no harm.

The Member questioned why the benefits were predicated on a building whose design would damage the light into the synagogue and why a building could not be designed that did not cause the damage but still contained the benefits. The supporter explained it was related to the economics and partly to do with the opportunity to use Holland House as a community space as there was a certain element of work that needed to be done to connect Holland House, Renown House and Bury House and Bury House was, at present, effectively acting as the host. The supporter added that host provided an upgrade from a DDA and fire perspective, as well as a sustainability answer to the heritage and the tower itself would deliver not only the offices, but was delivering a response to the listed building issue. The supporter told the Sub-Committee that it was necessary to have the two working together and the reason for the height and shape of the building was related to the second reason of the previous application.

A Member noted they were on the Sub-Committee when the developer last brought a scheme for approval and recalled the scheme was refused mainly due to the adverse impact on the Grade One setting of St. Bevis Mark's Synagogue, its overbearing and overshadowing impact of the development on the courtyard of the Synagogue which was contrary to the protection of the setting of listed buildings, and the adverse effect on the setting of the Tower of London world heritage site. The Member stated that they could see the applicant had amended the scheme to try to limit the impact on the World Heritage Site, they struggled to see how the scheme had been amended to overcome the grounds that it was initially refused on in relation to the overbearing and overshadowing impact. The Member added those grounds for refusal were not completely captured in the refusal note and there were other grounds raised such as Holland House as they had raised the impact on the Grade Two-listed Holland House themselves. A supporter confirmed the Member was correct, stated there were a very clear two reasons for refusal and told the Sub-Committee that led to a response to change the massing and tried to reduce harm to both assets in key views and increase the public benefits. Another supporter stated that in relation to the perception of the overbearing impact from the courtyard of the synagogue and the effects of the setting on the Synagogue, the building had been reduced in height quite visibly, with the massing on top also reduced, so when one entered the courtyard, as seen in the presentation, one would see most of the building but as one moved around the courtyard, less of it would be seen. The supporter added that in all cases, the Synagogue would be very close and present in the foreground and, in order to see the building from many spots in the courtyard, one would need to crank their neck, and a video had been provided to prove that. It was further stated by the supporter that tall buildings were already visible, and it was part of the

character of the Synagogue. In relation to the Tower of London, the supporter explained that there was clearly a reduction in height and that the proposal would maintain the gap that already existed in the view from the northern bastion of Tower Bridge between Heron Plaza and the White Tower.

The Member outlined that they realised Holland House needed to have some work done around the façade and queried why that had not been done to protect the historic building as they would have thought it would be one of the developer's priorities to preserve the current historic building of Holland House and ensure it was repaired and safe. A supporter stated they had spent quite a bit of time and money going through the structural elements and the safety of the façade, which continued to be monitored, and had carried out what was required for that particular façade.

The Member also raised the issue of the community space and noted a few months ago that the Sub-Committee granted the whole of Writers House as part of a community space for the Clare House development and there was another development at Bishopsgate near Liverpool Street Station that included two floors of community flexible space. The Member further noted the Sub-Committee had granted a classroom in the sky in the previous application and asked why the developer felt that their community offering was needed in addition to what had already been granted, why it was different and why it was a benefit. The Member stated that there was plenty of space in the City of London for community groups, who were always welcome and, if the development did not go ahead, space could be found for those already using the space. The Member asked the developer to outline the benefits as a lot of these would be encapsulated in any development there that could be designed to not overshadow or overbear on the Grade One-listed St. Bevis Marks Synagogue. A supporter stated that, in terms of benefits, the uniqueness of what they had done was the testing by thousands of users who had used the space and had said that was where the demand was. The supporter added that they understood the point made and that there were already consents for more space, but felt that demand outstripped supply now and would do so in the future. The supporter told the Sub-Committee that another point relating to the overall uniqueness of the scheme was that the offer was in perpetuity as other similar offers were usually aimed at a specific tenant which then fell away and required a new tenant to be found.

The Chairman moved the discussion to Members questions to Officers.

The Chairman sought to clarify some of the emotive points against the factual points and stated a need to get clear bandwidth between the two to ensure decisions were made in line with planning policy.

The Chairman noted there was reference to the fact that Historic England would not grant consent for Holland House off the back of what had been proposed and sought some clarification of the situation from Officers and where the conservation was going as it was a very clear statement they would not grant it. Officers responded that Historic England could not grant Listed Building Consent themselves as they were not a decision-making body. However, as set

out in the report, they did have the power of direction over listed buildings, including the ability to direct refusal of certain building consents, direct the imposition of conditions on consents or allow the Local Authority to determine as it saw fit. Officers added that in this case, they had objected to the scheme and have no issued their direction which, until such a direction had been received, meant that a Listed Building Consent decision could not be issued. Officers confirmed that Historic England were awaiting the Sub-Committee's decision before they decided what to do.

The Chairman also sought an answer on a point made by objectors regarding an assertion of the Sub-Committee being antisemitic, breaching human rights or being discriminatory as they were matters of law and not matters of opinion. He asked Officers for clarification that the Sub-Committee was on solid ground to make its decisions and that the reports that had been provided were not falling into the aforementioned categories. Officers responded that they could give absolute assurance that they were satisfied there had been a thorough assessment on the equality impact of the development and granting permission would not breach the public sector equality duty and the report before the Sub-Committee contained a thorough assessment of the complex equality impact of the application at an unprecedented level and the approach to equality impact was also reviewed by a third party, which was also unique and unprecedented, and was subject to internal and external legal scrutiny. Officers accepted it was a difficult situation for everyone in the room, but the suggestions that the Officers' conclusions were discriminatory or antisemitic were offensive with regard to their integrity. Officers underlined that they operated with professionalism, were objective and acted with integrity and impartiality. He added, above all, they were sensitive and respectful to all communities.

The Chairman asked Officers to inform the Sub-Committee on their confidence, or lack thereof, in the daylight and sunlight reports. Officers explained they had based their assessment on the data that was presented by the applicant which was based on the standards of the industry under BRE guidance, and the assessment had been third party reviewed. Officers told Members that they had considered the previous impact of the previously proposed development in comparison to the current development and that comparison had also been reviewed as well following the submission of the Bevis Marks Synagogue's daylight study which had also been third party reviewed. Officers stated they were confident that the conclusions in the report regarding impact on daylight and sunlight had been robustly assessed.

The Deputy Chairman queried whether the provision of the Hub and the auditorium space with suitable support staff for users would be conditioned and could not be withdrawn if the application was granted and implemented. Officers confirmed there was a condition securing the provision of them and would also secure the provision of them in perpetuity of the development via a Section 106 obligations. Officers added that they had included an implementation strategy for the cultural, education, sports and community spaces via Section 106 obligations, as well as a management plan for those uses to secure Creechurch Hall and Holland House Hub.

The Deputy Chairman also noted that the proposed tower was very close to the Synagogue and asked whether the City had any other consented or implemented towers in the City that were comparably near to sensitive buildings and locations. Officers explained the proposal was in the City Cluster area where ancient and hyper modern office buildings were seen in close juxtaposition such as St. Ethelburga's and 100 Bishopsgate, St. Andrew Undershaft and the Undershaft proposals that were discussed earlier in the meeting, and 22 Bishopsgate and St. Helen' Church. Officers added they were the kind of juxtapositions that most acutely embodied the City's living traditions as a modern financial centre with ancient roots and were part of its DNA. Officers further stated that if one took that as the starting point, then it followed that dynamic change, such as that of the proposal, was not necessarily harmful in principle or against the grain of the place. Officers further noted that they negotiated schemes to achieve respectful and appropriate relationships with heritage assets in the Cluster and the proposals were an example of this in its relationships with the various heritage assets in the locality. Officers maintained that the proposals were entirely in keeping with the character of the Cluster.

The Deputy Chairman also asked Officers to confirm their satisfaction with the lunar study and the BRE validation of it. Officers responded that their assessment had been based on data that was provided by the applicant and, after third party review by BRE, had accepted as stated in the report that there would be a reduction in terms of hours that the moon would be visible. However, as said during the presentation, the number of months that the moon would be visible would not be reduced when compared to the future baseline which reduced the number of months that the moon was visible by one month, but this was due to 100 Leadenhall. Officers directed Members to Page 1005 and stated that was where the tables set out the number of hours, number of days, and number of months that the moon would be visible.

The Deputy Chairman also questioned whether World Heritage was a material consideration that the Sub-Committee needed to consider. Officers confirmed that the World Heritage Site was a material consideration, and the City had a duty to preserve it.

A Member informed the Sub-Committee they too were offended by references to the Equality Act, and particularly antisemitism as, while they were not Jewish, they were a great supporter of Israel. However, this was a planning application, and they stated they were trying to limit their reasoning to planning considerations. The Member asked whether the named Acts were valid reasons to take into account when making the planning decision. Officers indicated they understood the question to be whether the Equalities Act and the Human Rights Act were material considerations in respect of the Sub-Committee's decisions and confirmed that they were. Officers noted that the report set out a thorough assessment of how the public sector equality duty applied and what they believed the impact would be. Officers also added that the report also went through what was considered to be the human rights balance and the implications for that.

The Member also queried if there was provision for public toilets that were accessible and not just those using the building as they had gone through the papers and could not find reference to it. Officers indicated they had considered the provision of changing place facilities and public toilets and confirmed they had imposed Condition 55 on Page 1112 that required the submission of details for a Changing Place, wheelchair accessibility, ambulant accessible toilet, baby changing facilities at the ground floor and associated signs to ensure that people could be directed to those facilities. Officers added they had also secured, through planning obligation, the management of the facilities.

Another Member noted that a year ago, the Sub-Committee voted unanimously to create the Creechurch Conservation Area and questioned why it would be ignored a year later in its first test. Officers explained that it had been fully assessed in the Officer report and summarised from the report that many of the viewing experiences in the Conservation Area did have the towers of the Cluster as its backdrop and, in many of the views, the proposed tall building would be seen above the low-rise Conservation Area buildings as part of the existing high-rise backdrop more associated with the Cluster above than the Creechurch Conservation Area below. Officers added that from the views where the Tower would be seen coming to ground, such as Mitre Street and Creechurch Lane, it would appear as a contrast in scale with the Conservation Area buildings. However, in the Creechurch Conservation Area proposal approved by the Planning and Transportation Committee, one of the identified attributes of the Conservation Area Special Interest was the juxtaposition in scale between buildings. Officers further stated in this sense, the proposal would not be a departure from the qualities identified in the formal designation of the conservation area.

The Member also stated that they understood that the heritage statutory consultees believed that some harm would be caused to the Synagogue and the Tower of London and questioned what the point of the consultation was in the first place if the Sub-Committee was not going to listen to heritage consultees. Officers responded, in relation to a previous point made about the character of the City Cluster, that if one took the established dynamic as the starting point, it followed that the proposal was not necessarily harmful in principle or against the grain of the place and, with that in mind, Officers sometimes arrive at different conclusions to Historic England and other bodies who seemed to begin from a different position. Officers added it was worth noting that there were many instances where Officers accorded with the views of objectors and the planning system allowed for a plurality of approaches.

A Member noted that the report had stated that there would not be any material impact to carry out religious practices, including circumcision, but then on Paragraph 430 went on to state that Officers did not profess expertise in the areas of religious history and practices. The Member stated that the Rabbi and one of the objections had said there would be an impact on circumcision and questioned what experts Officers had consulted with from the Jewish community as there were two different answers being received. The Member also asked for an explanation for the methodology and raised an example that if an organisation had people who were partially blind, would they be taken into

consideration or was it a generic methodology that was applied to the lighting. Officers stated they were not religious experts, but had assessed the daylight levels from the data provided by the applicant, which had also been third party reviewed, and the impacts identified within the interior of the Synagogue were minor adverse and, therefore, were not considered to be significant. Officers, for that reason, still considered that the Synagogue would be able to operate as a place of worship and carry out all religious ceremonies. Officers added, in regard to the daylight assessment, that the industry standards were to submit information around daylight and sunlight guidance based on the BRE guidance and that was what the applicant had submitted. Officers also noted that the applicant had prepared a radiance assessment which showed the light levels within the interior of a room, they were standard practice, accepted by local authorities and that is what Officers had assessed. Officers further stated they had the assessments third-party assessed by BRE and they had accepted and agreed with the impacts identified in those assessments. Officers further added that the impact on the interior, in relation to daylight and sunlight, of the Synagogue was not a reason for refusal last time and the previous refusal was related to the overshadowing and overbearing impact on the courtyard.

Another Member stated equality impact was the focus of what was being looked at and it was a concern that, during the course of the Sub-Committee meeting, it was having to seek to understand whether or not we had to apply the equality impact to the decision-making. The Member told the Sub-Committee the public sector equality duty absolutely had to be considered, and it was in the papers. The Member noted that the papers were the longest and most difficult to follow they had ever experienced and requested a drawing to attention of the key points that Members needed to take into consideration in relation to equality impact. The Member added that they understood it to be that it was not necessarily about having an impact, but the impact being disproportionate and stated the least the Sub-Committee could do was take the application as seriously as it could. The Member drew attention to Page 441 where the public sector equality duty was referenced and felt it would assist the Sub-Committee if that was at the forefront of its mind. Officers stated they would read out Section 149 as there was a danger that if they tried to summarise what had been identified as the main equality impacts, that would leave something out and could bring things into question. Officers added that there was an equalities impact assessment itself and Members were required to take that into account, but a lot of comments had also come through consultation as well and that, and what had been heard at the meeting, all formed part of the equalities information that was in front of Members which they would need to take a view on. Officers read out the following in Section 149 of the Equality Act 2010: the City as a Public Authority must, in the exercise of its function, have due regard to the need to eliminate discrimination, harassment, victimisation and any other conduct that was prohibited under the Act; advance equality of opportunity between persons who share a relevant protected characteristic and persons who do not share it; and foster good relations between persons who share a relevant protected characteristic and persons who do not share it. Officers read out Section 149.3 of the Equality Act: that having due regard to the need to advance equality of opportunity between persons who share a relevant protected characteristic and persons who do not

share it involves having due regard, in particular, to the need to remove and minimise disadvantages suffered by persons who shared a relevant protected characteristic that are not connected to that characteristic; to take steps to meet the needs of persons who share a relevant protected characteristic that are different from the needs of persons who do not share it; to encourage persons who share a relevant characteristic to participate in public life or in any other activity in which participation by such persons was disproportionately low. Officers added they also set out what the protected characteristics, which were: age, disability, gender, reassignment, pregnancy and maternity, race, religion or beliefs, sex and sexual orientation. Officers further stated that public authorities also needed to have due regard to the need to eliminate unlawful discrimination against someone because of their marriage or civil partnership status. Another Officer added that it did not just stop there as there was a thread throughout the entire report that looked at every single impact through those lenses and would not accept that the report was incoherent or unstructured and felt it was one of the best reports that had ever been drafted by the City.

The Member clarified that they did not mean they were referring to the quality of the report itself, but was referring to the way it had been received and stated they would be very surprised if other Members did not feel that receiving bits and pieces of the report had made it slightly more difficult to read and appreciated that may not have been an issue for Officers but felt it was important for the Sub-Committee to have that drawn to its attention. Officers stated that they read the Member's comments to suggest they had underplayed equalities obligations in the report. The Member confirmed that was not the case and stated there were different views at to where the balance was, but it had been difficult to get everything in one place and to understand everything in a way that would be helpful. The Member suggested it would be helpful to have a SharePoint site where all the papers could be viewed.

The Member sought confirmation that the full redevelopment option, which been had been selected, rather than the refurbishment option produced three times the whole life carbon emissions. Officers explained there were four options in the optioneering study and the redevelopment option had 56m tonnes of carbon emissions while the simple refurbishment option was only 15m tonnes, so it was more than three times as much. They added that Options Two and Three, which were also refurbishment with some extensions, were slightly higher in carbon, but were less than the redevelopment option and that was set out in the carbon option table in the report.

The Member asked, in relation to the refused scheme, whether the fact of refusal and the reasons given were a material consideration for the Sub-Committee. Officers confirmed that the reasons for refusal were a material planning consideration.

The Member also queried, in relation to the comparing of the refused scheme and current scheme from the applicant's presentation, that the difference between the two was described as absolutely minimal and were virtually identical in relation to the level of light. Officers clarified that the daylight levels

were relatively comparable and, in relation to sunlight effects, the proposed scheme represented a small improvement in comparison to the refused scheme.

The Chairman moved the meeting to a debate.

A Member indicated they wanted to discuss the balance of public and commercial benefits of the applications by referring to a previous scheme for the Synagogue in 2020. The Member stated that the earlier scheme, which was almost completed, involved demolishing and then rebuilding a single level annex building against the south wall of the Synagogue. The Member added that the project could have been stopped at the demolition stage, which would've added space to the courtyard, and that was how Members saw the site when they visited a few years ago prior to the last application where the old annex had gone and there was a concrete pad in the courtyard. The Member stated further that had the application been stopped at that point, it would have restored the Synagogue to what it was in 1925. However, that was not what happened. The Member told the Sub-Committee that a new annex was built with the same proportions to the previous one with the addition of an access ramp and a ticket office, and it would become a visitor centre with a café, shop, meeting rooms and exhibition spaces. The Member added that the disbenefits of the scheme, which was almost complete, had a reduction of natural light in the Synagogue because the ground floor windows on the south side continued to be internal windows, not external windows as they were in 1925 and there was a loss of a possibility of having a courtyard that was 30% larger. The Member indicated that had that scheme come to the Committee, he would have supported it as they felt the benefits of St. Bevis Mark's having a visitor centre would have outweighed the negatives, but Members did not get an opportunity to consider the application because there were no objections at all and it was decided by Officers under the Scheme of Delegations and he believed the Officers were right that time. The Member concluded that the same reasons for weighing up the loss of light and decrease in size of the courtyard, even thought the courtyard was not changing on this occasion, were the same issue on this occasion and expressed his support for the Officers.

Another Member addressed the Sub-Committee and stated the application before it was materially the same as the previous one the Sub-Committee had rejected citing the harm it would cause and, three years later, there was a stronger case to reject the application as the establishment of a Conservation Area, with the policy recommending refusal of tall buildings within inappropriate areas, including Conservation Areas, and if a tall building was to be granted, it should enhance the Conservation Area. The Member added that, as heard from the report, the harm would be caused and not enhance, and the scheme would result in heritage harm to the buildings, as well as to an existing community with deep connections to the location dating back hundreds of years. The Member stated that the benefits from the applications were temporary in comparison and were hardly unique, special or proportionate to justify the harm and it was not necessary to do this to unlock the benefits. The Member further added that the Officer's report acknowledged that they did not have an expertise in the area of religious history and practice, and yet Members were told the

application would not impact on the religious practices when Members were hearing from the Jewish community unequivocally that it would impact their freedom to worship. The Member further stated that it was hardly a development that was promoting inclusivity and accessibility, and indicated she would vote against the application and urged other Members of the Sub-Committee to do so as the application, like the previous scheme, would cause significant harm which could not be outweighed by any benefit of the development as it would cause irreversible damage to religious worship which had taken place on the site for hundreds of years. The Member concluded the application was materially the same as the one previously rejected by the Sub-Committee, particularly in relation to the harm caused, and it was essential that the Sub-Committee remain consistent in its opposition as a result and she would vote against the application.

A Member stated they were in favour of development, were sometimes in favour of taller buildings if they were right and every time the Sub-Committee made a decision of this nature, it was on balance. The Member indicated they would vote against the application as it crossed too much red lines, particularly relating to the Local Plan and heritage considerations.

The Deputy Chairman addressed the Sub-Committee and stated it was a difficult application to decide on as there was clearly harm to the Synagogue which would be caused to the development if consented and it had attracted a large volume of persuasive and passionate objections. He stated that the Synagogue was a wonderful asset in the City and all wanted to it to continue to flourish and thrive in the future, but there were a large number of significant benefits that the application, if consented, would bring such as the 34,000sqm of Grade A office space and CIL payments of around £10m, affordable housing contributions and the enhancements to the Grade Two-listed Holland House which the Deputy Chairman indicated were very positive. However, he stated it was the multifunctional auditorium space and the Holland House hub together, which would provide 1,400sqm of free to use space for the majority of the week, which was the unique office offer and the variety of groups that had successfully been using the community space was impressive, including museums, religious groups, art organisations, educational establishments and the London Fire Brigade. The Deputy Chairman further added that the community offering was exceptional and was clearly highly valued by those who had used it and, on balance, believed that the benefits of the application did outweigh the harm. The Deputy Chairman stated he would support the Officer recommendations.

A Member indicated they wanted to come back on some points made by a Member earlier in the debate in regard to the visitor centre next to the Synagogue and noted when they visited the Synagogue, they could clearly see that the visitor centre was a single level building with a glass roof, so the light was getting into the visitor centre and was not obscuring the windows at all. The Member told the Sub-Committee she could see that the developer had tried to improve the public benefit as the public benefit did not outweigh the detrimental harm done to the Synagogue and the World Heritage Site last time. The Member added that, whilst she believed the applicant had done their best,

they believed the harm may have been impounded by the proposal to increase the floors on Holland House which was a Grade II-listed unique building and the only building to have been constructed during the First World War which for her was another negative impact on a listed building. The Member further stated that the Tower of London as a World Heritage Site really was unique and was why it had that status, so while the height might have dropped down slightly, it was still very clear in those visuals of the impact toward White Tower and deflected from the site of White Tower across towards the Cluster and felt that was a very negative impact on the World Heritage Site. The Member, in reference to the Bevis Marks Synagogue, told the Sub-Committee that they had asked to see the light slide of the previous scheme that had been refused versus the proposed scheme and noted that Officers had confirmed in the meeting that there was no difference in the lighting between the refused scheme and the proposed scheme. The Member added that, having visited the Synagogue again, it was a very unique location, and it would be really overshadowed and impacted in her view. The Member further stated that the Synagogue was unique to the City of London and the country and believed that it deserved protection, as the City's policies stated, and felt that she would approve a scheme that was designed to minimise the impacts on the Synagogue and the World Heritage Site. The Member added that there were other spaces in the City of London which were granted a number of community spaces and the City was not lacking in those, and not to the point where the Sub-Committee would agree a scheme that would irreversibly damage the Synagogue and the World Heritage Site. The Member concluded that she would not approve the scheme.

Another Member addressed the Sub-Committee and stated their first point was in relation to the impact that Historic England had highlighted and noted they had previously supported applications that filled in the Cluster, including the application that had come before the Sub-Committee earlier in the meeting. The Member stated, however, that if one looked at View 23, one could see that the development popped up, not as a shoulder of the Cluster, but as if another Cluster was being started and was a very substantial addition and did not read as part of the existing Cluster. The Member added, secondly, that when one turned to View 45a, and referred to a comment made earlier in reference to need to crack your neck to view the building, that was not the case, it could be seen as soon as one walked into the courtyard and the dominant thing in that courtyard would be the building. The Member told the Sub-Committee he could not see how it possibly protected or enhanced the Conservation Area and did not see how it possibly helped the setting of a Grade I-listed building. The Member, referring to the new NPPF framework, highlighted paragraph 212 that stated: when considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset's conservation and the more important the asset, the greater the weight should be. This is irrespective of whether any potential harm amounts to substantial harm, total loss or less than substantial harm to its significance. The Member stated that was the new instruction and did not see how the Sub-Committee could possibly approve the application with that instruction. The Member also raised the issue of sunlight and overshadowing, which referred to Page 203 of the presentation pack which had the indoor daylight luminance

study shown, and indicated he could not figure out which of the numbers were supposed to be used as it seemed to be two numbers for the balcony, but whichever numbers were used, there was a 30% reduction in an already lower level and, in particular, the balcony was where women worshipped and would have a particular impact on them. The Member concluded, with reference to the lunar studies, that they did not understand the concept of counting the months and the fact was that people had to go out and worship on a monthly basis if they could, and to tell them they had a 15-minute window to possibly do it on a particular day was not telling them that they could do it. The Member suggested it was trying to explain Judaism to Jewish people which did not strike him as a helpful thing for anyone to be trying to do. The Member concluded that, for the aforementioned reasons, they would reject the application.

A Member addressed the Sub-Committee and stated he had been present for the original rejection and remained fairly convinced by the Officers, and had been reassured by them, that the development would not adversely affect the Synagogue as a place of worship. The Member added that they had been reassured by the Officers that it did meet the primary requirements for daylight and not adversely affecting daylight, and the applicants had made significant changes to the tower, specifically the shape and scale of it, in such a way that met the objections from both the Tower of London and from inside the Synagogue. The Member noted on the other hand that the Rabbi and the Jewish community were all saying it would adversely affect, or to some extent, render worship unworkable in the Synagogue and reduce it to being no more than a tourist attraction. The Member further added that there were two very strong arguments on both sides and could see it was going to be very challenging for the Sub-Committee to reach a fair and equitable decision. The Member concluded that it would have to be voted on and he intended to vote in favour of the application.

Another Member addressed the Sub-Committee and referred to a previous point made by a Member that the Officers said it would not affect worship in the Synagogue. The Member stated that Officers had confirmed, in response to another question, that they were no experts and the congregation obviously disagreed with that assessment. The Member added that if the Sub-Committee valued The Hub which seemed to be doing lovely work, there was no reason why it could not look for it in any other development and the Sub-Committee could demand it of the developer if they came back to Sub-Committee on a different site. The Member told the Sub-Committee that, as a previous Member had stated, all the heritage groups were against the proposal and the previous, and current, Members of Parliament was against the proposal. The Member further added that the proximity, the overshadowing and the overbearing nature of the development did affect the setting of the Synagogue which was important to the congregation. The Member further stated they did not believe that was acceptable and concluded they could not support the application.

A Member stated that they felt all of the Members felt that it was a difficult position for the Sub-Committee to be in and no one liked to have to make such decisions, but Members were elected to do so and it was interesting that planning applications came down to the passage of the sun and, indeed, in this

case the passage of the moon. The Member added that there was the added complexity of a heritage asset near the site, as well as the complexity of religion in the mix too and, to a certain extent, Officers had been put in an extremely invidious position of having to somehow make tangible the intangible which was at the heart of the challenge that Members had. The Member told the Sub-Committee that there was a developer who wanted to build a large building and had brought the scale of that back from a rejected application and the Sub-Committee were being told that the economics of that were required in order to continue what appeared to be a really worthwhile and valuable community space. The Member further added, as an aside, that they felt slightly uncomfortable at feeling like the Sub-Committee was being pitted between two different sets of communities within the City during the early presentations, but that was to be put to one side. The Member stated that on one hand were friends in the Jewish community whose voices the Sub-Committee was listening to who had heard what had been said, and echoed another Member's comments that it was unfortunate that the timing of the meeting was today on Shabbat. The Member further added that, having read through the pack and listened to the comments, they wanted to address a previous point by another Member as, when Members said the Officers had to be an expert in absolutely everything, including religion, he did not believe that was necessarily true and felt what was important was that Officers used the metrics and benchmarks that were available to them. The Member told the Sub-Committee that they had heard, with regard to the lunar transit, that Officers had done that and they could not be asked to be experts on the divine and did not think that would be reasonable as it was a part of town that needed a revamp and where development was needed and the economic benefit did need to be yielded that the site would bring. The Member concluded that, in recognition of the public benefit and trading that off against what they thought was indeed concern from a very valuable minority community here in the City who it desperately wanted to protect and look after, in their view they would support the application as he felt that the Officers had made a very difficult, but correct decision.

Another Member stated they believed that the Sub-Committee was working on the basis that it was an application being treated on its merits and not as a show of loyalty to anyone in particular. The Member added that the use of benchmarks was important, and it was important to say where the limit of those benchmarks was and they felt the Sub-Committee was in unique territory with the application. The Member stated it was right to say that last time, planning Officers had recommended and the Sub-Committee refused the application and did so on grounds that had not changed in substance. The Member noted that the reason she had asked about the material planning consideration of the previous refusal was to ensure that everyone could understand there was a consistency in approach of the Sub-Committee and that certainty was important, whether one was more pro-growth than their approaches to the expansion of office space or not, for everyone. The Member added she was asking the question about the point of whether it had fundamentally changed in terms of light or harm to the Tower of London World Heritage Site, and, in her view, there was unjustified harm to the Tower of London World Heritage Site at a very sensitive time which was entirely in keeping with what had been said before. The Member further stated that if one looked at images 23 and 45a, it

was really instructive and showed one that it was highly visible and did draw the eye, and it was important to acknowledge that there was a real harm to the Synagogue which everyone agreed there would at least be some adverse effect to the Synagogue's light impact, particularly in the ladies gallery and in the courtyard. The Member further added that it diminished the quality of the space and the chipping away at the access to light and sunlight for the important and valuable Grade I-listed building did not justify the continue chipping away and was an example of why the stringent St. Paul's requirements on sightlines, that sometimes felt heavy-handed, were the only way to prevent it from taking place. The Member told the Sub-Committee that, on balance, there had not been a significant change in those aspects and hoped a broader conservation could be had with Officers about how the City used really valuable opportunities, in relation to meanwhile space, to infill them into spaces that have been used as a public benefit on a number of other applications as if those spaces were not suitable for some groups, then the City would have a broader issue. The Member confirmed they would not approve the application and would be refusing.

The Chairman indicated the Sub-Committee need to give credence to the fact that it had a responsibility to vote without fear or favour as had been pointed out at the last meeting and stated it was not to give any favouritism to any party to an application as the Sub-Committee had to make sure it was making decisions as independent Members. He told the Sub-Committee that an application had been looked at in the morning where an applicant had listened to their neighbours and come back with an improved scheme and he looked at the proposed scheme with the reduced massing, the reduced height and felt the applicant had listened, listened to their neighbours, engaged with the groups involved in the scheme and had come back with quite a different scheme. He stated there were some comparators around the tower, but when one considered the impact on Holland House and Renown House, it was a very different bulk altogether that had come forward for consideration. The Chairman added that the Sub-Committee had to remember that it may have subjective views on the impacts on the World Heritage Site, the heights and impacts on daylight and sunlight, but the scheme did fit within the Eastern Cluster and the tall buildings area that had been designated by Members, had been approved by the Planning and Transportation Committee and the Court of Common Council, and was now with the Planning Inspectorate. The Chairman further stated that the tall building fit within the tall building cluster and, objectively, fit within City policies which the Sub-Committee should bear in mind when it looked at the impact on the World Heritage Site. He further added, in relation to the community offering, that was interesting that competition was spoken about in reference to the Synagogue and the communities that had been heard from and felt there was not a competition and there was nothing stopping the Synagogue from carrying out its religious activities. The Chairman told the Sub-Committee that if he felt there was a real impact on the Synagogue being able to continue services, he would not be supporting the application, but he saw the other community groups coming in as a compliment to the area, not a competition, and that diversity of offering should be embraced. He added that there had been discussion about other community offerings in the Square Mile and knew for a fact there were hundred of museums and community groups

looking for a home, and it was not a nil-sum game. He stated that there were people requesting a cultural activation or a community offering in the new schemes coming up and there was certainly no shortage of community groups, but there was a shortage of space to accommodate them. The Chairman confirmed he would support the scheme and would do so on a balanced perspective that had taken into account all of the argument heard on both sides.

The Chairman moved the meeting to the vote.

The Town Clerk stated that Members were voting on Items 4 and 5 and the recommendations on Pages 565 to 566, and Page 1127 of the main agenda pack with any relevant amendments set out in the addendum packs. Members confirmed they were happy to proceed to the vote on that basis.

The Sub-Committee proceeded to vote on the recommendations before them.

Votes were cast as follows: IN FAVOUR – 8
OPPOSED – 14
There were no abstentions.

The recommendations were therefore not carried.

RESOLVED – That, planning permission not be granted for the above proposal.

The Chairman asked the Town Clerk to run through the process outlining reasons for refusal.

The Town Clerk stated the following: In line with the Planning Protocol, specifically Appendix A, subsection 2a, the Committee should indicate reasons for refusal with sufficient clarity to enable clear and precise reasons (with reference to relevant policies) to be provided in the Decision Notice. The Protocol provides for instances such as this where, although committee has indicated clear reasons, the precise wording (including relevant policies) cannot appropriately be framed in the forum of the committee meeting. In these cases, the drafting of precise reasons may be delegated to the Town Clerk (after consultation with the Chief Planning Officer and Development Director and the Chairman and Deputy Chairman).

The Chairman moved a Motion.

MOTION: Delegated Authority be granted to the Town Clerk, in consultation with the relevant Officers, the Chairman and the Deputy Chairman, to finalise the precise wording of the minutes and Decision Notice, to be drafted in line with these reasons for refusal.

The Deputy Chairman seconded the Motion.

The Chairman moved the meeting to a debate on the Motion.

A Member addressed the Sub-Committee and stated the importance of the reasons for refusal and the reliance upon them as a material consideration and expressed concern that they would only be viewed by those who recommended supporting the application. The Member stated that the reasons, from the last refusal, were related to the bulk and masing of the proposal regarding the effect on the setting and amenities of the Synagogue, the daylight and sunlight effect, and Historic England's concerns about the views of the Tower of London. The Member added that she believed the reasons for refusal should come back to the Sub-Committee due to the significance and it being a material consideration. The Chairman expressed concern about bringing it back to the Sub-Committee and wanted to get the reasons for refusal actioned as the Officers had listened.

Another Member addressed the Sub-Committee and stated that Officers would usually work up grounds for refusal which would come back to Sub-Committee as had been done last time the application had been discussed and then it was agreed. The Member stated this happened at every other Local Authority and it was not delegated to the Chairman and Deputy Chairman, who had voted for the application, to agree the grounds for refusal. The Member added there was another reason for refusal related to the negative impacts on the Grade II-listed Holland House and suggested it had to come back to Sub-Committee to be agreed. The Chairman responded that the reasons for refusal were issued by the Town Clerk, in consultation with the Director of Planning, the Chairman and the Deputy Chairman, and stated there was an Officer oversight.

A Member proposed an amendment to the Motion. that the reasons for refusal come back to the Sub-Committee for consideration after it had been drafted by Officers.

MOTION: That the reasons for refusal come back to the Sub-Committee for consideration and approval following drafting by Officers.

The Town Clerk stated, for the avoidance of doubt, that Members had before them a Motion put forward by the Chairman and seconded by the Deputy Chairman for the final terms of refusal to be delegated to the Town Clerk in consultation with the aforementioned Officers and the Chairman and Deputy Chairman. The Town Clerk understood that a Member had moved an amendment, that had been seconded, which would amend the Motion in such a way that it would require it to come back to the Sub-Committee. The Town Clerk added, in terms of procedure, that Members could either move the amendment and then vote on it or vote down the original Motion proposed by the Chairman.

The Chairman moved to a vote on the amendment to the Motion.

The Town Clerk confirmed that Members were being asked to vote on an amendment which require the precise terms of the refusal to come back to the Sub-Committee for approval rather than for a Delegated Authority.

The Sub-Committee proceeded to vote on the Motion before them.

Votes were cast as follows: IN FAVOUR – 13
OPPOSED – 7
There were no abstentions.

The Motion detailing the amendment to the prior Motion was therefore carried.

RESOLVED – That, the Motion was amended to read: The reasons for refusal were to return to the Sub-Committee for consideration and approval following drafting by Officers.

The Chairman moved to the vote on the amended Motion.

The Sub-Committee proceeded to vote on the Motion before them.

The Motion was carried.

RESOLVED – That, the reasons for refusal were to return to the Sub-Committee for consideration and approval following drafting by Officers.

6. *** VALID PLANNING APPLICATIONS RECEIVED BY THE ENVIRONMENT DEPARTMENT**

The Committee received a report which detailed development applications received by the Department of the Built Environment since the last meeting.

RESOLVED – That, Members noted the report.

7. *** DELEGATED DECISIONS OF THE CHIEF PLANNING OFFICER AND DEVELOPMENT DIRECTOR**

The Committee received a report which detailed development and advertisement applications determined by the Chief Planning Officer and the Development Director or those authorised under delegated powers since the last report to the meeting.

RESOLVED – That, Members noted the report.

8. **QUESTIONS ON MATTERS RELATING TO THE WORK OF THE SUB-COMMITTEE**

There were no questions on matters relating to the work of the Sub-Committee.

9. **ANY OTHER BUSINESS THAT THE CHAIRMAN CONSIDERS URGENT**

The Chairman asked Officers to advise the Sub-Committee on the report on the new NPPF which would outline the changes and implications which was being prepared for Planning and Transportation Committee. Officers informed the Sub-Committee that a report would be going to Planning and Transportation

Committee setting out in detail the changes to the NPPF and how it impacted upon the work of the Committee.

The Chairman noted there had been a recent Government consultation document on planning committees and their structure and asked Officers to advise how the response would be drafted, and how the Committee would be involved. Officers stated that the report would be going to the Planning and Transportation Committee in January before it went to Policy & Resources Committee, and it would contain a draft response to the consultation about the workings of planning committees nationally.

The meeting ended at 2.33 pm

Chairman

Planning Application Ref: 24/00021/FULEIA

Re: Planning Consultation for Bury House 1 - 4, 31 - 34 Bury Street London EC3A 5AR

Dear Anna,

The Eastern City and Aldgate Connect Business Improvement Districts (BIDs) are proud to be making a joint representation in relation to the above planning application.

The Eastern City BID was established in April 2022, and the Aldgate BID in April 2020 following a successful ballot of local eligible businesses, and are two of the five BIDs that operate across the Square Mile investing around £9m per year to deliver hyper-local enhancements and support their relevant communities. The City BIDs form part of the Primera portfolio of 12 central London BIDs. Each of the City BIDs are developing or have already developed their own public realm visions and strategies.

We operate under a mandate from those paying member businesses to deliver our respective Business Plans, providing hyper local area wide projects and services to support business growth and vibrancy, working with occupiers, property owners and developers and our public sector partners.

Given our holistic and strategic approach, it is appropriate that we make representations on key planning applications, and in particular, those that have an impact on the wider area, public amenity provision and ground floor public realm.

For clarity, it is not the role of the BIDs to explicitly support or oppose any specific planning application and this is not the purpose of this letter. Rather, we view aspects of the above application in relation to our published evidence base – namely our Public Realm Visions; Eastern City (2024) and Aldgate Connect (2022) – which are rooted in insight, data and consultation with our member businesses, key stakeholders and the public.

We are supportive of the significant development pipeline and projected growth in the area. We see this as a positive thing for City, bringing benefits such as increased vibrancy and economic growth to this globally important area and unique part of the City. This is an area that has driven change for 2000 years, a hub of economic activity and the growing Destination City agenda. We are excited about the opportunities provided by the future growth of the area.

In the context of this growth, our public realm and the ‘spaces between the buildings’ are ever more important.

We are grateful to the developer for their consultation and positive engagement with the BIDs through the planning process. We have shared our Public Realm Visions with them and drawn specific attention to the development's strategic location at the intersection of the two BID areas, aligned with the project family routes set out in the document Eastern City Vision, and the nearby gateways to Aldgate, as well as identified heritage assets of Mitre Square and Devonshire Square. We would urge consideration of these priority areas in relation to the proposed development's wider context. In addition, the Eastern City Public Realm Vision outlines our seven key principles, which are:

- Welcoming publicly accessible spaces – designing spaces that are inviting and accommodating;
- Resilient trees and planting – ensuring the area is as green as possible;
- Lively uses and activity – creating a dynamic and energetic place;
- Intuitive navigation – making it easier to reach your destination;
- Historic character and lighting – celebrating and improving the heritage features;
- A mobility environment which is accessible to all – establishing environments where modes of movement can co-exist;
- A safe and secure neighbourhood – promoting spaces where all users feel safe.

Considering the above scheme against these principles, we welcome a number of provisions in the application and look forward to working with the developer should the scheme receive approval. Specifically, we wish to draw attention to the following aspects of this application, which support our outlined principles above;

- The creation of additional public realm at ground – a 172% increase from the current situation, including creation of a new pocket park space and arcade;
- Enhancing pedestrian experience through improved connection from Aldgate to Tower Hill in line with strategic project family;
- Consideration for weekend activation of spaces that are accessible to public and community, through proposed public space, retail offering and community/cultural use, and consideration for accessible and inclusive spaces such as proposal for 'changing places' facilities;
- Celebration of the historical context through retention of historic features of the built environment

Yours sincerely

Nick Carty

15-12-2024

Dear Sir/Madam

Town and Country Planning Act 1990 (as amended)
Town and Country Planning (Development Management Procedure) (England) Order 2015

Application Number: 2024/2229

Site Address: Bury House 1-4, 31-34 Bury Street, London, EC3A 5AR

Development Description: Notification from City of London of application 24/00021/FULEIA for Demolition of Bury House and erection of a new building comprising of 4 basement levels, ground plus 43 storeys (178.7m AOD); partial demolition of Holland House and Renown House; restoration of existing and erection of four storey extension resulting in ground plus 8 storeys at Holland House (48.05m AOD) and three storey extension resulting in ground plus 5 storeys at Renown House (36.49m AOD); interconnection of the three buildings; use of the buildings for office (Class E(g)), flexible retail/café (Class E(a)/E(b)), and flexible community/education/ cultural/amenity (Class F2(b)/ F1(a)- (e)/ E(f)/ Sui Generis) uses; and provision of a new covered pedestrian route, cycle parking and facilities, landscaping and highway improvements, servicing and plant and all other ancillary and other associated works. RE-CONSULTATION due to the submission of additional information and revised drawings

Thank you for your recent application for the above address on which a decision has now been made. The decision on your application is attached. Please carefully read all of the information contained in these documents.

Please quote your application reference number in any correspondence with the Council, either by post to the Hackney Planning Service, 1 Hillman Street, London, E8 1DY, by email to planning@hackney.gov.uk, or by phone to 020 8356 8062.

Yours sincerely

RE: REQUEST FOR OBSERVATIONS

Dear Anna Tastsoglou

DECISION NOTICE

TOWN AND COUNTRY PLANNING ACT 1990.

REQUEST FOR OBSERVATIONS
I refer to your application detailed below and have to inform you that this Council has considered the under-mentioned proposal and RAISES NO OBJECTION

Application Number: 24/03757/OBS Date of Application: 02.12.2024 Date of Decision 18.12.2024

Proposed Development At: Adjoining Borough Observations Within The Corporation Of London	
For:	Observations on a proposed development within the adjoining Borough of City of London with respect to restoration works to Holland House including removal and reinstatement of external faience together with the removal and replacement of existing concrete beam; partial demolition to facilitate interconnection with the neighbouring proposed new building and the construction of a four storey roof extension resulting in ground plus 8 storeys; together with internal alterations including truncation of the existing lightwelt, reconfiguration of partitions, installation of a new staircase, servicing and alt other ancillary and associated works at Holland House 1 - 4, 32 Bury Street London EC3A 5AW (RE-CONSULTATION due to the submission of additional information and revised drawings)

Conservation Area: Creechurch Conservation Area	**Listed Building: Holland House – grade II***

Summary

The application relates to a site located on the northeast corner of Bury Street, northwest of Creechurch Lane and it comprises three buildings, namely Holland House, Renown House and Bury House.

The site lies within the recently designated Creechurch Conservation Area, which includes all three buildings. Holland House is a Grade II* listed building, which was built to designs by H.P. Berlage for a Mueller, a Dutch shipping company and completed in 1916. Renown House is a characterful survival of a small-scale early 20th-century office building, not listed but considered a non-designated heritage asset. Bury House was constructed in the 1967 for use as commercial offices.

Planning permission for the demolition of the building at 31 Bury Street and the construction of a 48 storey tower building was previously refused, under the terms of application 20/00848/FULEIA. The reasons for refusal included the adverse impact of the development on the setting and amenities of the Grade 1 listed Bevis Marks Synagogue by reason of the overbearing and overshadowing impact of the development on the courtyard of the Synagogue and the adverse impact of the development on the Tower of London World Heritage Site by reason of the less than substantial harm caused to LVMF view 10A.1 from the Tower Bridge North Bastion. It was considered that the public benefits of the development did not overcome the harm identified to the heritage assets.

The current proposal incorporates three buildings, as noted above, and not only Bury House. In terms of the tower element of the proposal though, this has been amended by reducing the height of the building by 19 metres, and by setting back the top eight floors, at level thirty-seven to reduce the massing towards the termination point of the tower.

The redevelopment of the site is covered by two applications; one application for planning permission (ref.no.: 24/00021/FULEIA) and one application for listed building consent (ref. no: 2400011/LBC).

Planning permission is now sought for the demolition of Bury House and erection of a new building comprising of 4 basement levels, ground plus 43 storeys; partial demolition of Holland House and Renown House; restoration of existing and erection of four storey extension resulting in ground plus 8 storeys at Holland House and three storey extension resulting in ground plus 5 storeys at Renown House and interconnection of the three buildings. The use of the buildings would be office (Class E(g)(i)), including affordable workspace,

flexible retail/café (Class E(a)/E(b)), and flexible community/education/cultural/amenity (Class F2(b)/ F1(a)- (e)/ E(f)/ Sui Generis) uses. The development also includes the provision of a new covered pedestrian route, cycle parking and facilities, public toilet, landscaping and highway improvements and the provision of a single servicing access point onto Heneage Lane.

Listed building consent is sought for the restoration works to Holland House including removal and reinstatement of external faience together with the removal and replacement of existing concrete beam; partial demolition to facilitate interconnection with the neighbouring proposed new building and the construction of a four storey roof extension resulting in ground plus 8 storeys; together with internal alterations including truncation of the existing lightwell, reconfiguration of partitions, installation of a new staircase, servicing and all other ancillary and associated works.

Objections have been received from statutory consultees including Historic England, the Greater London Authority, the 20th Century Society, the Victorian Society, the Georgian Group, Historic Royal Palaces, the CAAC, SAVE Britain's Heritage, the London Borough of Tower Hamlets, as well as several objections from third parties, including the Jewish community, relating to the scale, massing and design of the development and its perceived impact on designated heritage assets, including the Tower of London World Heritage Site, the Bevis Marks Synagogue and the Creechurch Conservation Area and concerns around the ability of the Synagogue's congregation to use the Synagogue and its courtyard as a place of worship due to the daylight, and overshadowing impacts and by reason of the reduced visibility of the night sky and the moon. This report has considered these impacts, which are addressed below.

The application site is situated within the City Cluster. The Cluster contains the greatest density of businesses and jobs in the City and both the Local Plan 2015 and emerging City Plan 2040 recognise that the Cluster can accommodate significant growth in office floorspace and is a location for tall buildings.

The site is within the Central Activities Zone in a highly sustainable location. The proposal would deliver a high quality, office-led development in the emerging City Cluster, which will meet growing business needs, supporting and strengthening opportunities for continued collaboration and clustering of businesses and maintaining the City's position as the world's leading international, financial, and professional services centre.

The scheme would provide 34,584 sqm (GIA) of office floorspace (Use Class E(g)(i)), which would be flexible, sustainable Grade A office floorspace suitable

for circa 2,470 FTE City workers. The site is within the City's growth modelling and would deliver 1.5% of the required commercial space to meet projected economic and employment growth demand until 2040. This quantity of floorspace would significantly contribute to maintaining the City's position as the world's leading international, financial and professional services business centre.

The proposed office floorplates would range between 350 and 580sqm for businesses of 50-60 people supporting smaller, start-up businesses, providing office tenants with their own private entrance and dedicated floor rather than sharing with other tenants, which will ensure that the floorspace is attractive to a range of potential occupiers. The proposal would also provide 1,170sqm of affordable workspace available at 50% of market rent for qualifying occupiers or zero rent for charities, fulfilling the City's vision to providing inclusive workspace.

Alongside the office space the proposed flexible educational/ cultural/ community/ sports/ multi-faith space within the lower ground, ground and first floors of the three buildings, would combine to create a compelling and inclusive public offer in the heart of the cluster in line with the Destination City agenda. These multi-functional bookable spaces would attract a wide range of activities, including student visits for learning, educational, creative and skills workshops, rehearsals, performances, conferences, charity events, sports tournaments and faith events. The spaces would be available to pre-book, free of charge for community based groups and non-profit organisations, schools and other local groups, for 81 hours a week, of which over 67 hours will be free of charge. The public offer would also include an Urban Farm at the ninth floor of Holland House to be used as a rooftop classroom and the provision of a climbing wall, offering a new sport facility and attraction in the City Cluster. Heneage Arcade would create a new pedestrian route, with flexible retail/café uses, incorporating public art. The dedicated cycle repair space at lower ground floor level would support the provision of new skills in the area, providing training and jobs for young adults and concurrently providing a service in the area to support the local community. The provision of a changing place, public toilet and water fountain, will be secured by condition.

The proposals would optimise the use of land, delivering high quality office space, and a multi-layered series of accessible spaces. It would enhance convenience, comfort and attractiveness in a manner which optimises active travel and builds on the City's modal hierarchy and Transport Strategy and delivers high quality public realm. The proposals would constitute Good Growth by design and be in accordance with all Local Plan Policies relating to design, including, DM3.3, CS7, CS10, CS14, CS16, DM16.1, DM10.1, DM10.4, DM10.8, CS19 and DM19.1, emerging City Plan 2040 policies S10, AT1, S8,

DE2, DE3, DE4, S21, OS1, S14, London Plan D3, D4, D8, T1, T2, T4 and G4, and the policies contained in the NPPF and guidance in the National Design Guide, contextualised by London Plan Good Growth objectives GG1-3,5 and 6.

Officers consider the site to be acceptable for a tall building, supporting the consolidation of the City Cluster. While there is conflict with Local Plan policy CS7 (3) and CS14 (2) and London Plan D9 B (3), because the site is located in a conservation area and therefore considered inappropriate for a tall building, officers nevertheless find that the qualitative impacts of the proposal would be acceptable and that it would accord with London Plan Policy D9 A, C and D, Local Plan Policy CS7 (1,2, 4-7), draft City Plan S12 (1,2, 4-10) S21 (1,3-8). Most relevantly, the proposal would not cause harm to the setting, significance, character or appearance of the Creechurch Conservation Area in which it is situated. As such, officers consider the site acceptable for a tall building, notwithstanding some limited further conflict with emerging City Plan 2040 S21 (5) due to an impact on the significance of the grade II* listed Holland House which forms part of the application site.

The proposal would be a sophisticated new addition to the City Cluster, massed in tapering stages to form an endpiece at the eastern edge, and clad in pale blue faience elevations to do so elegantly and differentiate it from the more glazed towers at the centre. It would enliven the locality of the City at its feet by reinstate the lost leg of Heneage Lane with a new route and retail arcade and reimagining the existing open space between Bury House and Holland House; both these existing buildings on the application site and the new spaces between them, and the wider locality, would be made more accessible, inclusive, inviting, and animated by the scheme. The creation of the proposed new public spaces and improvements to the existing public spaces are considered by officers to be a benefit of the scheme. The proposal would comply with the relevant design policies set out above.

The proposal would not harm the attributes or components of the Outstanding Universal Value, significance, authenticity and integrity of the Tower of London World Heritage Site, in accordance with Local Plan Policy CS12 (5), CS13 (3) Emerging City Plan Policy S11 (5), HE1, HE3 London Plan Policy HC2 associated guidance in the World Heritage Site Management Plan, Local Setting Study and LVMF SPG and CoL Protected Views SPD.

The proposals would preserve the characteristics and composition of all relevant strategic views and would comply with Local Plan Policy CS13 and emerging City Plan 2040 Policy S13 London Plan Policy HC4, and associated guidance in the LVMF SPG and Protected Views SPD. The development would preserve the experiences from public high-level viewing platforms including

from Monument, St Paul's Cathedral Stone Gallery and Golden Gallery and existing and emerging elevated public spaces which are also important to the character of the City of London.

The proposal would result in a low level of harm to the grade II* listed Holland House. As such, it would fail to preserve the significance/special interest or setting of this designated heritage asset and conflict with Local Plan policies, CS12 (1 and 2), DM12.1 (1), Draft City Plan S 11 (2) and London Plan HC1 (C) and the objective set out in Section 66 of the Planning (Listed Buildings and Conservation Areas) Act 1990 and relevant NPPF policies. The proposals would otherwise comply with Local Plan CS14, CS 12 (2-5), CS13 and DM12.1 (2-5) DM12.5 Draft City Plan 2040 S11 (1,3-5) S 13, HE1 and London Plan HC 1 (D), HC2, HC3 and HC4. Most germanely, they would preserve the setting and significance of Bevis Marks Synagogue and the special interest, character and appearance of the Creechurch Conservation Area.

Giving considerable importance and weight to the desirability of preserving the significance of listed buildings, this harm would be outweighed by the heritage and public benefits of the scheme. The heritage benefits, set out in more detail in the Heritage section below, include a low level of enhancement to the grade II* Holland House and a low level of enhancement to the Creechurch Conservation Area. The public benefits include the delivery of growth in a highly sustainable location, the opening up of Holland House, and in particular its heritage lobbies, to a much broader demographic, and the provision of a highly compelling mix of educational/ cultural/ community/ sports/ multi-faith spaces across the lower levels of the proposal. The proposals would provide high quality amenities that would promote the wellbeing of workers, residents and visitors whilst also driving footfall and increasing spending in the locality.

The proposals comply with the required initial steps of archaeology investigation, in accordance with Local Plan DM 12.4, emerging City Plan 2040 HE2 and London Plan HC1, subject to archaeology conditions.

In transportation terms, the scheme would support active travel and maintain pedestrian comfort for a high number of future employees. The proposal would align with aspirations set out in the City's Transport Strategy. Policy compliant levels of cycle parking (582 long stay and 85 short stay) and associated end of trip facilities, including showers and lockers are proposed, which would encourage active travel to the site. The proposals for the enhanced public highways, can satisfactorily accommodate the additional pedestrian trips on the transport network. Demolition and construction methodologies would be secured via condition and proposals agreed between the Highways Authority and the appointed contractor, in accordance with construction regulations and logistic guidance. The three buildings are proposed to be serviced by a single

point onto Heneage Lane. 66 daily trips are forecasted following consolidation of deliveries by 50%. This would need to be set out in a delivery and servicing management plan. It is considered at this stage that the proposed servicing arrangement would be acceptable. The scheme is in compliance with Local Plan Policy 16.3 and London Plan policy T5.

Carbon optioneering has been carried out to establish carbon impacts, opportunities and constraints for environmental sustainability to inform the development proposals. The whole life-cycle carbon emissions per square meter of the selected option would be the lowest out of the 4 options tested. A lower new build option might be able to deliver the same sustainability benefits with less carbon impacts, however, the scheme in its proposed form would unlock a number of benefits that planning officers consider to be a suitable approach to future proof the City as a sustainable location in London.

The proposed development would optimise the quantity of floorspace for offices and a mix of community and retail uses along with a range of amenity and urban greening measures, thus contributing to future proofing the City of London against a range of environmental, social and economic sustainability challenges.

Compared to retrofit options with limited extension potential, the proposed development would result in the lowest whole life-cycle carbon emissions per square meter, with benefits relating to avoiding harmful interventions into historic fabric, improving social sustainability through the activation and diversification of the local area and integrating urban greening and climate resilience measures. The energy strategy has been optimised for the site and a BREEAM “excellent” rating is targeted, aspiring to an “outstanding” rating through detailed design. Circular economy measures have been incorporated, such as by retaining approximately 35% of the existing structures, as well as designing for longevity, adaptability and low maintenance. Although the proposal cannot meet the London Plan target of 35% operational carbon emission savings due to the particular stringency of the Part L 2021 baseline relating to non-residential buildings, as acknowledged by the GLA, it would overall comply with London Plan policies SI 2, SI 7, Local Plan policies CS15 and DM17.2, as well as emerging City Plan 2040 policy DE1. The building design responds well to climate change resilience by reducing solar gain, saving water resources and significant opportunities for urban greening and biodiversity and complies with London Plan policies G5 SI 4, SI 5 and SI 13, Local Plan policies DM18.1, DM18.2, CS19, DM19.2, and emerging City Plan 2040 policies S14, OS2, OS3, OS4, S15, CR1, CR3 and CR4.

In terms of the environmental impacts of the proposed development, the daylight, sunlight, overshadowing, overbearing overlooking, noise,

contamination, wind, thermal comfort, air quality, solar glare and light spillage impacts have been assessed. Microclimate, thermal comfort, ground conditions, air quality, contamination, solar glare and light spillage and noise generated by the development are acceptable subject to mitigation, conditions and planning obligations where relevant. In terms of thermal comfort beneficial impacts are expected on the existing benches to the north of 30 St Mary Axe.

A number of objections have been received from Bevis Marks Synagogue and members and the wider Sephardi community, inter alia, relating to the impact of the development to the historical and religious significance and the setting of Bevis Marks Synagogue, the loss of daylight and sunlight to the Synagogue, overshadowing of its courtyard and the ability to view the night sky and the moon in order to recite the Kiddush Levana prayer.

All the representation received are set out in the main body of the report and are also included in full in the background papers.

As discussed above and in length in the main body of the report, it is considered that the proposed development would preserve the special architectural and historic interest and heritage significance of the synagogue and its setting.

In terms of the daylight and sunlight impacts into the Synagogue, officers are extremely cognisant of the matters raised by the Jewish community and have analysed these in considerable detail. However, it is considered that the impacts would be limited, localised and minimally noticeable at ground floor level and slightly more noticeable at the southwest area to the mezzanine level. The VSC effects caused by the proposed development are minor adverse, the BRE guidelines for NLS and sunlight are met and therefore, overall, the daylight and sunlight effects are not considered significant, in EIA terms. The effects of cumulative scenarios have been assessed including consented and unconsented schemes. Although minor to moderate adverse effects are identified in the cumulative vs existing baseline scenario, the additional effects would be due to other consented schemes. It is also noted that BRE guidelines for daylight distribution and sunlight are again met in the cumulative scenario.

As such, it therefore follows that there is a very limited impact on the visual appreciation of the historic interior and on the visual appreciation of interior features of key religious significance such as the Bimah and the Ark. Consequently, on the basis of the detailed evidence provided, officers come to the view that the visual appreciation of the religious ceremonies and associated activities including the reading of religious texts would not be diminished to a significant or perceptible degree. From this it can be concluded that, based on the quantifiable daylight impact results, the effects of the proposal on daylight

to the interior of the Synagogue would not be great enough to compromise the religious use or activities therein.

Since the submission of the application, a daylight and sunlight empirical report has been submitted on behalf of the S&P Sephardi community and the Bevis Marks Synagogue Rabbi. Overall, based on the results of the submitted data it is accepted that the Synagogue currently experiences low levels of light, which accords with the results of the Daylight, Sunlight and Overshading Assessment submitted by the Applicant. Officers, based on the findings and conclusions of the reviewer, consider that the although the Bevis Marks Synagogue daylight report is not based on a published or generally used method, if carried out appropriately with adequate equipment and controlled methodology it can give an understanding of the current and proposed light levels. However, it is considered that the submitted daylight report, is not complete or entirely accurate, due to the lack of necessary information and other limitations, as discussed above, and therefore, it can be attributed limited weight. It is considered more appropriate that officers give substantial weight to the findings of the Daylight, Sunlight and Overshadowing Assessment submitted by the Applicant and reviewed by the Corporation's appointed daylight consultant, as this follows the BRE guidelines as referred to in Local Plan policy DM10.7, and paragraph 3.10.41 of the reasoned justification to that policy. The BRE guidelines are also referred to in draft City Plan 20240 policy DE7.

An application at 31 Bury Street proposing the erection of a 48-storey tower was previously refused by reason of the overbearing and overshadowing impact of the tower to the Synagogue's courtyard. Since the determination of the previous application the courtyard of the Synagogue has undergone changes to include a new ramp to the visitor centre, permanent security booth at the entrance of the site and ticketing booth on the northern part of the courtyard. At present no area of the courtyard receives two hours of sunlight on 21 March and therefore, although no area would be able to receive sunlight on the 21 March following the erection of the proposed development, the BRE guidelines are met. The Sun Exposure analysis and shadow diagrams, submitted with the application, show a reduction in the average sunlight availability within the courtyard of 16 minutes to 19 minutes when comparing the proposed development (including the consented schemes) with the consented scenario. It is therefore considered that the proposed development alone would not materially change the sunlight on the Bevis Marks Synagogue courtyard. As a result, it is not considered that the development would result in overshadowing in the Synagogue's courtyard that would affect the setting of the listed building or its associated amenities and it would not preclude from continuing to be used for religious events and as part of the visitor experience visiting the Synagogue's exhibition centre.

To respond to the concerns raised regarding the ability to recite the Kiddush Levana prayer, the applicant has submitted a Lunar Transit Study, assessing the impact the development would have on the visibility of the moon in the night sky. This study was independently reviewed. Following discussions with the Synagogue's Rabbi, the visibility of the sky from two observer points at the entrance of the Synagogue courtyard were assessed. Based on the results produced taking into account a full moon cycle, only for the 12-day periods of the waxing moon when the Kiddush Levana prayer can be recited (discounting cloud cover), the visibility of the moon when comparing the existing and cumulative scenario will be reduced by 2.5% and 2.1% in the major and minor lunistice respectively from point P (indicated by the Rabbi) and between 2.2% and 2.1% respectively from point N (initially included in the submitted study). The absolute reductions between the future baseline and cumulative scenario, effectively those resulting from the proposed development, are between 1.8% and 1.3% in the major and minor lunistices from both points. When considering the months and days that the moon would be able to be visible, taking into account the development alone (cumulative vs future baseline) it is noted that there would be no further reduction in the months that the moon would be able to be visible (the moon would still be able to be viewed 8 months of the year) and minor reductions in the number of days (50 days instead of 52 or 51 days every year, in case of a major and minor lunistice year respectively). In terms of hours there will be a reductions exceeding 40 hours in each year.

It is therefore concluded that currently there is a reduced overall opportunity to view the moon from the Synagogue courtyard due to obstructing effects from the existing surrounding buildings. The proposal would result in varying reductions of the number of hours available to see the moon on each relevant occasion, though in theory there would always be enough visibility to recite the prayer, and there would not be a reduction in the number of occasions (i.e. months) per year against the future baseline. Although the impact of the development in terms of relative losses is acknowledged, the prayer would still be able to be recited in those same months each year as the future baseline scenario. Whilst the development would have some impact on the ability to recite the Kiddush Levana Prayer due to the reduced hours that the moon would be able to be visible, it would not have a material impact on the ability to carry out of other religious practices including circumcision, the observance of Shabbat, and daily obligations. It is the view of officers that such an adverse impact is small, and should, taking account of the duties imposed by section 149 of the Equality Act 2010, therefore be attributed limited weight. In any event such adverse impact would be outweighed by the many public benefits of the scheme as set out in this report.

In terms of daylight impacts on other receptors, the proposed development would result in no significant adverse effect on the majority of the properties

assessed with the exception of 2 and 10-16 Creechurch Lane and 18-20 Creechurch Lane which would experience moderate adverse effects. However, the absolute alterations in most instances are either very limitedly or not likely to be noticeable and as such, the daylight and sunlight to these properties is not considered to be reduced to unacceptable levels.

It is the view of officers that as a matter of planning judgement, in particular as the effect of the proposal will be to advance Local Plan Strategic Objective 1, as policy CS1 is complied with, as policies relating to office floor space delivery, Eastern/City Cluster and public realm would be complied with that, notwithstanding the conflict with CS12 (Historic Environment) , DM12.1 (Managing Change affecting all heritage assets and spaces), CS14 (Tall Buildings); Draft City Plan Policies 2040 S11 (Historic Environment), HE1 (Managing Change to Heritage Assets), S21 (City Cluster Key Area Of Change) and London Plan HC1 (Heritage Conservation and Growth), the proposals would comply with the Development Plan when considered as a whole.

In this case, the proposals are considered to comply with a number of policies in particular those which encourage office development in the City. It is the view of officers that, as a matter of planning judgement, that as the proposals will make a significant contribution to advancing the strategic and business objectives of the City and comply with other relevant design, community, culture, environmental and public realm related policies.

The Local Planning Authority must determine the application in accordance with the development plan unless other material considerations indicate otherwise.

The scheme would provide benefits through CIL improvements to the public realm, housing and other local facilities and measures. That payment of CIL is a local finance consideration which weighs in favour of the scheme. In addition to general planning obligations there would be site specific measures secured by condition and in the S106 agreement.

Virtually no major development proposal is in complete compliance with all policies and in arriving at a decision it is necessary to assess all the policies and proposals in the plan and to come to a view as to whether in the light of the whole plan the proposal does or does not accord with it.

Paragraph 10 of the NPPF sets out that there is presumption in favour of sustainable development. For decision taking that means approving development proposals that accord with an up-to-date development plan (such as the proposal before you) without delay.

As discussed above, the paragraph 208 NPPF heritage balance (and the balance referred to at London Plan policy D9C(d)) is to be struck in favour of the scheme as the public benefits outweigh the less that substantial harm.

It is the view of Officers that as the proposal complies with the Development Plan when considered as a whole and as other material considerations also weigh in favour of the scheme, planning permission should be granted as set out in the recommendation and the schedules attached. Officers also consider that the applications for listed building consent should be granted.

Recommendation

(1) That the Planning and Development Director be authorised to issue a decision notice granting planning permission for the above proposal in accordance with the details set out in the attached schedule subject to:

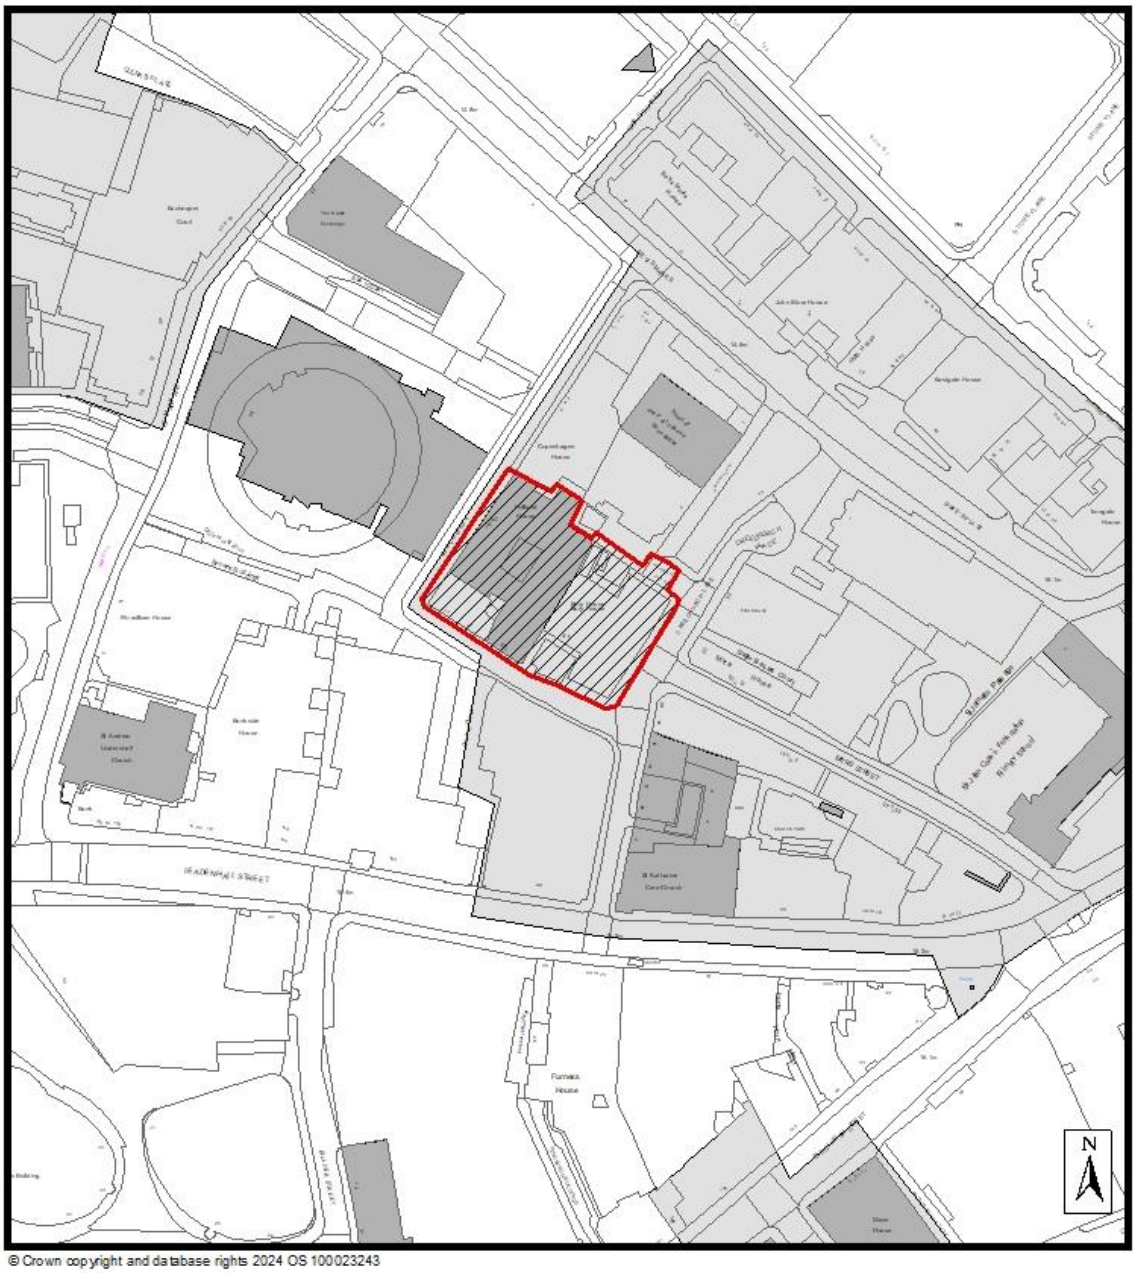
(a) The direction made by the Secretary of State under Article 31 of the Town and Country Planning (Development Management Procedure) (England) Order 2015;

(b) The application be referred to the Mayor of London to decide whether to allow the Corporation to grant planning permission as recommended, or to determine the application himself (Article 5(1)(a) of the Town and Country Planning (Mayor of London) Order 2008);

(c) The application being referred to the Secretary of State pursuant to the Town and Country Planning (Consultation) (England) Direction 2024 and the application not being called in under section 77 of the Town and Country Planning Act 1990;

(d) Planning obligations and other agreements being entered into under Section 106 of the Town & Country Planning Act 1990 and Section 278 of the Highway Act 1980 in respect of those matters set out in the report, the decision notice not to be issued until the Section 106 obligations have been executed.

(2) That the Department for Digital, Culture, Media & Sport (DCMS) be notified of the application and advised that the City Corporation intends to grant planning permission and that the Planning and Development Director be given delegated authority to consider any response received from DCMS, UNESCO or ICOMOS.



(3) That your Officers be instructed to negotiate and execute obligations in respect 55 of those matters set out in “Planning Obligations” under Section 106 of the Town and Country Planning Act 1990 and any necessary agreement under Section 278 of the Highways Act 1980.

(4) That members note that land affected by the building which is currently public highway and land over which the public have right of access may need to be stopped up to enable the development to proceed and, upon receipt of the formal application, officers may proceed with arrangements for advertising and (subject to consideration of consultation responses) making of a Stopping-up Order for

the area shown marked on the Stopping-up plan annexed to this report under the delegated arrangements approved by the Court of Common Council.

(5) That your Officers be authorised to provide the information required by regulations 29 of the Town and Country Planning (Environmental Impact Assessment) Regulations 2017, and to inform the public and the Secretary of State as required by regulation 30 of those regulations.

Main Report

Environmental Statement

1. The application is for EIA development and is accompanied by an Environmental Statement (ES). The ES is a means of drawing together, in a systematic way, an assessment of a project's likely significant environmental effects. This is to ensure that the importance of the predicted effects and the scope for reducing them are properly understood by the public and the competent authority before it makes its decision.

2. The Local Planning Authority must take the Environmental Statement into consideration in reaching its decision as well as comments made by the consultation bodies and any representations from members of the public about environmental issues as required by the Town and Country Planning (Environmental Impact Assessment) Regulations 2017.

3. The duties imposed by regulation 26 of the EIA Regulations require the local planning authority to undertake the following steps:
   - To examine the environmental information
   - To reach a reasoned conclusion on the significant effects of the proposed development on the environment, taking into account the examination referred to at (a) above, and where appropriate, their own supplementary examination
   - To integrate that conclusion into the decision as to whether planning permission is to be granted; and
   - If planning permission or subsequent consent is to be granted, consider whether it is appropriate to impose monitoring measures.

4. A local planning authority must not grant planning permission unless satisfied that the reasoned conclusion referred to above is up to date. A reasoned conclusion is to be taken to be up to date if, in the opinion of the relevant planning authority, it addresses the significant effects of the proposed development on the environment that are likely to arise as a result of the proposed development. The draft statement attached to this report at Appendix A and the content of this report set out the conclusions reached on the matters identified in regulation 26. It is the view of the officers that the reasoned conclusions address the significant effects of the proposed development on the environment that are likely to arise as a result of the proposed development and that reasoned conclusions set out in the statement are up to date.

5. Representations made by any body required by the EIA Regulations to be invited to make representations and any representations duly made by any other person about the environmental effects of the development also form part of the environmental information to be examined and taken into account by your Committee.

6. The Environmental Statement is available online, together with the application, drawings, relevant policy documents and the representations received in respect of the application.

7. Additional environmental information was requested, published and consulted upon under regulation 25 of the Town and Country Planning (Environmental Impact Assessment) Regulations 2017. The additional information (being further information and any other information) which forms part of the environmental information is also available online along with any further representations received in conjunction with the information.

Site and Surroundings

8. The application site is located on the northeast corner of Bury Street, northwest of Creechurch Lane. It is approximately 0.25 hectares in size and it comprises three buildings, namely Holland House, Renown House and Bury House.

9. The surrounding area is on high density and is primarily commercial with some residential properties, religious buildings and some retail units. To the north the site abuts Valiant House and Copenhagen House. Beyond Valiant House, approximately 30 metres north of the site, lies the Grade I listed Bevis Marks Synagogue. To the southeast of the site there are some residential properties along Creechurch Lane with commercial uses at ground floor. The Aldgate school is located further to the east of the site. To the south of the site there are medium rise commercial buildings. Beyond these lie a couple of high-rise buildings including 52-54 Lime Street. Immediately adjacent to the west of the site lies the Gherkin, at 30 St Mary Axe. There are further tall buildings to the west of the site, including the Leadenhall Building (the Cheesegrater) beyond the Gherkin. Another important religious building, Grade I listed St Helen's Bishopsgate Church, in located further to the west of the site.

10. The site lies approximately 500m to the north of the Tower of London World Heritage Site.

11. The site lies within the recently designated Creechurch Conservation Area. The Conservation Area includes all three buildings within the application site. The area that was designated is richly historic, comprising a critical mass of characterful, late Victorian/Edwardian warehouses built on the site and echoing the layout of the Holy Trinity Priory, foremost amongst the medieval City's monastic foundations, and including three outstanding places of worship: Bevis Marks Synagogue, St Katherine Cree Church and St Botolph Aldgate Church (all listed Grade I). It is noted that the site is not located within the immediate setting of the Bevis Marks Synagogue, as this is defined in the Policy S21 map of the draft City Plan 2040.

12. The site comprises three buildings as stated above. Bury House is a 7-storey commercial building (including the ground floor), which contains an underground car park providing 18 car parking spaces and ancillary storage for 10 cycle parking spaces that can be accessed via a car lift to the north of the site from Heneage Place. There is also 1 car parking space and 15 cycle parking spaces located at ground level. The building was constructed in 1967 for use as commercial offices and has remained relatively unchanged since. The single storey basement provides some ancillary storage and 18 car parking spaces.

13. Holland House is a Grade II* listed building, which was built to designs by H.P. Berlage for a Mueller, a Dutch shipping company and completed in 1916. It extends to seven storeys including the ground floor. The building consists of six storeys with additional set back roof storeys. It is mainly located on the eastern side of Bury Street, however, it wraps around Renown House on the southern corner of the Bury Street. It is of expressionist style with vertical architectural form and vaguely Art Deco detailing, finished in distinctive grey-green faience. Holland House has a very high quality and is considered as one of the architecturally standout buildings in the locality.

14. Renown House is a 5-storey office building including the basement and attic storeys built for Messrs Burge, grain dealers in 1912. It is a characterful survival of a small-scale early 20th-century office building, once a common type in the City. It has good quality carved stone detailing and makes an effective contrast with the adjacent Holland House.

15. In terms of size, Bury Street comprises 4,462sqm GIA floorspace, Holland House comprises 6,161sqm floorspace and Renown House is smallest of the three, comprising 716sqm GIA floorspace.

16. Aside of the Grade II* listed Holland House building within the application site and the Creechurch conservation area that the site lies within, there are several other heritage assets in the vicinity of the site, including:

- The Bevis Marks Synagogue (Grade I); located to the north,
- Church of St Helens Bishopsgate (Grade I); located to the west,
- Church of St Andrew Undershaft (Grade I); located to the south-west,
- St Katherine Cree (Grade I); located to the southeast,
- Creechurch Lane No's 2-16 (Grade II); located to the southeast,
- 38 St Mary Axe (The Baltic Exchange) (Grade II); located to the northwest and
- St Helen's Place Conservation Area; located to the north.

17. Other designated heritage assets in the wider area include:
    - The Tower of London World Heritage Site (WHS, Scheduled Monument including Listed Buildings);
    - St Paul's Cathedral (Grade I);
    - Tower Bridge (Grade I);
    - Royal Exchange (Grade I);
    - Lloyd's Building (Grade II);
    - Church of St Botolph, Aldgate (Grade I);
    - Guild Church of St Ethelburga the Virgin (Grade I);
    - The Monument (Scheduled Monument and Grade I);
    - 13 Bishopsgate (Grade I) ;
    - Museum of the Home (formerly The Geffrye Museum, 136 Kingsland Road – Grade I);
    - Former Port of London Authority (Grade II*);
    - Leadenhall Market (Grade II*);
    - Lloyd's Registry, 71 Fenchurch Street (Grade II*);
    - Bishopsgate Institute (and 6 Brushfield Street) (Grade II*);
    - Church of St Botolph Without Bishopsgate (Grade II*)
    - Iron Gates and Railings to Entrance of Church of St Andrew Undershaft (Grade II);
    - Gateway in yard of Church of St Katherine Cree (Grade II);
    - Liverpool Street Station (Grade II);
    - 46 Bishopsgate (Grade II);
    - 48 Bishopsgate (Grade II);
    - Hasilwood House 52-68 Bishopsgate (Grade II);
    - Park House and Garden House (Grade II);
    - Finsbury House (Grade II);
    - London Wall Buildings (Grade II);
    - 139- 144 Leadenhall Street (Grade II);
    - 147-148 Leadenhall Street (Grade II);
    - 38 St Mary Axe (The Baltic Exchange) (Grade II);
    - 20 and 21 Billiter Street (Grade II);
    - 2-16 Creechurch Lane (Grade II);

- 10 Brushfield Street (Grade II);
- 14 Brushfield Street (Grade II);
- Whitehall Court (Grade II*);
- Horse Guards (Grade I);
- War Office (Grade II*);
- Ministry of Defence (Grade I);
- Leadenhall Conservation Area;
- Bank Conservation Area;
- Bishopsgate Conservation Area;
- Finsbury Circus Conservation Area;
- The Tower of London Conservation Area
- Bunhill Fields and Finsbury Square Conservation Area;
- St James Park Registered Historic Park and Garden (Grade I);
- Finsbury Circus Registered Historic Park and Garden (Grade II);
- Bunhill Burial Ground Registered Historic Park and Graden (Grade I)
- 113-116 Leadenhall Street (Non-designated heritage asset);
- Liverpool Street Arcade (Non-designated heritage asset);
- 33-34 Bury Street (Non-designated heritage asset);
- 18-20 Creechurch Lane (Cree House) (Non-designated heritage asset);
- 24 Creechurch Lane (Fibi House) (Non-designated heritage asset);
- 12-14 Mitre Street (Mitre House) (Non-designated heritage asset);
- 27-31 Mitre Street (Non-designated heritage asset);
- 30 St Mary Axe (Non-designated heritage asset); and
- Liverpool Street Arcade (Non-designated heritage asset)

18. The application site is situated within the City Cluster. The Cluster contains the greatest density of businesses and jobs in the City and both the Local Plan 2015 and Draft City Plan 2040 recognise that the Cluster can accommodate significant growth in office floorspace and is a location for tall buildings. The Draft City Plan in Strategic Policy S21: City Cluster, identifies the Cluster as a key area of change. In the Local Plan 2015 the site is within the Eastern Cluster Key City Place as set out within policy CS7.

19. For the above reason there are a number of tall buildings in the vicinity of the site and many more in the wider area. Within those in the vicinity are 30 St Mary Axe (the Gherkin, ground plus 40 storeys), 122 Leadenhall Street (the Leadenhall Building, ground plus 51 storeys), 110 Bishopsgate (ground plus 45 storeys), 52 Lime Street (the Scalpel, ground plus 38 storeys), 22 Bishopsgate (ground plus 61 storeys), 150 Bishopsgate (ground plus 40 storeys); 40 Leadenhall Street (ground plus 33 storeys), and 8 Bishopsgate (ground plus 51 storeys). There are more that benefit from planning consent, including within others 1 Undershaft (ground plus 72 storeys)11 and 100, 106

& 107 Leadenhall Street ('100 Leadenhall Street') (ground plus 56 storeys), 115 - 123 Houndsditch (ground plus 23 storeys), Bevis Marks House (ground plus 19 storeys).

20. In terms of public transport, the site is located within Public Transport Accessibility Level (PTAL) 6b (excellent), the highest rating available. The site is served by numerous London Underground, DLR and National rail services within walking distance, including Liverpool Street Rain and Underground Station, Bank Underground Station Aldgate Underground Station, Aldgate East Underground Station, Tower Hill Underground Station, Tower Gateway DLR Station and Fenchurch Street Rail Station. The site is also served by numerous bus services with bus stops within a short walking distance.

Relevant Planning History and Background to the Proposal

21. The most recent and relevant planning history of the site relates to an application under the reference number of 20/00848/FULEIA which was submitted for the '*Demolition of existing building and construction of a new building comprising 2 basement levels (plus 2 mezzanines) and ground floor plus 48 upper storeys (197.94m AOD) for office use (Class E), flexible retail/cafe use (Class E), publicly accessible internal amenity space (Sui Generis) and community space (Sui Generis); a new pedestrian route and new and improved Public Realm; ancillary basement cycle parking, servicing and plant*.' The application was recommended for approval by officers and presented at the Planning and Transportation Committee on the 5th of October 2021 and overturned to be refused by the Committee Members for the following reasons:

- *The development would adversely affect the setting of the Grade 1 listed Bevis Marks Synagogue and its setting and amenities by reason of the overbearing and overshadowing impact of the development on the courtyard of the Synagogue (which harms would not be outweighed by the public benefits of the proposal), contrary to Local Plan Policy CS10.1 (ensuring buildings are appropriate to the setting and amenities of surrounding buildings and spaces); Local Plan Policy CS12 (conserving or enhancing the significance of the City's heritage assets and their settings and providing an attractive environment to the City's communities) and London Plan Policy GG1 (Building strong and inclusive communities, promoting fairness, inclusivity and equality).*

- *The development would adversely affect the setting of the Tower of London World Heritage Site by reason of the less than substantial harm caused to LVMF view 10A.1 from the Tower Bridge North Bastion and the*

resulting harm to the Outstanding Universal Value of the World Heritage Site (which harms would not be outweighed by the public benefits of the proposal) contrary to Local Plan Policy CS12 (conserving or enhancing the significance of the City's heritage assets and their settings and providing an attractive environment to the City's heritage assets and their settings and providing an attractive environment to the City's communities); Local Plan Policy CS13 (protecting and enhancing significant views of important buildings); London Plan Policies D9e; HC2, and HC3 (protecting the significance of the Tower of London).

22. The application related to 31 Bury Street only and was for a singular tower providing 25,406sqm (GIA) of new floor space. Holland House and Renown House did not form part of the previous application site. Since the refusal of the above application, the current proposal has been amended and two more buildings (Holland House and Renown House) have been included into the application site. The main amendments of the current application in relation to the one previously refused are discussed in the 'Proposal' section of the report.

23. Since the refusal of the previously proposed application the applicant has engaged into pre-application discussions with the aim to address the impacts of the proposed development, which related primarily to the height and massing of the proposed development, albeit maintaining the vision for an office-led tall building.

24. Other planning history of the site relates to Holland House, which was the subject of a Listed Building Consent application granted on 10 May 2022 (ref no.: 21/00838/LBC) for the removal and reinternment of the external faience together with the removal and replacement of existing concrete beam together with associated works.

25. The most recent planning application relating to Renown House was an application which sought the replacement of windows to first, second, third and fourth floors of Renown House. The application was approved in March 2016 (ref. no.: 16/00010/FULL).

26. The following section of the report sets out full details of the proposal.

Proposal

24/00021/FULEIA

27. Planning permission is sought for the demolition of Bury House and erection of a new building comprising of 4 basement levels, ground plus 43 storeys

(178.7m AOD); partial demolition of Holland House and Renown House; restoration of existing and erection of four storey extension resulting in ground plus 8 storeys at Holland House (48.05m AOD) and three storey extension resulting in ground plus 5 storeys at Renown House (36.49m AOD); interconnection of the three buildings; use of the buildings for office (Class E(g)), flexible retail/café (Class E(a)/E(b)), and flexible community/education/ cultural/amenity (Class F2(b)/ F1(a)- (e)/ E(f)/ Sui Generis) uses. The development also includes the provision of a new covered pedestrian route, cycle parking and facilities, public toilet, landscaping and highway improvements, servicing and plant and all other ancillary and other associated works.

28. The proposed scheme would provide 41,293 sq.m (GIA) of floorspace comprising:
    - 34,584sq.m (GIA) of office floorspace (Use Class E(g)(i)), including 1,176sq affordable workspace
    - 504sq.m (GIA) of retail/ food and beverage floor space (Use Class E(a)-(b))
    - 1,411sq.m (GIA) flexible community/education/ cultural/amenity (Class F2(b)/ F1(a)- (e)/ E(f)/ Sui Generis) uses
    - 4,794sq.m (GIA) of ancillary basement uses, including plant space, cycle storage space, shower facilities and building management, fire command centre, security room, refuse and misc. storage and servicing areas

Office Floorspace

29. In terms of the internal layout, the office floorspace will be provided in smaller floorplates (circa 350 – 580 sqm) within the tower component. The office workspace would include 1,176sqm GIA of community workspace at level 1 of Holland house comprising meeting room space and office space with 60 desks available at affordable rent (50% of market rent for qualifying occupiers and zero rent for charities).

Community, Education and Cultural Floorspace

30. The flexible space would be provided at lower ground, ground and first floor levels of proposed development, primarily within Holland House. This space would include classrooms, flexible immersive room for free use by qualifying users (Holland House Hub), between 8am and 9pm on weekdays and 9am till 5pm on weekends and a 339 sqm GIA auditorium (Creechurch Hall), a multi-functional space for office tenants and the wider community. The later

would be available to qualifying users between 8am and 9pm on weekdays and 9am till 5pm on weekends, with allowance for 12 hours a week and an additional 5 days a year for private and paid use.

31. The proposals also include a 120sqm 'Urban Farm' on the terrace at level 9 of Holland House which will be accessible to those using the Community, Education and Cultural Space, including those using the school classes.

Retail and Café Floorspace

32. The proposed shop, café, restaurant and kiosk uses would be delivered at ground floor level at the west of the site, and will be accessible between 7am and 11pm. In addition, both James' Court and Heneage Arcade are supported by smaller, flexible retail units.

Ancillary space

33. A single servicing area will be provided to serve all three buildings, which will be accessed directly via Heneage Lane.

34. A total of 582 long stay cycle parking spaces will be provided in the basement, lower ground and basement; and 85 short stay cycle parking spaces in the basement and lower ground with concierge service from the ground floor along with associated cyclist facilities, comprising 59 showers and 667 lockers. Cycle parking will be accessed via Creechurch Lane at the northeast corner of the new building. Stairs with wheeling channel are proposed as well as access via lift.

35. An area of approximately 200sqm of workshop and retail space is proposed for a Social Enterprise (City Cycles), which will be a charity aimed for young people living in the local area. The programme will support 8-10 people a year.

Public Realm

36. New and improved public routes and public realm are proposed at ground level. These include the new route through the site, namely Heneage Arcade, extending the existing Heneage Lane, which is proposed to stay in private ownership and management. The Heneage Arcade would be open from 7am until 11pm daily.

37. A new open space, namely James' Court, is proposed to be created at the southern end of the site, off Bury Street, which is also proposed to be privately owned and managed. This would be partially covered under the proposed colonnaded entrance of the tower at 31 Bury Street and it would remain open for public access at all times.

38. Combining both Heneage Arcade and James' Court, the proposed development would deliver 619sqm of new and varied public realm, including the improved areas within the public highway. The City of London's paving pallet will be used for the paving in and around James' Court, including through Heneage Arcade.

39. On the southwest façade of the proposed tower, within St James Court, the proposed development would include an outdoor climbing wall. Public art is also proposed within the public realm.

40. A public toilet accessed via Heneage Arcade is proposed as well as a drinking fountain. This is proposed to be available between 7am and 11 pm.

41. Outside open space would be provided on 6th to 9th floors of Holland House and floors 22, 36 and 41 of the tower at 31 Bury Street. The development would achieve an Urban Greening Factor score of 0.318 (rounded down to 0.31).

Bury House – Design and Massing

42. The design of the proposed tower has a more solid punched façade to respond to and interrelate with the design of Holland House and achieve better sustainability credentials. The façade has strong vertical hierarchy with recessive spandrels which frame single storey windows. The lower section of the building has been designed with a triple order base and double order attic storey before it transitions to the slender upper sections. The taller stepped massing of the upper levels has been designed with a strong horizontal emphasis with an attic storey replicating that of the lower section. The top storeys are designed with increasing façade proportions, with the upper part being three times taller than the lower elements. The entrances are articulated by contrasting material and the principle north and south arcade entrances given priority with a double width opening. The building would be finished in elegant, pale blue faience.

Holland Houe – Design and Massing

43. The proposed development at Holland House would see the existing 1960s and 1980s extensions being removed. The proposed additional massing would be stepped, setting backwards on the top floors, and designed to be symmetrical with principal elevation to Bury Street and largely invisible in the important original views of the building obliquely along that street. The rhythm and verticality of the Holland House facade has been continued in the proposal. Reinstatement works to the façade of the building area are also proposed.

Renown House

44. The existing juxtaposition of Renown House with Holland House is proposed to be retained. The proposals seek to raise Renown House by a single storey by raising the mansard line with a new upper masonry storey at 4th floor level. The floor plates to Renown House have been designed to re-align and interconnect with Holland House and proposed tower at 31 Bury Street. At ground floor level the existing stepped raised ground floor is lowered to provide step free access to Renown and Holland House.

Design amendments to Bury House from the previously refused scheme

45. Consideration has been given to the reasons for refusal of the previously submitted application at 31 Bury Street (Ref. no.: 20/00848/FULEIA). Apart from the inclusion of two more buildings to the application site (Holland House and Renown House), the main amendments to the proposed tower at 31 Bury Street are as follows:
    - The height of the building has been reduced by 19 metres. By this reduction in height at midpoint (level 22) the tower which is proposed to be set back provides a shoulder line creating a proportionate (50/50) balance to the massing of the tower.
    - A further set back has been introduced on the top eight floors, at level thirty-seven to reduce the massing towards the termination point of the building.

24/00011/LBC

46. The application for the Listed Building Consent relates to the restoration works to Holland House including removal and reinstatement of external faience together with the removal and replacement of existing concrete beam;

partial demolition to facilitate interconnection with the neighbouring proposed new building and the construction of a four storey roof extension resulting in ground plus 8 storeys; together with internal alterations including truncation of the existing lightwell, reconfiguration of partitions, installation of a new staircase, servicing and all other ancillary and associated works.

Consultations

Statement of Community Involvement

47. The applicant has submitted a Statement of Community Involvement prepared by Kanda Consulting. Engagement on the proposals was primarily conducted in two phases within a 13-month period between November 2022 and December 2023. Alongside ongoing consultation with the City of London Corporation, Historic England and the Greater London Authority the applicant engaged with (across London and Southeast):
    - 44 Education providers
    - 15 Sporting organisations
    - 44 Charities, social enterprises and community interest companies
    - 26 Arts and cultural organisations and
    - 21 Multi-faith groups
    - 10 Livery companies
    - 14 other organisations

48. 84 meetings were carried out with key stakeholders including:
    - Ward Members
    - Local tenants
    - Resident associations
    - Representatives of surrounding businesses
    - Faith-based organisations
    - Sports England

49. Extensive discussions have also taken place with representatives of the neighbouring Bevis Marks Synagogue over the last five years. At least 13 meetings and discussions have taken place with the representatives of the Synagogue over the two years since the previously refused application.

50. The submitted Statement of Community Involvement advises that during the 6-week period from 23rd October - 3rd December 2023, 22 meetings, trainings and events were hosted at Holland House. 369 people visited Holland House. It is also stated that through the 78 test case and workshop

sessions, it has been identified that there is significant demand for more accessible, affordable and flexible spaces which are accessible to communities and groups both within the CoL and across the Capital.

46. The first phase of wider consultation was held in March 2023 and involved discussions with local stakeholders and immediate neighbours. The second phase of wider consultation took place in June 2023 and provided an opportunity to comment on the detailed proposals for the future of the site. The wider engagement process included the following:
    - Emails sent to local stakeholders inviting them to meet to discuss the emerging ideas and proposals for the site
    - A virtual exhibition of the emerging ideas and the detailed proposals on the applicant's consultation website
    - Two designed two-page flyers, each time distributed to 3,030 properties
    - Four drop-in sessions with an exhibition of the emerging ideas on the 1st and 2nd March 2023 and detailed proposals shared on the 12th and 13th June 2023
    - A total of 32 people attended the exhibitions across the 4 days
    - 5 written responses to two surveys
    - Two social media campaigns, targeted at the local area, which secured a reach of:
        - March 2023: 11,467 individuals, 82,497 impressions and 491clicks
        - June 2023: 4,301 individuals, 51,002 impressions and 236 Clicks
    - A telephone number and email address were available and managed by Kanda consultants.

47. Feedback from key stakeholders mainly focused on the following:
    - Tower element, particularly regarding its reduced scale and massing since the previously refused application.
    - The applicant was encouraged to ensure that the public benefits reflect the needs of the users and the wider area.
    - Suggestion have been made to introduce further cultural, arts and sports groups.
    - Interest was expressed regarding the public realm and questions raised regarding the activation of the ground floor.
    - representatives of the Bevis Marks Synagogue have continued to express opposition, with concerns primarily about the tower element of the scheme.

48. Feedback from other organisations focused on the following:
    - Education:
        - Expressed the need to have a place to visit in the CoL to get young people understand of the possibilities in working in the future.

    - Expressed the need for activities that do not incur a cost.
    - Holland House is easily accessible for schools to visit by public transport.
    - Spaces in Holland House should be designed to support the development of a wide range of skills.
    - Highlighted the need for provision of calm areas; good technology; availability of resources; access to outside space; and flexible areas where they can share and work collaboratively.
    - For the future development, pupils prioritise celebrating the history of Holland House and the CoL.
    - Need for accessible spaces.
    - Provision of outdoor space.
    - Provision of immersive space that enhances curriculum learning, and by providing additional specialist resources and flexible learning space.
    - Delivery of a variety of community building events, celebrating cultural diversity and bringing different groups together to better understand each other and forge relationships.
    - Demand for accessible and affordable spaces within the CoL.
- Sports:
    - Meetings with representatives of Sports England, Netball England, Badminton England, Table Tennis England and GG3x3 (3-a side basketball), have reinforced the need for more casual sports facilities throughout the week.
    - Highlighted the lack of climbing facilities in the City.
- Charities/community interest companies and social enterprises:
    - Affordable meeting space in London has been a constant challenge.
    - It was highlighted that Holland House is ideally situated to address this need with a central location, easy transport links, professional meeting rooms and lobby areas, and additional support facilities.
- Arts and culture:
    - The need for benevolent spaces, such as Holland House, to support the voluntary sector.
- Multi-faith groups:
    - St Helen’s Bishopsgate Church has raised the need for affordable spaces to carry out events and classes.
    - The significant shortage of spaces for faith-based groups to use for prayer within the City of London has been raised.
- Livery Companies:
    - Some Livery companies have raised interest in using Holland House to host events.

- The need for more free or affordable, flexible spaces within the CoL has been expressed.

49. 11 people attended the public exhibition events during the first round of consultation and a further 21 people attended the public exhibition events during the second round of consultation. Feedback from wider public consultation:
    - Community groups, organisations and schools to be given priority for the space at Holland House.
    - The need for more clarification around the operation and funding of the space in the future was raised.
    - The need to improve the buildings' energy performance ratings was identified.
    - Supportive of the introduction of the new green spaces and improvements to air quality and biodiversity.
    - Supportive of the overall space of the tower element of the scheme. the reduction in heigh of seven storeys was recognised.
    - Some consultees raised ongoing concern regarding the potential detrimental impacts to the setting and operation of the Bevis Marks Synagogue.
    - The public realm improvements and activation of ground floor were welcomed by the public.

50. Since the submission of the application, a Statement of Community Involvement Addendum has been submitted, dated September 2024, capturing the ongoing 'Strategic Outreach Programme' from January 2024 to September 2024. Since submitting the planning application, the Applicant has continued to promote Holland House as a space for any interested groups and individuals to use, free of charge. The Applicant has also contacted all 125 Members of the City Corporation and continued updating the Aldgate and Portsoken ward councillors. The Applicant has continued to research and reach out to other potentially interested charities, education providers, arts, culture and faith-based organisations.
51. The abovementioned engagement has had the following outcomes:
    - 6,027 people have visited and / or used Holland House at the time of the submission of the Addendum.
    - The Museum of Diversity has established a semi-permanent office headquarters at Holland House. The museum has used the site for over 133 days.
    - Use of Holland House for Friday prayer sessions for Muslim men and women working in the City of London. It is stated that at the time of the submission of the Addendum 37 prayer sessions had been, each accommodating up to 149 people, with over 1,710 people attending.

- St Helen's Bishopsgate have been using Holland House for Sunday sessions, bringing 490 members of their congregation to Holland House.
- ClusterFlux has established regular weekly meetings of artists and creatives at Holland House with 37 meetings at the time of the submission of the Addendum.
- 86 separate ad-hoc bookings within 2024.
- On the 10th September an event was hosted at Holland House, which brought together 45 representatives of 22 organisations who have used Holland House and expressed interest in being part of the Holland House Hub community in future.

52. The key themes of feedback received through the outreach programme included the following:
    - The cost of hiring spaces within the City is prohibitive.
    - Bury Street is well-located, within walking distance from public transport.
    - More space is needed for the considerable number of multi-faith groups in the City of London.
    - Bury Street can bring people together to foster connections and ideas, collaboration and sense of community.
    - The wide range of flexible spaces was welcomed.
    - There is a lack of space to rehearse in the City and performing in those areas is often out of reach to arts and culture organisations.
    - Need for youth friendly spaces in the City.
    - Holland House offers opportunities to create new attractions, meeting the City of London's Destination City ambitions.
    - There is a lack of spaces to play and promote sports within the City.

Statutory Consultation

53. Following receipt of the application by the Local Planning Authority in March 2024, it has been advertised on site and in the press and has been consulted upon twice as follows:
    - On validation of the application in March 2024 for a period of 30 days.
    - Under Regulation 25 of the Town and Country Planning (Environmental Impact Assessment) Regulations 2017 following the receipt of further information, a 30 day consultation period has to be carried out. The application was re-consulted twice for 30 day, of which the second one ended on the 30th November 2024. These consultations covered the request for additional information primarily in conjunction with information

relating to a Lunar Transit Study and other Applicant's responses to the concerns raised by the objectors.

54. Copies of all received letters and emails making representations are attached in full and appended to this report. A summary of the representations received, and the consultation responses is set out in the table below.

55. The applicant has provided detailed responses to matters raised in consultee and third-party responses. The applicant's responses are attached in full and appended to this report.

Consultation responses	
Greater London Authority (Stage 1 letter dated 10 October 2024)	Stage 1 Letter Strategic issues summary Land use principles: The proposed uplift in office floorspace in the CAZ is supported in land use terms. The proposed element of affordable workspace and community floorspace require suitable obligations, as well as some clarifications and improvements. **Officer response: These points are addressed in the Proposed Uses sections of the report. With regard to the affordable workspace and community floorspace of the development, following negotiations with the Applicant has confirmed that they will be provided for the lifetime of the development.** Urban Design: The proposal is generally well designed as an office-led CAZ mixed use building, however, the final assessment under London Plan Policy D9 will be finalised at Stage 2. However, the applicant should improve the proposed public realm offer to better integrate it into the street context in order to increase this public benefit. The proposed fire statement and public toilets details should be revised and secured. **Officer response: These points are addressed in the Architecture, Urban Design and Public Realm,**

	Public Access and Inclusivity and Fire Statement sections of the report. Heritage: The development would compromise the ability to appreciate the Outstanding Universal Value and setting of the Tower of London World Heritage Site and would cause less than substantial harm to designated heritage assets. Nonetheless, further information is still needed to confirm impacts in full. The final NPPF paragraph 208 balance will be carried out at the Mayor's decision-making stage. **Officer response: These points are addressed in the Heritage and Assessment of Public Benefits and paragraph 208 NPPF balancing exercise sections of the report.** Transport: The applicant should provide a Stage 1 Road Safety audit and identify a suitable location for additional cycle hire services, for which a financial contribution should also be secured. Obligations are also sought for healthy streets improvements, a TfL safety improvement proposal and the submission of a revised Travel Plan. Conditions are also required. **Officer response: These points are addressed in the Highways and Transportation section of the report.** Equality: A degree of positive and negative equality impacts is expected to be caused by the proposals and these will be given further consideration at the Mayor's decision-making stage. **Officer response: These points are addressed in the Public Sector Equality Duty (section 149 of the Equality Act 2010) section of the report.**

	Other issues on **environmental matters** also require resolution prior to the Mayor's decision making stage. Recommendation That the City of London Corporation be advised that the application does not yet comply with the London Plan for the reasons set out in paragraph 99. Possible remedies set out in this report could address these deficiencies.
Transport for London (letter dated 14 May 2024)	Access and parking Pedestrian Access It is proposed that the proposed development will enable access through James' Court (to the south) and also through Heneage Place (to the north) as part of new public route through the building (7am – 11pm). Office access 'out of hours' will be via the Creechurch Lane entrance (to the east). Public and retail uses are accessible wrapping around to the west directly to Renown House and Holland House. This will significantly improve permeability of the site and increase the overall space available for pedestrian movement between Heneage Place and Bury Street and along Creechurch Lane; which is welcomed in line with London Plan policy T2 Heathy Street. A Pedestrian Comfort Level analysis has been undertaken for 13 sections of local streets in the vicinity of the site. It is considered that the streets to be used as the main route for access would be able to accommodate the additional footfall and without adverse impacting the PCLS with B+ rating maintained, while the narrower minor routes would not see any notable increase in footway nevertheless. Cycle and vehicle Access Cycle parking access will be via Creechurch Lane at the north-east corner of the building. The entrance provided is dedicated for cyclists which

	is separated from the pedestrian entrance. The entrance is equipped with a sliding door and stairs with a wheeling channel to access basement B1 and B1 Mezzanine. An alternative cycle access is provided via a lift to the basement within the north core for those not wanting to use the staircases. In addition, A secondary access for cycle parking is provided via the eastern Holland House entrance, off James' Court, via lift or stair, this welcomed. Vehicle Access TfL welcomes that an off-street servicing area at the north west corner of the site is provided to serve Bury House, Holland House and Renown House, in line with London Plan Policy T7 Delivery & Servicing, and is accessed directly via Heneage Lane. Having said that, Stage 1 Road Safety audit is required to support its acceptability in highway safety terms. Cycle Parking A total of 667 cycle parking spaces will be provided, of which 585 spaces will be for long stay spaces, and 85 short stay spaces. It is also proposed that 5% (29 spaces) will be provided the form of adaptable spaces to accommodate users of larger / unconventional cycles and those with mobility impairments. The remaining spaces will be in the form of Sheffield Stands (87spaces), and Fold bike lockers (58) and 1 High Density solution type space. Alongside with long stay cycle space, the short stay spaces will be provided within the basement level 1 (B1) and B1 mezzanine level accessed via the Creechurch Lane cycle entrances. All cycle parking shall be designed in line with the London Cycle Design Standards. Shower and changing facilities should also be provided for the office element in line with London Plan policy T5

	Cycling and London Plan cycle parking standards. Car Parking TfL welcomes that no on-site car parking has been proposed as the proposal will be 'car free'. As per current, on-street blue badge parking spaces are available on Creechurch Lane and Mitre Street. Healthy Street & Vision Zero An Active Travel Zone assessment (ATZ) has been undertaken and seven routes has been reviewed. The study has identified improvement opportunities on some routes, which include ensuring footways are well maintained, providing additional seating and minor crossing improvements etc. Since part of the land use of the proposed development would be for flexible community/education/ cultural/amenity use; therefore TfL considers that an Nighttime ATZ shall also be carried out to assess routes for darker hours, ensuring safety and security for vulnerable users. TfL is developing safety improvement proposal for the A10 Bishopsgate, the estimate cost of the project is currently £1.5m, therefore a partial contribution of £350K is sought from this proposal toward the project, the amount of contributions is based on common approach adopted for proposed developments in the area. The City Corporation is encouraged to secure necessary improvements for work on its highway network accordingly. Trip generation The submitted TA expected that the proposal would generate a total of 966 two-way trips are forecasted in the AM Peak (08:00-09:00) and 955

	two-way trips in the PM Peak (17:00-18:00), with a net increase of approx. 690 two-way persons trips during the peaks compare with the existing offices. This assessment is considered robust and is therefore accepted. A lower level of trips is also expected for the proposed retail use, which is not considered significant. Mode share It is also predicted that vast majority of the trips to/ from the proposal will be by sustainable transport modes. Of those, nearly 10% of trips will be by bike or on foot, and 7% will be by bus, 38% by tube and 47% by rail (including Elizabeth Line); and the level of car and taxi trips are negligible. Public Transport service The site is already with a very high level of public transport services; it is therefore considered that the proposal would not give rise to significant adverse impact to existing London Underground and local bus services in City area. London Cycle Hire It is estimated that the proposal would generate an additional 309 two-ways cycle trips over the current proposal, which means additional demand for cycle hire services. A financial contribution of £100K and land to construct additional docking station on footprint or as close to it as possible is therefore sought. The applicant is urged to identify a mutually agreeable location that would be accepted by the City Corporation and TfL Delivery & Servicing It is welcomed that at at-grade off-street on-site service yard will be provided for servicing, access from Heneage Place. A draft Delivery and Servicing Plan (DSP) has been submitted, which outlines the servicing arrangement for the proposal, includes consolidation and restricting

	servicing vehicle size of goods vehicle of up to 7.5T with 8m maximum length, this is due to the restricted width of Heneage Lane and the vehicle weight limit. However, the DSP shall also promote the use of cycle servicing to reduce goods vehicle traffic in the City and be more sustainable; as well as enabling night-time servicing to reduce traffic impact during normal business hours. The DSP should therefore be revised the comments above, and the final detailed DSP should be secured by pre-occupation condition. Construction Logistics A Detailed Construction Logistics Plan (DSP), produced fully in according with TfL's CLP guidance, should be secured by pre-commencement condition. Travel Planning A Framework Travel Plan have been submitted which is welcomed. It is considered that the 5 years mode shift targets to walking and cycling should be more ambitious to achieve the Mayors' long terms aspiration for 80% sustainable travel by 2041. The Travel Plan should therefore be revised to reflect the comments above, and the finalised Plan should be secured by s106 planning obligation. Community Infrastructure Levy The MCIL2 rate for City of London is £80 per square metre. Summary The following matters should be resolved before the application can be considered in line with the transport policies of London Plan;

	1. Secure the delivery of all highways, walking/ cycling and public realm improvement work by legal agreement' 2. Undertake Stage 1 Road Safety Audit for the proposed servicing access 3. Secure appropriate contribution toward local walking/ cycling/ Healthy Street improvements in line with ATZ findings and carried out Night-time ATZ. 4. Secure a partial financial contribution of £100K for TfL toward proposed A10 Bishopsgate improvement. 5. Secure the submission and approval of cycle parking details by condition. 6. Secure £100K (index linked) financial contribution toward enhancing local cycle hire services. 7. Revise the DSP in light of comments, and secure approval of both DSP and CLP by conditions. 8. Revise the Travel Plan, and ensure that the Plan would contribute positively toward the Mayor's sustainable travel goal and secure them by s106 agreement; and 9. Secure appropriate Mayor CIL payment from the proposal toward Crossrail. **Officer Response: These matters are addressed in the Highways and Transportation and the Planning Obligations and Community Infrastructure Levy sections of this report. Officers, the applicant and TfL have been in discussions in respect of the matters raised.**
Historic England (letter dated 15 May 2024. An email has also been received, dated 8 October 2024, by Historic England following re-consultation advising to refer to	Summary**:** In 2021 your authority considered a similar scheme for the replacement of Bury House with a 48-storey tower. That application was refused, which we welcomed. This was because the proposals would have harmed the Outstanding Universal Value of the Tower of London World Heritage Site. The application was also refused because the proposed tall

their original objection letter dated 15 May 2024. Another letter, dated 18 November, was received.)	building would have harmed the Bevis Marks Synagogue due to its overbearing and overshadowing impact on the synagogue and its courtyard. The current proposal, an amended scheme on a larger site, would not overcome either of the previous reasons for refusal in our view. Indeed, further harm caused by the proposed alterations to Holland House and the development's impact on the Creechurch Conservation Area mean that this scheme is worse than that refused from a heritage perspective. Historic England objects strongly to the applications and recommends they should be withdrawn or refused. Historic England Advice Significance of the heritage assets a) Tower of London World Heritage Site The Tower's attributes, as defined in the adopted WHS Management Plan (2016) convey its Outstanding Universal Value as an iconic landmark and symbol of London which sits at the heart of our national and cultural identity. They reflect the Tower's role as the setting of many significant episodes of European history and as one of the best surviving examples of a medieval fortress palace in the world. The Tower of London is a monument of exceptional historic and architectural importance as reflected in its multi-designation as a World Heritage Site, scheduled monument, collection of listed buildings, and conservation area. The World Heritage Site (WHS) is located approximately 550m south-east of the development site. The Tower is vulnerable to development in its setting, particularly the expansion of the City's cluster of tall buildings. The physical relationship of the Tower with the City as viewed from the river is central to understanding its Outstanding Universal Value

	(OUV). The Statement of OUV adopted by the World Heritage Committee, in the section relating to integrity, notes that such development 'could limit the ability to perceive the Tower as being slightly apart from the City or have an adverse impact on its skyline as viewed from the river.' The view from the north bastion of Tower Bridge towards the Tower of London, View 10A.1 in the London View Management Framework (LVMF), is historically important as a long-established picture post card view. It forms part of a kinetic experience of the Tower and wider London skyline along the bridge. Views of the Tower from this location showcase the Tower's attributes as an internationally famous monument, a symbol of Norman power, its landmark siting and its physical dominance. These attributes were considered in detail during the Tulip public inquiry. The Inspector found that they 'rely to a great extent on its setting' (IR 14.25) and, of the latter three attributes, 'the sky space component…is central to its OUV' (IR 14.29). The eastern edge of the Cluster, between the Gherkin and the Tower of London, is presently defined by the Salesforce/Heron Tower at 110 Bishopsgate and Heron Plaza at 80 Houndsditch. These step away from the Tower and up in stages to the taller Gherkin, somewhat mitigating their impact on the Tower of London. b) Bevis Marks Synagogue (Grade I listed) Bevis Marks Synagogue is the oldest surviving synagogue in the United Kingdom. It was built between 1699-1701 for a growing Sephardi community in the City of London, following the Resettlement of the Jews in England in the 1650s. The synagogue has been described as the 'Cathedral' Synagogue to Anglo Jewry, such is its stature and symbolic importance. The synagogue is a key part of the history of British Judaism and is of international

		importance, particularly given its roots in the Sephardi diaspora created by the expulsion of Jews from the Iberian Peninsula in 1492. The synagogue continues the traditions of those communities who travelled to the Low Countries and is now one of the oldest continually functioning synagogues in Europe. The synagogue is remarkably little altered. Its architectural and historic significance, including its communal value is clearly exceptional and it is Grade I listed for that reason. Its setting, whilst somewhat compromised by the evolving City around it, continues to make an important contribution to its architectural and historic significance and the ability to appreciate that significance. The premier example of early synagogue architecture in England, Bevis Marks Synagogue was built by the master craftsman Joseph Avis who worked closely with both Sir Christopher Wren and Robert Hooke elsewhere in the City. It is a simple, well proportioned classical building executed in brick and shares much in common with the style preferred for public buildings and churches, designed by the likes of Wren, at the time. Perhaps the most striking way that the synagogue is externally distinguishable from these places of worship is by its discrete siting away from the street in a small courtyard. Its hidden away location suggests a degree of caution, or limitation, for a place of worship (particularly when compared to the near contemporary Sephardi synagogue in Amsterdam). Nevertheless, the high-quality architecture was a demonstration of their faith and an investment which suggests the congregation were confident that they would remain welcome in London. In this way architecture was used by the Sephardi community to establish a positive identity, and permanence, within society.

	Historically, the synagogue formed part of a wider estate with lower rise community buildings encircling it. Despite modern development largely replacing the former one and two storey ranges, the form of the courtyard remains, and the enclosure continues to provide separation from the outside world. The synagogue is the pre-eminent feature of the space, reflecting its function and status. It is currently seen with a largely clear sky backdrop which enhances its presence. The adopted Conservation Management Plan (CMP 2019) for the synagogue notes that the courtyard represents an arresting point of departure from the modern world into what is palpably a historic place. It states that 'views across and out of the courtyard, as well as visibility of the sky are important contributors to the setting of the synagogue, as well as the courtyard's amenity value.' We note that the synagogue has liturgical practices which include interactions with the sky and celestial bodies. The CMP further explains the communal significance of the courtyard as a place where people gather before and after services and other events, including weddings. It therefore has a key role in supporting the customs and traditions of the synagogue. Modern development, including tall buildings, is increasingly visible in the wider setting of the synagogue. Where tall buildings encroach into the skyspace around the courtyard and have windows facing into it, they reduce its special sense of privacy and openness to the sky. This makes elements of the setting particularly sensitive to further erosion or loss. The synagogue nevertheless continues to benefit from a large amount of clear sky making a strong positive contribution to the buildings setting and significance, and the ability to appreciate these. c) The site - Holland House (Grade II* listed), Renown House and Bury House

	Holland House was designed as the London headquarters of W.M. Müller & Co by the preeminent Dutch architect H.P. Berlage, from 1913-16. It is a highly original office design and the only example of his work in the country. This building is now prominently sited, following the construction of the Gherkin and the creation of the public space around it which has enhanced the ability to appreciate its significance. It is an important building particularly because of its pioneering approach to rational façade design. The primary elevation has a regular grid without any apparent hierarchy - radical for its time. The realised design was unprecedented in London, reflecting Berlage's interest in contemporary American architecture and his own progressive ideas. The building is of more than special interest which is reflected by its Grade II* designation. Holland House wraps around the slightly earlier 33-34 Bury St (Renown House) to the south, a good quality but unlisted commercial building of 1912 (designed by the architect Delissa Joseph). It contributes positively to the setting of Holland House. Despite being separated by only a few years, the traditional architectural language of Renown House, including the hierarchical arrangement of its floor levels as expressed in its composition, contrasts unmistakably with the radical approach to façade design pursued at Holland House. This juxtaposition enhances the appreciation of the latter's significance. 31 Bury Street (Bury House) is a late 60's office building. While its design is of no particular merit, it is sympathetic in scale to its historic neighbours. Bury House is physically connected to Holland House, which also has alterations and extensions contemporary with the former that detract from the listed building's significance.

	d) Creechurch Conservation Area Recently designated for its special architectural and historic interest, the Creechurch Conservation Area's character is embodied in three exceptional Grade I listed places of worship: Bevis Marks Synagogue, the churches of St Katherine Cree and St Botolph-without Aldgate. Alongside these are high quality commercial buildings and warehouses from the late-nineteenth and early-twentieth centuries. Subsequent modern development is generally sympathetic to the historic scale, resulting in a clearly defined character worthy of preservation. The tall building at 1 Creechurch Place is an outlier which detracts considerably from the area's qualities. Holland House, Renown House and Bevis Marks Synagogue make a strong positive contribution to the conservation area's special architectural and historic interest. Although Bury House may not make a distinct positive contribution, its perceived scale is sympathetic to its neighbours and the area more broadly. The loss of James Court and the southern part of Heneage Lane caused by its construction has interrupted the historic urban grain to a small extent. Impact of the proposals The proposals are for the replacement of Bury House with a new 44 storey building (178.7m AOD) and the alteration and extension of Holland House and Renown House. a) Tower of London World Heritage Site The current proposals show a modest reduction in height and a chamfering of the massing at the uppermost part of the building, compared to the refused scheme. The proposed tower would, though, be slightly wider than the previous scheme in its middle section. We conclude the proposals would cause a similar

		level of harm to OUV as the previously refused scheme. While the reduction of clear sky around the White Tower due to 80 Houndsditch has harmed OUV, we recognise that the height of this building was specifically designed to finish below the capping of the White Tower's turrets as viewed in LVMF 10A.1. As such 80 Houndsditch demonstrates some deference to the silhouette of the Tower because of its lower height. Compared to the existing backdrop to the Tower in View 10A.1, as defined by 80 Houndsditch, these proposals would fill more sky space, rise higher than the corner turret of the White Tower and appear in closer proximity to it. The proposed tall building would also standout from the Cluster due to the proposed cladding material. The additional height that would be introduced at its eastern edge, would result in a striking upward step in scale directly beside the White Tower, creating much more of a cliff edge than the current situation. It would therefore present a greater distraction and harm the Tower's attributes of OUV as a symbol of Norman power, its landmark siting and its physical dominance, and so harming the integrity of the WHS. The proposals would make the Cluster increasingly overbearing overall, adding to the existing cumulative harm to the attributes conveying the WHS's OUV referred to above. The experience from Tower Bridge is kinetic and the composition of the view changes considerably within a very short distance when moving north from viewpoint 10A.1. This is explained in the Tower's Local Setting Study and was highlighted in the Tulip decision (IR 14.28). Here the Inspector noted that the Gherkin already impinges on the sky space around the Tower of London because it rises higher than the overall height of the closest

	turret of the White Tower when it moves through the sky space behind it. The proposals would introduce a comparable scale and mass to the Gherkin, evident notably closer to the Tower, leaving less of the kinetic experience unimpacted. Consequently, the Tower would appear less apart from the City and its silhouette would be further compromised when compared to the existing situation, adding to the harm to the attributes of OUV we have identified above. The proposed development would also be visible within the Tower of London Inner Ward. At different points it would appear above the roofline of the Chapel Royal of St. Peter ad Vincula and 2 Tower Green (both Grade I listed), adding further to the visual intrusions of various tall buildings in the City. Consequently, it would further diminish the self-contained ensemble of historic buildings and spaces, distracting from the Tower's remarkable sense of place. b) Bevis Marks Synagogue The proposed development would harm the significance of the synagogue, intruding directly behind it when viewed from its courtyard. The new tower would appear closer to the synagogue than any other existing tall building development, greatly reducing the clear sky backdrop, resulting in a worse scenario than the previously refused application proposals. The ability to appreciate the architectural interest of the synagogue would consequently be diminished. Its precedence would be all but lost with a roofline that would become framed against distracting modern development of a very large scale. The new tall building would become a dominant feature of the courtyard at the expense of the synagogue, diminishing the latter's role as the focal point of the space. The special historic character of the place and the deliberate sense of separation from the outside world would be further diminished. The

	ability to see clear sky from the courtyard would also be lost, breaking the visual link between the space and celestial bodies. Such harm needs to be considered in a cumulative context, with existing and consented tall buildings already having a damaging impact. These proposals would cause a greater degree of harm than those schemes, because of the location of the development site relative to the synagogue, evident immediately upon entering the courtyard. c) Holland House and Renown House Holland and Renown House would be altered in order to combine them with the proposed tall building on the site of Bury House. We note as heritage benefits the conservation works and proposed increased access, which would improve the ability to appreciate the significance of Holland House. However, the alterations would include the demolition of party walls in order to provide better connectivity and to enable a shared core. The light well in Holland House would be extended and subdivided. These alterations would result in harm to Holland House by compromising the legibility of its historic design. Both Holland House and Renown House would be extended upwards which would result in a greater level of harm to the listed building and to the conservation area. In the case of Holland House, the addition of attic levels which do not reflect the order or proportions of the original design intent would be particularly harmful to the appreciation of its significance by appearing overbearing. The scale of the proposed roof level and dormer windows to Renown House do not reflect the hierarchy of the building. As such, the extension would compromise its positive contribution to Holland House and the conservation area through increases to its height.

		The proposed tall building would appear to tower over Holland House distracting from an appreciation of its high architectural interest, causing further harm. c) Creechurch Conservation Area The proposals would similarly harm the conservation area by reducing the positive contribution made to it by these buildings. The scale of the proposed tall building would detract from a relatively consistent historic scale and become the dominant form. We note proposals offer modest enhancement to the character and appearance of the area by reinstating the southern part of Heneage Lane as a route through, which would be a small heritage benefit. Relevant Policy The letter sets out relevant policy. **Officer comment: The relevant policies are set out in the policy section of this report.** Historic England's position Historic England objects strongly to the current proposals. We consider they would harm designated heritage assets of the highest possible significance, contrary to planning legislation, policy and guidance. We do not support the development of a building of scale proposed in this location due to the inevitable harmful impact it would have on the historic environment. The reasons for refusal for the previous application remain entirely applicable to these proposals. That application was refused because the proposals were considered to harm the contribution to the OUV of the Tower of London World Heritage Site made by its setting, in particular in views that best allow that OUV to be appreciated. A second reason for refusal was the overbearing and overshadowing impact on the synagogue and its courtyard. a) The Tower of London World Heritage Site

		The previously refused application was subject to a Technical Review by ICOMOS, one of the Advisory Bodies to UNESCO's World Heritage Committee, in July 2022. Given the similarities between the current scheme and the refused one, we consider that ICOMOS' previous advice remains relevant to the current application and should similarly be taken into consideration. ICOMOS considered that the proposals would harm the integrity of the WHS as well as the significance it derives from attributes conveying its OUV. This harm remains in the current planning application. In the case of the World Heritage Site, a small reduction in height of the proposed tall building (without an apparent loss of deliverable office floor space) causes a similar impact. The same attributes of OUV (as a symbol of Norman power, its landmark siting and its physical dominance) and so the integrity of the WHS, would be harmed. The submitted Heritage Impact Assessment for the Tower does not consider the potential for negative impacts on OUV and we disagree strongly with its conclusion of a minor and beneficial impact in LVMF View 10A.1. It does not adequately consider the impact on the important kinetic experience of the viewpoint either. In their technical review, on this point ICOMOS stated that 'the work to maintain a separateness from the Tower is completely unsuccessful'. The same is true of these proposals. The City's adopted policies CS7, CS12, CS13 and CS14 require tall building proposals to avoid harm to the City's historic environment and its skyline, including the OUV of the Tower. Similarly, the London Plan provides for a robust protection of OUV in policies HC1, HC2, HC3 (and associated LVMF guidance) and D9. The proposals do not meet the requirements of these policies and are in clear conflict with them.

		We consider that, despite the changes to the scheme, a high level of harm would be caused to the same attributes of the WHS' OUV. For the purposes of the NPPF, we find that the harm would be in the middle of the less than substantial range to the World Heritage Site. Given the especially great weight which needs to be given to the conservation of World Heritage Sites, which are internationally recognised for their OUV as an irreplaceable resource, this weighs very heavily against the proposals. Notwithstanding our view that the advice received from ICOMOS on the previous scheme for this site remains relevant, the Department for Culture, Media & Sport (DCMS), representing the UK State Party to the World Heritage Convention, has decided to notify the current case to UNESCO. We consider that any decision on this application would benefit from knowing the position of the World Heritage Centre and/or further advice of ICOMOS. We note that we have received request from the World Heritage Centre to produce a State of Conservation Report for the Tower of London this year, indicating that UNESCO has serious concerns about the impacts of development on the setting of this WHS and its OUV. b) Bevis Marks Synagogue Our understanding of the significance of the synagogue has developed since the previous application. Clear harm would be caused to multiple aspects of the synagogue's significance by blocking the open sky in its backdrop - noting in particular the considerations set out in GPA3 and the assessment of significance in the adopted CMP. We defer to the expertise of the Sephardi community on the aspects of significance that are associated with their religious customs and traditions that may be impacted by the current proposals.

		We think that the harm arising from the proposals would be greater than we previously identified. The harm would fall in the middle of the less than substantial range, which represents a considerable impact to a building and setting of exceptional significance and rarity, which are sensitive to change. The submitted Heritage and Townscape Visual Impact Assessment presents a limited understanding of the significance of the synagogue, and the contribution made by setting to that significance. It does not explain why a different understanding to the adopted CMP has been reached with regard to the value of the sky. We consider that the application fails to meet the requirements of Paragraph 200 of the NPPF, as the level of detail is not sufficient. c) Holland House, Renown House and Creechurch Conservation Area. New additional harmful impacts to the historic environment arise through the present applications in the case of Holland House and the newly designated Creechurch Conservation Area, as described above. The proposed roof extensions have not been resolved in a way which avoids or minimises harm in accordance with the requirements of the NPPF. Given its importance as a pioneering building, we think that such harm is difficult to justify. The introduction of a tall building within the conservation area would harm its character and is at odds with the provisions of Local Plan Policy CS12 and CS14. The latter indicates that permission will be refused for tall buildings in inappropriate locations, including conservation areas. d) Design and heritage benefits We are not convinced that sufficient steps have been taken to minimise or avoid conflicts between the conservation of all of the designated heritage assets referred to above, as required by the NPPF.

		As context (including the historic environment, as set out in the NDG) is a fundamental aspect of good design, we find that the design quality is poor in this respect. Similarly, the proposals do not appear to comply with the design-led approach required by London Plan Policy D3, as the site's capacity has not been optimised with regard to the site's context and capacity for growth, including the setting of such exceptional heritage assets, which are an important consideration. The heritage benefits arising from the scheme are limited and could be achieved in less harmful ways. We afford them little weight and consider them incapable of outweighing the identified harm. Recommendation: Historic England strongly objects to these applications. We recommend that they are refused or withdrawn. **In their letter, dated 18 November 2024, Historic England state the following:** We have set our position on these applications in detail in our letter of 15 May 2024 and continue to refer you to this advice. The recent amendments concern aspects of the detailed design which do not materially change the impacts on significance. The heritage commentaries submitted by the applicant in response to our advice do not provide any new information which changes our position. We wish to draw the City Corporation's attention to the following points in light of further correspondence and information which has been submitted. In our previous response we advised that given the similarities between the refused application and the current proposals, ICOMOS's previous advice remains relevant to the current application. As indicated in our email to the

	case officer on 24 July 2024, UNESCO's World Heritage Centre has welcomed Historic England's advice that the comments made by ICOMOS in its 2022 Technical Review of the previous application for this site remain relevant and should be taken into consideration in the local planning authority's determination of the current scheme. Please find this email and ICOMOS's Technical Review appended. We would encourage careful consideration to be given to ICOMOS's advice given the potential implications for the World Heritage Site. We note the submission of the Lunar Transit Study Above The Bevis Marks Synagogue (GIA August 2024). This pertains to the Sephardi community's ability to practice the Kiddush Levana ritual - prayers performed outside at night to bless the new moon. A review of the Transit Study (BRE 04 November 2024) notes a significant reduction of visibility of the moon at relevant times of the lunar cycle as a consequence of the application proposals. In our previous response, we highlighted the importance of the clear sky backdrop in the setting of the Synagogue to its significance, both in terms of its tangible and intangible contributions. As set out in 'The Setting of Heritage Assets' (GPA3) 'the asset's intangible associations with its surroundings, and patterns of use' and 'intentional intervisibility with other historic and natural features' (which we take to include the celestial bodies) are relevant to the consideration of impacts on significance. We defer to the expertise of the Sephardi community on their traditions and the impact of the proposals on their ability to worship, but note the clear link to heritage significance raised by this point. In addition to the harm to the Tower of London and Bevis Mark Synagogue, we have also

	previously set out how the proposals would harm the significance of Holland House and the Creechurch Conservation Area. For the purposes of the NPPF, we find that the harm to the former would be in the middle of the range of 'less than substantial' and in the lower part of that range for the latter. Historic England continues to object strongly to the current proposals. We consider they would harm designated heritage assets of the highest possible significance, including the Tower of London and Bevis Marks Synagogue, contrary to planning legislation, policy and guidance. We do not support the development of a building of the scale proposed in this location due to the inevitable harmful impact it would have on the historic environment. We consider that the reasons for refusal for the previous application remain entirely applicable to these proposals. That application was refused because the proposals were considered to harm the contribution to the OUV of the Tower of London World Heritage Site made by its setting, in particular in views that best allow that OUV to be appreciated. A second reason for refusal was the overbearing and overshadowing impact on the synagogue and its courtyard. The current proposal would result in a worse impact in this case. <u>Recommendation</u> Historic England strongly objects to these applications. We recommend that they are refused or withdrawn. We will update the Department for Culture, Media & Sport (DCMS) in its role representing the UK State Party to the 1972 World Heritage Convention, about the recommendation in your report and the decision of your Planning

	Committee. This is in order that they can update UNESCO World Heritage Centre on this case in accordance with Paragraph 172 of the Operational Guidelines. We have not authorised the granting of listed building consent and will review our position on that matter after your Planning and Transportation Committee has met. **Officer response: The matters in the Historic England objections are addressed in the Tall Building, Architecture, Urban Design and Public Realm, Heritage and Strategic Views and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report.** **Historic England have withheld the listed building consent authorisation letter for this case and have not issued a direction, meaning that whilst the City can resolve to grant the LBC, the City will not be able to issue the LBC unless and until such authorisation is provided. Historic England have confirmed they are withholding the authorisation because they object to both proposals. Historic England will be updated and informed of the decision of the committee.** **Please note that the ICOMOS Technical Review relating to the previous application at 31 Bury Street is included in the background papers.**
Historic Royal Palaces (13 May 2024 and 21 November 2024)	As guardians of the Tower of London WHS we write to object to the revised proposals for this site. It is evident from the submission material that the proposed development would have a significant damaging visual effect on aspects of the 'Outstanding Universal Value' (OUV) of the Tower WHS. On the basis of the information available on the City's website, our comments on

	the proposal are set out below and we would ask that these are considered in the Council's determination of the application. On 19th November 2020 we objected to the previous application for this site (20/00848/FULEIA) for which ICOMOS conducted a Technical Review and for which Planning Permission was refused. In our view, the reduction in the height of the building from 48 storeys to 43 storeys is not sufficient to mitigate the harmful impact on the OUV of the WHS and overcome the previous reason for refusal in this regard. Particularly on the attributes of the Landmark Siting of the Tower of London and on the Physical Dominance of the White Tower. In the London View Management Framework (LVMF) view 10A.1 from the north bastion of Tower Bridge it is imperative that adequate visual separation is maintained between the City Cluster and the White Tower silhouette. The proposal retains just a sliver of sky space to separate it, but of course this view, like any other, is not static: move a few metres north and the proposal would appear to rise directly out of the White Tower. The LVMF guidance for view 10A.1 states that: 'The location enables the fine detail and the layers of history of the Tower of London to be readily understood. This understanding and appreciation is enhanced by the free sky space around the White Tower' Where it has been compromised its visual dominance has been devalued.' Regarding the background to the Tower, the LVMF guidance notes, 'Views from this place include the relationship between the Tower of London and the City in the background. It is important that the background of the landmark in these views is managed sensitively and should

	not compromise a viewer's ability to appreciate the Outstanding Universal Value of the World Heritage Site'. It should be borne in mind that the LVMF was written in 2011-12, when the only existing tall buildings in the emerging Cluster were the Gherkin (30 St Mary Axe), the Willis Towers and Tower 42. The expansion of the Cluster since, in both scale and height, has been beyond anything that was envisaged when the LVMF was published. The new proposal for Bury House, would still inevitably increase the existing compromise of the free space around the White Tower. In Historic Royal Palaces' view, the damaging visual impacts are also evident in the dynamic journey across Tower Bridge and in the local views from within the inner ward of the Tower identified in our Local Setting Study 2010. These impacts would be particularly apparent in the view north-west from the centre of Tower Green over the roof of St Peter ad Vincula (TBHVIA views 22 and 23), increasing the visual intrusion of the modern city skyline into the inner ward. A key impact of the proposed development would be that it would inevitably extend the eastern shoulder of the Cluster toward the Tower, further reducing the crucial separation between the Tower and the burgeoning City. Although there has been a minor decrease in the proposals' height, it still creates an abrupt vertical cliff edge in LVMF 10A.1, rather than a stepping down into the 'foothills' of the Cluster. This is a contradiction in the principles being set out for the Cluster and the proposal is also still high enough to suggest that there should be a further continuation of the downward slope of the Cluster towards the White Tower – which over the years has pushed increasingly up and out in the easterly direction from the consented 100 Leadenhall scheme.

	You will note that in their 2022 Technical Review, ICOMOS restated the position from the 2019 Review that “the cumulative effect of new developments, in relation to the possible negative visual impact on the integrity of the property in question, should not be diminished. The integrity of the World Heritage property the Tower of London has already reached its limit in terms of visual impact, and it is clear from the visual project documentation that there is no room for additional challenges to it. Neither is it an acceptable 30 City of London ref: 18/01213/FULEIA 12 approach to allow further negative visual impact on the property’s integrity when it is already threatened.” This position still stands for the current application and the impact of the development as proposed would be of significant heritage harm to the setting of the Tower of London and the Outstanding Universal Value of the World Heritage Site. On this basis the proposals are contrary to the policies of the Local Plan, London Plan and NPPF, whilst the scheme does not deliver sufficient public benefits to outweigh the level of harm created. The Planning Statement submitted with the planning application relies significantly on the draft policies of the City Plan in seeking to justify the excessive height and position of the proposal. However, given that the draft plan remains at an early stage of preparation, having not been submitted or tested through examination, with significant objections remaining to the tall buildings policies and proposals in the draft document, it is evident that limited weight can be attributed to the draft plan in the determination of the application at this stage. Historic Royal Palaces therefore objects to the proposed development, which would be harmful to the OUV of the Tower of London WHS and we ask the City of London to refuse the application.

	<u>The letter received on 21 November 2024 stated the following:</u> HRP remains strongly of the belief that the proposed development would significantly harm the Outstanding Universal Value (OUV) of the ToL WHS by virtue of the position and height of the proposed buildings and their impact on key views and the ToL. Growth of the City Cluster The growth of the CoL tall buildings cluster over the last 15 years, particularly the rapid development of new high-rise buildings, represents growth beyond that which was first envisaged when the LVMF was first published in 2012. The growth in tall buildings has resulted in cumulative impacts which HRP considers are threatening the OUV of the ToL WHS. HRP considers the emerging CoL Local Plan to 2040, which proposes additional height in the cluster, would further exacerbate the harm to the OUV through its promotion of an expanded eastern edge to the cluster and additional height. HRP believes that the Bury House development, along with the emerging CoL Local Plan 2040, to be a significant threat to the status of the WHS and as such maintains its objection both to this application and the emerging City Plan 2040. Harm to the OUV of the ToL WHS HRP remains of the view that the proposed development would harm the OUV of the ToL WHS. The original representation (May 2024) set out the unacceptable impact of the proposals on views of the Tower of London from Tower Bridge (LVMF 10A.1), in the dynamic journey across Tower Bridge, in the local views from within the inner ward of the Tower (in particular the view north-west from the centre of Tower Green over

	the roof of St Peter and Vincula), and on views of the White Tower, which is compromised by the erosion of the visual separation from the emerging City Cluster. This is contrary to the guidance of the LVMF, in relation to View 10A.1 which states that '*Views from this place include the relationship between the Tower of London and the City in the background. It is important that the background of the landmark in these views is managed sensitively and should not compromise a viewer's ability to appreciate the Outstanding Universal Value of the World Heritage Site'* (LVMF para 186). HRP notes the Townscape Consultancy response to the HRP comments made in May 2024. However, HRP maintains its position and does not agree with the conclusions in that response. In relation to View 9 in the TVIA (LVMF View 10A.1), HRP does not agree that 'in the cumulative condition the height of the proposed development would better mediate the cliff edge caused by the consented scheme at 100 Leadenhall'. HRP considers the height would in fact exacerbate the abrupt vertical cliff edge in this view, resulting in a domineering and overbearing relationship to the ToL White Tower in this view. In relation to the Townscape Consultancy comments on View 22, from the ToL Inner Ward, HRP maintains its comments. While the wire line shows the proposed development occluded in this view, the cumulative impact view in the TVIA clearly shows a development visible over the top of the Royal Chapel of St Peter and Vincula. This further highlights HRP's concerns about the growth of the city cluster overall and the damaging impact this is having on the ToL.

	The ‘Policy Considerations’ and ‘Changing policy context’ are included in the background papers. Misrepresentation of HRP comments on the emerging scheme HRP notes the statement in the Planning Statement (para 2.30) which refers to the way in which the 2024 submission seeks to address the reasons for refusal of the 2020 scheme: that ‘*The Applicant has also worked with key stakeholders including the GLA, Historic Royal Palaces (‘HRP’) and Historic England (‘HE’) to address the second reason for refusal. In this regard, HRP feedback acknowledged that there was “much to welcome in the new design proposals, particularly in respect of the existing incongruous extensions to Holland House, bringing public use to Holland House, and the reduction of height and introduction of shoulder elements to the tall building”, which were described as helpful in key views. It was acknowledged that the “height of the massing would reestablish a softer edge in the foothills of the City Cluster that would mitigate to some extent against the ‘cliff edge’ created by consented developments* ”. The Planning Statement concludes on this point (para 2.31) that there is ‘*consensus from the GLA, HRP and the HE that the height reduction represents a positive change from the previous scheme, but some concern remains in respect of the overall height of the scheme*.’ HRP takes issue with this presentation of its view of the current scheme, which overstates its assessment of the advantages of the current scheme compared with the previous rejected scheme, and suggests that its remaining concerns are minimal and entirely addressed in the Heritage Assessment, HTVIA and Design and Access Statement submitted as part of the current application. The quotes presented in the Planning Statement are from an email exchange

		immediately following an online presentation of the scheme by the Applicant to HRP, and omit other important issues raised by HRP in that email, including that '*the massing in LVMF view 10A.1 (from the northern bastion of Tower Bridge) still appeared tall and close to the White Tower'*. This position was set out in more detail in HRP's follow-up formal objection letter dated 13 May 2014. Historic Royal Palaces therefore continues to strongly object to the proposed development, which would harm the OUV of the Tower of London WHS and which therefore does not comply with CoL adopted or emerging Local Plan Policies, the LVMF and NPPF. We therefore request that the City of London refuses the application as currently presented. **<u>Officer response</u>: The matters in the Historic Royal Palaces objections are addressed in the Tall Building and Heritage and Strategic Views sections of this report.**
Surveyor to the Fabric St Paul's Cathedral		The proposals involve the construction of a new tall building to Bury Street, on the eastern end of the cluster. Whilst the development site is separated visually from the Cathedral by the bulk of the Cluster, the proposals will still be appreciable in key views of St Paul's (as identified within the Heritage, Townscape and Visual Impact Assessment - HTVIA) and thus form part of its setting. We would therefore query why an assessment of the significance of the Cathedral (including the contribution made by its setting) and subsequent heritage impact assessment was not explicitly included in the application documents, either within the HTVIA prepared by The Townscape Consultancy or the Heritage Statement prepared by KM Heritage. We would suggest that such assessment should be included in the submission

	documentation as a matter of due course given the exceptional significance of the Grade I listed building and the evolving nature of its setting. If this assessment is not included, we consider that explicit mention should be made of why the Cathedral was scoped out of assessment in order to fully understand the extent of potential heritage impact. We do, however welcome the inclusion of key views of the Cathedral outlined in the 'Visual Assessment' section of the HTVIA. Whilst we understand that the proposals are located on the eastern side of the cluster and a 'partial' ZTV is included as an appendix to the HTVIA, the inclusion of a ZTV that covers a wider area would be of great assistance in understanding the extents of potential visual impact, and why certain strategic views (such as view 15B.2) were not taken forward for assessment. Fleet Street views are not included within the HTVIA. However, the Processional Way along Fleet Street is an incredibly sensitive area of the setting of the Cathedral in terms of potential heritage and visual impact. We would therefore also seek to be assured that there is absolutely no visual intrusion within views of the Cathedral from Fleet Street. Wider Considerations: Bevis Marks We have confined our observations on this application to our primary locus (ie concern for the heritage and setting of St Paul's) and our well established planning application review methodology. However we also feel we would be remiss in not making mention of the evident impacts that this major development proposal has on both the Tower of London (WHS) and Bevis Marks Synagogue. The City Planning and Transportation Committee refused consent for an earlier proposal – which,

	to most observers, is more or less similar to the current application. The committee determined that the impact on the heritage and setting of two highly significant and sensitive Grade 1 listed heritage assets were found to be unacceptable. Accepting that other commentators and critics, including Historic England, will be better placed to advise Planning Committee on the methodology and evaluation of impacts of this development on Bevis Marks especially: the main observation that we wish to add to our comments here is in relation to the definition and understanding of 'setting'. There is very good guidance from HE on evaluation and consideration of managing significance, which includes 'setting' in GPA 1 and 2. We feel that it is important to note that, whilst the Tower and St Paul's are (in different ways) privileged with specific heritage management policies that broadly recognise these internationally significant heritage assets, Bevis Marks has to argue a case for 'Protection, Preservation and Celebration' within the rubric of the NPPF and Planning (Listed Buildings and Conservation Areas) Act 1990. All participants will rightly be concerned with seeking a better and shared understanding of the heritage setting of the Synagogue and, to date, it would appear that the regulators and proposers of this scheme have not yet arrived at a shared understanding of setting and the significance thereof. This important consideration might have been addressed by EIA Scoping. Where the interests of St Paul's and those of Bevis Marks intersect, we suggest and as noted above, is that this application before committee does not appear to be supported by sufficient or proportionate evidence and expertise in relation to the full and correct evaluation of the heritage context into which this major project intrudes. We

	would therefore urge officers and Committee to allow for these necessary data to emerge to inform any determination. Conclusion We hope that our comments are constructive and assist the project team, and Officers at the City, moving forward. We would be happy to review any additional information submitted to better understand potential impacts. **Officer response: The matters raised above are addressed in the Tall Buildings and Heritage and Strategic Views sections of the report.**
Twentieth Century Society (letter dated 17 May 2024 and email dated 11 November 2024, maintaining their objection)	It is the view of the Society's Casework Committee that the proposed 3-storey extension to the roof of Holland House would seriously harm the significance of the Grade II* Holland House. The 3 additional storeys would add considerable heaviness and bulkiness to the building's roofline. This extension would change the building's proportions and upset its balance, making it appear top heavy. While stepped back, it would still remain highly visible and impactful. This is illustrated in the applicant's HTVIA views 42, 43 and 60. The proposed extension would also have a harmful impact on the building's fabric and on the character of its interior spaces, namely through the infilling of its lightwell. The Society also has serious concerns about the proposed ground plus 43-storey office tower development to Bury House and its impact on the significance of Holland House. The proposed redevelopment would physically impact on the fabric of Holland House. Original rear floor slab and wall would be lost to connect Holland House with the proposed development. This part of Holland House has already suffered fabric loss as a result of the Bury House development in the 1960s and we are concerned that even more fabric would be removed as part of the current

		application, we are also concerned about the proposed insertion of a large stair to connect the ground and first floor level and its impact on the interiors here. We have concerns about the cumulative impacts of pervious and proposed changes on the significance of this Grade II* listed building. The proposed ground plus 43-storey office would also clearly impact on the setting of Holland House – it would rise up directly behind the building and would appear to overshadow it. This is illustrated in the applicant's illustrative CGIs and views within its HTVIA. We accept that the proposed height of the office has been reduced from the previous application (which proposed a ground plus 48 storey tower) but a reduction of five storeys has done little to reduce its impact on the surrounding built environment. It was on account of this impact on heritage that the previous scheme was refused, the planning/heritage context has also changed since the previous application. This area a very recently been designated the Creechurch Conservation Area which makes the site even more sensitive to change and even harder to justify such tall development here. These aspects of the scheme would majorly harm the significance of Holland House. We do not feel that this harm is mitigated by the few positive interventions proposed as part of the scheme, which includes restoring the elevations, replacing non-original windows with units closer to the originals, reinstating the blocked-in Bury Street entrance and conserving original interior finishes. There benefits could be delivered through a scheme which has a much less harmful impact on the site's heritage, we would seriously challenge the applicant's claim that remedial work to the elevations (which has already been approved by the local authority) could only be delivered through the wider redevelopment of the site (we refer to paragraph 2.32 of the planning statement).

	For the reasons outlined in this letter, the Society strongly objects to the proposal sand recommends that the local authority refuses these damaging applications. We do not object to adapting Hollan d House for office use nor to the redevelopment of the Bury House site in principle but take issue with the approach proposed and would like to see a more conservation-led scheme forward. **<u>Officer response</u>: Comments noted and are addressed in the Architecture, Urban Design, Public Realm and Heritage sections of the report.**
The Victorian Society	Strongly Object. Significance and Harm Holland House is a Grade II* listed building constructed between 1914-1916 and designed by the eminent architect Hendrik Petrus Berlage. It is considered a key transitional building between the Art Nouveau and Art Deco styles, noted for its faience cladding, its sculpted corner resembling the bow of a ship, and its elaborately tiled entrance lobby. The heritage asset also forms a key building within the newly established Creechurch Conservation Area. Renown House is a non-designated heritage asset constructed in 1912, designed by Delissa Joseph for the Bunge & Co import-export trading business. The building positively contributes to the immediate setting of Holland House and the Creechurch Conservation Area. The four-storey extension to both Holland House and Renown House is excessive and top-heavy, disrupting the careful architectural proportions of both buildings. The extension would also result in the loss of historic fabric, including the loss of stone chimney stacks on Renown House and the

	complete removal of the top floor of Holland House, causing less than substantial harm. To accommodate an open connection with the proposed new tower at No. 31 Bury Street, further losses to Holland House are proposed, including the rear wall, the insertion of a large new staircase, and the enclosure of a light well. Listing applies to all the building's fabric; the cumulative effect of these changes would heavily reduce the integrity of this heritage asset. Renown House will lose all its interiors, roof mansard, and stone chimney stacks. New floor levels inserted to accommodate the connection with the proposed tower at 31 Bury Street and Holland House would not align with existing windows. The proposed interventions aggressively attack the integrity and design of this non-designated heritage asset. The construction of a 43-storey building at 31 Bury Street would negatively impact the surroundings in which these heritage assets are experienced. The scale of the proposal would have the effect of overpowering the assets by absorbing them into the wider proposal, affecting the ability to appreciate the individual significance of both Holland House and Renown House. Creechurch Conservation Area The proposed scale and design of the development would have a far-reaching effect on the appearance and special architectural and historic character of the Creechurch Conservation Area, defined by intricate lanes and medium-rise buildings. This proposal would compromise this character by introducing an inappropriate scale and materiality, affecting the predominant setting of a number of designated and undesignated heritage assets, causing less than substantial harm to this conservation area,

	and damaging one of the key aspects of its significance. 1990 Planning (Listed Buildings and Conservation Areas) Act: The application simply fails to adequately preserve a building of special architectural and historic interest due to the loss of historic fabric, disruptive additions, and the compromise of its immediate setting, in addition to the wider negative impact on a conservation area. **<u>Officer response</u>: Comments noted and are addressed in the Architecture, Urban Design, Public Realm and Heritage sections of the report.**
LAMAS - Historic Buildings and Conservation Committee	The LAMAS Historic Buildings Committee object to the planning application and for listed building consent application on the grounds of the harm it would cause to the Bevis Marks Synagogue, a Grade I listed designated historic asset, and the loss of significance of the Creechurch conservation area. 24/00021/FULEIA (Bury House 1 - 4, 31 - 34 Bury Street) We have written on two previous occasions in 2021 expressing our objections to the planning applications submitted for 20/00848/FULEIA Bury House, 31 Bury Street, London, EC3A 5AR. As you will know, this scheme was subsequently refused in June 2022, with the reason cited as: 1. The development would adversely affect the setting of the Grade 1 listed Bevis Marks Synagogue and its setting and amenities by reason of the overbearing and overshadowing impact of the development on the courtyard of the Synagogue (which harms would not be outweighed by the public benefits of the proposal).

	2. The development would adversely affect the setting of the Tower of London World Heritage Site by reason of the less than substantial harm caused to LVMF view 10A.1 from the Tower Bridge North Bastion and the resulting harm to the Outstanding Universal Value of the World Heritage Site, as highlighted by Historic England in their letter of objection. The City of London Local Plan January 2015; Policy DM 12.2 Development in conservation areas identifies that: Development in conservation areas will only be permitted if it preserves and enhances the character or appearance of the conservation area. Contrary to that stated in the applicants DAS Vol 1; page 14, the proposed development is within the Creechurch conservation area. 24/00011/LBC (Holland House 1 - 4, 32 Bury Street) Holland House is a Grade II* listed building first listed in June 1972 and amended in September 1997. The scheme 24/00011/LBC proposes the partial demolition to facilitate interconnection with the neighbouring proposed new building and the construction of a four storey roof extension resulting in ground plus 8 storeys. The City of London Local Plan January 2015; Core Strategic Policy CS12: Historic Environment identifies the need: To conserve or enhance the significance of the City's heritage assets and their settings, and provide an attractive environment for the City's communities and visitors, by safeguarding the City's listed buildings and their settings, while allowing appropriate adaptation and new uses. Policy DM 12.2 Development in conservation areas, para 3.12.10 further identifies that: In the design of new buildings or alteration of existing buildings, developers should have regard to the

	size and shape of historic building plots, existing street patterns and the alignment and the width of frontages, materials, vertical and horizontal emphasis, layout and detailed design, bulk and scale. Policy DM 12.3 Listed buildings states: 1. To resist the demolition of listed buildings. 2. To grant consent for the alteration or change of use of a listed building only where this would not detract from its special architectural or historic interest, character and significance or its setting. Para 3.12.14 further identifies that: Where extensions are proposed, in order to be acceptable, they should be located where they minimise the effect on the listed building concerned, and should always be appropriate in scale and character. The bulk, height, location and materials of roof extensions will be particularly critical and should be appropriate to the period and style of the building and its setting. This has been reinforced by the establishment of the Creechurch conservation area, which encompasses both the Grade II* Holland House and the Grade I listed Bevis Marks synagogue. The application 24/00021/FULEIA for the demolition of Bury House and erection of a new building is, in our opinion, materially of little difference to the previous 2020 scheme. The committee therefore still remain of the opinion that: 1. The proposal for the 43-storey tower immediately adjacent to the grade I listed Bevis Marks Synagogue will still profoundly harm the exceptional significance of the Synagogue in its setting by further eroding its prominence in its immediate surroundings. The reason as stated in paragraph one of the letter of rejection therefore still relates.

	2. Whilst it is acknowledged that the proposed building has a slightly amended profile, we do not consider that this provides sufficient mitigation to change the less than substantial harm on the London View Management Framework view as stated in paragraph two of the letter of rejection. The application for listed building consent 24/00011/LBC for the partial demolition of the Grade II* Holland House and the construction of four further storeys would cause a significant detrimental effect on the Grade II* listed building, in contravention of Policy DM 12.3 Para 3.12.14 The proposed development is within the Creechurch conservation area, and in the opinion of the committee, will have a significant detrimental impact on the character and appearance of the conservation area, in contravention of Policy DM 12.2. For the reasons set out above, the LAMAS Historic Buildings Committee therefore continue to object to the planning application and for listed building consent application on the grounds of the harm it would cause to the Bevis Marks Synagogue, a Grade I listed designated historic asset, and the loss of significance of the Creechurch conservation area. **Officer response: The matters raised are addressed in the Tall Building and Heritage and Strategic Views sections of this report.**
Historic England, Greater London Archaeological Advisory Service (letters dated 2 April 2024 and emails received on 10 October 2024 and 7 November 2024	Assessment of Significance and Impact: The proposed development is in an area of archaeological interest. The City of London was founded almost two thousand years ago and London has been Britain's largest and most important urban settlement for most of that time. Consequently, the City of London Local Plan 2015 says that all of the City is considered to have archaeological potential, except where there is evidence that archaeological remains

confirming that the additional information did not affect the original advice)	have been lost due to deep basement construction or other groundworks. The site lies in an area which was formerly within the walls of the Roman city of Londinium. A large Roman ditch was identified to the west of the site at St Mary Axe and a Roman road was identified to the south of the site, both of which are likely to have continued through the site. Roman buildings have also been identified close to the site. The Augustinian Holy Trinity Priory (founded 1108) was formerly located partially within the east of the site. The site was occupied by a series of buildings during the post-medieval period, including a school. All three of the current buildings on the site have a basement. The deepest basement appears to be under Holland House although no OD height has been provided for it. Shallower basements appear to be present beneath Bury House and Renown House. The archaeological desk-based assessment (AOC 2023) submitted with the application suggests that the Bury House basement has removed all archaeological deposits to a depth of c 11m OD. No depth for the basement of Renown House has been provided but a similar level of impact may be expected. Remains of the Abbey previously excavated to the east of the site have confirmed that the lower parts of the Abbey remains extend to below 11m OD in places. It is also possible that deeper cut features of Roman date may also survive beneath the current basements. No archaeological evaluation or investigation has been previously carried out on the site to ascertain likely levels of truncation. The proposed development includes a basement under Bury House that will extend to four levels. This will cause complete truncation of any surviving archaeological deposits. In Holland House, no new basements are

		proposed but a crane base and new foundation will be inserted into the current lightwell. Renown House will retain its facade, which is likely to need propping. The supports for the propping are likely to extend below the current basement. Underpinning may also be required here. It is therefore possible that remains of Roman and medieval date survive on the site, although remains of high significance are not expected due to truncation from the current buildings. The proposed development will have a high impact on these potential remains. It is recommended that an archaeological evaluation take place, if consent is granted, in order to establish the nature and extent of archaeological survival. In the first instance, geotechnical investigations should be monitored by an archaeologist as they are carried out. If archaeological remains are encountered, a full programme of archaeological mitigation, which covers all below ground impacts should be implemented. A cultural and education space is to be provided within the proposed development. The archaeological work should therefore include public engagement to feed into the cultural and education programme for the site. The story of Holy Trinity Priory is of particular interest as little information about this site is available to view within the City. <u>Recommendations</u> I advise that the development could cause harm to archaeological remains and field evaluation is needed to determine appropriate mitigation. However, although the NPPF envisages evaluation being undertaken prior to determination, in this case consideration of the nature of the development, the archaeological interest and/or practical constraints are such that I consider archaeological conditions could

	provide an acceptable safeguard. This would comprise firstly, evaluation to clarify the nature and extent of surviving remains, followed, if necessary, by a full investigation. **Officer Response: The recommended conditions are included in the conditions schedule. A full assessment of the archaeological implications of the proposal are set out in the archaeology section of this report.**
London City Airport (letters dated 19 March 2024, 15 October 2024 and 1 November 2024)	This proposal has been assessed from an aerodrome safeguarding perspective. Accordingly, it was found to have the potential to conflict with London City Airport's safeguarding criteria. If the local planning authority is of a mind to approve this application, then London City Airport suggests a condition relating to the following are applied to any approval: - Building Obstacle Lighting Also, the following observations have been made: - City Aviation Authority Building Notification - City Aviation Authority Crane Notification **Officer Response: The recommended condition have been included in the conditions schedule.**
Heathrow Airport (letter dated 20 March 2024 and emails dated 9 and 31October 2024)	No safeguarding objections to the proposed development. However, if a crane is needed for installation purposes, the applicant's attention is drawn to the following: CAA Crane Notification: Where a crane is 100m or higher, crane operators are advised to notify the CAA (arops@caa.co.uk) and Defence Geographic Centre (dvof@mod.gov.uk) via Crane notification The following details should be provided before the crane is erected: • the crane's precise location • an accurate maximum height • start and completion dates **Officer Response: The advice has been included as an informative.**

London Gatwick Airport (letter dated 03 June 2024)	No response
NATS Safeguarding Office (email dated 15 March 2024)	The proposed development has been examined from a technical safeguarding aspect and does not conflict with our safeguarding criteria. Accordingly, NATS (En Route) Public Limited Company ("NERL") has no safeguarding objection to the proposal. **Officer response: Comment noted.**
Environment Agency (letters dated 26 March 2024 and letters dates 18 October 2024 and 15 November raising no further comments)	Based on the information provided the application raises no environmental concerns. The Environment Agency therefore have no comments on the application. Advice is given in respect of water resources and water efficiency. **Officer Response: Comments noted. The Environment Agency's advice is available to applicant to take into consideration.**
Natural England (letter dated 8 May 2024 and email dated 4 November 2024 stating that the advice provided in their previous response still applies)	No objection. Based on the plan submitted, Natural England considers that the proposed development would not have significant adverse impacts on statutorily protected nature conservation sites or landscapes. **Officer Response: Comments notes.**
Environmental Health / Markets and consumer protection (letter dated 9 October 2024)	Raised no objections. Conditions are recommended including a Scheme of protective works during demolition and construction, including monitoring by officers, restrictions on servicing hours and roof terrace use hours, submission of an acoustic report and restriction on operational noise and plant noise, details of soundproofing, details of fume extraction, details of contamination investigations.

Environmental Resilience Officer (letter dated 14 March 2024, updated response 30 August 2024)	<u>Overheating and the urban heat island effect</u> Section 8.3 within the CCRSS covers the risk of heat stress and assesses the following hazards: - Increase in temperature may result in a risk of overheating and reduction in building user health and comfort levels within their internal environment (High Risk) - Increased in temperature may result in reduction in building user comfort within the external environment (Moderate Risk) - Increased temperatures will have a direct impact of the urban heat island effect (Moderate Risk) - High levels of sun exposure may cause UV damage to building fabric and reduction in material durability and robustness (Moderate Risk) - Increased risk of dust and damage results in increased repairs and maintenance (Moderate Risk) - Building degrading, subsidence and reduced robustness due to dry and hot conditions (Moderate / Low Risk) - Increased risk of damage to building materials (Moderate Risk) To manage the above risks, the CCRSS states that the following design features and techniques will be included: - Mechanical ventilation installed with heat recovery mechanisms and plant located away from pollution sources - Facade and building services have been designed with a fan coil cooling solution - Dynamic thermal modelling using TM49 DSYs has been conducted to demonstrate the Proposed Development is not at risk of overheating against the criteria of CIBSE TM52 and justify the inclusion of active cooling - An external (outdoor) thermal comfort assessment has been completed (using high resolution Computational Fluid Dynamics - CFD) to evaluate external thermal comfort conditions based on the design proposals. The assessment concluded that:

	• All ground level conditions were suitable for intended use, or no worse than the baseline conditions. • The Proposed Development is having a beneficial impact on existing benches to the north of 30 St Mary's Axe. • Conditions for all existing off-site terraces are suitable for the intended use. • Conditions for all proposed terraces are suitable for the intended use - Air source heat pumps will be located at roof level, minimising the amount of heat being rejected to the external environment at low level, where heat absorbing surfaces are present - Building maintenance strategy will be implemented to check and treat materials for UV damage - Materials on exposed areas will be designed and installed to weather effectively - Structural foundations and frame have been designed to accommodate a range of soil stiffness values - All heat stress hazards residual risks have been assessed as Low. **<u>Flooding</u>** Section 8.1 of the CCRSS includes the risk assessment for flooding and includes the following hazards: - Rising sea levels could increase the risk of flooding to the building and the surrounding area (High risk) - Increased duration of prolonged rainfall could cause an increased risk of surface water flooding (Very High risk) - Increased risk of flooding causing significant damage to the development and requirements for weather proofing (Moderate risk) The CCRSS states that the proposed development is in Flood Zone 1 and has been assessed to be at low risk of flooding from all sources. The proposed drainage system will be sized to attenuate storms up to the 1 in 100 year

	event plus a 40% allowance for climate change, comprising a blue roof and two attenuation tanks. Flows will be restricted to 5 l/s, which provides an 83% reduction on the equivalent brownfield rate during the 2 year storm event. Based on the above, the CCRSS assesses the residual risk for flooding to the proposed development to be Moderate/low. **Water stress** Section 8.2 of the CCRSS includes the risk assessment for water stress and includes the following hazards: - Increased risk of drought (Moderate risk) - Increased duration of prolonged rainfall could cause impacts on structural stability within the building (Moderate risk) - Risk of material degradation due to extended exposure of building materials to increased moisture levels (Moderate/ low risk) - Increased risk of extended duration of water stress and high water costs (Moderate risk) In terms of risk management, the CCRSS states that the following design features and techniques will be incorporated to adapt and mitigate for the above risks: - Project will prioritise native, locally sourced plants for the public realm landscape strategy - Landscape strategy supported by ecologists and landscape architect's recommendations such as appropriate species which are resilient to periods of water scarcity - Roof drainage will be used for irrigation of green walls and roofing - SuDS in the form of blue roofs and tanks will attenuate rainfall - Site is not at risk from groundwater flooding - Lowest level basement slab will be designed for Grade 3 waterproofing which will protect against future risk - Internal linings proposed in retained basements

	- Efficient water fittings installed to reduce water consumption All water stress hazards' residual risks have been assessed as Low. The FRA & DS states that "roofwater recycling has been discounted on the basis that the roof area is small compared to the number of potential users and disproportionate investment required to distribute a small water resource over a large number of occupants." **<u>Biodiversity and pests and diseases</u>** Section 8.4 of the CCRSS assesses the risk to natural capital and includes the following hazard: - Risk of loss of biodiversity and high quality green space (Moderate Risk) The CCRSS states this risk will be managed through: - Introducing increased vegetation on site, in green roofing, terrace planting and public realm planting - Habitat infrastructure such as bird and insect boxes to be installed - Project will prioritise native, locally sourced plants for the landscape strategy The CCRSS classes the residual risk as Low. Section 8.5 of the CCRSS assesses the risk of pests and diseases and assesses the following hazards: - Increased temperatures mean new warm-climate pests migrate to the UK and spread new diseases to humans (Moderate Risk) - Increased temperatures mean new warm-climate pests migrate to the UK and spread new diseases to plants (Moderate Risk) The CCRSS states this risk will be managed through: - Implementation of a pest management plan or implementation of an accredited Pest Management program

	- Regular monitoring and maintenance of ventilation systems - Consideration of new warm-climate pests will be factored into final species selection for planting The CCRSS assesses the residual risk to be Moderate /Low. A Preliminary Ecological Appraisal (PEA) has been produced by Bowes & Wyer. The survey deemed the site to be of low ecological value with limited opportunities to support nesting birds. The proposed development incorporates multiple biodiversity enhancements measures which will result in an Urban Greening Factor (UGF) exceeding 0.3. Ecological enhancements will be delivered through the inclusion of green roof habitats, terraced landscaping, a green wall and planting at the public realm level. Habitat infrastructure such as bird and insect boxes will also be installed. A Health Impact Assessment was prepared by Quod which found the proposed development has a positive impact on health through: • New jobs associated with the uplift in office floorspace and affordable co-working space supporting access to local employment; • Provision of flexible community/education/cultural space meeting an identified need in the area; • 'City Cycles' – a new social enterprise in the retail space on site supporting unemployment adults into employment through training and work experience of bike mechanics, as well as meeting a need for bike servicing in the area; • A car-free building minimising vehicles travelling to the Site alongside extensive provision of bike parking to support active travel (and improved pedestrian permeability, as set out above); • Provision of new open space at James' Court and external building terraces providing much needed amenity provision;

	• Heneage Arcade providing a new north-south through route improving connectivity and permeability, as well as enhancing the attractiveness of the physical environment; • Inclusivity and accessibility as placemaking principles; • Building and landscape design considering sustainability and climate change, with ASHPs and a 'fabric first' approach significantly reducing the carbon footprint, and extensive urban greening measuring enhancing biodiversity; • The building and landscape design also provides an enhanced environment for workers and site users (along with the wider public) through high quality design aspiring towards • BREEAM 'Outstanding' and WELL 'Platinum' rating, an attractive public realm, greening measures and supporting active travel measures **Food, trade and infrastructure** The Sustainability Statement writes that the project aims to deliver a 'WELL' certified building thereby incorporating industry best practice on health and wellbeing. Measures encouraging physical exercise such as the provision of cycle spaces will incentivise active commuting. The positive health impacts taken from the Quod Health Impact Assessment can also be applied to positive improvements to trade and infrastructure. **Recommendation:** The proposed development is compliant with Local Plan Policy DM 15.5 (Climate change resilience), Draft City Plan 2040 Strategic Policy S15 (Climate Resilience and Flood Risk) and associated City Plan 2040 Policies CR1 and CR2.
Lead Local Flood Authority	Raised no objections. Recommended 2 conditions: Before any construction works hereby permitted are begun the following details shall be submitted to and approved in writing by the Local Planning Authority in conjunction with the Lead Local Flood Authority and all development pursuant to

	this permission shall be carried out in accordance with the approved details: (a) Fully detailed design and layout drawings for the proposed SuDS components including but not limited to: attenuation systems, rainwater pipework, flow control devices, design for system exceedance, design for ongoing maintenance; surface water flow rates shall be restricted to no greater than 5 l/s. Provision should be made for an attenuation volume capacity capable of achieving this, which should be no less than 123 m3 ; (b) Full details of measures to be taken to prevent flooding (of the site or caused by the site) during the course of the construction works. (c) Evidence that Thames Water have been consulted and consider the proposed discharge rate to be satisfactory. Before the shell and core is complete the following details shall be submitted to and approved in writing by the Local Planning Authority in conjunction with the Lead Local Flood Authority and all development pursuant to this permission shall be carried out in accordance with the approved details: A Lifetime Maintenance Plan for the SuDS system to include: • A full description of how the system would work, it's aims and objectives and the flow control arrangements; • A Maintenance Inspection Checklist/Log; • A Maintenance Schedule of Work itemising the tasks to be undertaken, such as the frequency required and the costs incurred to maintain the system. REASON: To improve sustainability, reduce flood risk and reduce water runoff rates in accordance with the following policy of the Local Plan: DM18.1, DM18.2 and DM18.3.

Air Quality (Memo dated 08.05.2024)	Email dated 2nd April states no further comments aside from those already sent across (can't see these), and AQ Positive statement is acceptable. - SJ – I asked DP9 to respond to Paul's comments dated from May (SJ 01/10/24) **Officer Response: The recommended conditions have been included in the conditions schedule.**
City Police	The City Police provided a number of comments and advice to the applicant. This includes ensuring there is sufficient access controls into different areas of the buildings and at different times, sufficient natural and formal surveillance and sufficient safety and management of accessible terraces. **Officer Response: Details of security an anti-terror measures are recommended to be secured by condition and in the S106 agreement.**
Transport for London (Infrastructure Protection, letters dated 9 April 2024 and 11 October 2024)	London Underground/DLR Infrastructure Protection has no comment to make on this planning application.
Crossrail Safeguarding (letters dated 25 October 2024 and 1 November 2024)	The application relates to land outside the limits subject to consultation by Crossrail Safeguarding Direction.
Active Travel England (emails dated 20 March 2024, 9 October 2024 and 30 October 2024)	In relation to the above planning consultation and given the role of Transport for London (TfL) in promoting and supporting active travel through the planning process, Active Travel England (ATE) will not be providing detailed comments on development proposals in Greater London at the current time. However, ATE and TfL have jointly produced a standing advice note, which

	recommends that TfL is consulted on this application where this has not already occurred via a Stage 1 referral to the Mayor of London. **Officer Response: TfL have been consulted on the application.**
Royal Parks	Having reviewed the Heritage Statement submitted in support of this planning application, we believe that although the development may not be visible form The Regent's Park and St James's Park, it will be visible from Greenwich Park. This includes the view from the General Wolfe statue, which is a protected view, as set out in the London Plan. In light of our charitable objects, TRP is concerned that the additional massing of the proposed development would be detrimental to the views and visual amenity experienced by visitors to the aforementioned Royal Parks. We therefore object to this planning application and hope that our comments will be considered in your determination. **Officer response: The matters are addressed in the Heritage and Strategic Views sections of this report.**
Thames Water (letter dated 30 January 2024)	Waste Comments The proposed development is located within 15 metres of a strategic sewer. Thames Water requests a condition for pilling methos statement to be imposed. Thames Water requests that the Applicant should incorporate within their proposal, protection to the property to prevent sewage flooding, by installing a positive pumped device (or equivalent reflecting technological advances), on the assumption that the sewerage network may surcharge to ground level during storm conditions. If as part of the basement development there is a proposal to discharge ground water to the public network, this would require a Groundwater Risk

	Management Permit from Thames Water. Any discharge made without a permit is deemed illegal and may result in prosecution under the provisions of the Water Industry Act 1991. Thames Water would expect the developer to demonstrate what measures will be undertaken to minimise groundwater discharges into the public sewer. Measures should be taken to minimise groundwater discharges into the public sewer. There are public sewers crossing or close to your development. If significant work is planned near our sewers, it's important that the applicant minimizes the risk of damage. Thames Water would advise that with regard to the combined waste water network infrastructure capacity, we would not have any objection to the above planning application, based on the information provided. Water comments Water Comments There are water mains crossing or close to your development. Thames Water do not permit the building over or construction within 3m of water mains. If significant works are planned near Thames Water mains (within 3m) they'll need to check that development doesn't reduce capacity, limit repair or maintenance activities during and after construction, or inhibit the services we provide in any other way. The proposed development is located within 15m of Thames Water underground water assets and as an informative is suggested to ensures that appropriate measures are taken into consideration. Following initial investigations, Thames Water has identified an inability of the existing water network infrastructure to accommodate the needs of this development proposal. Thames Water have contacted the developer in an attempt to

	agree a position on water networks but have been unable to do so in the time available and as such Thames Water request that a condition is added regarding potential water network updates to ensure sufficient water pressure and capacity. **Officer comments: The piling method statement conditions and network updates to ensure sufficient capacity are imposed in the conditions schedule. Suggested informatives are also recommended.**
City of Westminster (letter dated 3 April 2024 and 8 October 2024)	The City Council has considered the proposals and does not wish to comment.
London Borough of Camden (letters dated 20 March 2024 and 15 November 2024)	No objection to the proposal. The application site is a significant distance from the London Borough of Camden boundary. The development would have no impact on the significance of the protected views, on the amenity of any Camden occupiers or visitors, or on transport, environmental or ecological conditions. **Officer comments: Comments noted.**
London Borough of Tower Hamlets (letters dated 14 May 2024 and 11 November. In their second letter they state that they maintain their original objection)	LBTH previously voiced strong objections to a similar application at Bury House, 31 Bury Street, between 2020-2021 (City of London ref: 20/00848/FULEIA and LBTH refs: PA/20/02417, PA/21/00436, and PA/21/01930). These concerns remain. While it is noted that the current proposal now includes adjacent Holland House (Grade II*) and Renown House, our primary concerns pertain to the replacement building for Bury House. Despite minor adjustments, the replacement building maintains its design as a tall, slender tower situated to the southeast of the Gherkin. Although the maximum height has been

	marginally reduced from 197.94m AOD to 178.7m AOD, and a stepped form introduced to the upper sections, these modifications do little to alleviate the impact on the Tower of London World Heritage Site (WHS). As illustrated in LVMF View 10A.1 in Figure 5.4 of the Tower of London Heritage Impact Assessment, despite the reduced height and massing, the proposed development would still disrupt the clear sky gap between the City Cluster and the Tower of London, encroaching inappropriately and competing with the iconic White Tower. Consequently, LBTH maintains its objection to the proposals, expressing concerns that, even with amendments, the proposed development would significantly and detrimentally affect the setting of the Grade I listed Tower of London WHS and its townscape views. These proposals severely risk diminishing the ability to appreciate the Outstanding Universal Value of the Tower of London WHS. **Officer response: Comments noted. The matters raised are addressed in the Tall Building, Architecture and Heritage and Strategic Views sections of this report.**
London Borough of Richmond Upon Thames	No response.
Royal Borough of Greenwich	No response.
London Borough of Lambeth	No response.
London Borough of Southwark	No comments raised.
SAVE Britain's Heritage (letters	SAVE Britain's Heritage strongly objects to the above planning application for Bury House 1-4,

dated1 May 2024 and 6 November 2024, stating that the revisions do alter the fundamental nature of the application and their views expressed initially are maintained.)	31-34 Bury Street on the grounds that this proposal would cause substantial harm to the Grade I listed Bevis Marks Synagogue and its setting, and the Creechurch Conservation Area which is designated to protect multiple highly listed heritage assets and their character. SAVE also strongly objects to the total demolition of Bury House on climate grounds. We further note that a previous scheme for a 48-storey tower at No. 31 Bury Street was already refused permission in 2022 (ref no. 20/ 00848/ FULEIA) on the grounds that the development would overbear and overshadow the Bevis Marks synagogue. For these reasons, this application fails to comply with national and local policy for preserving the historic and natural environment of the City of London, and so we call on the Local Planning Authority to refuse planning permission. Assessment 1. Substantial harm to Bevis Marks Synagogue SAVE considers that the proposed 43-storey tower at No. 31 Bury Street will cause substantial harm to the setting of the Grade I listed Bevis Marks Synagogue. The proposal will fundamentally alter the streetscape around this highly designated asset which is of exceptional historic value. The Local Planning Authority is under a legal duty to preserve and enhance listed buildings and their settings under Section 66(1) of the Planning (Listed Buildings and Conservation Areas) Act 1990. Further to this, Para 206 NPPF (2023) provides that any harm to the significance of a heritage asset, including its setting, requires clear and convincing justification. SAVE contests the applicant’s claim in the Heritage, Townscape and Visual Impact Assessment [para 8.134] that “only the immediate setting of the Bevis Marks Synagogue contributes to its significance”, to be insufficient to comply with Para 206. Historic

	England's Good Practice Advice in Planning Note 3: The Setting of Heritage Assets: Historic Environment (2015) sets out that, "setting is the surroundings in which an asset is experienced, and may therefore be more extensive than its curtilage". We consider that the proposed 43-storey tower, which would be visible from within the courtyard of Bevis Marks synagogue, has a direct and substantially harmful impact upon the building's setting and secluded nature. The sky view from within the courtyard has religious importance and allows daylight into the synagogue's interior. We wish to highlight the reason for refusal of application 20/00848/ FULEIA which found that a tall building at No. 31 Bury Street would "affect the setting of the Grade I listed Bevis Marks Synagogue and its setting and amenities by reason of the overbearing and overshadowing impact of the development on the courtyard of the Synagogue". This proposed development contravenes local as well as national policy. Policy CS12(1) City of London Local Plan (adopted 2015) requires that development should safeguard the City's listed buildings and their settings. More specifically, Policy HE1 [Managing Change to the Historic Environment] of the emerging City Plan 2040 recognises that the Bevis Marks Synagogue requires, "special consideration and protection, given their outstanding architectural and historic significance and...the critical contribution of elements of setting to that significance." We call upon the LPA to refuse a planning application which fails to comply with national and local policy and contradicts the emerging City Plan 2040. 2. Substantial harm to the Creechurch Conservation Area (CCA) The application site, whilst within the City Cluster, is fully within the Creechurch Conservation Area which was newly designated in January 2024.

	Policy CS14(2) of the City of London Local Plan (2015) states that planning permission for tall buildings will be refused within inappropriate areas, such as conservation areas. Policy S12 [Tall buildings] of the emerging City Plan (2040) elaborates that “tall buildings must have regard to... the significance of heritage assets and their immediate and wider settings”. We strongly object to this proposal on the grounds that it would cause substantial harm in heritage terms to the special character and appearance of the Creechurch Conservation Area. This harm would fail to meet the duty to preserve the CCA under Sections 72 of the Planning (Listed Buildings and Conservation Areas) Act 1990. At 43- storeys, the proposed tower would overshadow a number of highly designated heritage assets, which include three buildings of the highest possible listed status, which the conservation area is designated to protect. We consider the tower, which would be located directly behind Holland House and Renown House, would diminish the primacy and appreciation of these buildings. The drastically increased scale from the present 7-storey Bury House would compound this harm. In the absence of a formal Appraisal and Management Plan yet to be adopted, we refer to The Proposed Bevis Marks/ Creechurch Conservation Area (2022) draft documentation which recognises that, “despite the proximity to the cluster of tall buildings in the eastern part of the City, the area under consideration has a remarkably consistent and harmonious low-rise scale of building” (p. 3, para 1.02). The erection of a tower within the CCA would erode its low scale, harmonious townscape. This is unsupported by local policy. Policy CS12(2) of the City of London Local Plan (2015) requires that to conserve the significance of the City’s heritage assets, the distinctive character and

	appearance of the City's conservation areas will be preserved and enhanced, while allowing sympathetic development within them. This proposed application cannot be considered sympathetic development. 3. Substantial Harm to Holland House and Renown House The works proposed to Renown House and the Grade II* listed Holland house (in the associated application 24/ 00011/ LBC) are strongly concerning. We recognise that the rooftop alterations to Holland House are later additions, not contemporaneous with the original 1916 building. However, they are sufficiently set back from the building's facade to be considered largely unobtrusive when viewed from the streetscape. The proposed 4-storey roof top extension is an increase in scale and massing which would overwhelm Holland House and detract from an architectural appreciation of the building. The extension of Renown House by a storey, and the realignment of the floor plates to connect with Holland House constitutes further, drastic alteration which, when as read a whole, amounts to substantial harm. Para 207 NPPF (2023) provides that, "where a proposed development will lead to substantial harm to...a designated heritage asset, local planning authorities should refuse consent, unless it can be demonstrated that the substantial harm or total loss is necessary to achieve substantial public benefits that outweigh that harm". We do not consider that the purported public benefits from this development can outweigh the cumulative harm caused by these radical rooftop extensions, a harm which is further compounded by the proposed tower at No. 31 Bury Street. 4. Views of the Tower of London

	The development would adversely affect the setting of the Tower of London World Heritage Site by causing less than substantial harm to LVMF view 10A.1. Whilst we acknowledge a reduction in height from the previous application 20/00848/FULEIA, we do not consider this sufficient to mitigate the adverse impact on the setting of the Tower of London. Policy HC4 of the London Plan (2021) notes that proposals should not harm, and should seek to make a positive contribution to, the characteristics and composition of strategic views and their landmark elements, also stating that: "they should also preserve and, where possible, enhance viewers' ability to recognise and to appreciate Strategically Important Landmarks in these views". The scheme cannot be considered in compliance with this policy. 5. Unsustainable development This application cannot be considered sustainable development. The demolition of No. 31 Bury Street (Bury House) would generate an embodied carbon footprint on a scale that runs counter to Para 157 NPPF (2023) and Policy CS15 of the City of London Local Plan (2015) which provides that the demolition should be avoided through the reuse of existing buildings and their structures. This development would further contradict emerging policy which recognises the wider benefit in heritage terms of the retrofit first approach. The City of London Corporation is currently consulting on Planning for Sustainability Supplementary Planning Document (SPD). Chapter 3 [Retrofit and Reuse] states that, "in the City of London context, retrofitting existing buildings contributes to preserving and enhancing the sensitive character of conservation areas, creating an architecturally innovative environment, and contributing towards making

	the City a leading leisure and culture destination". We consider this application fails to meet national and local policy on sustainability grounds and runs counter to emerging guidance on sustainable development. Conclusion For the reasons outlined above, SAVE objects to this planning application on heritage and climate grounds, and we call on the Local Planning Authority to refuse planning permission. **Officer response: Comments noted. The matters raised are addressed in the Tall Building, Architecture, Heritage and Strategic Views and Sustainability sections of this report.**
Historic Buildings and Places	Object to the proposal. Holland House is a Grade II* listed building constructed between 1914-1916 and designed by the eminent architect Hendrik Petrus Berlage for a shipping company. Berlage was a major architect in the Netherlands and Holland House was a rare commission in England. Berlage took inspiration from the works of pioneering American architect Louis Sullivan. It is noted for its pronounced vertical ribs, faience cladding and its elaborately tiled entrance lobby, and is one of the first steel framed structures within the City. Holland House is also a key contributory building within the newly established Creechurch Conservation Area. The adjacent Renown House is a non-designated heritage asset constructed in 1912, designed by Delissa Joseph for the Bunge & Co import-export trading business. The building contributes to the setting of Holland House and character of the Creechurch Conservation Area.

	HB&P objects to the proposed four-storey extension to both Holland House and Renown House. It is an intrusive, bulky, and top-heavy addition to both buildings that fails to respect their proportions and scale. The extension would result in the loss of historic fabric, particularly within Holland House at roof level and the rear wall to provide open floors and connections to the new proposed tower at No. 31 Bury Street. The cumulative impact of the loss of so much building fabric, as well as the damaging additions has a considerably negative impact on the integrity of this heritage asset and its historic architectural interest. The construction of the 43-storey tower at 31 Bury Street would have a significant impact on the appearance and special architectural and historic character of the Creechurch Conservation Area. The concept of a tower with a conservation area predominantly characterised by low and medium height buildings would compromise this character and cause irreparable harm to the setting of several key listed buildings, including Holland House and the Bevis Marks Synagogue. Policy: The total inappropriateness of a tower within a conservation area is clearly stated in the City of London's Adopted Local Plan (2015), notably Core Strategic Policy CS10: Design, which requires "that the bulk, scale, massing and height of buildings are appropriate to the character of the City and the setting and amenities of surrounding buildings and spaces". Policy CS14: Tall buildings states "Refusing planning permission for tall buildings within inappropriate areas, comprising of conservation areas". Chapter 16 of the NPPF (2023) manages change within the historic environment. Paragraph 205 states that "When considering the impact of a

	proposed development on the significance of a designated heritage asset, great weight should be given to the asset's conservation". And at Para 206: "Any harm to, or loss of, the significance of a designated heritage asset (from its alteration or destruction, or from development within its setting), should require clear and convincing justification." Section 16 (2) of the Planning (Listed Buildings and Conservation Areas) Act 1990 requires that, in considering whether to grant listed building consent for any works the local planning authority shall have special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses. Recommendation: The proposal is clearly contrary to the local plan and to national planning policy by virtue of the tower's scale and height, and by the extent and bulk of the alterations and additions proposed to the grade II* Holland House. It should therefore be refused. **Officer Response: Comments are noted. The impact of the development on heritage assets is assessed in 'Design and Heritage' section of the report.**
The Georgian Group (letter dated 8 May 2024 and email received on 24 October 2024 advising that the additional information does not address their original comments)	Summary The Georgian Group objects to the applications for Planning Permission and Listed Building Consent. The Group's statutory remit is 1700-1840 and it is only buildings within that period referred to in this letter. For buildings outside this period, the Group defers to the expertise of our sister national amenity societies. The location, height and massing of the proposed development would cause considerable harm to the significance of Bevis Marks, St Botolph's Church and the Creechurch Conservation Area. The proposed development is defined as a tall

	building and therefore in line with policy CS14 of the existing local plan should not be permitted within a conservation area. Consequently, the development would be contrary to policy D9 of the London Plan. The height and massing of the building would cause considerable harm to the three heritage assets referenced above and is therefore contrary to legislation as well as national and local policy relating to heritage assets. The Georgian Group is aware of the consultation on the proposed City Plan 2040 and will be making representations to address specific concerns with the plan. Proposals and Their Impact Bevis Marks Synagogue The courtyard wrapped around Bevis Marks should be seen as an extension of the building due to the vital liturgical function it plays in the workings of the synagogue. The courtyard forms the immediate setting of the building and allows visitors to appreciate the unique setting and appearance of the building. The setting of Bevis Marks contributes greatly to the significance of the building, allowing light into the synagogue which is integral to the practices of Judaism. The proposed development as shown within the submitted HTVIA would be a dominating visual intrusion on the courtyard and setting of the synagogue. Views 45a and 45b show the impact the proposed tall building would have on the setting of Bevis Marks and the synagogue. The height, massing and positioning of the proposed tower would have an overbearing impact on Bevis Marks harming the setting and the ability to experience the building. Owing to the impact the proposed tall building would have on the setting of Bevis Marks the

	level of harm would be towards the higher end of Less than substantial due to the importance of the setting and the potential for reduced light. St Botolph Without Aldgate The spire of St Botolph's church is prominent within the local environs and views within the Creechurch Conservation Area. It is identified within the City of London Protected Views SPD as being a church with a 'skyline presence'. The prominence of St Botolph's spire can be appreciated from along Aldgate High Street looking West and from the Minories looking North. Kinetic views of St Botolph's and its spire are permitted when moving around the Creechurch Conservation Area and the wider surroundings which all contribute to the significance of the building. The applicant has provided views towards the church within the submitted HTVIA on pages 189-194 and identified as views 38 and 39. View 38 is situated along Aldgate High Street and shows the proposed development rising above One Creechurch Place, a building which harms the setting of the church and detracts from the interest of the Creechurch Conservation Area. The cumulative view shows the proposed tall building grouped in with 100 Leadenhall Street and 1 Undershaft. The height, massing and proximity would challenge the landmark quality of St Botolph's Church which is more evident within view 39 situated further east along Aldgate High Street. The impact of the towers would be further exacerbated in kinetic views along Aldgate High Street where the proposed development would be visible in the skyline behind the church. The positioning of the tower in relation to the spire of St Botolph's would challenge its presence on the city skyline and be a distraction in views down Aldgate High Street. Both the presence of the spire and views towards the

	church contribute to its significance and therefore the proposed development would cause an element of harm to St Botolph's Church. This harm would be at the low-middle level of less than substantial harm. Creechurch Conservation Area Views within the Creechurch Conservation Area contribute considerably towards its significance and allow for the special interest of the area to be appreciated. As referenced above concerning Bevis Marks and St Botolph's, the impact on those individual assets is similarly applicable to the wider character and appearance of the Creechurch Conservation Area which the proposed development would cause harm to. The special interest associated with the Creechurch Conservation Area is closely related to the three places of worship situated within the area. The proposed development would harm the ability to appreciate two of those in Bevis Marks Synagogue and St Botolph's Church which fall within the Georgian Group's statutory remit. The Group defers to the expertise of our sister National Amenity Societies on buildings which fall outside of our remit. A further characteristic that contributes to the special interest of the conservation area is the proliferation of historic open spaces including the courtyard of Bevis Marks Synagogue. The proposed development would have a negative impact, as referred to above, on the courtyard of Bevis Marks, and the churchyard of St Botolph's owing to the impact on their setting which in turn would cause harm to the character and appearance of the Creechurch Conservation Area. It is evident from the views submitted within the HTVIA that the proposed development would pose an incongruous element to the area and

	would harm the prevailing character and appearance of the Creechurch Conservation Area. The level of harm would be at the upper end of less than substantial harm, boarding on substantial. The Georgian Group's Recommendation The proposals would cause harm to the significance of Bevis Mark Synagogue, St Botolph's church and the Creechurch Conservation Area and would therefore be contrary to legislation as well as national and local policy as set out above. The Georgian Group recommends the applications for Planning Permission and Listed Building Consent be refused by your local authority. In determining this application, you should bear in mind the statutory duties contained within sections 16(2), 66(1) and 72(1) of the Planning (Listed Building and Conservation Areas) Act 1990. **Officer response: Comments noted. The matters raised are addressed in the Tall Building, Architecture and Heritage and Strategic Views sections of this report.**
Conservation Area Advisory Committee	The Committee strongly objected considering that the development proposals would result in the gross overdevelopment of this site in the Creechurch Lane Conservation Area, with a significantly negative impact on the character and appearance of the immediate Conservation Area and its setting. The proposals were considered to be highly damaging to the local townscape quality in the nearby streetscene context, with harmful consequences for important listed buildings that were in close proximity. The lack of architectural quality and refinement of the

	proposals was noted, together with their significant negative impact on wider townscape views and heritage context of the site's City/central London location. **Officer Response: Comments are noted. The impact of the development on heritage assets is assessed in in the Tall Building, Architecture and Heritage and Strategic Views sections of this report.**
Society for the protection of ancient buildings (letters dated 14 May 2024 and 6 November 2024, reiterating their objection)	The SPAB has been made aware of the above application and is writing to register its strong objection on the basis of the serious harm that would be caused to the Bevis Marks Synagogue and the Creechurch Conservation area. The proposal for a 45 storey office block at 31 Bury Street bears striking similarities to the highly controversial scheme which was refused by your authority in 2022. The major area of difference would appear to be the justification offered by the applicant for the scheme. Much is made of the new building's sustainability credentials, the economic benefits that would flow from it, and the provision of space for a variety of community uses. In our view, these arguments are tenuous at best and do not provide adequate justification for the substantial harm that would be caused to the Synagogue and the conservation area. Any new building of the type proposed would be expected to demonstrate solid sustainability credentials, so this cannot be considered as a determining factor when weighing justification against harm to an exceptional heritage asset. Also, and quite simply, the most sustainable building is one that already exists and we cannot see that the applicant has fully understood or explained the total carbon lifecycle cost of the proposed development. We are also not convinced that there is a requirement for community usage on the scale envisaged by the applicants, and indeed the location of our own offices in the City of London allows us to

	witness on a daily basis the many underused and often cavernous 'community' spaces that now occupy the ground floor of tall buildings at the expense of genuinely useful and affordable small scale businesses and community premises. The previous application was rightly refused by your Planning Committee based on the serious harm that would have been caused to the Synagogue. To that harm must now be added the very damaging impact on the newly designated Creechurch Conservation Area that would result if the application were granted. The height, scale, and mass of the proposed tower would overwhelm the Conservation Area and cause a high level of harm to key views. We cannot think of any precedent that would support your Authority in granting a permission that would be so clearly in contravention of the requirement of Section 72 of the Planning (Listed Buildings and Conservation Areas) Act 1990 that special attention must be paid to the desirability of preserving or enhancing the character or appearance of the area. Indeed, doing so would set a very damaging precedent. The SPAB urges that the application be refused by your local authority. **Officer Response: The impact of the proposed development on the Bevis Marks Synagogue as a heritage asset and on the Creechurch Conservation Area are assessed in the Heritage section of the report.** **The proposed community, cultural, educational, sports, amenity offer of the proposed development are assessed in the Land Uses section of the report. This offer is considered being unique taking into the wide variety of uses and flexibility of space. The benefits of the proposed development against the identified less that substantial heritage harm are assessed in the Assessment of Public**

	Benefits and paragraph 208 NPPF balancing exercise section of the report. **The Whole life-cycle carbon emissions of the proposed development are assessed in the Sustainability section of the report.**

Letters of Representation

56. One thousand, four-hundred and twelve (1412) letters of objection have been received from members of the public, and various organisations.

57. The responses from non-statutory organisations who have objected are set out below:

Example representations from (non-statutory) organisations, groups and individuals (objections)	Comments and Officers Response to Comments
Rabbi Morris (Bevis Marks Synagogue)	I'm writing to object in the strongest terms to the proposed redevelopment at 31 Bury St. I write as a private resident in the City of London and as the rabbi of the Bevis Marks Synagogue. I object due to the substantial harm the proposed tower would have on the functioning and viability of the synagogue, its Heritage Centre, its enormous heritage value, and on me as a local resident. The developers treat the synagogue as a heritage asset but fail to address the harm their proposal would cause to the synagogue's primary function as a house of worship and community space. The harm caused by this proposed development, both in its own account and due to the cumulative effect of previously built and consented tall buildings around the synagogue, puts at risk the core purpose of the Bevis Marks Synagogue as a fully functioning place of Jewish worship. Thus, the harm that

	puts this at risk must be classified as substantial harm, or even total loss of significance. Before delineating my concerns, it is necessary to state that this process has caused significant distress within the Jewish community. Any consultation would be challenging, but to have to repeat this process for an application which is clearly inappropriate and has already been rejected is oppressive in nature. In fact, this is now the fifth consultation that our community has needed to engage in over these matters over the past two years. Each consultation further drains our resources and places an immense burden on our community. We are disappointed that repeated efforts to work collaboratively with the Corporation have failed to result in policies that prevent this kind of harmful application from coming forward, something which we earnestly hope can still be rectified. **Officer Response: The comments are noted and mainly addressed in the Heritage, Environmental Impacts and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report. It should be noted that the LPA's role is to assess the applications that are submitted for determination. The LPA cannot control or preclude the submission of an application. With regard to the formation of the local policy framework, it is noted that this is outside this application process and there are separate guidelines and legislation assessing its processes and procedures.** For clarity, each time we seem to have achieved a desired result, the Corporation has pulled back. 1. When proposing a Conservation Area, there was an inexplicable attempt by the Corporation to exclude 31 Bury St from this area. 2. Only weeks after adopting the CA with 31 Bury St included, the Corporation published its draft local plan which proposes to remove a previous

	restriction on tall buildings in Conservation Areas. 3. In putting forward an 'immediate setting' protection scheme for the synagogue in the draft local plan (a concept invented by the City, which has no legal status), the City has attempted to deny the impact of a tower at 31 Bury St on the synagogue, despite robust professional representations made by scholars to explain the harm that a tall building at that site would cause. While the policy gives the impression of protecting the synagogue, in effect it justifies substantial harm to it. In total, these moves may be construed by some to be in support the applicant, despite the harm their proposal would cause to the synagogue. I hope this has not been willful, but it does reflect a general ignorance for Judaism and Jewish culture, a serious inadequacy for the City which I hope this consultation will help with addressing. I now attempt to explain my views in an organised manner. **Officer Response: Comments noted. It is not considered that this report and the assessment of the current application is the appropriate process to consider or comment on the formulation of Planning Policy or on the designation of Conservation Areas. In determining the application the CoL must comply with the Public Sector Equality Duty, in accordance with section 149 of the Equality Act 2010. That duty is considered later in this report.** 1. It is difficult to overestimate the significance of Bevis Marks Synagogue as the first purpose-built Jewish house of worship in England following the 1656 resettlement. It is also the only non-Christian house of worship in the City of London. Finally, and perhaps more importantly, due to the Holocaust and other Jewish expulsions in other places

	around the world, it is the only surviving synagogue in the world to have maintained regular worship dating back to 1701. It is therefore of the highest significance locally, nationally and internationally. 2. Furthermore, the synagogue maintains a unique form of Jewish worship, that of the Spanish & Portuguese Jews. Many of its melodies, traditions and rituals are preserved only within this congregation, making its maintenance of great importance to the preservation of its unique intangible heritage which would otherwise be lost. **Officer Response: These comments are noted and are taken into account in the assessment set out below.** 3. The synagogue receives low levels of light, but just enough to maintain Jewish worship which requires sufficient light for young and old alike to be able to read hundreds of pages of prayers. However, it cannot absorb further reductions before the maintenance of this worship becomes untenable. The noticeable impact on light reduction from 1 Creechurch makes clear that this impact is real. The developer's admittance of reduction in our light levels affirms this reality. However, its dismissal of these reductions as minor or negligible is detached from the reality we face where further reductions are unacceptable as the cumulative impact of yet another reduction cannot be further tolerated. When light levels are poor, each further reduction, even amounts that in other contexts would be considered minor, in this context will be perceptible and several damaging. Without doubt then, with respect to internal light levels, the proposed tower would cause substantial harm, by risking the viability of use of Bevis Marks Synagogue for its original purpose, as a place of Jewish worship.

	Officer Response: Comments noted. The impact of the development on the internal light levels of the Synagogue is assessed in the Daylight, Sunlight and Overshadowing section of this report. This takes into consideration impacts of the consented and non-consented schemes. 4. As reported during the last application by Dr Joseph Spitzer, president of the Initiation Society which oversees Jewish ritual circumcision in the UK, any further reduction in light levels will make it impossible to continue to safely carry out ritual circumcision, a core marker of Jewish identity. The existence of multiple historic circumcision chairs in the collection of Bevis Marks Synagogue testifies to the long history of this ritual being performed at Bevis Marks Synagogue, as it continues to be maintained at the synagogue even until today. Rendering the performance of this important Jewish marker impossible at Bevis Marks Synagogue would surely be a substantial harm. **Officer Response: The above matter is assessed in the Daylight, Sunlight and Overshadowing, Heritage and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report.** 5. The location of the proposed tower along the southern horizon, adds to the substantial harm it would cause to the use of Bevis Marks Synagogue as a synagogue and to our worshipping community. Each month, Jews gather outside after dark to recite kiddush levana, as the moon's waxing crescent appears in the night sky. This proposed tower will obstruct our visibility of this phenomenon, making it impossible to recite this prayer. This is a direct obstruction to our freedom of worship as we have enjoyed it in this place since 1701.

	Officer Response: The impacts of the development on the visibility of the night sky and moon are assessed in the Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report. 6. The courtyard is also an important part of the community space, as a location where we celebrate festivals (such as Succot), hold receptions (for weddings and after services) and conduct events (such as BBQs and socials for City workers). The overshadowing of this space would significantly harm the amenity use of this space, particularly during the Spring/Summer months when it is more often utilised. **Officer Response: Comments noted. The impact of the development on the courtyard of the Synagogue is assessed in the Daylight, Sunlight and Overshadowing section of this report. This takes into consideration impacts of the consented and non-consented schemes.** 7. The courtyard is also an essential part of the visitor experience of our new visitor centre. It is where visitors will first enter, purchase admission, begin their audio guide, study a bronze map of the site and surrounding area, and study the exterior of the synagogue. The courtyard is a destination in its own right, not just a passage to the synagogue. The courtyard will also be used as part of our cafe. A decrease in amenity of this space risks the viability of our new venture, which in turn places the future viability of the synagogue at risk. It is a shared human experience that people don't tend to enjoy spaces that are in the shadows. As such the proposed tower would make the space unwelcoming and unappealing to visitors and community members alike, removing its significance. This impact must be considered significant harm.

	Officer Response: Comments noted. The impact of the development on the light levels of the Synagogue's courtyard is assessed in the Daylight, Sunlight and Overshadowing section of this report. 8. Developers have admitted that the proposed tower would reduce light levels in the Beadle's House, but have discounted these harms due to their identification of the upper floors as bedrooms. However, on account of the bright light in these upper floors, they are utilised throughout the day as rooms for reading (with reading chairs), a key need for a rabbi as study is a religious requirement, and as a playroom for the rabbi's family. The Beadle's house is therefore used throughout the day and reductions in its remaining best light must be considered a significant harm to both a resident and to the heritage of this historic property. **Officer Response: The impact of the development on the light levels on the nearby residential properties including 2 Heneage Lane is assessed in the Daylight, Sunlight and Overshadowing section of this report.** 9. A near identical tower proposal for this site was rejected in 2021. The reason cited on that occasion was the harm it would cause to the synagogue's setting. This new submission is little changed in any way that reduces the harm it would cause to the above as it would continue to dominate and overshadow the synagogue site, detracting from the significance of the synagogue and its courtyard. **Officer Response: The previous decision and the importance of consistency in decision making is material and should be taken into account in making a decision on this application The previous decision is considered later in this report. Assessment**

	of the impacts of the development on setting of the Synagogue are assessed in the Heritage section of this report and those related to overshadowing of the courtyard in the Daylight, Sunlight and Overshadowing section of this report. 10.Indeed, since then, the City of London established the Creechurch Conservation Area, further increasing the threshold for allowing harm to sites within the CA, most notably the Grade-1 listed Bevis Marks Synagogue. 11.Beyond this, the Conservation Area report identified as significant the townscapes down Heneage Lane and down Mitre St, both of which culminate in Bury House. The report noted the sense of coherence of these streets due to the similar scale of the buildings along them. A tower at 31 Bury St would destroy this historic character and is therefore completely out of step with the new Conservation Area. As such, it would cause significant harm to the Conservation Area as a whole. **Officer Response: The abovementioned matters are assessed in the Heritage section of this report.** 12.Most clearly, there is a provision in the current local plan that bars tall buildings in Conservation Areas, making it difficult to understand how this application moved beyond the pre-app stage of planning. Regardless, for this reason alone it should be refused out of hand. Furthermore, the possibility that this policy may be removed from the Local Plan 2040 has no bearing at this point, especially when considering that it is not without considerable controversy, which according the planning guidelines means it cannot be relied upon at this stage in the local plan process before adoption.

	Officer Response: The emerging plan is a material consideration. Paragraph 48 of the NPPF states that "Local planning authorities may give weight to relevant policies in emerging plans according to: a) the stage of preparation of the emerging plan (the more advanced its preparation, the greater the weight that may be given); b) the extent to which there are unresolved objections to relevant policies (the less significant the unresolved objections, the greater the weight that may be given); and c) the degree of consistency of the relevant policies in the emerging plan to this Framework (the closer the policies in the emerging plan to the policies in the Framework, the greater the weight that may be given)." It is considered that at this stage (following Reg 19 public consultation and prior to examination in public) the emerging City Plan 2040 carries limited weight to the determination of this application. 13.Furthermore, that Local Plan states that while the eastern cluster is designated for tall buildings, not every site within it will be appropriate for tall buildings. If this isn't the case example for that I can't understand where it wouldn't be acceptable. **Officer Response: This matter is addressed in the Architecture, Urban Design and Public Realm section of the report.** 14.For the purpose of clarity, I wish to confirm the near-constant anticipated use of the synagogue site for religious, communal and tourist purposes. Some of this may not be self-evident due to the impact of covid and the launch of our NLHF supported redevelopment project which began in 2020 and continues. As a result, we've had to step back from much of our usual activity, in anticipation of a large increase in activity from

	pre-2020 numbers. This will include daily worship, both in the morning and midday, and on the Sabbath and Jewish festivals. Furthermore, we will regularly conduct evening events, and weekend weddings. Finally, our visitor centre will be opened Sunday-Friday, welcoming at least 25,000 visitors a year including thousands of local school-children. All of these activities will be harmed in different ways by the proposed tower. **Officer Response: Comments noted. The functions of the Synagogue have been considered throughout the report assessing the impact of the development on the Synagogue, its amenities and its functions, as a place of worship and visitor centre.** 15.It is unconscionable that at a moment when Bevis Marks Synagogue is about to embark on a new chapter of vitality in its storied history, that the City of London would approve a development that puts its very future at risk, and certainly places it in a more challenging situation. This would be far from celebrating the synagogue's heritage and ongoing contribution to the City of London. **Officer Response: Comments noted. Consideration of the impacts onto the Synagogue as a place of worship, heritage asset and as a visitor centre are considered in the main body of the report. The decision about the acceptability of the proposed development is yet to be made at the PASC committee.** 16.The synagogue as a whole should be seen as one of the best expressions of the 'Destination City' vision, and harm to it must be avoided. **Officer Response: Comment noted.**

	17.The generic public benefits offered by the developers do not in any way counteract the substantial and enduring harm their proposed tower would cause to the synagogue and its functioning as a living place of Judaism, one of the most unique synagogues in the world. Permission would further chip away at the ability of Bevis Marks Synagogue to function as a synagogue, placing it at existential risk of becoming yet another 'heritage asset'. Once the unbroken chain of worship is broken, it can never be repaired, and all that Bevis Marks Synagogue is and represents will be lost to history. **Officer Response: Comment noted. The impact of the proposed development on the Bevis Marks Synagogue as a place of worship and as a heritage asset are assessed in the Heritage, Daylight, Sunlight and Overshadowing, Overbearing Impacts and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report. The proposed community, cultural, educational, sports, amenity offer of the proposed development are assessed in the Land Uses section of the report. The benefits of the proposed development against the identified less that substantial heritage harm are assessed in the Assessment of Public Benefits and paragraph 208 NPPF balancing exercise section of the report.** 18.With further regard to the proposed benefits made by the applicant, making use of lower floors for charities does not justify the construction of a tower. These benefits could equally be offered even with a shorter building, just as they are currently being offered to charities with the current Holland House building. Furthermore, the charity space is in Holland House, which is adjacent to Bury House. Just because the developers own both properties, the use of Holland House does not constitute a public

	benefit to the Bury St application that should justify the substantial harm that Bury House would cause to the Bevis Marks Synagogue. In addition, the use of this space by non-local charities does not justify harm to a local community (Bevis Marks) who should be the primary concern of neighbouring developers, not sidestepped as this proposal tries to do. Finally, these benefits are not unique, and could equally be offered in any other scheme. Therefore they are not a justification to cause harm to the functioning and setting of the synagogue, a site that irreplaceable and altogether unique, and is of the highest level of significance. **Officer Response: It is noted that none of the current meanwhile uses are secured or controlled by condition or obligation for charity purposes and therefore, these charity uses can cease at any time. Furthermore, the local planning authority can only assess a development that is before them for determination. The impact of the proposed development on the Bevis Marks Synagogue as a place of worship and as a heritage asset are assessed in the Heritage, Daylight, Sunlight and Overshadowing, Overbearing Impacts and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report. The proposed community, cultural, educational, sports, amenity offer of the proposed development are assessed in the Land Uses section of the report. The benefits of the proposed development against the identified less that substantial heritage harm are assessed in the Assessment of Public Benefits and paragraph 208 NPPF balancing exercise section of the report.** In sum, this scheme is so ludicrously inappropriate that I can't believe developers have not withdrawn their application. If we were in a court,

	I'd ask the City to throw out the application as frivolous. Save that, I implore the Corporation to refuse this application and once and for all protect the integrity and future of Bevis Marks Synagogue.
Roger Hepher, on behalf of the S&P Sephardi Community (15 May 2024, 15 November 2024 and 28 November 2024)	**Officer comment: A summary of the letters is included below. Full versions of these letters are provided as part of the background papers.** The letter received on the 15th May is summarised below: The proposals will have a substantial and wholly unacceptable impact on the historic, Grade I Listed Bevis Marks Synagogue and the Creechurch Conservation Area within which it sits; and an unacceptable impact upon other heritage assets in the vicinity. A previous application at this site (ref. 20/00848/FULEIA) was refused only two years ago on the basis of harm to Bevis Marks Synagogue and to the Tower of London World Heritage Site. Put simply, the revised proposals do not overcome this heritage harm or come anywhere close to delivering sufficient public benefits to outweigh it. On this basis and in accordance with planning policy, the applications should be refused. **Officer Response: The position of the S&P Sephardi Community is noted and is taken into consideration in the assessment set out below. The previous decision and the importance of consistency in decision making is material and should be taken into account in making a decision on this application. The previous decision is considered later in this report.** - Bevis Marks Synagogue is a significant building, with outstanding communal, architectural, artistic, historic and archaeological significance. It has been continuously in use for worship since its construction. - The Synagogue's courtyard is of value due to it use as a social and religious space, for gathering before and after services and for holding events. - The sky view at Bevis Marks is central to a number of rituals. The Jewish Sabbath concludes at the appearance of three stars which first appear in the

	darkening eastern sky. The beginning of each new Jewish (lunar) month is marked by the appearance of the new moon, at which time a special prayer (kiddush lebana) is recited. - There is spiritual significance of natural daylight within the Synagogue. The Synagogue has already experienced a substantial reduction in natural light as a result of the construction of other buildings. Further deterioration of the natural light will have profound implications for the religious value of the Synagogue as a spiritual space and house of Jewish prayer. **Officer Response: Comments noted and are addressed in the Heritage, Daylight, Sunlight and Overshadowing and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report.** - A Heritage Assessment of the proposed development has been prepared by Alec Forshaw on behalf of the objectors identifying substantial harm to the Bevis Marks Synagogue and the Creechurch Conservation Area. Less than substantial harm has been identified in several other heritage assets. - It is also stated that the proposed repairs and renovations to Holland House should be regarded as routine and not a benefit. - The proposed reinstatement of Heneage Lane is at a different angle from the original lane and it would be gated and closed at night. - The proposed reinstatement of St James Court significantly reduces the size of the existing open courtyard **Officer Response: The impact of the proposed development heritage assets is assessed in the Heritage section of the report.** - The fact that the Synagogue is already going to experience loss of daylight is not an argument in favour of the Applicant; rather, it demonstrates the need to protect the precious remaining daylight and for the current proposals to come under even greater scrutiny. - No account is taken of the fact that the Synagogue is illuminated primarily by natural light and by

	candles, or that the reading of printed scripts is fundamental to worship. - The loss of nearly a fifth of the sunlight within the courtyard cannot rationally be considered to be of little consequence in the context of an already very low level of sunlight. - No consideration is given to the fact that the synagogue is a centre of a thriving community and the courtyard is used fir several religious events and to view the heritage asset. **Officer Response: The abovementioned comments are assessed in the Daylight, Sunlight and Overshadowing and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report.** - At Bevis Marks, the view of the passage of the moon across the night sky is highly symbolic and intimately related to the traditions and rituals of the Synagogue, and is a most important aspect of the heritage value of the building. **Officer Response: Comments noted and are addressed in the Heritage and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report.** - The Equality Statement is inadequate in assessing the proposed impacts of the development on the operation of the Synagogue. - Not only does the Equality Statement demonstrate a lack of understanding of the impact of the proposals on the Synagogue. It implies that the impact of the proposals on the Synagogue is outweighed by other factors such as the increased provision of commercial floorspace. **Officer Response: The City, as a public authority, in exercise of its functions, has given due regard to the need to: a) Eliminate discrimination, harassment, victimisation and any other conduct that is prohibited under this Act; b) Advance equality of opportunity between persons who share a relevant protected characteristic and persons should do not share it; and c) Foster good relations between persons who share a relevant protected characteristic and persons**

	who do not share it. The abovementioned matters are addressed in the Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report. - The operational jobs are capable of being achieved on many other, less sensitive, sites. - There is no convincing evidence that the existing building is incapable of re-use. - There are many other less sensitive sites where a high quality tall building could be delivered. This urban block, which is part of a Conservation Area, does not need "transformative reimagination" - The community workspace is a potential public benefit, though it is unclear whether it would meet a specific need. It could also be delivered on another, less sensitive site. - The community, multi-faith, cultural and education offer is a public benefit that can be delivered elsewhere. - There is no shortage of flexible retail space in the City. - There is no need for public realm enhancement within what is a Conservation Area. - A sensitive re-use of the existing buildings could achieve a substantial increase in BNG. - The package of public benefits proposed by the applicants are typical benefits which any major commercial scheme would be expected to deliver. **Officer Response: The proposed uses and public benefits of the proposed development are discussed through the report and in the in the Assessment of Public Benefits and paragraph 208 NPPF balancing exercise section of the report.** <u>The letter received on the 15th November included the following additional information:</u> - A daylight/sunlight study. The assessment of the lighting levels was carried out between 26th February 2022 to 2nd April 2024 using two illuminance meters. - Responses to the letter prepared by the Applicant's agents DP9 dated 27th September 2024, specifically in relation to the GIA Lunar Transit Study; - A letter from Professor Barry Stiefel, Professor of Historic Preservation & Community Planning at the

	College of Charleston, regarding the significance of the sky view for Bevis Marks Synagogue; and - The findings of a review of the applicant's Equalities Statement prepared by the barrister Claire Nevin. Generally the position remains that the proposals would have a substantial and wholly unacceptable impact on the historic, Grade I Listed Bevis Marks Synagogue and the Creechurch Conservation Area within which it sits; and a less than substantial and unacceptable impact upon other heritage assets in the vicinity. The revised proposals do not overcome this heritage harm or come anywhere close to delivering sufficient public benefits to outweigh it. **Officer Response: The position of the S&P Sephardi Community is noted and is taken into consideration in the assessment set out below.** The objector considers that the applications should be refused for the following reasons: 1. The impact upon the Synagogue (the first previous Reason for Refusal) has not been overcome; the new scheme would be little different from the previous one in its impact. There is now even stronger evidence of adverse impact, including a better articulated objection concerning the heritage/religious/cultural significance of the sky view, and empirical evidence of poor daylighting. **Officer Response: Officers address the abovementioned matters primarily in the Heritage, Daylight, Sunlight and Overshadowing and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report.** 2. The impact on the World Heritage Site (the second previous Reason for Refusal) has not been overcome; the modelling of the new scheme is a little different, but it still has more-or-less the same substantial impact on a very important view of the Tower of London.

	Officer Response: Officers respond to matter in the Heritage sections of the report. **On both abovementioned points the heritage harm against the public benefits are assessed the Assessment of Public Benefits and paragraph 208 NPPF balancing exercise section of the report.** 3. The site is now in a Conservation Area, meaning that the scheme's heritage impact (especially on the Synagogue, which is in the same CA) should be given even more weight. City Plan Policy CS14 is very specific in saying that tall buildings proposed in Conservation Areas will be refused. **Officer Response: Officers respond to matter in the Heritage sections of the report.** 4. The claimed heritage benefits amount to nothing of substance: it is ridiculous to claim that a 43 storey tower will enhance the Conservation Area, and adding a 4 storey upward extension to Holland House represents harm to that heritage asset, not sensitive restoration. **Officer Response: This matter is addressed in the Heritage sections of the report.** 5. The claimed other public benefits must be viewed with deep scepticism, and certainly don't amount to something to which "very great weight" should be attached. For example, the three storeys of "public access" appears to be nothing more than a meanwhile use. **Officer Response: The proposed uses and public benefits of the proposed development are discussed through the report and in the in the Assessment of Public Benefits and paragraph 208 NPPF balancing exercise section of the report.** 6. Insofar as there could be some heritage/public benefit, no attempt has been made to demonstrate that the proposed development is the minimum necessary to achieve it. The applicants maintain they are not running an enabling development argument but, in fact, they are. They are arguing to be allowed to erect a building that is specifically contrary to development plan policy, on the basis

	that their claimed public benefits outweigh the policy presumption and other material considerations. The planning system should only ever accept such an argument if it is demonstrated that what is proposed is the minimum necessary to achieve the claimed benefits. **Officer Response: The Applicant has confirmed that they are not putting forward an enabling development argument and the local planning authority has not assessed the proposed development as such. The proposed development involves three building, of which one is a listed building. Any heritage harm identified that is less that substantial is assessed against the public benefits of the development. These are discussed in several sections of the report, including the proposed uses, section, the heritage section and the Assessment of Public Benefits and paragraph 208 NPPF balancing exercise section of the report. Spatially, these benefits are delivered in all three buildings of the proposed development. Furthermore, the local planning authority can only assess a development that is before them for determination.** 7. The building is believed to be substantially unviable, and the small size of the site is such that it is unlikely a tall building would ever be viable, let alone one that relies upon substantial expenditure upon public benefits for its justification. Planning permission should not as a matter of principle be granted for developments that are unlikely ever to be built (or unlikely to be built except with significant amendment of the proposal and/or the package of claimed benefits which accompanies it). **Officer Response: A viability assessment has not been requested to accompany the application, as this is not a policy requirement for this type of development. It is considered reasonable to assume though that the proposed development has been tested commercially for its viability by the Applicant. Without any evidence being provided by the objector, the local planning authority cannot come into conclusion based on assumptions.**

	The objector concludes that the additional information produced by the applicant or their agent in response to our previous objection do not change their position as set out before. The previous application at this site was correctly refused on the basis of heritage harm including to Bevis Marks Synagogue. The level of harm is now significantly greater because a new heritage asset - the Creechurch Conservation Area - has come into existence, and because the significance of the sky view is now better understood. The revised proposals do not begin to overcome the heritage harm or deliver sufficient public benefits to outweigh it, let alone to justify a clear conflict with City Plan Policy CS14. **Officer Response: The comments are noted and is taken into consideration in the assessment set out below. The previously refused application has been taken into consideration for the assessment of the current application. Matters in relation to the level of harm of the proposed development on the identified heritage assets is assessed in the heritage section of the report. The impact of the development on the visibility of the sky and the moon are assessed in Heritage and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report.** <u>The letter received on the 28th November included the following additional information:</u> - An assessment of the impact on the Synagogue of the proposed development in Heritage/Townscape terms, prepared by Donald Insall Associates (Appendix 1); and - A paper by Rabbi Shalom Morris providing further contextual detail on Bevis Marks Synagogue and its setting (Appendix 2). Heritage/Townscape Impact Assessment Donald Insall Associates has been instructed by The S&P Sephardi Community to prepare a professional third party assessment of the heritage impacts of the proposals, particularly the impact of the proposed development on the significance of Bevis Marks Synagogue. The report finds that, in summary, the proposals for the Bury

	Street tall building have a serious adverse impact on the setting and by implication on the special architectural and historic interest of the Grade I-listed Bevis Marks Synagogue. Guidance on assessing heritage significance in the NPPF (2023) and PPG (2019) defines significance as *'the value of a heritage asset to this and future generations because of its heritage interest. Significance derives not only from a heritage asset's physical presence, but also from its setting*'. This report finds that the significance of the building relates to its architectural quality and its historic significance: it has outstanding historic interest as the oldest purpose-built and continuously-operational synagogue in the UK, and it has special architectural interest as an accomplished Georgian building, but also as a building where this historic use is manifest in the fabric, including its generous extent of fenestration, as well assist courtyard setting which frames the building and allows community and religious activities to take place. The report concludes that the proposals for a tall building close to the site would cause a high level of harm to the significance of the Grade I-listed synagogue. This harm would result from overshadowing which would efface or seriously affect historic elements of the spatial quality of the architecture, namely the bathing of the interior in light from the south; harm the setting of the synagogue through dominating its important southern backdrop and preventing views to the sky and the moon; and finally, potentially jeopardise or at least diminish the use of the building by the community through reducing its ability to serve as a religious centre through reducing light to the interior and the ability to carry out certain services, including the Kiddush Levana which rely on views of the moon and, therefore, an open sky setting. **Officer response: The matters raised above are addressed mainly in the Heritage and Strategic Views, but also in the Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report.** Setting Study Rabbi Shalom Morris has prepared a study of the setting of Bevis Marks Synagogue, with reference to its specific

	cultural and religious context and Jewish sources. The report draws on sources including Jewish religious law and the communal records kept at the Metropolitan Archives, alongside discussion of the community over time and how it operates today. Reflecting on these sources, the report explains the wide-ranging harm that the proposed tower would cause to the significance of the Synagogue, in terms of harm to: • The original architectural intent of the Synagogue's design; • Religiously important sky views; • Interior light levels necessary for prayer; • The purposeful functioning of the architecturally significant windows; • The amenity of the communally important courtyard; • The meaning of the Synagogue's name; and • The economic viability of the site. **Officer response: The matters raised above are addressed in the Heritage and Strategic Views, Daylight, Sunlight and Overshadowing and in the Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report.** **Normally matters such as the financial impact on a neighbouring business or property values are considered to be private matters and not material planning considerations. Even if the view was taken here that income generation was relevant because of the listed status of the building, there is no evidence to suggest that the development is likely to impact on the number of visitors the synagogue will receive or the number of weddings held, and this would be difficult to quantify with any accuracy through a viability review.** The documents enclosed further support our client's position that the proposals would have a substantial and wholly unacceptable impact on the historic, Grade I Listed Bevis Marks Synagogue and the Creechurch Conservation Area within which it sits; and a less than substantial and unacceptable impact upon other heritage assets in the vicinity. The revised proposals do not overcome this heritage harm or come anywhere close to delivering sufficient public benefits to outweigh it.
Board of deputies of British Jews	I am writing to you, as I was forced to write to your predecessor in 2021, to object formally to this

	planning application which, if approved, would have a detrimental impact on the Jewish community's beloved Bevis Marks synagogue, the oldest continuously used synagogue in Britain which dates from 1701. This most recent planning application is no less harmful than the earlier one which thankfully was rejected, following widespread opposition. I write as President of the Board of Deputies of British Jews aware that my organisation, founded in 1760 to represent the Jewish community throughout the country, emerged from those Jews of Spanish and Portuguese heritage such as the founders of the Bevis Marks Synagogue. Modern British Jewish history was born at Bevis Marks when Jews first returned to this country following our expulsion in the 13th Century. It offered a safe haven to those who came from overseas and that feeling very much remains to this day. The synagogue is also the legacy of those who came before me in leading the community, and whenever I am at Bevis Marks I am humbled by that fact. At 45 storeys, the proposed building would destroy the southern sky view, which is an essential part of the setting of the synagogue and is important for the intangible qualities it contributes to our religious ritual. Not only will it shroud the building in shadow, but it will have a direct impact on the local communities weekly Sabbath rituals. In Judaism, it is essential that we judge the coming of the Sabbath, and the end of the Sabbath, by our view of the night sky and the visibility of the stars. Should this development go ahead, the view of the moon's passage across the sky, and many of the celestial bodies, would be blocked. Lastly, the synagogue, which is a Grade 1 Listed building will lose its character and significant beauty as a result of the proposed development. To add further insult to injury, the area has recently become the Creechurch Conservation Area, and this proposal flies directly in the face of the principles of conservation. I would urge you to

	share with those who will make the relevant decisions, how important the Bevis Marks Synagogue is both to the UK Jewish community, to the City of London, and to the UK as a whole so they can come to the best decision regarding our shared heritage and reject this application. **Officer Response: Comments noted. The impact of the proposed development on the Bevis Marks Synagogue as a place of worship and as a heritage asset are assessed in the Heritage, Daylight, Sunlight and Overshadowing, Overbearing Impacts and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report. The impact of the development on the Creechurch Conservation Area is assessed in the Heritage Section of this report. In terms of the night sky visibility and the moon passage the applicant has submitted a Lunar Transit Study, which has been third party reviewed. This matter is assessed in the Public Sector Equality Duty (section 149 of the Equality Act 2010) section of the report.**
Foundation for Jewish Heritage	I am writing to register the Foundation for Jewish Heritage's strong objection to the above application. Our objection relates to the negative impact that the proposed development would have on the Grade I listed Bevis Marks Synagogue (NHLE List Entry Number: 1064745). Bevis Marks is the oldest surviving synagogue in the UK and is arguably the most important Jewish heritage site in the country. The Synagogue is of exceptional significance both to the UK's Jewish community and in the history of the City of London, in which Sephardic Jews played a pivotal role. In respect of the previous application, our trustee Esther Robinson Wild wrote a comprehensive objection dated 01.02.21. All of the points made in this document apply to the new application. In addition, we would like to make the following

	points in support of our objection to the new application: 1. The alterations made to the proposal since the previous application do not address the grounds on which it was refused, including the unacceptable impact on the Synagogue. We welcomed the planning committee's refusal of the previous application and can see no reason for this decision to be undone by the new application. Indeed, the subsequent creation of the Creechurch Conservation Area and the widening of the new proposal's footprint strengthen the case for refusal. 2. The Foundation's previous objection stated that we expected a robust and thorough assessment of the significance of a Grade I listed heritage asset which may be impacted by a major development of this nature and that we were concerned by the absence of such. We remain concerned that no such assessment has been adequately carried out. The Environmental Statement Volume 2: Heritage, Townscape and Visual Impact Assessment submitted with this application includes a single page heritage assessment devoted specifically to Bevis Marks Synagogue (sections 8.124-8.139). It includes no attempt to assess the evidential or communal significance of the site, points raised in our previous objection. The assessment is incomplete and inadequate for a Grade I listed site of outstanding historical interest. We again call for a thorough Statement of Significance for Bevis Marks Synagogue to be prepared along with a robust assessment of potential harms to significance caused by the proposed development. 3. We fundamentally disagree with the assumption of the heritage assessment that the setting of Bevis Marks Synagogue makes no contribution to its significance, and that therefore the proposed development would result in 'no harm' to significance. We fully support Historic England's position that the setting does in fact contribute to

	the significance of the Synagogue. We believe that the proposed development will cause substantial harm to the setting of Bevis Marks Synagogue. 4. The proposed development sits within the Creechurch Conservation Area, which was created in part to achieve 'Fuller recognition of the Jewish history of the locality' (Creechurch Conservation Area Proposal, City of London Corporation, December 2023). The application must be determined in accordance with the City of London Local Plan 2015. Core Strategic Policy CS14: Tall Buildings clearly states that the City will refuse planning permission for tall buildings in conservation areas. The proposed development would contravene both CS14 and DM12.2 which states that development in conservation areas will only be permitted if it preserves and enhances the character or appearance of the conservation area. 5. The proposed development would mean that the Synagogue's courtyard would be overlooked to an unacceptable extent. The visualisation of the view from the courtyard submitted with the proposal (Environmental Statement Volume 2: Heritage, Townscape and Visual Impact Assessment, View 45a proposed, pp211-212) shows how there would be views into the courtyard from the majority of floors of the proposed Bury House. The Synagogue courtyard was designed as a secluded, peaceful and private space for spiritual practice. and has been used in this way for three centuries. The overlooking of the courtyard would represent a very substantial change to the privacy and intended atmosphere of the space. While we agree with the Environmental Statement that the change to the view from and into the courtyard will be 'large', we strongly disagree with the assessment of the view as being of only 'medium' sensitivity, and find it difficult to understand the conclusion that the effect would be 'moderate' and 'beneficial'. 6. The Foundation for Jewish Heritage is concerned with the conservation of Jewish built heritage. It is not a religious organisation; therefore we defer to

	the congregation of Bevis Marks Synagogue in assessing the impact of the proposal on their religious practice. We fully support the congregation's position that the proposed development would have a serious, negative impact on their ability to carry out religious rituals. We hope that the reasons for our objection will considered in your determination and would welcome the opportunity to provide further comments if needed. **Officer Response: Comments noted. The amendments from the previously refused application are discussed in the proposal section of the report. The impact of the proposed development on the Bevis Marks Synagogue as a place of worship and as a heritage asset are assessed in the Heritage, Daylight, Sunlight and Overshadowing, Overbearing Impacts and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report. The impact of the development on the Creechurch Conservation Area is assessed in the Heritage Section of this report. In terms of loss of privacy, officers do not consider that there would be any more risk and loss of privacy than the existing situation as there are already a number of tall buildings, which are in close proximity to the Synagogue.**
Office of the Chief Rabbi	As you will know, Bevis Marks is the oldest synagogue in the UK in continuous use, and a deeply resonant symbol of the history of British Jewry. In the 320 years since the Bevis Marks Synagogue was built, the Jewish community has become a valued part of the fabric of British society. Bevis Marks was one of the first major synagogues to be constructed following the resettlement of Jews in England in 1656. It has stood as a reminder of that history, and of how much has been achieved since members of the Jewish faith were permitted to return to this country.

	I have been troubled to read that there is now another proposed development on the doorstep of the synagogue, with very limited changes to the original proposal, with the potential to significantly affect the natural light that can reach the building. This will, in turn, disrupt prayers taking place inside, and the use of the courtyard outside. It would have a notable impact on the atmosphere that Bevis Marks is so famed for around the Jewish world, to the detriment of those worshipping there. Beyond this, by further reducing views of the southern exposure sky, this proposal would have implications for worshippers at Bevis Marks wishing to recite the monthly prayer kiddush levanah, recited after nightfall upon seeing the waxing moon in the sky. The granting of permission to this proposal would therefore be a regrettable development with implications for rights of religious practice, precisely in the place where Jews first enjoyed these rights in England following the 17th century resettlement. That would be a tragic irony. It was my hope that the City's new Creechurch Conservation Area would serve to protect Bevis Marks Synagogue from this type of scenario. I am disappointed that this seems now not to be the case. I trust that this can be rectified with some adjustments in the new local plan, ensuring that the synagogue's southern exposure remains unobstructed. Thank you for your consideration of this matter. **Officer Response: Comments noted. The amendments from the previously refused application are discussed in the proposal section of the report. The impact of the proposed development on the Bevis Marks Synagogue as a place of worship and as a heritage asset are assessed in the Heritage, Daylight, Sunlight and Overshadowing, Overbearing Impacts and Public Sector Equality Duty (section 149 of the Equality Act**

	2010) sections of the report. The impact of the development on the Creechurch Conservation Area is assessed in the Heritage Section of this report. In terms of the night sky visibility and the moon passage the applicant has submitted a Lunar Transit Study, which has been third party reviewed. This matter is assessed in the Public Sector Equality Duty (section 149 of the Equality Act 2010) section of the report.
Senior Rabbi Joseph Dwek of The S&P Sephardi Community	You will no doubt be aware of the strength of feeling around this submission, and I share in that deep disappointment. As the Senior Rabbi of the S&P Sephardi community, the custodian of Bevis Marks Synagogue, I am aware of the severe distress this application has caused, the waste of community resources it has engendered, and of the complete disregard it has shown for the needs of the Jewish community. I've already submitted a detailed account appended to the synagogue's formal objection outlining the diminution of our religious practices that would result should this application be approved. Please see there for more information. But in short, the proposed tower would block out views of the southern sky necessary for Jewish worship, in particular the necessary views of the moon in the night sky for the Kiddush Levana prayer. Jewish tradition also strongly prefers that synagogue worship more generally include sky views, and clearly this was intended in the original design of the Bevis Marks synagogue with it numerous windows. This would no longer be possible should the tower at 31 Bury St be permitted. Finally, the further reduction in sunlight falling on the entirety of the synagogue site that would result from such a tower, would also harm the community's ability to worship as it has for over three centuries. This is both a breach of our religious rights, but it is also in conflict with the original design of the building, intended to be usable by daylight, which was an

	intentional departure from medieval buildings or houses of worship with stained glass windows. More fundamentally, it is shameful that our community is forced to campaign once again to protect Bevis Marks Synagogue, when it should already be abundantly clear that it is in need of protection from circumstances such as this. That the City of London has as of yet refrained from formulating policies that would prevent this harm from even being proposed is a dereliction in their duty of care, and it demonstrates a disdain and disregard for the well-being of the UK's oldest Jewish community. At a time of increasing Antisemitism in this country, I expect more from the City. I call upon the City to refuse this proposal without caveat and ensure the long-term protection of Bevis Marks Synagogue. **Officer Response: Comments noted. The daylight impacts of the proposed development on the Bevis Marks Synagogue as a place of worship are assessed in the Daylight, Sunlight and Overshadowing, Overbearing Impacts and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report. In terms of the night sky visibility and the moon passage the applicant has submitted a Lunar Transit Study, which has been third party reviewed. This matter is assessed in the Public Sector Equality Duty (section 149 of the Equality Act 2010) section of the report.** **In relation to the formation of the City of London Planning Policies, it is noted that these are being prepared and assessed for their soundness under a separate process to that of the planning application process. It is therefore not considered pertinent that officers respond to matters relating that process as part of this assessment of this planning application.**

	Although the impact that an application might have to a community is understood, it should be also noted that the local planning authority cannot stop an applicant for submitting an application for consideration.
Rabbi Dr Michael Hilton	Thank you for writing to me to seek my views on the above planning application. Reason for writing: the proposed building of 43 above ground storeys will overwhelm the nearby Bevis Marks Synagogue which is the oldest synagogue in Europe in continuous use. I have attended for worship on an occasional basis for the past forty years. The synagogue received a grant of nearly £2.8 million from the National Heritage Lottery Fund for restoration work and the conservation of collections. Work is now almost complete, and will include a museum and heritage exhibition, whilst the synagogue will continue to serve the community through prayer services. Astonishingly, daily worship by the Minister (on his own) was able to continue right through the Covid lockdowns, and the synagogue has remained open during the subsequent building works there. It seems perverse, to say the least, to spend public money on conserving the synagogue and at the same time to destroy its wider setting with a tower block directly to the south 43 storeys high. Reductions in light, described by the developers as 'negligible', will none the less impact the reading capacity of older users of the synagogue with poor eyesight, of whom there are many. In addition, construction of the four basement levels threaten the stability of the synagogue building, since it is 323 years old and like all buildings from that period, has shallow foundations. The published heritage plans for the City state that the surroundings of Bevis Marks Synagogue should not just be preserved, but enhanced. In contrast to this, the enhancements and green features

	described by the developer will have no impact on the Synagogue at all. The envisaged City Plan 2040 has a whole section (S11) on "Heritage and Tall Buildings." It begins with the words: Celebrating the City's heritage for its contribution to the quality of life and promoting public enjoyment of, and access to, heritage assets; Conserving and enhancing heritage assets and their settings; opportunities will be sought for development proposals to make a positive contribution to, and better reveal the significance of, heritage assets and reflect and enhance local character and distinctiveness Please note also the following four specific references to the synagogue: 11.1.1 There are a large number of designated heritage assets in the City, with over 600 listed buildings and many structures such as statues, monuments and sculptures. Listed buildings range from a 17th century home on Cloth Fair, the unique early 18th century Bevis Marks Synagogue, and Wren's iconic St Paul's Cathedral and churches, to modern buildings by renowned architects. On tall buildings: 11.1.7 Applicants will be required to undertake a comprehensive heritage assessment proportionate to the scale of their site and heritage asset to understand ways in which their proposal could contribute towards the enhancement and enjoyment of the historic environment. 11.2.1 The City Corporation has identified "immediate setting" areas around The Monument and Bevis Marks Synagogue, both of which are Grade I listed heritage assets in the City and require special consideration and protection, given their outstanding architectural and historic significance and, for these particular buildings, the critical contribution of elements of setting to that significance.

	Policy HE1 6 Development in conservation areas should preserve, and where possible, enhance and better reveal the character, appearance and significance of the conservation area and its setting. The buildings and features that contribute to the character, appearance, setting or significance of a conservation area should be conserved and opportunities to enhance conservation areas should be considered. Policy HE1 8 Development in the defined immediate setting of Bevis Marks Synagogue and The Monument should preserve, and where possible, enhance the elements of setting that contribute to the significance of these heritage assets. 14.6 Ensuring development proposals have regard to the immediate setting of Bevis Marks Synagogue. Developments should form a positive relationship with the Synagogue without dominating or detracting from its architectural and historic value; and ensuring that the historic elements of the Synagogue's setting are preserved and enhanced. Three of the paragraphs quoted above mention the 'immediate setting' of the Synagogue. A Policy Paper (Policy Paper: Bevis Marks Synagogue - Immediate Setting January 2024) explains that the 'immediate setting' means only the buildings adjacent to the synagogue, not those in the wider area, however close by they may be. The paper contains valuable information on the architectural history and significance of the synagogue, which should be drawn to the attention of the Planning Committee. However, the Policy Paper does also comment on the Synagogue's wider setting and argues that this too must be carefully managed: the introduction of tall buildings, which is a relatively recent development in the context of the history of the building, has changed the character of the setting above the courtyard by introducing built form and activity into an area that was previously sky space. This has altered the sense of

	seclusion that is an important element of the significance of the synagogue, both functionally and symbolically. Additionally, there are recently consented schemes for other tall buildings, some of which are currently being implemented... further development that has the potential to reduce the sense of seclusion offered by the Immediate Setting of the courtyard framing the Synagogue has to be carefully managed. Although not technically part of the 'immediate setting' of the synagogue, the Proposed Development is so overwhelmingly tall and close to the Synagogue that in reality it will affect the immediate setting far more than the existing tall buildings visible from the courtyard. The heritage implications are profound. Please see below for my remarks on the importance of daylight and a view of the sky for traditional Jewish worship. The synagogue was designed by a pupil of Sir Christopher Wren and deserves as much environmental protection as the City's Wren Churches, to which it is comparable in scale and standard. In my travels round Europe I have visited many historic synagogues and seen none hemmed in and overshadowed by such a close and tall building as is here proposed. If they accept this proposal, the planning committee would be ignoring the City's stated objective and current and past practice of seeking to preserve and to enhance the setting of heritage assets. Aldgate Square, a few metres away, enhances the setting of St Botolph's Aldgate and by providing leisure space, ensures that people stop to admire the Church. On the other side of the synagogue, the setting of St Helen's Bishopsgate has also been enhanced by new open space at the Gherkin Plaza. Contrast the synagogue, which will be hemmed in as if the City were ashamed of it. I invite members of the Planning Committee to consider how the development will enhance the setting of the synagogue as their policies

	require. In view of the importance of heritage in the centre of one of the world's oldest cities, and the huge importance of tourism to the city, questions need to be asked about how these considerations are considered by the Planning Committee and in particular whether there is specific heritage representation on or to the group. Environmental Impact References below are to paragraph numbers in the 'Environmental Impact Statement' by Trium. The new documents submitted on behalf of the developers repeat the erroneous argument previously used that because the setting and the light levels in and around the synagogue have been compromised in the past, it is somehow acceptable to compromise them still further. None of the documents submitted discuss the right of the congregation to enjoy freedom of worship in the way they and their predecessors have done at the synagogue for the past 320 years. Of the three daily Jewish prayer services, two of them, the morning and afternoon prayers, have to take place during daylight. This does not simply mean during daylight hours but in a setting which has natural light. This idea goes back to the Bible, where it is written (Daniel 6:10) "Daniel went into his house with the windows open in the upper chamber facing Jerusalem, and three times a day he kneeled upon his knees and prayed and gave thanks before his God." The medieval commentator Rashi explains that through windows we can see the sky, and remind ourselves of our submission to heaven (comment on the Babylonian Talmud Berakhot 34b). From this you can see the importance of not shutting out or inhibiting the view of the sky from a synagogue. It also explains why the architect of Bevis Marks synagogue placed the windows high up, so that eyes could be raised heavenward during prayer. The beauty and purpose of this design will be frustrated and damaged by a view up towards new tall

	buildings. You cannot measure the value of the setting of a heritage asset with a light meter. None of the statements on behalf of the developers address this point. The Environmental Impact Statement submitted by the developers has 251 pages and contains over a hundred references to Bevis Marks Synagogue. In spite of the length of the report, there is no mention at all of the view of the new building from the synagogue courtyard. This is a serious omission. Furthermore, the Environmental Impact Statement was submitted before the Creechurch Conservation Area was established and therefore does not include any reference to the additional protection which one might expect this to provide to Bevis Marks Synagogue, to Holland House, and to the many other listed buildings nearby. The Statement details various meetings and similar application was refused in 2020 and details that a previous and very proposals which have taken place to ensure that the new application does not carry as much environmental impact. Unfortunately, the slight reduction in height and the slimmer top of the building will make little difference to Bevis Marks Synagogue. The report notes (9:100) that there will be a vibration impact on the synagogue during construction from pile driving, and that this will be increased when the auger hits the base of the hole. However, there appears to be nothing that describes the additional affect that vibrations will have on a building more than 300 years old. This is a serious omission from the assessment, especially considering the depth of the four basement levels. Vibrations spread and so the effect of pile driving at a greater depth can be felt further away. A well written report should give examples of vibrations from different levels, so that calculations can be made as to how many basement levels, if any, should be permitted in

	order to ensure that the synagogue's foundations are not damaged. On the question of sunlight, the report claims that the Synagogue courtyard currently receives less than 2 hours of direct sunlight on March 21st and September 21st each year. However, there appears to be no mention of indirect sunlight reflected from neighbouring buildings. I have noticed myself how much the light level in the synagogue changes suddenly and markedly on a day when there are many clouds coming across the sun, as the light is reflected off the building across the courtyard into the large upper windows at the west end of the synagogue. Indeed, this dappled sunlight, coming and going through the windows and illuminating the dark wood throughout the synagogue creates a very beautiful effect. It is therefore alarming to read an impact assessment which does not even consider this. On the question of daylight, the report makes the same error as the 2020 report, arguing that because the amount of daylight is already very low, the effect of reducing it further will be high in percentage terms, but negligible in real terms. This is tantamount to saying that because the synagogue is already too dark, it is acceptable to deprive it of even more light. The argument places the legal technicalities above what happens in real life. If I am struggling to read my prayer book on a dark day in the synagogue, even the tiniest further reduction is going to affect my reading adversely. When the light is already below par, there is no such thing as a negligible further reduction. The whole argument is a false one. The fact that the report repeats this same argument many times does nothing to enhance its case. Furthermore, it is a known fact that eye problems increase, and eyesight diminishes, with age. The reduction in daylight woefully described as 'negligible' will therefore have a disproportionate impact on older members of the congregation, of

	whom there are many. This constitutes discrimination on the basis of age, which is illegal under the terms of the Equality Act 2010. It is not sufficient for the developers merely to consider an 'average person' when assessing the light impact on a building with a high proportion of older users. Furthermore, the higher reduction in light at upper levels is discriminatory against women users of the synagogue; the effect on those with reduced eyesight is discriminatory against less able users; and the whole project disadvantages the Jewish community which has no other synagogue within the City of London. Similarly, the question of overshadowing is dismissed on the grounds that the Synagogue courtyard is already in shadow, and therefore only a very minimal portion of the Proposed Development shadow hits the ground (10:174) at any time of the year. This ignores the fact that shadows make a difference above ground level as well, and will reduce the amount of light coming through the upper windows, especially those at the western end and the south west corner which currently provide a considerable proportion of the Synagogue's light. Paragraph 15:9 of the report states that during demolition and construction, the Proposed Development will have significant adverse effects on the Synagogue as a result of the use of heavy machinery and tall cranes and the erection of other infrastructure needed for construction, such as scaffolding, hoarding, mobile cranes, site lighting, temporary site offices and facilities. The section of the report on mitigation does not mention the Synagogue, and there is no assessment at all of whether or not this could cause irreparable damage to such an old and fragile building. Summary The Proposed Development application does not take sufficient account of the City's existing and anticipated heritage policies, nor does it take

	account of Conservation Area policies which require any new development to enhance the setting of the synagogue. The Proposed Development discriminates against older people and other protected groups by dismissing as irrelevant small reductions in the light in a building used for the reading of books. The new building will have a negative visual and overshadowing impact on the synagogue and its setting and context within the City townscape. Pile driving during construction may cause damaging vibrations. I am against this planning application. **Officer Response: Comments noted. The daylight, sunlight and overshadowing impacts of the proposed development on the Bevis Marks Synagogue and its courtyard are assessed in the Daylight, Sunlight and Overshadowing, Overbearing Impacts and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report. In terms of the night sky visibility and the moon passage the applicant has submitted a Lunar Transit Study, which has been third party reviewed. This matter is assessed in the Public Sector Equality Duty (section 149 of the Equality Act 2010) section of the report.** **Matters relevant to equality impacts of the development are addressed in the Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report. It is also noted that the applicant has submitted an Equality Statement which has been third party reviewed. Overall, the third party reviewer considers that the scope, methodology and findings of the EqS, and the mitigation and enhancement measures to mitigate the potential impacts, are appropriate to the potential impacts on protected characteristics arising from the Proposed Development.**

	The impact of the proposed development on the Bevis Marks Synagogue as a heritage asset and on the Creechurch Conservation Area are assessed in the Heritage section of the report. **Consideration of the impacts to the Synagogue foundations are set out in the 'Impact to Synagogue Foundations and Ground Movement' section of the report. A condition is recommended for the submission of a demolition and construction methodology (including monitoring of ground movement) to be prepared by a heritage accredited structural engineer to be submitted and approved to address these concerns.**
Reverend Laura Jorgenson of St Boltoph without Aldgate	Objection to planning application 24/00021/FULEIA (Bury House 1-4, 31-34 Bury Street) and 24/00011/LBC (Holland House 1-4, 32 Bury Street). I write on behalf of the St Botolph without Aldgate PCC to object to the above planning application. Bevis Marks, the only dedicated non-Christian place of worship in the City of London, has been a centre of worship and community for three hundred years. It is more than a 'heritage asset'; it has a beating heart of people, many of whose families have worshipped there for generations, some since the synagogue has been built. In recent years the synagogue has been fighting for its very survival. Building a tower which will cast the Synagogue and its courtyard into shadow, taking away the view of the sky is not merely a matter of light, but also of ritual - of their ability to worship in the building, and of particular importance to the congregation are the prayers at the appearance of the new moon, which they will no longer be able to do if this development goes ahead. As a neighbouring friend and colleague St Botolph's is keen to support and encourage the congregation

	at Bevis Marks in their life as a vibrant community, with a future, including their new Education Centre which will bring thousands of school children to the City. We have deep concerns that should this development go ahead, instead of a living community, Bevis Marks will ultimately instead a place of remembrance of the historic Jewish communities in the City. **Officer Response: Comments noted. The daylight, sunlight and overshadowing impacts of the proposed development on the Bevis Marks Synagogue and its courtyard are assessed in the Daylight, Sunlight and Overshadowing, Overbearing Impacts and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report. In terms of the night sky visibility and the moon passage the applicant has submitted a Lunar Transit Study, which has been third party reviewed. This matter is assessed in the Public Sector Equality Duty (section 149 of the Equality Act 2010) and Heritage sections of the report.** **The impact of the proposed development on the Bevis Marks Synagogue as a heritage asset and on the Creechurch Conservation Area are assessed in the Heritage section of the report.**
Reverend Dr Malcolm Torry, St Mary Abchurch	I am writing to object to the proposed new building and extensions of buildings that are the subject of planning application no. 24/00021/FULEIA and listed building consent 24/00011/LBC. On the 18th of April, Rabbi Morris of the Bevis Marks Synagogue was invited to attend the City Deanery Clergy Chapter to tell us about the planning application for a 44 storey office block just a few metres from the synagogue. He explained that a very similar application had previously been rejected by the Planning Committee; that a Conservation Area had been

	proposed, but that the site of Bury House had been omitted from it; and that when that site was then included in the Conservation Area (which unusually still seems to permit new tall buildings) the new City Plan document relating to the Bevis Marks Synagogue's 'immediate setting' (document ED-HTB29) did not include the site of Bury House, which is where the 44 storey block would be built: a tall building that would substantially impact the synagogue and so should surely be included in the immediate setting-which would in turn suggest that the planning application should be rejected. I notice that the buildings adjacent to Bury House have also been omitted from the 'immediate setting', yet the planning application proposes adding additional floors to these, which would also substantially impact the synagogue, suggesting that these buildings too should be included in the immediate setting-which would again suggest that the planning application should be rejected. Reverend Dr Malcolm Torry This morning I visited the synagogue and explored the surrounding streets. It was immediately clear to me that to locate a 44 storey building on the site of Bury House, and to add additional floors to adjacent buildings, would, in the context of existing tall buildings, completely hem in the synagogue and remove most of its natural light. This unique synagogue, a Grade I building that has been in constant use by the Jewish community for over three hundred years, and that unusually for a historic City building has its original interior intact, would experience significant harm, as would the community that uses it. I understood from Rabbi Morris that the developer has offered space for community use in the buildings that it now owns. What it might have failed to realise is that temporary community benefit can never substitute for permanent community and heritage harm, which is what it is planning to inflict on London's Jewish community and on its synagogue: an unconscionable thing to do,

	particularly at such a complex and difficult time for London's Jewish community. Please, for the sake of the City's heritage, and for the sake of its Jewish community, reject this planning application; forbid the building of new tall buildings in conservation areas; and do all you can to protect the precious heritage that the City of London Corporation holds in trust for London and its people. **Officer Response: Comments noted. The daylight, sunlight and overshadowing impacts of the proposed development on the Bevis Marks Synagogue and its courtyard are assessed in the Daylight, Sunlight and Overshadowing, Overbearing Impacts and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report.** **The impact of the proposed development on the Bevis Marks Synagogue as a heritage asset and on the Creechurch Conservation Area are assessed in the Heritage section of the report.** **The proposed community, cultural, educational, sports, amenity offer of the proposed development are assessed in the Land Uses section of the report. The benefits of the proposed development against the identified less that substantial heritage harm are assessed in the Assessment of Public Benefits and paragraph 208 NPPF balancing exercise section of the report. It is noted that the proposed community/cultural/education offer and the proposed affordable workspace would be secured by the S106 agreement for the lifetime of the development.** **The comments which call into question the professionalism and integrity of the Corporation's officers are unsubstantiated and strongly refuted. It is noted**

	that any investigation relating into an accusation that there was an undue influence of developers on the City Corporation regarding the designation of the Conservation Area, would be a process that is carried out by a separate department of the Corporation in accordance with the relevant protocol. Having sought advice from the Comptroller and City Solicitor's Department it is clear that an investigation of this nature would only be carried out if there was evidence to support such a claim. It is not considered that this separate process would constitute a material planning consideration that would influence the assessment or decision making in respect of the current application.
Reverand Josh Harris, St Katherine Cree	As a local church leader, I object to this proposal because it involves direct and specific harms to the local Jewish community specifically, including restricting their freedom of worship by obscuring a key portion of the sky and reducing natural light levels to unsustainably low levels. I am proud to minister in the City of London, which we regard as an open, tolerant, civil place which hosts a diverse and international community. I am concerned that this development, if approved, will seriously undermine that reputation, at a moment when we should be particularly working to ensure the safety of the Jewish community. As Priest-in-Charge of St Katharine Cree, I am closely engaged with the local community in and around Bury Street including workers, residents, and those who access community services in our church. We have undertaken more than 1,000 face to face conversations with City workers in the last three years.

	In my view, the proposed community benefit of this development and the investment in Holland House is intangible and, on the basis of what has happened in similar developments, unlikely to be sustainable to operate - and seems to have required importing organisations with the offer of free space to give the impression of deep community engagement. There are few successful examples of this kind of space I know without an 'anchor institution' running them such as a church, major established charity like Toynbee Hall, or local authority. As someone with expertise in the local community's needs, I cannot see significant likely benefit from the plans to the workers and residents who we engage with in the existing local community. Our community was proud that the City has recently created a conservation area here, and we were looking forward to working with the City to celebrate this and to see how we can together enhance it. **Officer Response: Comments noted. The daylight, sunlight and overshadowing impacts of the proposed development on the Bevis Marks Synagogue and its courtyard are assessed in the Daylight, Sunlight and Overshadowing, Overbearing Impacts and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report.** **The proposed community, cultural, educational, sports, amenity offer of the proposed development are assessed in the Land Uses section of the report. The benefits of the proposed development against the identified less that substantial heritage harm are assessed in the Assessment of Public Benefits and paragraph 208 NPPF balancing exercise section of the report.**

	The impact of the proposed development on the Creechurch Conservation Area are assessed in the Heritage section of the report.
The Honorable Company of Master Mariners	Representation on 24/00021/FULEIA 1.1 Its background and purpose outlined above compel the HCMM to register an objection to this planning application centred on No. 31 Bury Street EC3. In this, it wishes to remind the City of London Corporation that on 7th April 2021, it objected similarly to the original application for this site, 20/00848/FULEIA. The HCMM did so not only in defence of the Bevis Marks Synagogue, the most directly impacted, but also the other heritage assets that would be affected by the development, not least those of Trinity Square and the Tower of London World Heritage Site with which it has particular association. These were also the key reasons given by members of the Corporation's Planning and Transportation Committee in refusing the original application at its meeting on 5th October 2021. Moreover, the HCMM later voted with the majority in delineating the conservation area around the Synagogue that now appears to have been ignored by the Corporation. As a City livery company, the HCMM cannot take lightly the need to respond in this situation. 1.2 'Skyscraper' is a term little recognized now as of maritime origin. In the days of square-rigged ships such as tea clippers racing to be first back in London in the 1850s and 1860s, every breath of wind was sought when becalmed. Extra sails would be added up the masts, the seventh and last being the skyscraper. Irony is thus added in this present context, but the HCMM again cites the City's maritime past and present in support of its objection to this revised application which offers only the most marginal modification. 1.3 In 2022, the Corporation launched Destination City, currently promoted as 'The City is the birthplace of London with a unique and diverse offer'. In fact, from the sea and Thames came the

	maritime trade out of which the City and so much more grew. Destination City will celebrate, promote, and support the Square Mile's unrivalled history and heritage. It is hoped that the embedded pages here, outlining a little of that 'unrivalled history and heritage', may illustrate the difficulty of attempting to reconcile the Corporation's apparent valuing of heritage with its contradiction as embodied in this application. 1.4 The estate agents' mantra, it is said, is 'Location, location, location', but the more appropriate term is 'context'. Without expertise in the fields of architecture and construction, the HCMM is content to defer to the conservation bodies and specialists. Instead, it is in particular regard to the wider significance and context of the application that it is opposed by the HCMM. 1.5 London, especially the City, is built on maritime trade with much of Britain's maritime past and present to be seen in EC3 alone. The maritime sector remains a significant business presence in the City while the City's worldwide standing as a banking, finance and insurance centre is in turn rooted in maritime trade. In 1694 with the Royal Navy's financial security the aim since re-equipping was needed yet its capitalization was beyond the Government. The Bank of England was established. The new bank attracted a loan of £1,200,000 (195,265,744 in 2024) raised by subscription. Links with the sea continue today to be commercially and strategically vital to the UK's economy and defence. Current events in the Red Sea demonstrate the rôle of and the country's reliance upon the Merchant Navy and Royal Navy. The supply chain does not consist of just the internet and motorways, some 95% of UK global trade being by sea. 1.6 The Destination City website lists 'Attractions; Experience; Food & Drink; Galleries; Green Spaces; Museums; Restaurants; Shopping; Stay; Theatres and Wellbeing' as the areas of interest on offer. Despite the unrivalled claim

	cited above, heritage is not mentioned. Further, the term appears only twice in the whole website, in referring to the City Visitor Trail which invites such to 'feast on the culture, history and heritage' while noting 'grand heritage hotels' are available. History itself fares little better. The City of London timeline within 'Our Story on the website records but one maritime date, publication of the first Lloyd's Register in 1764 and omits the two World Wars but does mention the Bevis Marks Synagogue's opening in 1701. **2.1** Similarly, what the application proposes for Holland House suggests indifference to its importance, the HCMM thus being obliged to oppose the application. Wm H Muller & Co, a Dutch shipping company, chose Hendrik Berlage to design its London offices in Bury Street. Known as the 'father of Modern architecture in The Netherlands, the result is said to have been the first steel-framed building in Europe. Berlage is believed to have taken inspiration from the work of American architect Louis Sullivan on a visit to the USA in 1911. External walls of grey-green terracotta or faience tiles, made in Delft and shipped in company vessels, top a black granite base. A merchant ship sculpted by the Dutch artist Joseph Mendes da Costa appears at the southeastern corner of the Grade II*-listed building. Construction of the office block, begun in 1914 and completed in 1916, was made possible during the First World War only by The Netherlands' neutrality. It is thought to be the sole building erected in the City during the War. **2.2** In turn, that provides another maritime link, this time with Liverpool Street station. The Netherlands' neutrality in the First World War allowed North Sea ferry services to continue, albeit resented by Germany. Among the refugees and occasional business passengers

	were those of more clandestine intent. Dutch operators' eventual withdrawal from the crossing left only the Harwich-Rotterdam sailings by the Great Eastern Railway Steamship Company. One of its captains was Charles Fryatt of the Mercantile Marine, renamed as the Merchant Navy in 1928. Several times from March 1915, German submarines ordered Fryatt to stop his unarmed ship but instead he made to ram the U-boats or outran them, outraging Germany. Around 0300 on 4th June 1916, German naval vessels stopped Fryatt and the SS Brussels outbound to Harwich. The ship, 45 crew, including five stewardesses, and 100 refugee passengers were taken to Bruges and interned. On 27th July, two hours after a summary court martial, Fryatt, despite being a civilian non-combatant, was shot by firing squad. On 7th July 1919 Fryatt's body was repatriated by Royal Navy destroyer, escorted by two more, to Dover and by train to Charing Cross. The purple-lined luggage van used had served previously for nurse Edith Cavell's coffin and in 1920 for that of the Unknown Warrior. On 8th, Fryatt's coffin was drawn by Royal Navy ratings on a gun carriage, a State funeral honour, to St Paul's for the service, hundreds of thousands lining the streets. The burial was in Dovercourt, Harwich, Fryatt's home. A hospital and pub there bear his name but reaction to what so many newspaper headlines declared as his 'murder' finds it too in Belgium, the USA, South Africa, Mauritius, Australia and New Zealand. In the Canadian Rockies, Mount Fryatt is close to Brussels Peak, named after his ship, while his memorial is on Liverpool Street station. The dedication reads 'From the neutral admirers of Fryatt's portrait appears on this in bronze relief. Beneath, the dedication reads for the first World War period, 'more than conduct and heroic death'. The Netherlands section of the League of Neutral States July 27th 1917, his brave Holland

	House's architectural features would be lost were this application approved. **Officer Response: The impact of the proposed development on Holland House are assessed in the Architecture, Urban Design and Public Realm and Heritage sections of the report.**
Lord Mann of Holbeck Moor HM Government's Independent Adviser on Antisemitism	I write to express my grave concern over plans to build a forty-five-story tower block next door to Bevis Marks synagogue (planning application reference: 24/00021/FULEIA). Bevis Marks, a Grade One listed building, is often heralded by the local community and beyond as Britian's 'Jewish Cathedral'. A building that has thrived for over three hundred years, it is a space of enormous historical and cultural significance. The fact that such a vital community hub is under threat by this development is deeply alarming. The plans have significant implications for the usability of the synagogue, as the building of a tower block along the southern side would totally destroy the setting. Not only would important elements of religious ritual (the view of the moon's passage and many of the celestial bodies) be blocked, the synagogue's natural light levels would be so obscured that the space would be rendered unfit for conducting worship. The historic nature of the synagogue prevents the installation of additional electric lighting as a feasible alternative, leaving no choice but to consider the space unusable. The City of London Corporation, as the municipal governing body of the City of London, has a duty to safeguard the right of the Jewish community to freely gather for worship without obstruction or difficulty. Facilitating the approval of such a development, threatening the vitality of such an essential community space, would fall short of recognising the importance of the synagogue, and in turn supporting London's Jewish community. The idea of building something similar next to St Paul's Cathedral would be inconceivable and inappropriate. The same levels of protection and preservation should be

	attributed to Jewish community spaces like Bevis Marks. At a time of rising levels of antisemitism, and increased fear and uncertainty amongst the Jewish community, the protection of their places of worship and community could not be more urgent. I hope you will take these concerns into account and reconsider the plans for this development, to ensure the life and legacy of Bevis Marks synagogue is protected. **Officer Response: Comments noted. The daylight, sunlight and overshadowing impacts of the proposed development on the Bevis Marks Synagogue and its courtyard are assessed in the Daylight, Sunlight and Overshadowing, Overbearing Impacts and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report. In terms of the night sky visibility and the moon passage the applicant has submitted a Lunar Transit Study, which has been third party reviewed. This matter is assessed in the Public Sector Equality Duty (section 149 of the Equality Act 2010) and Heritage sections of the report.** **The impact of the proposed development on the Bevis Marks Synagogue as a heritage asset and on the Creechurch Conservation Area are assessed in the Heritage section of the report. It is noted that although both Grade I listed buildings, with defined immediate setting, the architecture, setting, location and presence on the wider London skyline of St Paul's Cathedral and the Synagogue are markedly different and in this respect both listed buildings and their setting are not directly comparable.** **Matters pertaining the equality impacts of the development on the Jewish community of the Bevis Marks Synagogue are addressed in**

	the Public Sector Equality Duty (section 149 of the Equality Act 2010) and Heritage sections of the report.
Rachel Blake MP	I am writing to express my opposition to Planning Application 24/00021/FULEIA, which proposes the construction of a 43-storey building at 34 Bury Street. It is clear that this application will have a substantively negatively impact on worship at the Bevis Marks synagogue, the oldest synagogue in the United Kingdom, and the oldest synagogue in continuous use in Europe. This new office building would block out the daylight, and the appearance of the moon from the synagogue and its courtyard for much of the day. This would make it impossible to mark the coming of the new moon, key to Kiddush Levana, which has been practiced at Bevis Marks for nearly four hundred years. This application would therefore breach Policy DM 10.8 of the City of London plan, which states that: “To achieve an environment that meets the highest standards of accessibility and inclusive design in all developments (both new and refurbished), open spaces and streets, ensuring that the City of London is inclusive and safe for of all who wish to use it, regardless of disability, age, gender, ethnicity, faith or economic circumstance; It would also contravene the 2021 London Plan, which stresses in GG1 G that new buildings: “are designed to reinforce or enhance the identity, legibility, permeability, and inclusivity of neighbourhoods.” These policies are made in mind with the City of London and Mayor of London’s public-sector equality duties under the Equality Act 2010, particularly where this regards fostering “good relations between persons who share a relevant protected characteristic and persons who do not share it”. It is clear that this development would contravene these duties, and therefore I believe that it be refused. **Officer Response: The comments made are noted and are addressed within the report. The daylight, sunlight and overshadowing**

	impacts of the proposed development on the Bevis Marks Synagogue and its courtyard are assessed in the Daylight, Sunlight and Overshadowing, Overbearing Impacts and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report. In terms of the night sky visibility and the moon passage, the applicant has submitted a Lunar Transit Study, which has been third party reviewed. This matter, as well as other equality matters are assessed in the Public Sector Equality Duty (section 149 of the Equality Act 2010) and Heritage sections of the report.
Nickie Aiken – former MP	Having considered the latest application to develop 31-34 Bury Street, I believe it must not be granted permission. The proposal would have an unacceptable impact on the oldest continuous synagogue in Europe, Bevis Marks, while also having a detrimental impact on the wider Creechurch Conservation Area. It is important to consider the significant impact this development would have on Bevis Marks ability to function. The only artificial light sources within the synagogue are candles and a limited amount of electrical lighting that was installed prior to the building being listed. There are also sensitive issues like the recital of a special prayer at the beginning of each lunar month which would be lost as they require a view of the eastern and southeastern sky. The previous planning application for this site was refused because "The development would adversely affect the setting of the Grade 1 listed Bevis Marks Synagogue and its setting and amenities by reason of the overbearing and overshadowing impact of the development". I do not see any reason why this new proposal would not still adversely affect Bevis Marks. In the Heritage Assessment of the previous application, it states "were the proposed development to be allowed it would render the

	designation of the Creechurch Conservation Area virtually meaningless and to have made the whole designation and consultation process a worthless exercise". Now that the site does firmly sit within the newly created Creechurch Conservation Area, and as the plans do not significantly change from the previous application, I do not see how this development can be permitted. This development would cause substantial harm to the surrounding Creechurch Conservation Area and must not be allowed to go ahead. **Officer Response: Comments noted. The daylight, sunlight and overshadowing impacts of the proposed development on the Bevis Marks Synagogue and its courtyard are assessed in the Daylight, Sunlight and Overshadowing, Overbearing Impacts and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report. In terms of the night sky visibility and the moon passage the applicant has submitted a Lunar Transit Study, which has been third party reviewed. This matter is assessed in the Public Sector Equality Duty (section 149 of the Equality Act 2010) and Heritage sections of the report.** **The impact of the proposed development on the Bevis Marks Synagogue as a heritage asset and on the Creechurch Conservation Area are assessed in the Heritage section of the report.** **The previous decision and the importance of consistency in decision making is material and should be taken into account in making a decision on this application The previous decision is considered later in this report.**
Blackman Bob - MP	I object to this overdevelopment of the site which will dwarf Bevis Marks Synagogue. This will devastate Europe's oldest continuously used Synagogue.

	Officer Response: Comment noted. The impact of the development on the Bevis Marks Synagogue is assessed in several sections within the main body of the report.
Baroness Deech – Lords Member	It is disrespectful to the neighbourhood, to an ancient and significant building, Bevis Marks, even to non-Jews, to put this enormous building near it. It is essential to preserve and enhance Bevis Marks. **Officer Response: Comment noted. The impact of the development on the Bevis Marks Synagogue is assessed in several sections within the main body of the report.**
Zoe Garbett – Green Party Member of the London Assembly	I have been contacted by constituents from the Jewish community in London about this planning application and its potential impact on the Bevis Marks synagogue. Please accept my apologies for sending this letter after the deadline for comments –I was newly elected to my role as an Assembly Member just three weeks ago. The sole synagogue in the City of London and the oldest in the country, Bevis Marks synagogue has a totemic significance for Jewish people living locally, across London and in the rest of the UK. As one constituent in the neighbouring borough of Islington told me: “as an Islington Jew I sometimes attend myself but in any case have an emotional attachment due to its place in the community's history.” Preserving the character of the synagogue is vitally important in making the City of London a truly inclusive place for people of all faiths. While I appreciate that neither the synagogue or the proposed buildings are in conservation areas, the synagogue itself is a Grade 1 listed building of immense social and cultural value and as such should be protected from harm.

	My constituents, however, fear the proposed development will irrevocably impact the character of the synagogue, both during construction and once the development has been completed. These objections have been laid out by concerned residents and groups, as well as by the Protect Bevis Marks campaign. I urge you to give due regard to the many objections raised and recommended you do not approve this application. **Officer Response: Matters pertaining the equality impacts of the development on the Jewish community of the Bevis Marks Synagogue are addressed in the Public Sector Equality Duty (section 149 of the Equality Act 2010) and Heritage sections of the report.** **The impact of the proposed development on the Bevis Marks Synagogue as a heritage asset and on the Creechurch Conservation Area are assessed in the Heritage section of the report.** **Other impacts environmental impacts of the proposed development on the synagogue and its community are assessed in the Environmental Impacts and in the Public Sector Equality Duty (section 149 of the Equality Act 2010) and Heritage sections of the report.**

Representations from members of the public (Objections)	**Officers Response to Comments**
Loss of light to the Synagogue	Comments noted. The daylight, sunlight and overshadowing impacts of the proposed development on the Bevis Marks Synagogue and its

• The Synagogue is lit primarily by natural light which is an important part of its attractiveness • This is the last remaining section of sky not blocked by high-rise buildings	courtyard are assessed in the Daylight, Sunlight and Overshadowing, Overbearing Impacts and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report.
Overshadowing to the Synagogue Courtyard • Remaining light is already limited, this will reduce further • Will impact not just worship but enjoyment of the building	Comments noted. The overshadowing impact of the proposed development on the Bevis Marks Synagogue's courtyard are assessed in the Daylight, Sunlight and Overshadowing, Overbearing Impacts and Public Sector Equality Duty (section 149 of the Equality Act 2010) sections of the report.
Loss of view of the moon in the night sky, and subsequent consequences to specific religious practice • The southern sky view is an essential part of the setting of the synagogue • Viewing of the moon and stars important for	A study assessing the impact of the development regarding the visibility of the sky and the moon has been submitted by the applicant. This Lunar Transit Study has been independently reviewed by BRE. Matter pertaining those impacts are addressed in the Public Sector Equality Duty (section 149 of the Equality Act 2010) and Heritage sections of the report.

Sabbath and festivals	
There is not a need for more office-space in the City • People are working from home and don't need office space • There is no demand for more offices • No ecological justification to build further high-rise offices • Many vacant offices in other areas such as Canary Wharf	The site within London's Central Activity Zone (CAZ) where the London Plan promotes further economic and employment growth. The principle of the development would be supported by London Plan Policy SD5, which states that higher priority should be given to strategic functions such as offices within the CAZ, to meet demand for office space and facilitate London's continuing role as a World City. At the local level, the City of London's Eastern Cluster is identified in the Local Plan (2015) as having the capacity for significant growth in office floorspace through the delivery of tall buildings on appropriate sites. The intensification of office floorspace in a development of this scale would support the function of the Central Activities Zone and London's position as a World City. The clustering of businesses is a vital part of the City's operation and contributes to its reputation as a dynamic place to do business as well as providing agglomeration benefits. Matters relating to the need of office space and the acceptability of the provision of a tall building in this location are assessed in the Principle of Development, Proposed used Architecture, Urban Design and Heritage sections of the report.
The Synagogue must not be harmed from construction work	Relevant mitigation during demolition and construction of the proposed development would be secured by conditions.
Comparison to Development Near St. Paul's • The development would not be permitted adjacent to St Paul's	It is noted that although both Grade I listed buildings, with defined immediate setting, the architecture, setting, location and presence on the wider London skyline of St Paul's Cathedral and the Synagogue are markedly different and in this respect both listed buildings and their setting are not directly comparable.

• Historic places of worship need to be respected equally • This is the only non-Christian place of worship in the City	
Concerns over damage to foundations of the Synagogue	Consideration of these impacts are set out in the 'Impact to Synagogue Foundations and Ground Movement' section of the report. A condition is recommended for the submission of a demolition and construction methodology (including monitoring of ground movement) to be prepared by a heritage accredited structural engineer to be submitted and approved to address these concerns.
Site lies within the Creechurch Conservation Area where tall buildings are against planning policy • A need to protect the historic character of this area from more development • Not in keeping with the character of the area • Since the previous scheme was refused, the Conservation Area has been adopted and therefore the	The impact of the proposed development on the Creechurch Conservation Area is assessed in the Heritage section of the report.

proposed development is even more harmful	
The building will create further issues of wind tunnelling	Consideration of these impacts are contained in the Wind Microclimate section of the report.
Environmental impacts • The demolition of buildings cannot be considered sustainable	Matters relating to sustainability and the redevelopment of the building at 31 Bury Street are addressed in the Sustainability section of the report.

58. Sixty-eight (68) letters of support have been received from members of the public and organisations, as set out in the table below:

Representations from members of the public (Support)
The building's design is attractive, fits in well with the surrounding cluster and creates a sensible step-down from nearby taller buildings • It is welcoming to see this project being revised and resubmitted. It will have a positive effect on the City's skyline. • When seen from vantage points around Tower Bridge, this proposal would appear to the right of a taller tower approved at 100 Leadenhall Street (22/00790/FULEIA). Its comparatively lower height would provide a more gradual transition between the Eastern Cluster and the low-rise buildings beneath it, balancing the view of the cluster as a whole. • It is aesthetically pleasing and constitutes a step down from the taller elements in the cluster. It will contribute to the visual coherence of the City cluster. London is a dynamic city and always changes. • The proposed design is attractive and modern, the slim profile is a welcomed addition • The building will fit in well with surrounding tall buildings in the area
Affordable workspace is a valuable asset for the area

• The provision of affordable workspace to small companies will be very beneficial to new and starting enterprises. At a time of increased cost of doing business, this is very welcome. • The redevelopment of Holland House offers a unique opportunity to support the unmet demand for affordable creative workspaces in the City. This initiative would not only benefit local artists and companies like ours but also contribute to the cultural landscape and attractiveness of the area.
A welcomed juxtaposition between old and new in the area will be enhanced by the design of this building • There are plenty of tall buildings in the City already, which have improved the place. The blend of old and new is part of its charm - there are plenty of churches and other religious buildings nearby which are abutted by tall buildings and are no worse for it. • London is all about the juxtaposition of old and new buildings. New modern buildings help to highlight old buildings, rather than detract from them. This is the case all over the City of London where historic buildings sit perfectly fine side-by-side with modern buildings.
A modern building that will positively affect the local economy and provide more floorspace in the City • The development is high quality design which will help maintain London's position as a premier financial centre and provide a net benefit to the local economy and wider UK economy.
The proposed building is a high-quality design that makes the most of the site potential
Workers nearby will benefit from the added amenities.
The building will provide cultural space which is needed in the City
Amenity space will add value to the area

Example representations from (non-statutory) organisations, groups and individuals (in support)	**Comments**

Param Singh – City Sikhs	I am writing on behalf of City Sikhs, a leading organisation that supports Sikh professionals across London, providing networking opportunities, cultural engagement, and community initiatives that foster a sense of belonging and diversity. We would like to express our strong support for the planning application for Holland House and believe this development will bring meaningful benefits to the City of London. A significant aspect of our support stems from the commitment to providing free-of-charge community spaces within the new and existing premises. Like many community organisations, City Sikhs often encounter difficulties in finding affordable venues in the city to host our events, which range from professional development workshops to cultural and social gatherings. This challenge limits our ability to connect with and support our members effectively. The inclusion of accessible community spaces at Holland House will directly address this longstanding issue. It will allow us to host more frequent and impactful events, benefiting not only our members but also contributing to the cultural richness and inclusivity of the City of London. By enabling organisations like ours to expand our reach and activities, the development will serve as a catalyst for greater engagement and collaboration within the Square Mile. We believe the proposed Holland House development will become an invaluable resource for fostering connections, promoting diversity, and strengthening community ties. Its potential to serve as a hub for cultural, educational, and professional initiatives aligns closely with the values we champion as an organisation. We hope the City of London Corporation will appreciate the far-reaching benefits of this proposal and approve the planning application.
Aslam Baccus - Halls4Jumuah	My name is Aslam Baccus and I am a trustee of the charity Halls4Jumuah in London. Our main purpose is to hire halls and venues across the

	City of London to provide muslim men and women working in the city with a place to perform their Friday prayers. At present, we are hiring six halls within the city, including Holland House in Bury Street, London, EC3A 3BP. We have been using the hall every Friday since the beginning of January 2024 and we manage the venue with the help of our on-site volunteers. To ensure the venue as well as the attendees are safe and capacity is kept under control, we record the names and phone numbers of anyone coming in to perform their prayers. Currently, we have an average of 40 people attending Holland House each week, using a hall that has the capacity to host 150 people. The venue is in an excellent location in London and our numbers are gradually increasing as more people become aware of its whereabouts. The owners of the building have been absolutely first class in providing our charity with their support to allow members of our community access to perform their weekly prayers, and we are always rest assured that the venue is clean, spacious and welcoming. We have benefitted greatly from a review of the proposed development plan and we feel that the idea of turning the Lower Ground, Ground and First Floors into spaces that can accommodate small and local charities as well as community based projects truly inspiring. We at Halls4Jumuah hope the project with be successful and full credit must go to the management of the building who are always a pleasure to work with.
Tony Richards – Museum of Diversity	On behalf of the Museum of Diversity, I am delighted to extend our warmest regards and wholehearted support for the establishment of BGO's multi-use cultural space at Holland House, as outlined in your cultural strategy plan for the City of London (CoL). We deeply admire the exemplary work that BGO has undertaken over the past few years, providing invaluable support to organisations like ours, thereby enhancing representation and diversity within the city. The cultural strategy proposed by BGO promises a rich tapestry of diverse offerings, poised to deliver unique and engaging experiences for those who live and work in the CoL. We believe

	that this initiative will set a new benchmark, not only within the City but also throughout Greater London, reinforcing its status as one of the world's foremost global cities. The Board of the Museum of Diversity and I acknowledge the significant contributions BGO has made in promoting cultural awareness and education within the CoL. The concept of a multi-cultural, multi-use space in London's financial district, tailored to best serve its community, attests to BGO's visionary outlook on the future narrative of urban life. This initiative highlights BGO as a pioneering institution fostering an environment where community voices can shape an agenda reflective of the needs of future leaders across London. Their commitment to growth, cultural enrichment, and educational advancement aligns profoundly with the values of the Museum of Diversity, cementing a strong partnership between our organisations. BGO is at the forefront of embracing change and fostering prosperity among the city's residents and workforce. As they pursue these goals, the presence of the Museum of Diversity will symbolise a significant step forward in our collective journey towards cultural appreciation and understanding. BGO's dedication to supporting diversity and cultural initiatives, as outlined in their cultural strategy, ensures the continuation of programmes that will enrich our societal fabric. BGO's development initiatives, particularly the planned redevelopment of Holland House, demonstrate their dedication to transformative projects that catalyse both economic and cultural growth. BGO envisions the Museum of Diversity as an integral part of the city's landscape, where history, technology, and humanity converge to inspire future generations through unique architecture and exhibits showcasing artifacts from diverse cultures worldwide. Furthermore, the City of London has a rich history of supporting the arts and museums, as evidenced by the success of the Museum of London and other institutions, which have become hubs of community engagement and cultural education. We foresee a partnership with BGO that will enhance our ongoing efforts to celebrate diversity, promote equality, and provide inclusive

	cultural education to all residents and stakeholders. The anticipated establishment of the Museum of Diversity in the City of London is expected to create approximately 300 employment opportunities across various levels, significantly advancing our community's economic landscape. Moreover, the initial phase of this project, with an estimated investment of £1.2 million, will serve as a cultural beacon and a collaborative nexus for partners dedicated to showcasing the rich tapestry of our shared human experience. The Museum of Diversity is ready to collaborate with the City of London to facilitate the establishment of BGO's cultural space at Holland House. We eagerly anticipate discussing the potential design and use of the space and are prepared to assist and support in their application or regulatory processes to expedite this exciting project. We look forward to the Museum of Diversity joining the tapestry of the City's cultural landscape and becoming a beacon of inspiration, learning, and unity. Together, we can create a future where diversity is recognised and revered.
Suzanne Gorman – East London Community Band	I am writing on behalf of East London Community Band in support of the planning application being brought forward by WELPUT for the redevelopment of Bury House, Holland House and Renown House. ELCB is a volunteer-run charity providing music-making opportunities for musicians of all ages and abilities. When it comes to performance spaces, affordable, secular spaces are very rare; we often hold our concerts in churches or school halls, which meet our budget but are often poorly lit, inadequately heated, and not fit for purpose. There is a notable dearth of spaces in the City to rehearse and perform free of charge. On the 29th August 2023, we were invited to tour the spaces within the historic Holland House and to have a discussion about how we could utilise these spaces in future. Following this, on the 27th October 2023 we held our first band music and community social evening on the first floor of Holland House, something which we will look to doing more in future. We currently rehearse in a former Victorian school which is only partially accessible, which is an increasing concern as

	some of our members have restricted mobility. It is a key objective of our organisation to make our sessions available at an accessible site. The proposed development would be especially welcome particularly as the proposals include an auditorium space in a great, central London location. I therefore welcome the proposed application in principle and hope the that the City of London Corporation will approve the proposals, which I hope will make a positive contribution to the long-term cultural success of the City.
Matthew Somerville – Wondering Minds	This is a letter which outlines the use of Holland House by community interest company Wondering Minds CiC for purposes looking to up lift the community. Wondering Minds are a community interest company who are committed to finding alternative solutions to the mental health crisis through art, storytelling and nature. We engage people in meaningful creative activities while building community, creating employment and creating radical therapeutic shifts in peoples lives. So far we have used the space at Holland House for a collaborative filmmaking course which bought together people living with complex mental health to engage with filmmaking and storytelling. The space was used to train people with cameras, allow them to shoot their films and create a community filmmaking screening in July where we bought over 50 people together to watch short films and have meaningful discussions around mental health and the importance of collaboration. Spaces like Holland House are so important to community building as there is very little space available which is free or affordable for people to come together. We have capacity to use HH permanently or on a short term let to create an office and creative hub where we can manage our community wellbeing projects, offer space to people who are in recovery. A space to come and be creative, set up an editing suite for our service users to make work, a location for filming for our participants and create drop-in sessions for people struggling with mental health to engage in creative activities.
Alex Feldman – deputy Headteacher at Dairy	As an experienced primary school teacher and school leader, I have seen my profession change wildly across the last two decades. We are no longer

Meadow Primary and Nursery School	individuals who impart facts to children from the hours of 9.00am to 3.15pm hoping that something sticks, we are now architects of the future responsible for all aspects of child development. All careers of the future start with a seed or an experience that is nurtured within a school setting. Making links with future careers and giving learning a purpose is the bedrock of successful education hence why our experiences at Holland House with Dr Sharon Wright have made such a difference to our children. Just travelling to Holland House helped build the cultural capital of our children. Coming from an incredibly deprived part of West London where most of our children are EAL (English as an additional language) and the progeny are part of an insular community that may not venture out the borough, travelling to Holland House was an eye opener. Getting on the Elizabeth Line, going up an escalator, walking through the City, gazing at the polished metal and glass, seeing workers that may look like them – this is inspirational for our children. Knowing that the financial heartbeat of the country can be reached in less than 30 minutes from Southall and becoming increasingly aware of the fact that the City of London could be a place of future employment frames the educational experience we hope to offer. Then there's the building itself – we teach the skills of comparison all the time in the primary curriculum – nestled next to the Gherkin and dripping in history. Our children had never seen anything like it: the aquatic tiles, the maritime theme echoed throughout, sitting in a boardroom from reclaimed wood – it's the closest some of our children have been to getting on a boat! Couple this with the role of shipping in the founding of Great Britain, it ties in with our fundamental British Values as well as providing a starting point for a conversation on the role of Empire and the decolonisation of the curriculum. The sheer space within Holland House lends itself beautifully to learning experiences for all ages. These workshops are what children remember about school, the people who give up their time and energy to actually guide and inspire – Sharon is the embodiment of this. At Dairy Meadow we were fortunate enough to run three workshops

	together across a two term period. We brought our school council and our Pupil Premium (the most vulnerable of risk of underachievement) children to have a tour of the building and supplement their DT and Skills Builder curriculum by designing sustainable work spaces of the future. The purpose of these visits were to: gain a potted history of London's financial centre, understand the jobs that occur in the city of London and contribute to the positive sustainable changes that they would like to see. A further workshop involved us taking all 53 Year 6 children for a 'world of work' immersion day. This involved meeting the team from Bentall Green Oak and having a series of presentations from inspiring individuals within the construction industry. All of our presenters were female which was an absolute surprise to our young ladies who are often subjected to cultural boundaries when thinking of further employment. From there we had a CV writing workshop and mock interviews! I don't know of any other primary school that has undertaken such an ambitious project, we really couldn't have completed it without the help of Holland House and Dr Sharon. I appreciate that this is just the experience of one primary school however you can not underestimate the impact these visits had for our children. Everything in London is getting more expensive and difficult – as a result the day to day worlds our children inhabit get smaller and smaller. It's only through events like I've mentioned that we can give the children the chance to envisage a life beyond their immediate future and encourage our future workers the chance to dream big. Happy to discuss anything that has been mentioned above, photos and pupil/staff voice available on request.

59. Sixty (60) representations have been receive stating that they have not made a representation relating to the proposed or previously refused development and they want their names to be taken off the contributors list.

Policy Context

60. The Development Plan consists of the London Plan 2021 and the City of London Local Plan 2015. The London Plan and Local Plan policies that are most relevant to the consideration of this case are set out in Appendix B to this report.

61. The City of London (CoL) is preparing a new emerging plan, the City Plan 2040, which has undergoing Regulation 19 consultation. The City Plan has been submitted to the Secretary of State and it is anticipated to be examined in public in Spring 2025. Emerging policies are considered to be a material consideration with limited weight with an increasing degree of weight as the City Plan progresses towards adoption, in accordance with paragraph 48 of the NPPF. The emerging City Plan 2040 policies that are most relevant to the consideration of this case are set out in Appendix B to this report.

62. The City of London (CoL) has prepared a draft plan, the City Plan 2036, which was published for Regulation 19 consultation in early 2021. The City does not intend to proceed with this plan and therefore it is of no or very limited weight and will not be referred to in this report.

63. Government Guidance is contained in the National Planning Policy Framework (NPPF) December 2023 and the Planning Practice Guidance (PPG) which is amended from time to time.

64. The National Planning Policy Framework (NPPF) states at paragraph 2 that "Planning Law requires that applications for planning permission must be determined in accordance with the development plan unless material considerations indicate otherwise". Other relevant sections of the NPPF are set out in the following paragraphs.

65. The NPPF states at paragraph 8 that achieving sustainable development has three overarching objectives, being economic, social and environmental.

66. Paragraph 10 of the NPPF states that "at the heart of the Framework is a presumption in favour of sustainable development. That presumption is set out at paragraph 11. For decision-taking this means:
    a) approving development proposals that accord with an up-to-date development plan without delay; or
    b) where there are no relevant development plan policies, or the policies which are most important for determining the application are out of date, granting permission unless:

- the application of policies in this Framework that protect areas or assets of particular importance provides a clear reason for refusing the development proposed; or
- any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole.

67. Paragraph 48 states that local planning authorities may give weight to relevant policies in emerging plans according to:
    a) the stage of preparation of the emerging plan (the more advanced its preparation the greater the weight that may be given);
    b) the extent to which there are unresolved objections to relevant policies (the less significant the unresolved objections, the greater the weight that may be given) and
    c) the degree of consistency of the relevant policies in the emerging plan to this Framework (the closer the policies in the emerging plan to the policies in the Framework, the greater the weight that may be given).

68. Chapter 6 of the NPPF seeks to build a strong and competitive economy. Paragraph 85 states that decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, considering both local business needs and wider opportunities for development.

69. Chapter 8 of the NPPF seeks to promote healthy, inclusive and safe places.

70. Paragraph 96 states that planning decisions should aim to achieve healthy, inclusive and safe places which promote social interaction, are safe and accessible and enable and support healthy lifestyles.

71. Paragraph 97 states that planning decision should provide the social, recreational and cultural facilities and services the community needs.

72. Paragraph 103 of the NPPF states that existing open space should not be built on unless an assessment has been undertaken which has clearly shown the open space, buildings or land to be surplus to requirements or the loss resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and quality in a suitable location.

73. Chapter 9 of the NPPF seeks to promote sustainable transport. Paragraph 109 states that "*Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions and improve air quality and public health*".

74. Paragraph 116 states that applications for development should give priority first to pedestrian and cycle movements and second to facilitating access to high quality public transport; it should address the needs of people with disabilities and reduced mobility in relation to all modes of transport; it should create places that are safe, secure and attractive and which minimise the scope for conflicts between pedestrians, cyclists and vehicles; it should allow for the efficient delivery of goods and access by service and emergency vehicles.

75. Paragraph 117 states that "*All developments that will generate significant amounts of movement should be required to provide a travel plan, and the application should be supported by a transport statement or transport assessment so that the likely impacts of the proposal can be assessed*".

76. Chapter 11 of the NPPF seeks to achieve effective use of the land. Paragraph 123 advises that "*Planning policies and decisions should promote an effective use of land in meeting the need for homes and other uses, while safeguarding and improving the environment and ensuring safe and healthy living conditions*."

77. Chapter 12 of the NPPF seeks to achieve well designed places. Paragraph 131 advises that "The creation of high quality, beautiful and sustainable buildings and places is fundamental to what the planning and development process should achieve. Good design is a key aspect of sustainable development, creates better places in which to live and work and helps make development acceptable to communities."

78. Paragraph 135 sets out how good design should be achieved including ensuring developments function well and add to the overall quality of the area, not just for the short term but over the lifetime of the development, are visually attractive as a result of good architecture, layout and appropriate and effective landscaping, are sympathetic to local character and history, including the surrounding built environment and landscape setting, while not preventing or discouraging appropriate innovation or change (such as increased densities), establish or maintain a strong sense of place, using the arrangement of streets, spaces, building types and materials to create attractive, welcoming and distinctive places to live, work and visit; optimise the potential of the site to accommodate and sustain an appropriate amount and mix of development (including green and other public space) and create places that are safe, inclusive and accessible and which promote health and wellbeing.

79. Paragraph 136 of the NPPF states that 'Trees make an important contribution to the character and quality of urban environments and can also help mitigate and adapt to climate change. Planning policies and decisions should ensure that new streets are tree-lined, that opportunities are taken to incorporate trees elsewhere

in developments (such as parks and community orchards), that appropriate measures are in place to secure the long-term maintenance of newly planted trees, and that existing trees are retained wherever possible...'

80. Paragraph 139 sets out that significant weight should be given to outstanding or innovative designs which promote high levels of sustainability or help raise the standard of design more generally in an area, so long as they fit in with the overall form and layout of their surroundings.

81. Chapter 14 of the NPPF relates to meeting the challenge of climate change. Paragraph 157 states that the planning system should support the transition to a low carbon future in a changing climate. It should help to; shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including conversion of existing buildings.

82. Paragraph 159 states that new developments should avoid increased vulnerability to the range of impacts arising from climate change. When new development is brought forward in areas which are vulnerable, care should be taken to ensure that risks can be managed through suitable adaptation measures.

83. Chapter 15 of the NPPF seeks to conserve and enhance the natural environment. Paragraph 180 of the NPPF advises that planning policies and decisions should contribute to and enhance the natural and local environment by, inter alia, minimising impacts on and providing net gains for biodiversity, including by establishing coherent ecological networks that are more resilient to current and future pressures. It is also stated that development should, wherever possible, help to improve local environmental conditions such as air and water quality.

84. Chapter 16 of the NPPF relates to conserving and enhancing the historic environment. Paragraph 201 of the NPPF advises that Local Planning Authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affecting the setting of a heritage asset) taking account of the available evidence and any necessary expertise. They should take this into account when considering the impact of a proposal on a heritage asset, to avoid or minimise any conflict between the heritage asset's conservation and any aspect of the proposal.

85. Paragraph 203 of the NPPF advises, "*In determining applications, local planning authorities should take account of:*
    a) the desirability of sustaining and enhancing the significance of heritage assets and putting them to viable uses consistent with their conservation;
    b) the positive contribution that conservation of heritage assets can make to sustainable communities including their economic vitality; and

c) *the desirability of new development making a positive contribution to local character and distinctiveness*."

86. Paragraph 205 of the NPPF advises "*When considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset's conservation (and the more important the asset, the greater the weight should be). This is irrespective of whether any potential harm amounts to substantial harm, total loss or less than substantial harm to its significance*."

87. Paragraph 206 states that any harm to, or loss of, the significance of a designated heritage asset (from its alteration or destruction, or from development within its setting), should require clear and convincing justification. Substantial harm to or loss of:
    a) grade II listed buildings, or grade II registered parks or gardens, should be exceptional;
    b) assets of the highest significance, notably scheduled monuments, protected wreck sites, registered battlefields, grade I and II* listed buildings, grade I and II* registered parks and gardens, and World Heritage Sites, should be wholly exceptional.

88. Paragraph 208 of the NPPF states "*Where a development proposal will lead to less than substantial harm to the significance of a designated heritage asset, this harm should be weighed against the public benefits of the proposal including, where appropriate, securing its optimum viable use*".

89. Paragraph 209 of the NPPF states "*The effect of an application on the significance of a non-designated heritage asset should be taken into account in determining the application. In weighing applications that directly or indirectly affect non-designated heritage assets, a balanced judgement will be required having regard to the scale of any harm or loss and the significance of the heritage asset*".

90. Paragraph 212 of the NPPF states "*Local planning authorities should look for opportunities for new development within Conservation Areas and World Heritage Sites, and within the setting of heritage assets, to enhance or better reveal their significance. Proposals that preserve those elements of the setting that make a positive contribution to the asset (or which better reveal its significance) should be treated favourably*."

Statutory Duties

91. The Corporation, in determining the planning application has the following main statutory duties to perform:

- To have regard to the provisions of the development plan, so far as material to the application, to local finance considerations and to any other material considerations. (Section 70(2) Town & Country Planning Act 1990);
- To determine the application in accordance with the development plan unless material considerations indicate otherwise. (Section 38(6) of the Planning and Compulsory Purchase Act 2004).

92. In considering whether to grant planning permission for development which affects a listed building or its setting, to have special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses. (S66 (1) Planning (Listed Buildings and Conservation Areas) Act 1990).

93. In exercising planning functions with respect to buildings or land in a conservation area, there is a statutory duty to pay special attention to the desirability of preserving or enhancing the character or appearance of that area. (S72(1) Planning, Listed Buildings and Conservation Areas Act 1990).

94. In considering whether to grant listed building consent the CoL is to have special regard to the desirability of preserving the building or its setting or any feature of special architectural or historic interest which it possesses (section 16(2) Planning (Listed Buildings and Conservation Areas) Act 1990.

95. In considering the planning and listed building applications before you, account has to be taken of the documents accompanying the application, the environmental information including the Environmental Statement, the further information, any other information and consultation responses.

Main Considerations

96. In determining the planning application, consideration has to be taken of the documents accompanying the application, the updated information, the consultation responses, the development plan, and other material considerations including SPGs, SPDs and emerging policy.

97. It is necessary to assess all the policies and proposals in the plan and come to a view as to whether in light of the plan as a whole the proposal does or does not accord with it.

98. The principal issues in considering this application are:

a) The principle of development, including the appropriateness of the proposed uses, including the proposed office use, the flexible community/education/cultural/amenity offer and other flexible retain uses.
b) The economic impacts/benefits of the proposal.
c) The appropriateness of the site to accommodate a tall building.
d) The impact of the of the development on the character and appearance of the area and the design of the building itself.
e) The impact of the proposal on the Tower of London World Heritage Site.
f) The impact on strategic views in the London Views Management Framework and on other strategic local views.
g) The impacts of the proposal on the setting and significance of heritage assets.
h) The proposed public realm benefits and cultural/community/educational offer
i) The potential impacts of the development on buried archaeology.
j) The impacts of the development in terms of accessibility and inclusivity.
k) The impact on the development in highway and transportation terms and cycle parking provision.
l) The impact of the development in terms of energy, sustainability and climate change.
m) The impact of the development on ecology.
n) The environmental impacts of the proposal including wind microclimate, daylight, sunlight and overshadowing, air quality, building resource efficiency, energy consumption and sustainability.
o) The impact of the proposed development on the amenity of nearby residential and other occupiers.
p) The impacts in terms of security and suicide prevention.
q) The outcome of the Health Impact Assessment.
r) The impacts of the development on fire safety.
s) An assessment of the public benefits of the proposal and whether they would be sufficient to outweigh any heritage harm.
t) Duties under the Public Sector Equality Duty (section 149 of the Equality Act 2010) and The Human Rights.
u) The requirement for the development to secure financial contributions and other planning obligations.

Principle of Development - Economic Considerations

99. The National Planning Policy Framework places significant weight on the need to support economic growth and productivity taking into account both local business needs and wider opportunities for development. Significant weight is to be given to the economic objective (to help build a strong, responsive and competitive economy, as referred to at paragraph 8 of the NPPF). In deciding this application, the weight to be given to the economic benefits will depend on the nature and

extent of those benefits in the light of any other planning considerations relevant to the assessment.

100. The City of London, as one of the world's leading international financial and business centres, contributes significantly to the national economy and to London's status as a 'World City'. Rankings such as the Global Financial Centres Index (Z/Yen Group) and the Cities of Opportunities series (PwC) consistently score London as the world's leading financial centre, alongside New York. The City is a leading driver of the London and national economies, generating £69 billion in economic output (as measured by Gross Value Added), equivalent to 15% of London's output and 4% of total UK output. The City is a significant and growing centre of employment, providing employment for over 590,000 people.

101. The City is the home of many of the world's leading markets. It has world class banking, insurance and maritime industries supported by world class legal, accountancy and other professional services and a growing cluster of technology, media and telecommunications (TMT) businesses. These office-based economic activities have clustered in or near the City to benefit from the economies of scale and in recognition that physical proximity to business customers and rivals can provide a significant competitive advantage.

102. Alongside changes in the mix of businesses operating in the City, the City's workspaces are becoming more flexible and able to respond to changing occupier needs. Offices are increasingly being managed in a way which encourages flexible and collaborative working and provides a greater range of complementary facilities to meet workforce needs. There is increasing demand for smaller floor plates and tenant spaces, reflecting this trend and the fact that many businesses in the City are classed as Small and Medium Sized Enterprises (SMEs). The newly launched Small and Medium Enterprise Strategy (2024) includes the City's strategy to attract and support the growth of SMEs. The London Recharged: Our Vision for London in 2025 report sets out the need to develop London's office stock (including the development of hyper flexible office spaces) to support and motivate small and larger businesses alike to re-enter and flourish in the City.

103. The National Planning Policy Framework establishes a presumption in favour of sustainable development and advises that significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development. That policy does not require a decision maker to assign a uniform level of weight- the weight to be ascribed to the economic benefits depends upon the nature and extent of the benefits in the light of any other planning considerations relevant to the assessment. The NPPF (at paragraph 87) also states that planning decisions should recognise and address the specific locational requirements of different sectors.

104. The City lies wholly within London's Central Activity Zone (CAZ) where the London Plan promotes further economic and employment growth. The GLA projects (GLA 2022 London Labour Market Projections), that City of London employment will grow by 176,000 from 2016 to 2041, a growth of 31.6%. Further office floorspace would be required in the City to deliver this scale of growth and contribute to the maintenance of London's World City Status. London Plan policy E1 supports the improvement of the quality, flexibility and adaptability of office space of different sizes.

105. The London Plan 2021 strongly supports the renewal of office sites within the CAZ to meet long term demand for offices and support London's continuing function as a World City. The Plan recognises the City of London as a strategic priority and stresses the need 'to sustain and enhance it as a strategically important, globally-oriented financial and business services centre' (policy SD4). CAZ policy and wider London Plan policy acknowledge the need to sustain the City's cluster of economic activity and provide for exemptions from mixed use development in the City in order to achieve this aim.

106. London Plan Policy GG2 sets out the Mayor's good growth policy with regard to making the best use of land. These include prioritising sites which are well connected by existing or planned public transport; proactively explore the potential to intensify the use of land to support additional homes and workspaces, promoting higher density development, particularly in locations that are well-connected to jobs, services, infrastructure and amenities by public transport, walking and cycling; applying a design–led approach to determine the optimum development capacity of sites; and understanding what is valued about existing places and use this as a catalyst for growth, renewal, and place-making, strengthening London's distinct and varied character.

107. London Plan Policy GG5 sets out the Mayor's good growth policy with regard to growing London's economy, to conserve and enhance London's global economic competitiveness and ensure that economic success is shared amongst all Londoners, it is important that development, amongst others, promotes the strength and potential of the wider city region; plans for sufficient employment and industrial space in the right locations to support economic development and regeneration; promote and support London's rich heritage and cultural assets, and its role as a 24-hour city; and makes the fullest use of London's existing and future public transport, walking and cycling network, as well as its network of town centres, to support agglomeration and economic activity.

108. In terms of the Local Plan 2015 Strategic Objective 1 seeks to maintain the City's position as the world's leading international financial and business centre. Policy CS1 aims to increase the City's office floorspace by 1,150,000sq.m gross

during the period 2011-2026, to provide for an expected growth in workforce of 55,000. The Local Plan, policy DM1.2 further encourages the provision of large office schemes, while DM1.3 encourages the provision of space suitable for SMEs. The Local Plan recognises the benefits that can accrue from a concentration of economic activity and seeks to strengthen the cluster of office activity.

109. The Strategic Priorities of the emerging City Plan 2040 sets out that the City Corporation will facilitate significant growth in office development of the highest quality to meet project economic and employment growth and protecting existing office floorspace to maintain the City's role as a world leading financial and professional services centre and to sustain the City's strategically important cluster of commercial activities within the Central Activities Zone; broadening the City's appeal by ensuring new office developments deliver flexible, healthy working environments and meet the needs of different types of businesses including Small and Medium Enterprises, supporting specialist clusters such as legal and creative industries and promoting a range of complementary uses; creating a more vibrant and diverse retail economy; balancing growth with the protection and enhancement of the City's unique heritage assets and open spaces and creating an inclusive, healthier and safer City for everyone.

110. The application site is located within an area identified as the Eastern Cluster in the Local Plan 2015 and within the City Cluster Tall Buildings area identified in the draft City Plan 2040. The Cluster Policy area is defined by an illustrative diagram on the Policies Map in the adopted and a more detailed map in the emerging Plan. The area is intended to be a general strategic area where tall buildings can be delivered on appropriate sites. Strategic Policy S21 of the emerging City Plan identifies the City Cluster as a key area of change where a significant growth in office floorspace and employment will be successfully accommodated including through the construction of new tall buildings together with complementary land uses, transport, public realm and security enhancements by, *inter alia:*

- Increasing the provision of attractive world class buildings that are sustainable and offer a range of office accommodation to cater for the needs of varied office occupiers;
- Encouraging complementary uses including leisure, culture and retail to support the primary office function in this area and providing active frontages at ground level.
- Requiring the provision of new and improved open spaces at ground level, free to enter publicly accessible spaces such as roof gardens and roof terraces, and cultural and leisure destinations and other facilities, that will provide additional public space and experiences for people working in the City alongside visitors and residents.

- Delivering tall buildings on appropriate sites in line with Policy S12 (Tall buildings) ensuring they positively contribute to the City's skyline, preserving heritage assets and their settings, taking account of the effect on the London skyline and on protected views;
- Ensuring development proposals have regard to the immediate setting of Bevis Marks Synagogue (as set out in the Policy Map). Developments should form a positive relationship with the Synagogue without dominating or detracting from its architectural and historic value; and ensuring that the historic elements of the Synagogue's setting are preserved and enhanced.
- Protecting the City's businesses, workers, residents and visitors against crime and terrorism by promoting the natural surveillance of streets, open spaces and buildings and implementing area-wide security measures, funded in part through s106 planning obligations;
- Delivering a high quality public realm, maintaining the quality of the microclimate and increasing urban greening;
- Activating streets, spaces and public realm at the ground floor and improving wayfinding through the streets and alleys;
- Improving walking and cycling into and through the Cluster. Pedestrian movement should be given priority through re-allocation of road space on key routes during daytime;
- Ensuring the provision of high quality utilities and communications infrastructure and efficient use of the subsurface through early engagement and joint working between developers and utility providers;
- Ensuring an area wide approach is taken to security and estate management to ensure the safety and comfort of workers and visitors, with a high quality public realm and environment that reflects the status of the area;
- Introducing new approaches to freight, construction logistics and servicing and delivering improvements to public transport to ensure the City Cluster can accommodate the planned level of growth.

111. Despite the uncertainty about the pace and scale of future growth in the City following the immediate impact of Covid-19, the longer term geographical, economic and social fundamentals underpinning demand remain in place and it is expected that the City will continue to be an attractive and sustainable meeting place where people and businesses come together for creative innovation. Local Plan and emerging City Plan 2040 policies seek to facilitate a healthy and inclusive City, new ways of working, improvements in public realm, urban greening and a radical transformation of the City's streets in accordance with these expectations. These aims are also reflected in the Corporations 'Destination City' vision for the square mile.

112. The proposed development would provide a primarily office lead development, providing a significant uplift in the number of full time jobs; namely from 330 to

2,470 full time jobs, as well as a material uplift in the office floorspace; namely from 10,064 sqm to 34,584sqm. Therefore, the proposed development would support the strategic objectives of the development plan and the emerging City Plan. The anticipated economic benefits of the proposed development are material and weigh in favour of the proposed development.

Proposed Uses

113. This section of the report provides an overview in respect of the layout and proposed mix of uses on the site before appraising the acceptability of the proposed uses:

- 34,584sq of office floorspace.
- Flexible retail space at ground floor, along the Heneage Arcade, Renown House and the southeast and southwest (near the open space) sections of Holland House at ground floor.
- 300sqm of learning spaces at the ground floor (northeast section) of Holland House
- 750sqm of workspace for small enterprises, including meeting rooms, workspace and event space at part ground and part first floor of Holland House (8 meeting rooms).
- 1,170sqm of flexible community/affordable workspace at part of the first floor of Holland House and first floor or Renown House (60 desk spaces).
- 750sqm of flexible creative/education/cultural floorspace at the lower ground and ground floors of Holland House, including 40sqm of gallery space.
- Provision of multi-faith space either at the lower ground of Holland House or at the first floor of the tower.
- Provision of rehearsal/event space/sports facilities at the first floor of the tower. The rehearsal/event space can provide 110 seats, which the space would be used for sports facilities including option such as a pickleball court, 3x3 basketball court, cricket nets, badminton courts and table tennis.
- Provision of workspace for cycle repairs (City Cycles) at the lower ground of Renown House, part of Holland House and the tower. This proposed use would generate up to 10 apprenticeships.
- Provision of 120 sqm of outdoor space (urban farm).

A breakdown of the existing and proposed uses (GIA) is set out below:

Land Use	Existing	Proposed
Office (Class E(g)(i))	11,339 sqm	34,584 sqm

Display/sale of goods other than hot food (E(a))	0 sqm	504 sqm
Flexible educational/ cultural/ community/ sports/ amenity space	0 sqm	1,411 sqm
Back of House/ Ancillary	0 sqm	4,794 sqm
Total	**11,339 sqm**	**41,293 sqm**

Provision of Office Accommodation

114. Strategic Policy CS1 of the City of London Local Plan 2015 and policy E1 of the London Plan seek to ensure that there is sufficient office space to meet demand and encourage the supply of a range of office accommodation to meet the varied needs of City occupiers. Policy DM 1.3 seeks to promote small and medium sized businesses in the City by encouraging new accommodation suitable for small and medium sized businesses and office designs which are flexible and adaptable to allow for subdivision to meet the needs of such businesses. Similar policy objectives are carried forward into Policies S4 and OF1 of the emerging City Plan 2040.

115. The predominant use of the proposed development is as office space, comprising of 34,584 sq.m (GIA) of Office Floorspace Class E (an uplift of 24,520 sq.m (GIA) of office floorspace on this site. The office space is classified as Grade A office space.

116. Adopted Local Plan Policy CS1 seeks a significant increase in new office floorspace in the City. The draft City Plan 2040, in Policy S4, seeks to deliver 1.2 million sqm net of new office floorspace; which approximately equates to 1.6 million square metres gross, in the period between 2021 and 2040. The apparent significant reduction in the 2040 City Plan compared with the previous City Plan 2036 target for office floorspace (2million sqm) is largely due to the passage of time and the significant office floorspace completions in the 2016-2021 period, totalling 835,000sqm. Overall, comparing the City Plan 2036 and City Plan 2040 floorspace targets is indeed similar due to the 2016-2021 period being met by completions.

117. At 31st March 2022, 835,000 sq.m net increase in office floorspace had been delivered since 2016 and a further 576,000 sqm net was under construction or

was permitted in the City. 370,000sq.m of flexible office floorspace was approved in 2022.

118. The Offices Topic Paper as part of the evidence base for the City Plan 2040 looks at capacity modelling within areas of the City for an increase in office floorspace. The Site is within the 'City Cluster' category, which is modelled at being able to achieve an office floorspace uplift of 630,000 – 770,000 sqm. The proposed development would deliver a considerable amount of this floorspace target providing an uplift of 24,520 sqm delivering 1.5% towards achieving the total office floorspace (1.6 million sqm gross) to be delivered by 2040 as required by the City Plan 2040. The site is central to the City's growth modelling.

119. The typical floorplate of the proposed tower would range between 350 and 580sqm for businesses of 50-60 people supporting smaller, start-up businesses. The proposal provides an option for potential office tenants who are looking for a smaller area that is not provided in a shared space in co-living office formats. The proposed smaller office floorplates would be able to provide office tenants with their own private entrance and dedicated floor rather than sharing with other tenants, which will ensure that the floorspace is attractive to a range of potential occupiers. The Future of Office Use (June 2023) which formed part of the evidence base for the emerging City Plan stated that "*Long term growth prospects appear good in our scenarios, with the City requiring 6 – 20 million sq ft of additional office space by 2042. Much of this will be high quality office space for smaller employers*". This would accord with emerging City Plan 2040 Policy S4 which encourages new floorspace to be designed to be flexible to allow adaptation of space for different types and sizes of occupiers

120. A range of office floorspace is required to meet the future needs of the City's office occupiers, including provision for incubator, start-ups and co-working space.

121. Policy OF1 of the emerging City Plan 2040 states that office developments should where appropriate, provide a proportion of affordable workspace suitable for SMEs. The proposed development includes the provision of 1,176 sqm of 'Community Workspace' at the first floor of Holland House comprising restored historic meeting room space and affordable office space with 60 desks which will be available at 50% of market rent for qualifying occupiers or zero rent for charities. This would fulfil the City's vision to providing inclusive workspace. The S106 agreement would include an obligation to secure and require further details of such provision.

122. The scheme meets the aims of policy E1 of the London Plan, CS1, DM1.2 and DM1.3 of the Local Plan 2015 and S4 of the emerging City Plan 2040 in delivering growth in both office floorspace and employment. The proposals provide for an additional increase in floorspace and subsequent employment opportunity in line

with the aspirations for the CAZ and the requirements of the Local Plan and the emerging City Plan. The proposed development would result in a considerable uplift of high quality, flexible Class E office floorspace for the City, contributing to its attractiveness as a world leading international financial and professional services centre.

Proposed Retail/Food and Beverage

123. Policy DM 1.5 encourages mix commercial uses within office development which contribute to the City's economy and character and provide support services for its businesses, workers and residents. Similar support of other commercial uses particularly at ground and basement levels is also supported by policy OF1 of the emerging City Plan.

124. The proposed scheme would provide 504 sqm of flexible retail/café space at ground floor level. The retail space would be accessed from several entrances at ground floor, along the Heneage Arcade, Renown House and the southeast and southwest (near the open space) sections of Holland House.

125. The policy requirement is for these 'town centre uses', as defined within the NPPF, to be provided primarily in Primary Shopping Areas, then Retail Links and then outside of them. The site is not within a Principal Shopping Centre or along a Retail Link as defined by the City of London Local Plan 2015 and the emerging City Plan 2040. Inclusion of main town centre uses in this location is in accordance with the local plan which encourages such uses relying on policy DM1.5.

126. The proposal would provide seven times more active frontage than currently exists. The provision of an active retail offer is welcomed. Policy S5 (Retail and active frontages) of the emerging City Plan 2040 states that "*The City Corporation will seek to make the City's retail areas more vibrant, with a greater mix of retail, leisure, entertainment, experience, culture, and other appropriate uses across the City*". The supporting text to policy S5 notes that over the longer term, evidence shows significant demand for growth in retail uses in the City. The City's growing working population and the increasing number of visitors create significant opportunities for improvement to the retail offer, complementing the wider vision for the City to become a destination of choice for visitors.

Cultural/Community/Educational/Sports/Multi-faith/Amenity uses

127. Policy CS11 of the Local Plan seeks to maintain and enhance the City's contribution to London's world-class cultural status and to enable the City's

communities to access a range of arts, heritage and cultural experiences, in accordance with the City Corporation's Visitor Strategy by:

- *Providing, supporting and further developing a wide range of cultural facilities.*
- *Maintaining the City's collection of public art and culturally significant objects and commissioning new pieces where appropriate.*
- *Protecting existing cultural facilities where they are need.*
- *Providing visitor information and raising awareness of the City's cultural and heritage assets.*
- *Allowing hotel development where it supports the primary business or cultural role of the City.*

128. The emerging City Plan 2040 under policy CV2 will seek opportunities to provide new arts, cultural and leisure facilities that offer unique experiences at different times of the day and week and attract significant numbers of visitors into the City.

129. Local Plan policies CS22 and DM 22.1 support the provision of community services. It is advised that development of "*new social and community facilities should provide flexible, multi-use space suitable for a range of different uses and will be permitted:*

- *where they would not be prejudicial to the business City and where there is no strong economic reason for retaining office use;*
- *in locations which are convenient to the communities they serve;*
- *in or near identified residential areas, providing their amenity is safeguarded;*
- *as part of major mixed-use developments, subject to an assessment of the scale, character, location and impact of the proposal on existing facilities and neighbouring uses."*

130. Similar requirements are set out in policy HL5 of the Emerging City Plan, which expects the provision of new social and community facilities at flexible, multi-use spaces suitable for a range if uses. These spaces are considered making a significant contribution to people's mental, spiritual and physical wellbeing, sense of community, learning and education.

131. Policy DM19.3 supports the provision of new sport and recreational facilities and encourages the provision of flexible space to accommodate a range of different uses that are accessible to all, at locations that are convenient to the communities, near existing residential areas, where they do not cause undue disturbance to neighbouring occupiers. Similar support is set in Policy HL7 of the emerging City Plan.

132. Policy DM 1.5 encourages mix commercial uses within office development. Complementary uses, include within others retailing, leisure, education and health facilities to contribute to the City's economy, character and appearance.

133. Strategic Policy CS22 supports the provision of health, social and educational facilities and opportunities for the City's residents and workers.

134. Functions of state health, education, creativity and cultural activities are also supported by Policy SD4 in the London Plan within the CAZ area.

135. As noted above, the proposed development would provide an area of 1,411sqm GIA of community, education, cultural, sports and amenity facilities, at lower ground, ground and first floor, primarily within Holland House. There will be two main parts of the proposed flexible space, the 'Holland House Hub', which would include classrooms, flexible immersive room and other rooms and the 'Creechurch Hall', which would be a multifunctional space for a range of uses including lectures, presentations, rehearsals space, sports area and multi-faith space.

136. The flexible spaces would be used for a variety of events, including charity, educational, cultural, social, multi-faith and corporate events and they are proposed to be free to use to qualifying users between 8am – 9pm on weekdays and 9am - 5pm on weekends, with private bookings outside those hours (save that Creechurch Hall will be available for 67.75 hours per week free of charge and for 13.25 hours for private hire during these hours). The majority of these uses have already been tested within Holland House through a collaborative process involving discussions with over 80 stakeholders, including education institutions, sporting organisations, charities, social enterprises and community groups, arts and culture organisations and multi-faith groups.

137. The provision of cultural/community/educational/amenity offers within development proposals is of increasing importance. The City of London contains a huge concentration of arts, leisure, recreation, community and cultural facilities and spaces that contribute to its uniqueness and complement its primary business function. Destination City is the City Corporation's flagship strategy, that seeks to ensure that the City is a global destination for workers, visitors and residents. It seeks to enhance the Square Mile's leisure and cultural offer by creating a sustainable, innovative, and inclusive ecosystem of culture that celebrates its rich history and heritage and makes it more appealing to visitors as well as the City's working and resident communities.

138. A cultural plan accompanies the application in accordance with policy CV2 of the draft Local Plan 2040. The plan analyses the City's existing cultural

infrastructure and sets out how the proposal would support the City's continued role as a destination. Further details about the proposed plan are discussed below.

139. Through consultation with charities, educational institutions, sports organisations and arts, culture and faith groups, different needs have been highlighted, including:

- Provision of work experience opportunities in the City
- An accessible space for a school trip
- Active learning
- Affordable space to host events
- Meeting rooms and workspace
- Access to indoor sports facilities
- Space for community sporting events and tournaments
- Encouragement of the community to get more active
- Flexible event/rehearsal space
- Space that is available in the evenings and weekends
- Volunteer and sponsorship opportunities
- Calm and quite space
- Auditorium space for services

Holland House Hub

140. A large area of Holland House, at lower ground and ground floors will be opened to the public for the first time to be used as venue for learning, creativity and culture. At ground level there will be an approximate area of 300sqm which would be mainly used as learning space for schools and community groups and it will split into two areas, the learning space and the exhibition centre. This would provide an opportunity for young people to experience the City of London and this historic building while getting informed about future career opportunities. This space would also be able to be used from local groups for hosting events.

141. Holland House Hub would be available all days of the week, between 8am and 9pm on weekdays (65 hours) and 9am till 5pm (16 hours) on weekends. It would therefore be available for a total of 81 hours a week. Of those hours 12 hours a week and 5 days a year would be available to be hired privately, resulting in 67.75 hours per week free of charge use.

142. Creative space is proposed at the lower ground. This would be 750sqm and would be available for creative, educational and cultural activities. An immersive room is proposed at the lower ground, providing a dedicated space where technology and history collide to engage visitors with the art and history of the

building, primarily supporting the educational programmes that are proposed at Holland House.

143. The cultural plan is also supported by ‘week in the life’ information for the Holland House Hub. The week table has been split into morning, afternoon and evening sessions for the weekdays and morning and afternoon sessions for the weekends. As this is proposed to be a multi-functional space, different uses are proposed at each session of the week.

144. The learning space would be used, within others, for educational workshops, school trips, work experience student visits, building future skills workshops, language lessons, Sunday church school, trustee meetings and it will also be available for booking for approximately 4 out of 19 sessions in a week.

145. The creative space would be used for several workshops, including art and design, artist drawing, global trade, educational and history of the building workshops, filming marketing material, creative hub sessions and programme events on Sudays.

Creechurch Hall

146. Creechurch Hall would consist of one area at the first floor level of the tower element. This would be a community led, flexible space designed to be used for multiple purposes, including rehearsals, performances, conferences, charity events, sports tournaments, faith events, and weddings.

147. Similar to Holland House Hub, Creechurch Hall would be available all days of the week, between 8am and 9pm on weekdays and 9am till 5pm on weekends, being available for 67.75 hours per week free of charge and for 13.25 hours for private hire.

148. The versatile space would be equipped with retractable seating providing 110 seats, fostering artistic growth and community engagement. It is intended that the space would be used to host faith groups, charity events, music and drama workshops, as well as providing additional space for nearby schools. The aim would be to create a space where ideas are shared, skills are developed and community gets together. The space would be provided free to community partners and would be able to be hired at lower than the market price privately.

149. The area would also be able to be transformed to indoor sports space with dedicated hours for each sport, offering the following facilities and equipment:
- Pickleball courts

- 3x3 basketball court
- Cricket nets
- Two badminton courts
- Eight table tennis tables

150. The ‘week in the life’ timetable shows an example of how the space would be used during the weekdays and weekends in the morning, in the afternoon and in the evening (excluding weekends). Within others there will be times dedicated for sports, community music workshops, fundraiser events, performances, Friday prayers and Sunday schools.

151. It is therefore considered that, subject to a Community/Educational/Cultural/Sports/Amenity Implementation Strategy being secured in the S106 agreement to secure a year-round Programme which would establish monitorable deliverables in curation of the spaces for education workshops, school visits, sharing of knowledge and skills, cultural activities and events, sports tournaments, faith, social and charity events, rehearsals and performances, which would respond to the needs of the local and wider area and be informed by a continuing dialogue with stakeholders, users, visitors, the local community and building users, the policies referred to above would be complied with.

Other associated public offer elements

Urban Farm/ Climbing Wall

152. Policy DM10.3 ‘Roof Gardens and Terraces’ of the Local Plan seeks to encourage high quality roof gardens and terraces where they do not immediately overlook residential premises; adversely affect rooflines or roof profiles; result in the loss of historic or locally distinctive roof forms, features or coverings; impact on identified views. It is also noted that public access will be sought where feasible in new development. Policy DE4 of the Emerging City Plan also requires that the roof terraces are visually integrated with the overall design of the building and they optimise the potential for urban greening.

153. At the ninth-floor terrace, on top of Holland House an outdoor classroom and accessible terrace for the tenants is proposed to be designed. This would be accessible via a dedicated lift and would be open to all tenants, including those using the community workspace. The rooftop classroom would be able to provide nurturing environment for learners to explore and urban greening. It is proposed that the Urban Farm would offer the chance to facilitate a small level of food production and partner with initiatives such as Capital Growth.

154. By reason of the orientation of the terrace, intervening tower element of the development and distance from the nearby residential properties, it would not overlook any residential units. This is further assessed in the 'Impact on the residential amenity' section below. The impact of the proposed development and roof terrace on the historic building, its roof profile and identified views is assessed in the 'Design and Heritage' section below.

155. The proposal also involves the creation of an outdoor climbing wall on the façade of the tower fronting St James' Court. This would be open to the public and would offer regular climbing sessions. This would encourage health and wellbeing and support the provision of new sport and recreational facilities and encourages the provision of flexible space to accommodate a range of different uses that are accessible to all.

Public Art/Cultural offer and Heritage

156. As noted above, Holland House and in particular an area of Holland House Hub would be used as art exhibition space for permanent and rotating exhibitions of City and Guild students and local artists to display their work. Furthermore, historical elements and artwork is proposed to be displayed along Heneage Arcade to educate public about heritage. Other art initiatives would include art competitions for local schools including one round hoarding design, provision of space for artists and creatives to host micro workshops and galleries and tours within the community space of Holland House. The provision of public art and all the abovementioned art initiatives would be secured via S106 obligations.

Ground level Public Realm

157. The proposed landscaped public realm, St James' Court, to the southeast of the tower element would provide an area open to the public at all times with seating to be used by workers, visitors and residents. Part of the area would be covered under the colonnade, incorporating local artist work installations.

158. A route through, Heneage Arcade, will be created traversing the tower at ground floor linking Bury Street with Heneage Lane, to reintroduce a historic City route. Along the new route through there will be retail units, activating the space.

159. Further details on the operation of the public realm would be secured through the cultural strategy and the public realm management plan.

Changing Place/ Public Toilet/ Drinking Fountain

160. London Plan Policy S6 states that large-scale developments that are open to public should provide and secure the future management of free publicly-accessible toilets suitable for a range of users, including disabled people and free 'changing places' toilets designed in accordance with the guidance in the British Standard BS8300-2:2018. Similar standards are set in policy HL6 of the emerging City Plan 2040. A widespread distribution of public toilets to support demand is also required by policy DM22.2 of the Local Plan 2015.

161. The proposed development would incorporate a 'changing place' accessed via the office reception along Heneage Arcade. The 'changing place', as designed appears to not meet the current British Standards. However, it is considered the ground floor area is not so constrained as to render it impossible to provide one that meets the minimum requirements in terms of dimensions and facilities. For that reason, it is considered reasonable that a condition is imposed ensuring that the 'changing place' proposed is provided in accordance with the British Standards. This facility would have to be made available to the public for the duration of the use of Heneage Arcade (between 7am and 11pm).

162. The proposed development also includes an accessible toilet between Renown House and Holland House. Further toilets, including an accessible toilet are proposed within Holland House. Although the toilets within Holland House would be accessible from the users of the visiting the Holland House Hub, the accessible toilet between the two buildings can be made publicly accessible. A condition will be imposed ensuring that this accessible toilet, which is easily accessed via the step free entrance of Renown House would be made available to the public for the duration of the operational hours of the area, between 7am and 11pm. The public facility would have to be advertised at the entrance of the building.

163. The provision of free drinking water at appropriate locations in new public realm is highlighted in both policy D8 of the London Plan and policy DE3 of the emerging City Plan. A drinking fountain is proposed to be installed along Heneage Arcade. A condition to secure the details and its provision for the lifetime of the development would be secured by condition.

164. Maintenance of the abovementioned facilities would be secured via a planning obligation in the S106 agreement.

165. Subject to the imposition of the abovementioned conditions, it is considered that the proposed development would be able to secure significant benefits to meet the needs of the area and its users and would promote equality of access to much needed facilities.

Cycle Repair space

166. The Proposed Development includes the delivery of dedicated cycle repair space at lower ground floor level within the tower element of the scheme and renown House. In particular, three cycle repair stations are proposed. This social enterprise would support young adults in offering bike mechanic training and jobs servicing the office tenants' bikes in addition to providing a street presence in Heneage Lane to serve the local community.

167. This offer would support the provision of new skills in the area, providing training and jobs for young adults and concurrently providing a service in the area to support the local community in accordance with policies CS4 and CS22 of the Local Plan.

Conclusion

168. It is considered that the proposal would deliver a compelling new community/educational/cultural/amenity/sports offer for the City that would align with the Destination City agenda. Final details of the operation and marketing of the spaces, uses and public art would be secured through the S.106 and as part of the Implementation Strategy. The proposal would therefore accord with policy CS11, CS22, DM1.5, DM10.3, DM19.3 and DM22.1 of the Local Plan 2015 and policies CV2, HL5, HL7 and DE4 of the emerging City Plan 2040.

Architecture, Urban Design and Heritage

169. The relevant local policies for consideration in this section are CS7, S10, DM10.1, DM10.2, DM10.3, DM10.4, DM10.8, CS12, CS12, DM12.1, DM12.2, DM12.3 CS13, CS14, CS16 and DM16.2 of the Local Plan (2015) policies and HL1, S8, DE1, DE2, DE3, DE4, DE8, S11, HE1, HE3, S12, S13, S21, AT1, of the emerging City Plan 2040, and London Plan (2021) policies D3, D4, D5, D8, D9, HC1, HC2, HC3, HC4 and GG1-6.

Principle of a Tall Building

170. The proposal is considered a tall building as defined by the adopted Local Plan (CS14, para 3.14.1) and the emerging City Plan 2040 (S12 (1), >75m AOD) and London Plan D9 (A).

171. The application site is in the Central Activities Zone, and the proposal would complement the unique international, national and London-wide role of the CAZ, as an agglomeration and rich mix of strategic functions, including nationally and internationally significant economic activity, in line with London Plan Policy SD4.

It would be in a highly accessible and sustainable location, with the highest PTAL Level of 6B, with excellent access to transport infrastructure including active travel.

172. The City's long-term, plan-led approach to tall buildings is to cluster them to minimise heritage impacts and maximise good growth. As such, the adopted Local Plan seeks to consolidate tall buildings into a singular, coherent Eastern Cluster (CS7 and CS14 (1)), an approach carried forward in the draft City Plan 2040 (as the 'City Cluster'; policies S12 (2) and S21).

173. The application site is in the Eastern/City Cluster and as such is identified in these Plans as a suitable location for a tall building in the strategic sense; for the spatial purposes of London Plan policy D9 (B), the application site, due to its Cluster location, is in a location identified as suitable for tall buildings in the Development Plan. In its Stage 1 letter the GLA state that 'in line with London Plan policy D9 B (3)' the site is located in an area which is potentially suitable for tall buildings.

174. This location makes the application site important to the City's growth modelling, the significant majority of which will be accommodated in a consolidating City Cluster of tall buildings and would deliver 34,584 sqm (which is c.1.5%) of the required commercial space to meet projected economic and employment growth demand until 2040. This strategic quantity of floorspace would contribute to maintaining the City's position as the world's leading international financial and business centre.

175. The proposal is in the proposed City Cluster Tall Buildings Area and would comply with the contour lines of the proposed City Cluster as set out in the draft City Plan 2040. The shoulder of the lowermost part of the massing would, in the language of draft policy S12, mediate successfully between the 90m and 100m contour lines which relate to that part of the site; and the top of the building, at 178.7m AOD, would sit comfortably below the 180m and 200m contour lines which relate to the rest of the site. As such, it would accord with the objectives of the proposed City Cluster contour lines, which are to minimise the possibility of harm being caused to the settings and significance of the three Strategically Important Landmarks, including the WHS.

176. At a more local level, the proposal is located in the Creechurch Conservation Area which lies within the City Cluster. Adopted Local Plan 2015 policy CS14 (2) states that the City will refuse planning permission for tall buildings within 'inappropriate areas' including conservation areas. Thus, at this level, the application site would be inappropriate for a tall building because it is in a conservation area. For clarity, this aspect of the policy is not included in the draft City Plan 2040.

177. The proposal would be in the Eastern/City Cluster Key Areas of Change in both the 2015 and 2040 Plans. Whilst it draws in-principle support from the fact that the site lies within the identified Cluster, the proposal would conflict with Local Plan policy CS7 (3), due to its location also within a conservation area, and with emerging policy S21 (5), as it does not preserve the significance of grade II* listed Holland House. In respect of the latter, the City Plan 2040 is about to undergo Examination in Public and consequently its provisions can be afforded only limited weight.

178. Because of the conflicts with Local Plan policies CS7 (3) and CS14 (2), the proposal would not be a site or in an area identified as suitable for a tall building, and this would mean that the proposal would not comply with D9 B (3).

179. In *R (oao LB of Hillingdon) v. Mayor of London* [2021], the High Court held that London Plan policy D9 B was not a pre-condition or 'gateway' to the application of the criteria in D9 C. In other words, even where a proposed tall building falls outside an area identified as suitable in a Development Plan under part B, the impact of the tall building as set out in Part C should still be considered.

180. As such, an assessment against London Plan policy D9 (C) and (D) is made below, with reference to other sections of this report for more detail. It is found that the proposal would largely satisfy the criteria in (C) and (D) and, most relevantly, the proposal would not cause harm to the significance of the Creechurch Conservation Area.

181. As such, the proposal is considered to comply with London Plan D9 C and D, but would conflict with D9 B (3), Local Plan policy CS7(3) and CS14 (2). This conflict with a Development Plan policy is addressed at the end of the report when considering whether the proposal accords with the Development Plan as a whole, as part of the Planning Balance.

182. The effect of policy CS14 (2) is to indicate that planning permission should be refused for tall buildings within a conservation area, being an inappropriate area for the purposes of the application of the policy. The policy does not require that every application for a tall building in a conservation area must be refused; other factors should also be considered. After considering the impacts of the proposed tall building in the assessment that follows, and in particular because it has been concluded that no harm would be caused to the conservation area as a result of the proposed development, and as the London Plan policy D9 C criteria area satisfied, officers consider that the principle of locating a tall building on this site in the defined Eastern Cluster is acceptable, notwithstanding the conflict with CS14 (2). The proposal is supported by adopted policy CS1, which seeks to ensure the Cluster can accommodate the Plan's significant growth in office and employment floorspace, whilst drawing support from CS14 (1) (Tall Buildings),

which seeks to consolidate tall buildings where they are least impactful on the strategic heritage and character of the CoL and London. This balance is at the heart of the design-led optimisation of site capacity when assessing this against wider heritage and design policies.

183. The GLA Stage 1 Letter states defers judgement on London Plan Policy D9 until stage 2 of the decision making process (this occurs once the application has been considered by the local planning authority).

Tall Building – Impacts

184. The site is in the centre of the City Cluster, a carefully curated collection of tall buildings which serves as the heart of the City and London's financial and insurance industry. The City Cluster is an established part of the City's and London's skyline and its long-term consolidation and curation is anticipated under the draft City Plan 2040. The relationship of the proposal to the composition of the City Cluster has been carefully considered in a range of long, mid-range and immediate views.

185. This section assesses the proposals against the requirements of policy D9 (C) (1-3) and (D) of the London Plan. The visual, functional, and environmental impacts are addressed in turn. Further assessment follows on below in the 'Architecture and Urban Design' and 'Strategic Views and Heritage' sections.

Visual Impacts

186. At ground plus 43 storeys (178.7m AOD), the proposal would be one of the lower towers in the City Cluster, commensurate with its status as a tower proposed at the Cluster's edge rather than its centre. Comparison is given below with the other existing and consented tall buildings in the Cluster (in descending AOD height order), with the proposal noted in **bold**:

- 1 Undershaft: 304.9m (2016 consent)
- 22 Bishopsgate: 294.94m
- 55 Bishopsgate: 284.68m (resolution to approve)
- 100 Leadenhall: 263m
- 122 Leadenhall Street (the 'Cheesegrater'): 239.40m
- Heron Tower: 217.80m
- 52-54 Lime Street: 206.50m
- Tower 42: 199.60m

- 30 St Mary Axe (the ‘Gherkin’): 195m
-
- Leadenhall Court: 182.7m
- Bury Street proposal to which this report relates (178.7m)
- 20 Fenchurch Street: 177m
- 50 Fenchurch Street: 165m
- 85 Gracechurch Street: 155.70m
- 70 Gracechurch Street: 155m

187. The impact of the proposals upon the City and wider London skyline has fundamentally informed the design-led optimisation of the site and officers support the overall form and massing strategy. This represents an efficient use of the site, that would form part of the heart of a dense, consolidating cluster of tall buildings including 122 Leadenhall Street (the Leadenhall Building), 22 Bishopsgate, 55 Bishopsgate, 100 Bishopsgate, 100 Leadenhall, 30 St Mary Axe and Tower 42.

188. The proposal would take the form of a pale blue faience tower massed in three stages: broadest at its base, then slenderer in its middle section and slenderest in its topmost stage which reach approximately the height of the Gherkin. Its height and massing have been fundamentally informed by the most important view it has the potential to affect: that from Tower Bridge of the Tower of London World Heritage Site, although consideration has been given to its presence in a great number of other views too, as set out the sections below. The height and massing proposed would ensure the proposal reads as clear endpiece to the eastern edge of the Cluster, of a height commensurate with its position at the edge rather than the centre.

189. In relation to long range views D9 C (1; a; i), the proposal would form a clear endpiece to the eastern edge of the City Cluster. As such it would be clearly visible in the long-range views from Greenwich and Blackheath, positioned in front of the Gherkin. Due its position, it would otherwise be largely or fully occluded by the existing Cluster buildings in the views from the northern hills. As such, the siting and height of the proposal would ensure it reinforces the edge of the Cluster rather than creating a more conspicuous change in these views; as such, the development would comply with Policy D9 C (1 a; i)

190. In relation to mid-range views, and consideration of London Plan D9 C (1; a; ii), much of the comments and objections from statutory consultees, including from Historic England, Historic Royal Palaces, the GLA and others relate to these views and the impacts are discussed through the report and in detail in the Strategic View and Heritage sections of the report.

191. In both baseline and cumulative scenarios, in mid-range views particularly from the south-east, east and north, the proposal would appear on the eastern edge of the Cluster, intrinsic to reinforcing and defining its overall silhouette and form. From Tower Bridge and The Queen's Walk, it would appear as a clear endpiece to the emerging Cluster, of a scale commensurate with its position as an edge rather than more central component of the Cluster. From the east, including from Whitechapel Road and Commercial Road, the development would also be perceived as part of the Cluster, standing at a clearly subsidiary scale before the taller buildings at the apex of the Cluster, while in views from the north, including from Shoreditch High Street, it would be less visible, glimpsed as part of the Cluster's stepping down to the east.

192. Due its position on the eastern edge of the Cluster, the proposal would be mostly screened in views from the south west and west, glimpsed in some of the views from the Thames bridges but otherwise largely occluded. In views from Fleet Street, the development would be completely screened by existing buildings in the Cluster, maintaining the primacy of St Paul's Cathedral.

193. From these mid-range distances, the observer would begin to experience the elegant form of the proposals, with its sophisticated pale blue faience becoming apparent and edging the Cluster with pleasing solidity. The highly distinct façade of the building would calmly stand out from the rest of the fully glazed buildings in the Cluster and help to emphasise its status as an edge component. In relation to mid-range views, the proposed development is considered to comply with London Plan D9 C (1; a; ii).

194. In relation to immediate views, London Plan D9 C (1; a; iii), the proposal would be located in the western zone of the Creechurch Conservation Area where it meets the heart of the City Cluster. The tower element of the proposal would, in the majority of local view experiences, such as from Gherkin Plaza, Bevis Marks, the Synagogue Courtyard and Aldgate Square, be seen rising behind the low-rise buildings in the foreground of these views in a manner entirely characteristic of this intensely developed part of the Cluster. Its pale blue faience elevations would form a high quality new addition to this dynamic townscape character. The tower element would be seen coming to ground in the views along Creechurch Lane and along Mitre Street, where it would be seen to form a high quality new landmark in the locality, particularly in the views along Mitre Street. have a landmark quality.

195. The proposed development has been designed to activate the ground floor and to optimise inclusive public realm around the footprint of the tower element through Heneage Arcade and James' Court; it would bestow new uses upon the lower levels of Holland House and Renown House and open them up to a wider demographic. The building would provide new and interactive frontages on all sides of its tower element, that would be of pedestrian scale that engage and

acknowledge the historic context and specifically the neighbouring medieval churches. Active frontages, urban greenery and high-quality architecture would invite people to the site as a destination, place to linger or connection route through this eastern edge of the Cluster. In relation to immediate views the proposals would comply with D9 C (1; a; iii).

196. In relation to D9 C (1; b) the proposal has been designed to assist the future evolution and consolidation of the City Cluster. It would be an important and clear endpiece to the eastern edge of the Cluster in key views from the south, south-east and east, playing an important role in consolidating the Cluster's skyline view and presence when seen from these areas.

197. In this, and like other conspicuous Cluster schemes, it would accentuate the important place of the City Cluster in the mental 'mind map' of the City and London, assisting wayfinding and London-wide legibility. The skyline impact is commensurate with a recognition of the importance of the City and the Cluster in the wider historical and socio-economic topographical reading of the capital, where the Cluster identifies the original commercial heart of London since Roman times.

198. As assessed elsewhere in this report, at a macro character and identity level, the consolidation of the Cluster achieved by the proposal would allow the observer of strategic views to better orientate themselves, assisting in a recognition and appreciation of other strategic London landmarks as part of a more coherent whole. In local views the proposal will assist in consolidating the Cluster form so that its form can be further reinforced. As such, it is considered the proposal would reinforce the existing and emerging Cluster of tall buildings, reinforcing the local and wider spatial hierarchy, aiding legibility and wayfinding. Therefore, the development is considered to comply with D9 C (1; b).

199. In relation to D9 C (1; c), the architectural quality and materials are exemplary and would be maintained through the life span of the proposal and this is elaborated upon in the 'Architecture' section below. The tower would be visually split into four main parts: the triple-height base incorporating the Heneage Arcade, the podium block, the slenderer tower above and the slenderest crown element of the tower. This stepped profile would achieve an elegance, particularly in views form the south and south-east, that would be enhanced by its dressing in high-quality and subtly articulated pale blue faience elevations. The roof extensions to Holland House would be highly discreet in relation to the important original views of the building, and of a recessive and high-quality terracotta presence in longer views. Overall, the architecture is clearly well-considered in the round and of a high quality, would be visually distinctive and an attractive addition to the skyline in of itself, compliant with D9 C (1; c).

200. In relation to D9 C (1; d), a full assessment of impact with regards to heritage assets is detailed in the Heritage section of the report. Officers have identified that the proposal would cause a low level of less than substantial harm to the significance of Holland House (grade II* listed) through the roofing over and infilling of part of its atrium.

201. Historic England have identified harm arising to a number of heritage assets, at the middle to low range of less than substantial, including the Tower of London WHS, Bevis Marks Synagogue, Holland House and Creechurch Conservation Area. Their conclusions on harm to the WHS and the Synagogue are shared by many other objectors.

202. The GLA have identified that the proposal would cause less than substantial harm, from the middle to the low range, to a number of heritage assets. They state that "The development would compromise the ability to appreciate the Outstanding Universal Value and setting of the Tower of London World Heritage Site and would cause less than substantial harm to designated heritage assets. Nonetheless, further information is still needed to confirm impacts in full. The final NPPF paragraph 208 balance will be carried out at the Mayor's decision-making stage.

203. For the reasons set out in detail in this report, it is considered there is clear and convincing justification for the proposed development. The development would optimise the capacity of the site and deliver an essential contribution of required office space as is set out in the office section of this report. To optimise the site, while minimising harm, alternatives have been explored, including numerous iterations of the height and massing profile of the tower in order to arrive at a comfortable presence in relation to the Tower of London WHS, and the quantum, positioning and architectural design of the roof extensions to Holland House and Renown House.

204. While the adverse heritage impacts to Holland House are not entirely mitigated, they have been minimised by a design-led approach which has included the exploration of alternative forms of development; the proposal is considered to strike the right balance between conservation and growth in optimising the site and clear heritage and public benefits flow from the development and outweigh the harm identified. This is detailed in the planning balance section of the report. As such the proposal is considered to comply with D9 C (1; d).

205. In respect of D9 C (1; e), the proposal's siting at the eastern edge of the Cluster means that it would be visible to varying degrees of prominence in relation to the Tower of London WHS. As mentioned, this has been the focus of many objections to the proposal, including from Historic England and Historic Royal Palaces. The proposal has been found through detailed analysis, referred to later in this report,

not to cause harm to the Outstanding Universal Value of the Tower of London World Heritage Site, or the ability to appreciate it. In relation the view from Tower Bridge, the focus of the objections and where the juxtaposition between the proposal and the WHS is acutest, the proposal would have a slender, tapering profile which would be appropriately deferential to the WHS and be commensurate with its status as an edge component of the Cluster. Officers consider that the proposal's strategic siting within the long-established and consolidating Cluster backdrop, and its intervening distance from and height in relation to the WHS, would mean that it would preserve the OUV of the WHS and comply with D9 C (1; e).

206. In respect of D9 C (1; f), the proposal would be set well back from the banks of the River Thames, outside the Thames Policy Area. It would form a clear eastern endpiece to the consolidating City Cluster. Due to its location at the eastern edge of the Cluster, its distance and intervening built fabric layering, as well as its strategically driven height aiming to consolidate the cluster, it would preserve the open quality and views of/along the River, avoiding a 'canyon effect' when seen in association with the London Bridge Cluster, in accordance with D9 C (1; f).

207. In respect of D9 C (1; g), the potential impact of solar glare from the proposed development is considered at its worse to be minor adverse but the effects are not significant, as discussed in the relevant section in this report. Further details would be requested as a S106 obligation to require a detailed solar glare assessment to be submitted post completion but prior to occupation of the proposed development which would include details of a mitigation measures (if considered necessary). The proposed development would comply with Policy D9 C (1; g) of the London Plan.

208. In accordance with D9 C (1; h), the proposal has been designed to minimise light pollution from internal and external lighting, which is inherent in the façade, and will be secured in detail via condition which requires a detailed lighting strategy to be submitted prior to the occupation of the building, demonstrating the measures that would be utilised to mitigate the impact of internal and external lighting on light pollution and residential amenity. The strategy shall include full details of all luminaires, associated infrastructure, and the lighting intensity, uniformity, colour and associated management measures to reduce the impact on light pollution and residential amenity. The development would comply with Local Plan policy D9 C (1; h).

Functional Impact

209. Through the pre-app process and consultation, the internal and external design, including construction detailing, materials and emergency exits have been designed to ensure the safety of all occupants and are considered to be in accordance with London Plan Policy D9 C (2; a).

210. The proposed servicing strategy would utilise the existing servicing area of Valiant House. Vehicle bays for servicing and deliveries would be positioned towards the northern edge of the site, off Heneage Lane, these loading bays would provide access to the building management facilities within the basement of the site through goods lifts. This arrangement and positioning of the servicing bay is considered to be the most suitable position for unloading/loading activity considering the other edges of the site, where pedestrian footfall is likely to be higher and where there could be a greater degree of conflict between users.

211. The proposed Framework Delivery and Servicing Plan includes significant consolidation. The FDSP would ensure that deliveries are managed and time-limited for safety. The proposals have been assessed to ensure they are serviced, maintained and managed in such a way that will preserve safety and quality, without disturbance or inconvenience for surrounding public realm in accordance with D9 C (2; b). The servicing bay, and the associated hours of operation, have been considered to minimise the impact on the surrounding public realm and pedestrian routes. Out of hours servicing, and the hours of closure on the Heneage Arcade, would work in conjunction with pedestrian desire lines. Further details in respect of the servicing approach are set out in the Transportation section of this report.

212. Entrances at ground floor level would provide access to the public and office spaces throughout the building. The entrance doors would be set into glass façades to enhance transparency and extend the external public space into the ground floor receptions and retail spaces. The public ‘heritage lobby’ entrance doors and reception lobby for access the publicly accessible areas and the office floors would be positioned on the Heneage Arcade, furthermore, the lobby’s and lifts have been sized to accommodate visitors to the building. This access arrangement, off Heneage Arcade, would comfortably accommodate peak time use, avoiding unacceptable overcrowding or isolation in the surroundings. This is in accordance with D9;C;2;c.

213. As discussed in the transport section of the report, there will be an uplift in pedestrian and cyclist activity on the wider transport network as a result of the development. The impact will require some interventions to the highway which will be developed in detail as part of the S278 agreement. The S106 agreement will require the developer to enter into a S278 agreement with the City of London to

undertake any works to mitigate the impact of the development in accordance with (D9;C;2;c).

214. In particular, the provision of cultural space, community space, educational space and office floor space will promote the creation of jobs, services, facilities and economic activity will act as a catalyst for future growth and change in the locale in accordance with (D9;C;2;e).

215. With the imposition of conditions, no adverse effects have been identified on the operation of London's aviation navigation and the proposals have also been found to avoid significant detrimental effect on solar energy generation on adjoining buildings (D9;C;2;f).

Environmental Impact

216. In regard to D9 C (3; a) the proposals have been found to provide safe and satisfactory levels of wind, daylight and sunlight and temperature conditions and would not compromise the comfort and enjoyment of the public realm at ground floor level. In regard to (D9 3b-c), the design has given consideration for how the proposals can assist with the dispersal of air pollutants and which will not adversely affect street-level conditions or create harmful levels of noise from air movements, servicing or building uses, preserving the comfort and enjoyment of surrounding open space. Thermal comfort, pollutants dispersal and solar glare are analysed in detail elsewhere in the report. It is considered the proposal would meet the environmental considerations of Policy D9 C (3).

Public Access

217. The policy states that publicly accessible space should be incorporated into tall buildings, where appropriate, particularly more prominent tall buildings where they should normally be at the top of the building. In this instance, given the context of the Reasons for Refusal of the previous scheme, officers consider that the provision of an elevated viewing gallery would not be appropriate in this location. Instead, the proposal would turn over significant areas of the lower levels of the site to a wider demographic.

218. Heneage Arcade would be a new public thoroughfare positioned such as to re-open a lost historic street; portions of Holland House, at the lower and upper levels, would be dedicated to educational, cultural and community spaces. These spaces would be accessible and free of charge to the public for 81 hours per week with 67.75 hours per week free of charge use, despite being free of charge, officers believe this satisfies the intent of the policy, the necessity to book space within

these uses is appropriate given the nature, function and use type of the publicly accessible space. Access would be provided via the historic entrances to Holland House and the new lobby off the Heneage Arcade with legible portals to each of the relevant uses. As such, the provision of publicly accessible uses in the development would be in accordance with D9 D.

Tall Building, Principle, Conclusion:

219. Overall, Officers considered the site to be acceptable for a tall building and a strategic delivery site supporting the consolidation of the City Cluster. As a matter of planning judgement, it is considered the proposal would accord with London Plan Policy D9 A, C and D, Local Plan policies CS7 (1,2 and 4-7) and CS 14 (1 and 4), draft City Plan 2040 S12 and S21.

220. It is recognised that, due to the proposal's location within the Creechurch Conservation Area, there would be a conflict with CS7 (3), CS 14 (2) and therefore London Plan D9 (B). This conflict with Development Plan policy is addressed at the end of the report when considering whether the proposal accords with the Development Plan as a whole, as part of the Planning Balance.

Architecture, Urban Design and Public Realm

221. The proposal would be a distinguished and sophisticated addition to the City Cluster. It would have excellent sustainability credentials, be aesthetically pleasing and enhance the public realm in and around the site. The proposals would positively transform the wider area. Providing new, active ground floor uses and pedestrian routes, the proposed building would stitch into the fabric of the surrounding urban grain, complementing the local neighbourhood. Visually, the existing building (31 Bury Street) is tired, and has limited architectural value, its replacement would improve its function and appearance. The Grade II* listed Holland House would also be altered, with judicious roof level additions to increase the height by several floors, and similar alterations to its neighbour Renown House, there would also be alterations to the facades, entrances and interiors.

222. The scheme would provide best in class office floor space, a new retail arcade, a pocket park, publicly accessible spaces and uses within the building, including a rehearsal space at 1st floor level and high-quality shower, changing and cycle facilities to encourage active travel.

223. The Grade II* Listed Holland House would be opened up to a much wider demographic through the provision of cultural and community uses, the proposals

would deliver a campus of civic facilities. These uses would provide space for community groups, schools, faith groups, community workspace, rehearsal and events space, sports facilities and accommodation for SME's. This broader demographic would be able to see its exceptional and vibrant interiors, accessible through a 'heritage lobby' from the proposed retail arcade. A new, attractive roofscape to Holland House would replace the unsympathetic 1960s and 1980s alterations, in addition, works to upgrade the fire safety and accessibility credentials of the building, with further works to the façade of the building and restoration of the historic fabric, would dramatically improve the function and condition of the Grade II* listed building.

224. Renown House would undergo several changes, it would have an additional 2 storeys, designed and modelled in a sensitive manner to continue the appearance of the façade below, the extension would read as a sympathetic addition to the local townscape, the height and mass of this extension would positively rationalise the building heights of its mid-height neighbours. Between Renown House and the proposed tower on 31 Bury Street, a small pocket park referred to as, "St James' Court", would have an outdoor climbing wall on the façade of the building, a dramatic, unique and playful moment in the City of London, bringing sport and activity to the heart of the cluster.

225. The proposals would offer far more to the surrounding area than the existing buildings, and would positively contribute to an active and vibrant City Cluster. The proposal would make the best use of land, following a design-led approach that optimises the site capacity to accommodate the significant growth the Central Activities Zone, providing employment and complementary commercial, cultural and community uses. It is considered that the scheme would represent 'Good Growth' by design, in accordance with the London Plan Good Growth objectives GG1-3,5,6: growth which is socially, economically and environmentally inclusive. The proposal is at the heart of the strategic function of the City Cluster, to accommodate substantial growth in accordance with Local Plan Policies CS7 and London Plan Policies SD4, SD5 and E1.

226. The proposed development would provide 1.5% of the projected demand for office floor space in the City, and the proposals sought to optimise this delivery in a Plan-led approach which seeks to accommodate growth within the City Cluster. This long-term approach has created an evolving character and context of tall buildings, to which the proposal has been designed to respond. The GLA acknowledge the intensification of office floorspace would support the function of the Central Activities Zone and London's position as a World City, and the proposals are supported in land use terms. The GLA also acknowledge the location of the site in the City of London Eastern Cluster as a suitable location for tall buildings, and that the proposal represents high quality architecture, despite

some concerns with impacts on heritage assets and the design of the ground floor of the building.

227. The proposal would accord with the design-led approach of London Plan Policies D3, delivering a design solution making effective use of limited land resources, in accordance with strategic Local Plan Policy CS10 and Draft City Plan Policy S8. Various alternatives have been explored, including the 2020 refusal, and iterations of the height, massing and façade treatment have been explored by the applicants with planning officers.

228. The site is part of a dynamic, dense urban townscape, fundamentally characterised by its proximity to other tall buildings, conservations areas and listed buildings, as well as being a pivotal site central to several pedestrian routes connecting key landmarks and destinations across the Square Mile. The site is towards the eastern edge of the cluster with numerous completed tall buildings in the vicinity including the Leadenhall Building (No. 122 Leadenhall Street), 22 Bishopsgate, 6-8 Bishopsgate, 100 Bishopsgate, 40 Leadenhall Street, Bevis Marks House, 70 St Mary Axe and 115-123 Houndsditch. These large and tall modern commercial buildings are contrasted with characterful pockets of historic townscape: the defining 'genius loci' ('spirit of the place') of the Cluster. This contrast gives the City Cluster a charisma which is unique.

229. The immediate historic townscape includes the Grade II* listed Holland House (on site), Bevis Marks Synagogue (Grade I) and 38 St Mary Axe (Grade II) sit to the north and northwest respectively. The Leadenhall Street Church of Katherine Cree (Grade I) and 2-16 Creechurch Lane (Grade II) are to the south, The site is within the Creechurch Conservation Area, further afield, the St Helen's Place Conservation Area, the Lloyds Avenue Conservation Area are in the wider vicinity. To the west, 30 St Mary Axe (a non-designated heritage asset), by Foster and Partners, is an example of an early 21st century office building of the highest architectural quality. The proposal would be consistent with the character of striking juxtapositions of old and new, it would be a new addition to and an extension of this character.

Comparison with the previous application (20/00848/FULEIA)

230. The previous application for a similar tall building on the site was refused in 2022, the proposals represent a new design approach for the site, but include a similar yet smaller tower, this application also brings in the adjacent buildings into the application, Renown House and Holland House. Architecturally, the facades of the tower are similar to the previously refused proposals, although the height and

massing has been reduced. The proposal must be considered on its own merits, however regard must be had to the previous decision and to the principle of consistency in decision making.

231. The previously refused scheme was ground plus 48 storeys and 197.94m+AOD while the proposed is ground plus 43 storeys and 178.7m+AOD. Both schemes take the approach of a rectilinear block with a slender tower element towards the south of the site, and a 'backpack' of mass at mid height towards the north of the site; the previous proposal's massing stepped once in the middle of the building, it was made of two rectangular forms. The current application steps back and chamfers at the top of the building, thinning out the tower towards the top on the northeast corner. Towards the middle, the proposals has a similar, but slightly lower rectangular block.

232. Both the previous and the current proposal have a similar architectural approach for the tower, a largely solid facade with strong horizontal and vertical elements, the façade would be made up of a combination of light and dark blue terracotta; the approach is broadly very similar, though with small yet crucial differences in emphasis. The previous proposal was more emphatically vertical, whereas the current proposal has more accentuated horizontal elements which is considered to assist with softening its presence in views of the World Heritage Site.

233. Both applications have a similar approach at ground floor level (although the previous application only included 31 Bury Street within the application boundary), by creating a pedestrian arcade through the centre of the building, lined with active uses. As previously discussed in the paragraphs above, the current application would include Renown House and Holland House, and a new 'heritage lobby' positioned on the pedestrian route through 31 Bury Street would be provided, there would be significant positive alterations, making the buildings more outward facing and inviting members of the public, a key distinction between the two applications and a benefit to the wider area. Holland House is Grade II* listed, and Renown House is a non-designated heritage asset, the impacts on these heritage assets is explained in more detail later in the report.

234. Holland House would have additional floors added to the top of the building, each additional floor would consequentially set back from Bury Street towards the centre of the block, this would replace the existing unsympathetic rooftop extensions, architecturally designed to be recessive to the architecture of the GII* listed façade. Furthermore repairs to the existing listed facades, restorations of the historic interiors, alterations to party walls and internal core alterations would be required to upgrade the building and integrate it into the wider development site. Renown House would also have additional storeys and a new contemporary mansard roof, in addition to other minor façade works and internal alterations

which would help facilitate the delivery of office floor space and cultural spaces within the respective buildings. In addition, the provision of the outdoor climbing wall in the James' Court public space is a new aspect of the proposals. Overall, the proposals would deliver a development which is mixed use, offering social and economically inclusivity to the wider area. . It is the view of officers that, as a result of the differences identified in this report, the current scheme can be distinguished from the previously refused scheme, and from the reasons which lay behind that previous decision.

Architecture

235. The proposed architecture distinguishes itself through a thoughtful and contextual articulation of base, middle and upper sections, delivering a coherent, well-proportioned building with a strong overall sense of architectural integrity. The modelling, detailing and materials are accomplished, resulting in architecture of the highest quality as befitting the City skyline. On a challenging site it works successfully at various scales and is designed to read as three elements – the ground floor public levels, a mid-section block and a slender tower above.

236. The proposed height and massing is consistent with the long-term evolution of the City Cluster, which has sought to influence development so that a considered, coherent overall shape and composition to the skyline presence of tall buildings is achieved. The height of the proposed development has been reduced such that, compared to the previously refused application on the site, the proposal would now read unmistakably as an edge instead of more central component of the Cluster.

237. It would be a clear continuation of the macro-level stepping down of the cluster towards the east, the site would act as a mediator between the lower rise context to the east and the City skyline to the west. In the baseline scenario, the proposed building would loosely follow the existing silhouette of 110 Bishopsgate (the Heron Tower), although it would appear taller in views from the southeast, the additional height would pop up to a limited degree in views from the Southbank and Tower Bridge, although not to an extent which is unusual for the cluster. In the cumulative scenario, the tower at 31 Bury Street would play an important role in the mediating between cluster and the lower buildings to the east, particularly when compared to 100 Leadenhall and 1 Undershaft, consultees have raised concerns and/or objected to the proposals based on its height and its relationship to its context, this is discussed in more detail in the views and heritage section of the report. It is the view of officers that the proposed tower would contribute to the composition of the Cluster in providing an important graduation against its neighbouring group of tall buildings.

238. The height of the proposed building would complement and highlight the City skyline in strategic and distant views, maintaining an iconic townscape character for London. Rounding off this Cluster at its edges is essential to reinforcing the familiar pattern of buildings stepping up towards the centre, making the Cluster a distinct and striking feature of the City's skyline.

239. The proposed building would be the first tower in the City to be clad entirely in faience, giving it a unique presence. The Cluster of towers comprises a rich and eclectic collection of towers, each with its own unique architectural character, resulting in a dynamic collection of individuals which combine to create a coherent Cluster. The proposal complements this key characteristic.

240. Above the ground floor, the architectural treatment of the proposed building comprises a series of pale blue faience bays with scalloped, ribbed spandrels, set between smooth columns and mullions which would create refined articulation across the façades. The sides of the rectangular window openings would incorporate vertical natural ventilation louvres, successfully integrating sustainable passive ventilation systems, with a 40% solid to glass ratio, to minimise solar heat gains. The pale blue hue of the faience has been selected to sympathise with, but be distinct from, the hues of other tall buildings within the City Cluster, ensuring that in views of the Tower of London World Heritage Site, the proposed building is identified as a sophisticated new addition to the Cluster. Specifically, the colour was selected to appear distinct from the buff masonry of the World Heritage Site and is considered to be a more neutral edge to the Cluster than the darker 110 Bishopsgate building.

241. At the uppermost floor levels, the double order at mid-level would recur across the uppermost office floors, this change in height of the fenestration occurs from when the massing steps inward and the tower becomes slenderer. Above these, the three-storey plant room is housed in a triple order echoing that of the ground floor but executed to a simpler pattern, a successful visual termination of the design. The mirroring and echoing of these architectural devices give the overall architectural design a cohesion which would further distinguish it on the skyline and in the local townscape. The parapets of both the mid-level 'shoulder' and the top of the building are subtly broken by the columns terminating above them to add further architectural modelling and interest. The location of plant and greening in the uppermost three storeys will cause minimal light spillage and appear restrained when seen in conjunction with the World Heritage Site.

242. From the first-floor level to the twenty-second-floor level, the massing largely follows the footprint of the building Bury House. At the twenty-second floor level there would be an external terrace. From the twenty second floor to the thirty fifth floor, the area above this northwestern terrace, the building would step back, the tower would step back again at level thirty seven. Additional terraces would be

provided at level thirty six and forty one. The provision of these terraces contributes to the provision of high quality office floor space, and the massing has been sculpted in an integral and organic architectural manner whilst responding to strategic views of the Tower of London and other sensitive views.

243. The tower base would take the form of a ‘triple order’ of faience columns wrapping around the building from the south-west to the north-east, rooted in a granite plinth and rising to a strong cornice line which would be a focal point for further public artwork. This ‘triple order’ device builds upon architectural precedent elsewhere in the locality and would relate the building appropriately to its townscape. The faience of these areas would be executed in a darker blue hue to further differentiate them from the upper storeys. Their colour tone, materiality and modelling would ensure the proposed building relates appropriately to its local setting at street level; the Creechurch locality here is characterised by a number of unlisted brick and terracotta historic buildings and the sophisticated faience of the grade II* listed Holland House.

244. Holland House would be extended at roof level to provide additional accommodation within the building, this would replace the indifferent 1960s, low quality rooftop additions. Attractively modelled, finished in faience, these upper layers would read as a lightweight top when seen in glimpsed views from the southside of Gherkin Plaza. This rooftop extension would be setback from the main, western façade, respecting the primacy of the ordered yet decorative main façade, and would be scarcely visible in the original, oblique views of this façade along Bury Street. Façade repairs to the listed building would maintain the historic façade and internal alterations would integrate the building with the wider development, allowing the building to accommodate public uses which contribute positively to the surrounding area.

245. Renown House would also be extended, it would have additional floors on top, and a new contemporary mansard, with the new facades following the architectural treatment of the existing façade below, the fenestration and materials would match the existing condition. This extension would create a more uniform approach to this city block, bringing the building heights closer together in a more coherent manner. There would also be internal alterations to combine Holland House and Renown House, as part of providing the mix of uses which would contribute to the wider positivity of the development.

246. The alterations to Holland House and Renown House are discussed in more detail in the heritage section of the report.

Active Uses and Ground Floor Public Realm

247. The proposed development would transform the site into a vibrant hub for the community, with a focus on public access, vibrancy and connectivity. At the heart of the scheme is the creation of inviting and engaging publicly accessible spaces at the base and lower floors of the buildings, both on the pedestrian route through the tower, 'Heneage Place', and Holland House and Renown House, offering opportunities for community use, sport, learning and education that appeal to Londoners and visitors alike. Additionally, the development would offer flexibility to workspaces and cultural areas and reimagined and new public realm, situated within the historic interiors of Holland House. The provision of these new publicly accessible areas would add a variety of activity to the centre of the cluster, the proposals would deliver a more dynamic and varied offer of uses to its surroundings.

248. The existing building forms an irregular, impermeable block with inactive frontages to Heneage Place, Creechurch Place and Bury Street. Between it and Holland House on Bury Street there is a small, recessed area of open space with some poor-quality planting. At ground floor level, the proposed building would replace the impenetrable site with a permeable ground floor plane with increased public realm, planting and active frontages.

249. Despite the relatively small site footprint, the proposed building would provide 619 sqm of new external public realm at ground floor level as compared with the existing 352 sqm. The chief feature would be a new public pedestrian route running north-south, 'Heneage Place' which would reinstate the lost south-western end of Heneage Lane. The 'Heneage Arcade' would be generous in scale, paved in York stone to blend seamlessly into the City's existing public realm. The generous scale will draw the eye and attract the public from numerous vantages. The ceiling soffit would be eye-catching with a sense of rhythm created by the architectural 'ribs' that would further draw pedestrians through. The arcade would draw inspiration from the established tradition of covered walkways elsewhere in London and would be flanked internally by retail units, to create a new mixed-use arcade destination for the locality and the wider City, this would be complemented by a rear access point to the cultural and community uses hosted within Holland House. It would significantly raise the quantum of active frontages, making a strong contribution to the local vibrancy of the area and providing shelter in inclement weather and during hot summer days.

250. GLA officers have argued that the arcade should be opened up, to create an open colonnade through the area, City officers believe the applicant's vision for the route is the most appropriate for the site's context, it follows a key characteristic of the City's public realm where narrow streets and alleys stitch together routes and public spaces. An open colonnade with a cantilevered space is not considered by officers to be an appropriate design solution for this area. The

London Review Panel and the GLA have suggested this route should be open 24 hours a day and be publicly accessible, the hours of operation of the route would be 7am-11pm.

251. A public realm management plan will be secured through the s106, to agreement the maintenance and management of the public space and the rules governing it, with the intent to maximise public access and limit rules governing the space insofar as reasonably possible.

252. The arcade would be enriched by a curated and flexible programme of permanent, bespoke architectural sculpture integrated into the structural members, portraying local and City-wide historical and contemporary themes, including interpretation of the former Holy Trinity Priory which survives below the wider area. This would be developed in collaboration with craftspeople studying at the City & Guilds School and the Sculpture in the City initiative and would constitute not only a major new piece of public art but also make the Heneage Arcade a cultural destination in its own right. Furthermore, a free drinking water fountain would be provided in the public realm. The details of this would be secured by S106 obligations.

253. At the southern exit of Heneage Arcade, the existing, rather drab open space between 31 Bury Street and Holland House would be reimagined as a pocket park, 'James' Court'. This would help to increase the area of public realm at the heart of the dense Cluster, opening up the entire ground floor plane on the south-west part of the site to pedestrians, as well as, creating a new amenity space for people in the locality. It would host the theatrical climbing wall, hanging above the space, adding visual interest to the area, encouraging physical exercise by being visibly on display, a unique offer to the cluster which is likely to appeal to a wide demographic. The new James' Court would also increase the quantity of urban greening in this location, with a generous nine-storey high green wall rising above the pocket park on the proposed building creating a humane, gentle environment conducive to public use.

Optimising Active Travel

254. The proposals would have an impact on the appearance and function of Creechurch Lane and Bury Street, the development would generate pedestrian footfall in particular, as addressed in the Transport section of this report and Strategic Transport Report. Cycle movement is also expected to increase in the vicinity of the site. There would be an impact on the townscape and heritage assets, as well as some microclimatic impacts.

255. The execution of highway works would be provided for in a s278 Highways Act 1980 agreement, secured through the s106, which would include works on Creechurch Lane and Bury Street to mitigate these impacts, in accordance with Policy VT1 of the Draft City Plan 2040 and T4 of the London Plan 2021. This s278 agreement would include alterations to the physical infrastructure on the street, including alterations to the pavement kerb lines and upgrading the surface materials to York stone for the footways and granite setts for the carriageway in accordance with the CoL technical palette of materials.

256. These interventions would represent an improvement to the environment for pedestrians, both in terms of its functional design and visual amenity, the existing pavement and surfaces are in poor condition. Creechurch Lane and Bury Street currently below the standards of neighbouring streets, the paving materials are inconsistent and low quality, and the carriageway prioritises vehicles over pedestrians, in an area where vehicle movement volumes are low. The immediate vicinity of the site has active ground floor uses, including pubs and restaurants, upgrading the physical infrastructure of the street will improve the attractiveness of the streetscape. The City Cluster Vision 2019 identifies this area and the proposed enhancements are broadly in accordance with what's set out in the strategy, these works are considered to be a benefit of the scheme which would mitigate the impact of the development and enhance the surrounding area. Furthermore, the proposed 'City Cycles' facility in the basement of the building would provide maintenance and repairs services for those who cycle, encouraging active travel through enhancing convenience and amenity for user.

Public Access

257. Publicly accessible space would also be created within the building. As well as the north-south entrances to Heneage Arcade, the middle bay of the proposed building's Creechurch Place elevation would incorporate a focal entrance aligned on Mitre Street which would lead directly to the main office entrance for accessing the upper floors.

258. The Creechurch Place entrance would also provide access, via staircase and lifts, to the 'Creechurch Hall', a series of new publicly accessible intended to be analogous to a village hall or community centre. It would provide a bookable, inclusive and free for all new space for public use, targeted at individuals, community groups and other organisations from the locality and beyond, including from those more economically disadvantaged areas around the City fringe. The space has the potential to serve a rich, diverse community from all backgrounds

in a socially and economically inclusive manner. Access from the ground floor would connect to lifts and the ground floor of Holland House and Renown House, from these areas people can take the stairs or lifts to the other spaces and uses across the proposed tower or through the internal circulation of Holland and Renown House. At first floor level, within the tower of Holland House, a large auditorium would provide capacity to host events, furthermore, the lower ground floor level would also complement the ground floor offer. The provision of community uses would be a significant provision to the locality and the wider City.

259. The elevations to lower floors of the tower would be treated differently from the rest of the building to reflect and celebrate their public status, particularly Heneage Place, other public uses would largely be located within the GII* listed Holland House, boosting its appeal as a destination. Overall, the proposals would integrate unique civic experiential offerings in support of the City's wider 'Destination City' initiative, providing a rich mix of public uses which would enliven the City Cluster as a vibrant, 24/7 destination. The people-focussed lower floors of all buildings within the application boundary and the varied cultural offer throughout the base of the building would create a rich tapestry of uses and activities, in accordance with London Plan policy D3, Local Plan policies CS10, DM10.1, DM10.3 and emerging City Plan 2040 S8.

Delivering Good Design and Design Scrutiny

260. Officers consider that the application process has adhered to the policy approach set out in London Plan D4 Delivering Good Design. In respect of D4 A, the applicant's evolution of site development was design-led to deliver high quality design and place making and this is detailed in the Tall Building, Architecture and Urban Design section of the report, it is also covered in the comparison with the previously refused application.

261. With regard to D4 B, the pre-application process including formal meetings, workshops using digital and physical visual tools, and site visits as part of the design analysis and interrogation to optimise the potential of the site. Officers with expertise in sustainability, microclimate, daylighting, policy and land use, accessibility, heritage, archaeology, urban design, public realm, transport and urban greening have been engaged and shaped the final application proposals.

262. A development carbon optioneering process has been followed which has had external scrutiny and is set out elsewhere in the report. Transport data has informed options and evidence for the provision of transport related infrastructure. Environmental microclimate, daylight and sunlight analysis informed the massing

and design treatment as well as the public realm and landscaping. Wider engagement by the applicant is set out elsewhere in the report. Part D4 C has been met and a detailed design and access statement has been submitted.

263. In respect of D4 D, the proposals have been to the London Review Panel, they have undergone a rigorous local borough process of design scrutiny as required by the policy. In addition, the applicants undertook preapplication engagement with a variety of stakeholders, including the GLA, Historic Royal Palaces, Historic England and others. The design and access statement sets out how the scheme has changed and evolved as a result of officer and stakeholder feedback, showing the evolution of the scheme and the 'moves' taken to respond to comments.

264. In relation to D4 E, parts 1-6, there has been a City level of scrutiny comprising extensive officer topic-based reviews over multiple pre-application meetings; external input has been provided by other experts as set out above. In addition, the applicants brought the scheme to the London Review Panel which was attended by experts from different disciplines, these comments were mindful of the policy context and clearly set out recommendations. The London Review Panel set out several recommendations which have been considered by the design team. City of London officers views on topics which the LRP comments have been set out elsewhere in the architecture, heritage and views section of this report.

265. In relation to D4 F, parts 1-4, officers have been mindful to ensure that building heights, land use and materials for the buildings and the landscape are stipulated on the drawings to minimise ambiguity and avoid deferring large elements of the development to the conditions. The recommendation is also supported by a robust relevant condition to ensure the scheme is implemented to an exemplary standard.

266. Overall, the application process has adhered to the policy approach set out in London Plan D4 Delivering Good Design.

Amenity Space and Terraces

267. The amenity terraces have been designed with adopted policy DM 10.3, and draft policy DE4 in mind, utilising the form of the building and integrated in its mass, would avoid any adverse impacts on identified views.

268. On the Bury House Tower at twenty-second floor level there would be a large external terrace, additional terraces would be provided at level thirty six and forty

one. The provision of these terraces contributes to the provision of high quality office floor space, and they have been designed as a distinct but fully integrated aspect of the building. These terraces would help to provide best in class office accommodation by providing amenity and break out space for the office occupants. Planting would be provided on these areas, to provide biodiversity and well-being benefits. They would have a negligible impact on long range views, small amounts of potential greening would provide visual interest at a high level where it is visible.

269. On the upper levels of the roofscape of Holland House, there would be terraces which provide amenity to the office occupants and the potential cultural partners of the building. These terraces would have limited visual impact, at range, balustrades would barely be perceptible, closer to the building they would be set back from the façade line of the building limiting visibility from street level. Where visible, viewers would see the balustrades, planting and landscaping. The planting would provide privacy, screening from overlooking and visual amenity, whilst providing a pleasant environment for the occupants.

270. The provision of the Urban Farm on the 9th floor level would accompany the proposed cultural and community spaces, it would facilitate a small amount of food production but would chiefly be used for educational purposes and partnerships with relevant organisations. This terraced area would further enhance the amount of green infrastructure, offering biodiversity gains and re-connecting people with the green environment.

Servicing, Plant Equipment and Integration into the Design

271. Facade maintenance and cleaning have been carefully considered. High level access from the main roof and intermediate terraces would be via permanently installed Building Maintenance Units (BMU). BMUs would be located at roof level. When not in use, the BMUs would be parked inboard and would not be visible. The systems are designed to be visually integrated into the architectural form when non-operational. Mechanical and electrical plant rooms would be distributed throughout the building and at the uppermost levels of the Bury St tower, largely concealed from view, where they do appear, they would be visually integrated into the facade design. The main plant levels would be located in the basement and on the upper levels of the tower. This is in accordance with Local Plan Policy DM10.1 (bullet 7) and Draft Policy S8(21).

Lighting

272. Lighting, in accordance with the City Lighting Strategy, is proposed to enhance visual amenity and minimise light trespass. It would be contextual, building on the components of spatial character design guidance for the City Cluster in the adopted Strategy. The full details would be secured via condition. 125. Overall, the proposed building is considered to harmonise with the principles of paragraph 130 of the NPPF in that it is a building which is sustainable and beautiful, being a well-designed proposal which would enhance the City's architectural character and would be sympathetic to the character of the locality, function well and add to the overall quality of the area.

Conclusion on Architecture:

273. Overall, the architectural credentials of the proposed development would be excellent. It follows the best practice principles of urban design, combining office, public and cultural uses within a well considered built form, it would be finished in high quality materials. The design throughout integrates public amenities and cultural uses, befitting the pivotal on the edge of the City Cluster. Above all, a strong and compelling civic quality would be woven throughout the proposal. The proposals would not comply with policy CS14.2 of the Local Plan for the reasons set out in the above paragraphs, however the proposals would accord with London Plan policies D3, D4, D5, D8 and GG1-6, City Plan (2015) policies CS10, DM10.1, DM10.2, DM10.3, DM10.4, DM10.8, CS16 and DM16.2, and Draft City Plan 2040 policies HL1, S8, DE1, DE2, DE3, DE4, DE8, AT1, the relevant NPPF design policies and National Design Guide.

274. The proposals would optimise the use of land, delivering high quality office space, and a multi-layered series of publicly accessible spaces. It would improve the site's interfaces with and contribution to its surroundings. It would enhance convenience, comfort and attractiveness in a manner which optimises active travel and builds on the City's modal hierarchy and Transport Strategy. The proposals would constitute Good Growth by design and be in accordance with all Local Plan Policies CS10 and DM 10.1, Emerging City Plan 2040 Policy DE3, London Plan Policies D3, D4 and D8, the policies contained in the NPPF and guidance in the National Design Guide, contextualised by London Plan Good Growth objectives GG1-6.

Strategic Views and Heritage

Tower of London World Heritage Site

OUV and Relationship to Setting

275. The impact of the proposal on the World Heritage Site (WHS) has been assessed against the seven attributes, and their components, of Outstanding Universal Value (OUV) contained within the adopted Statement of OUV. It is considered that all attributes of OUV draw on the contribution of setting for significance and an appreciation of it, but in particular the attributes: (i) an internationally famous monument, (ii) landmark siting, (iii) symbol of Norman power and (iv) physical dominance (of the White Tower); and, to a lesser extent, (v) concentric defences, (vi) surviving medieval remains and (vii) physical (historical) associative evidence.

276. Whilst the Tower of London comprises a scheduled ancient monument, various listed buildings and is within a conservation area (in the LB Tower Hamlets), it is considered proportionate and robust to consider the impact on OUV in order to draw a conclusion on the impact on these heritage assets.

277. The WHS Management Plan establishes a 'Local Setting', 'Immediate Setting' and non-spatially defined 'Wider Setting'; the proposal site is within the latter. The Local Setting Study (LSS) identifies those most representative views and/or viewing areas to and from the Tower of London which are deemed to exemplify the OUV and their components, with management guidance providing a baseline for assessing change. These representative views/viewpoints overlap with some LVMF viewing locations and these are assessed together here.

278. Importantly, the WHS Management Plan acknowledges the City Cluster as signifying the City's commercial centre, stating (at para 2.4.25) that 'its visibility expresses the evolving political and cultural relationship between the Tower and the trading centre of the City of London'. Here is important recognition that the Cluster has an emerging, distinct identity and the relationship between the Tower and the Cluster is long-established, having existed for over half a century, forming a backdrop to many views of the Tower such as from within the Inner Ward.

279. In recognising the place of the Cluster in the Wider Setting, the Management Plan acknowledges (at para 7.3.18) that it will intensify as a distinct and separate element to the Tower. At para 7.3.27 it states that proposals for tall buildings to the west of the White Tower, falling within the background of the WHS, should consider

(i) their effect on the established Cluster, (ii) the space between it an the Tower, and (iii) the effect on the ability to recognise, understand and appreciate the OUV of the Tower.

280. The intervisibility between the royal Tower and the commercial City, over which it was intended to command and defend from the river approach, is an integral part of the attributes (i) to (v) of OUV outlined above. Both the Tower and the City are ancient entities with a rich ceremonial life accrued through hundreds of years of existence, giving them a unique sense of place both central to and yet set apart from modern London. In the case of the City, that original commercial purpose remains and contributes to a relationship between the two entities that is nearly one thousand years old and therefore of unique interest.

281. The impact assessment set out below uses the assessment framework in the Mayor's London World Heritage Sites: Guidance on 'setting' SPG, which is based on the relevant ICOMOS guidance.

Impact on OUV/Significance

282. The proposal would have an indirect impact on the WHS, via change in its Wider Setting.

Objections

283. As set out in the Consultation section of the report, above, Historic England have objected to the impact of the proposals on the World Heritage Site, specifically in views from Tower Bridge (North Bastion and dynamic journey) and the Inner Ward. Others have objected to the Tower Bridge impact, including the GLA, Historic Royal Palaces, London Borough of Tower Hamlets and others. Historic Royal Palaces share the concerns about the proposal's impact on the Inner Ward and have concerns about its presence in views from other places. In coming to a view on these matters, officers have given these representations from expert stakeholders substantial weight; however, as set out in subsequent paragraphs below, officers reach a different conclusion on the impact of the proposal on the WHS.

Tower Bridge (10A.1)

284. This is also identified as a Representative View in the Local Setting Study (View 9), whilst the impact here is also representative of the impact from Approach 14 (Tower Bridge). The view is of particular importance in appreciating the 'Internationally Famous Monument' and 'Landmark Siting' attributes of OUV.

285. The LVMF SPG states that this location enables the fine details and the layers of history of the Tower of London to be readily understood. The LVMF states that such understanding and appreciation is enhanced by the free sky space around the White Tower, and that where this has been compromised its visual dominance has been affected. It also states that the middle ground includes the varied elements of the City, rising behind the Tower, which includes prominent tall buildings of the late 20th and early 21st centuries, and earlier periods such as the spires of City churches and the Monument. It is also noted that the lantern and upper dome of St Paul's Cathedral can be seen, while other prominent buildings or structures in the background include the Cannon Street Station towers, BT tower, Centre Point and Tate Modern (para 182).

286. In the foreground of this view, the Tower of London WHS forms an important visual centre of gravity, with its legible and consistent stretch of historic townscape and iconic silhouette of the White Tower. Due to the elevation of the viewing point and the topography of the City, the area of the WHS west of the White Tower does not form a historic skyline because the modern City is seen immediately behind it as a backdrop; in this area of the view the towers of the Cluster form a distinctive modern skyline.

287. Immediately adjacent in the view, and with visual separation between them, the White Tower and the eastern half of the WHS are seen against sky and so form a historic skyline. Much of the drama and interest of this view derives from this powerful contrast between the modern skyline of the City and the historic skyline of the White Tower and eastern half of the WHS immediately adjacent to one another. Indeed, the SPG implicitly acknowledges this by describing how the evolving Cluster 'will add considerably to the character and stature of the view' (para 187).

288. Historic England, Historic Royal Palaces and others have objected to the impact of the proposal on the OUV of the WHS in this view. Historic England claim that the proposal would create a 'cliff edge' that would present 'a greater distraction' in the view, in addition to making the Cluster 'increasingly overbearing overall.' This sentiment is broadly echoed by the other objectors.

289. Seen from here, the proposal would appear at the eastern edge of the Cluster, between the historic and modern skylines described above, providing an eastern endpiece to the baseline and cumulative Cluster form. The proposed building would be visible between 30 St Mary Axe (the Gherkin) and the White Tower against the backdrop of Heron Tower and Heron Plaza, which it would partially occlude.

290. The proposal would take the form of a pale blue faience tower massed in three stages: broadest at its base where it would mirror the existing silhouette of Heron Plaza, then slenderer in its middle section, as it rises upwards to maintain the sky gap between Heron Plaza and the White Tower, and slenderest in its topmost stage where it would step deferentially back from the WHS towards the Cluster. Rising to approximately the height of the Gherkin, the proposal would occupy a small area of clear sky space near the White Tower, though it would maintain visual separation between the Cluster and the WHS.

291. The baseline and consented (cumulative) Cluster of towers steps downwards from the centre at 22 Bishopsgate (and 1 Undershaft in the cumulative) in a deferential manner towards the WHS. This profile has been carefully negotiated through numerous planning decisions to mediate between the Cluster and the WHS. Under both baseline and cumulative scenarios, the height and stepped form of the proposal are considered to create a successful terminus to the Cluster when seen from this viewpoint and would be consistent with the long-term Cluster curation described above.

292. The LVMF SPG (para 186) seeks to maintain ‘some’ visual separation between the upper parts of the White Tower and the Cluster; the guidance in the Local Setting Study (LSS) for this view seeks to ensure that ‘buildings behind or close to the White Tower should not diminish its perceived scale from this vantage point’.

293. Although it would create, particularly in its middle section, a vertical edge or frame near the silhouette of the White Tower, this is not considered to challenge the iconic qualities of this silhouette or the gravitas of the WHS as a whole. The second stage of the proposal would rise approximately to the level of the weathervane of the south-west turret, below the terminus of the finial. At this point the proposal would step deferentially back towards the Cluster; though it would clearly be a new, taller element of mass in the background, it is considered that its profile would be sufficiently deferential so as not to dominate the White Tower or diminish its perceived scale by drawing that of the centre of the Cluster too close.

294. As such, the proposal is considered to successfully address the Reason for Refusal of the preceding scheme on this application site, which related specifically to this view. The refused scheme was considered to cause harm through its height, strong vertical form and proximity, which departed from the long-term curation of

the Cluster referenced above. In particular, it introduced a vertical edge adjacent to the White Tower that rose significantly higher than the Gherkin, drawing the overall scale of the Cluster much closer to the WHS. Whilst the proximity would remain the same with this revised proposal, the vertical edge or frame it would present to the White Tower would be considerably lower and crucially broken by the deferential step backwards of its topmost stage towards the Cluster, ensuring the proposal would be of a subsidiary scale commensurate with its position as an edge, rather than a central, component of the Cluster, and thereby consistent with its long-term curation. Moreover, the architectural approach for the current proposal has been crucially nuanced by introducing more accentuated horizontals, which help to further downplay the tower's verticality.

295. Furthermore, while the proposal would be visually proximate to the White Tower, it would clearly be physically distant and therefore clearly disassociated from, the WHS. The proposal would be read as a clear endpiece to a group of modern towers located at the centre of the Cluster some 500m away. In this, assisted by its horizontal emphasis and blue hues of its faience echoing the colouration and appearance of other Cluster buildings, it would be comfortably disassociated from the WHS, which would remain clearly legible and appreciable by the viewer. The WHS would be the closer and would remain the dominant of the two entities in this view.

296. For the aforementioned reasons, the proposal would, under baseline and cumulative scenarios, preserve the ability to appreciate the WHS as an internationally famous monument, that sense of its landmark siting in relation to the City and the physical dominance of the White Tower, the attributes of OUV that are particularly captured by this view. It would not 'dominate' the WHS, would not directly interact with the protected silhouette of the White Tower and would maintain visual separation between it and the Cluster, all in accordance with paras 183 and 186 of the LVMF SPG. The proposal would relate appropriately to existing skyline features and, in the way it would consolidate and 'complete' the eastern edge of the Cluster when seen from here, would support the Cluster's contribution to the character and stature of the view, in line with para 187 of the SPG.

297. The proposal would preserve those attributes of OUV (and their relevant components) which have been identified in accordance with Local Plan policy CS12, CS13 (3), emerging City Plan policy S11, HE1, HE3, London Plan policy HC2, HC4, associated guidance in the World Heritage Site Management Plan, Local Setting Study, LVMF SPG and the CoL Protected Views SPD.

Dynamic Journey across Tower Bridge

298. Historic England and Historic Royal Palaces have raised concerns about the impact of the proposed building in the sequence of views of the WHS as one proceeds northwards over Tower Bridge, approaching the WHS, and onto the northern bridge approach. Historic England are considered that the proposal would 'leave less of the kinetic experience unimpacted… consequently the Tower would appear less apart from the City and its silhouette.'

299. The experience is identified in the LSS as Route 14 of the Approaches and Arrivals (Section 5), which acknowledges the overlap between these local views and the LVMF 10A.1 viewpoint from the bridge discussed above. The identified aim is 'to create views in which the Tower of London is perceived as a riverside gateway lying at the edge of the City rather than 'lost in the City', in which the scale of the White Tower is perceived as more prominent than the buildings surrounding it; and in which the military architecture of the Tower and its defences can be appreciated.'

300. Viewpoints corresponding to this experience have been assessed in the submitted application. Moving north, from the south end of Tower Bridge to the North Bastion, the proposal would appear as an eastern endpiece to the City Cluster which gradually draws closer to the WHS as one moves over the bridge. At the North Bastion, the proposal (and the Cluster) would appear as described in the section on 10A.1 above; beyond the North Bastion and onto the northern bridge approach, the proposal would continue to appear as part of the City Cluster which at this point in the journey has appeared behind the WHS.

301. Throughout this journey, the Cluster forms a long-established background presence that gradually draws closer to, then is seen (from the North Bastion) in poised juxtaposition with, and then gradually draws behind and moves beyond, the WHS. The proposal would be at its most prominent when seen from the North Bastion, as discussed at length in the paragraphs above; the juxtaposition between the two entities is at its acutest there. For the rest of the journey, the proposal would read as a comparatively modest (in respect of overall height) addition to the Cluster that would consolidate further and be well integrated with it; particularly on the northern end of the journey where, due to the lines of sight, the proposal would cease to read as the Cluster's eastern edge and would instead become more 'merged' with the existing buildings in the field of view.

302. As with the specific viewpoint on the North Bastion, officers strongly consider that, throughout this dynamic journey, the viewer is always conscious of the fact that the WHS and the Cluster are two entities, historic and contemporary, that are physically separated by a considerable portion of low-rise townscape, including the Local Setting area, and as such visually separated in most of the viewing experiences, including from Queen's Walk and much of the Tower Bridge

experience. Much of the drama and interest in this journey derives from the way in which the WHS remains the commanding focal point but is contrasted with, and set off by, the presence of the modern Cluster which underscores and enhances that ancient and overarching relationship between Tower and City.

303. Officers strongly consider that, having reached the northern bridge approach where the proposal and the wider Cluster has fallen in behind the WHS, the viewer is in no doubt that this is because the lines of sight, not the fundamental balance of this relationship, have changed; in moving across the bridge, the viewer has had ample opportunity in which to appreciate each of these entities on their own terms, as a contrasting pair, and the clear physical and varying amounts of visual separation which exists between them.

304. As such, in baseline and cumulative scenarios, officers consider that the proposal would preserve those attributes of OUV (and their relevant components) which have been identified in accordance with Local Plan policy CS12, CS13 (3), emerging City Plan policy S11, HE1, HE3, London Plan policy HC2, HC4, associated guidance in the World Heritage Site Management Plan and Local Setting Study.

Queen's Walk (25A.1-3)

305. This view is identified in the ToL WHS Management Plan (7.3.22) as the most iconic view of the Tower and is Representative View 10 in the LSS.

306. In this viewing experience, the WHS is the dominant centre of gravity and visual focus, with its sky-etched, iconic silhouette clearly recognisable and standout from all other surrounding features. Accordingly, a Protected Vista from 25A.1 focuses on axis with the White Tower, which also benefits from a dynamically protected sky silhouette between the Assessment Points (25A.1-3). The Monument and Tower Bridge are also identified as landmarks. The LVMF SPG recognises the juxtaposition of built elements from a variety of eras as an aspect of the view (para 413).

307. In this viewing experience, the proposal would appear at a significant distance away from the WHS, at the eastern edge of the Cluster in both baseline and cumulative scenarios. At no point in the viewing experience – from the Assessment Points or between them – would the proposal appear near the White Tower and only in the most easterly viewpoint (25A.3) would it appear behind the westernmost curtain walls of the WHS – but the impact here would be minimal,

given the existing modern buildings which already form a backdrop to this area of the WHS.

308. The observer would continue to recognise and appreciate the WHS as the Strategically Important Landmark, set apart from the City and not lost in it; the proposal would preserve the long-established dynamic between the WHS and the consolidating Cluster as two distinct, juxtaposed urban forms. In baseline and cumulative scenarios, the proposal would preserve the characteristics and composition of the view, all in accordance with the LVMF SPG (paras 414-5 and 418-422) and LSS guidance.

309. In baseline and cumulative scenarios, the proposal would preserve those attributes of OUV (and their relevant components) which have been identified in accordance with Local Plan policy CS12, CS13 (3), emerging City Plan policy S11, HE1, HE3, London Plan policy HC2, HC4, associated guidance in the World Heritage Site Management Plan, Local Setting Study, LVMF SPG and the CoL Protected Views SPD.

London Bridge (11B.1 and 11B.2)

310. This view is also identified as important in the WHS Management Plan and the LSS (Representative Viewpoint 11). The WHS is identified as the sole Strategically Important Landmark whilst Tower Bridge and HMS Belfast are identified as other landmarks. The rising ground of Greenwich and Canary Wharf are clearly discernible.

311. From both Assessment Points, in baseline and cumulative scenarios, the upper storeys of the proposal would be visible directly east of 20 Fenchurch Street. It would appear as closely integrated amongst, and a further high-quality augmentation and consolidation of, the Cluster. It would appear clearly disassociated from the WHS, which lies to the extreme east of the view.

312. As such, in baseline and cumulative scenarios, the proposal would preserve those attributes of OUV (and their relevant components) which have been identified in accordance with Local Plan policy CS12, CS13 (3), emerging City Plan policy S11, HE1, HE3, London Plan policy HC2, HC4, associated guidance in the World Heritage Site Management Plan, Local Setting Study, LVMF SPG and the CoL Protected Views SPD.

Other WHS views

Inner Ward, Tower Green and Scaffold Site

313. The LSS Inner Ward views are deemed to illustrate well the ToL's significance as the setting for key historical events and the relationship and scale of surrounding palace buildings of the Inner Ward. The LSS aims to maintain views illustrating the living tradition of the WHS, its rich ceremonial life and unique sense of place set apart from the modern city outside the walls, where the relationship between the scale of individual buildings can be appreciated.

314. Under 'key issues' the LSS states that tall buildings could, and so not in principle would, detract from that unique sense of place apart from the modern city and/or affect the scale of the enclosing historic buildings. The associated 'Objectives and guidance' stats that development should (i) respect that sense of place and (ii) ensure the buildings surrounding the Inner Ward remain the focus of the view.

315. The LSS acknowledges the Inner Ward to have a range of views, and the submitted application provides a detailed and comprehensive assessment of the visual impact on this place. Being entirely occluded behind the Chapel of St Peter ad Vincula, the proposal would not be visible from the Scaffold Site viewpoint (LSS view 1). It would be visible (along with the existing towers of the Cluster) to varying degrees from other places within the Inner Ward; from the centre, the proposal would appear over the east end of the Chapel, while from the south side, the proposal would be glimpsed above the roof of No. 2 Tower Green. Further forwards toward the Chapel, the proposal would disappear again from view.

316. Historic England have objected to the appearance of the proposal in these views, which they consider would add 'further to the visual intrusion of various tall buildings in the City' and 'further diminish the self-contained ensemble…distracting from the Tower's remarkable sense of place'. This point of view is shared by Historic Royal Palaces and other objectors.

317. In these dynamic viewing experiences from the Inner Ward, in both baseline and cumulative scenarios, the proposal would be seen as part of the varied, eclectic City Cluster, disassociated from the WHS and subject to the aforementioned long-term curation to achieve a balanced and deferential relationship with the WHS. And these Inner Ward views are a kinetic experience, in which the buildings of the WHS are the foremost presence, seen in a variety of

endlessly charming juxtapositions. Occasionally in these views the towers of the Cluster can be seen on the City skyline beyond, but never to such a degree of prominence that upsets the sense of place in the Inner Ward, or the aforementioned juxtapositions between its buildings.

318. Where visible, in both baseline and cumulative scenarios, the proposal would appear as a subsidiary, recessive edge component of the Cluster. Its discreetly elegant architecture would shed rather than draw attention, especially when contrasted against the larger existing forms of the Cluster. As such, the proposal would maintain that balanced, deferential relationship between WHS and the Cluster and the recessive, occasional presence of the latter in the Inner Ward views.

319. In accordance with the guidance in the LSS, the proposal would (i) respect the distinct sense of place and the pre-eminent stage in which those rich traditions would continue to take place and (ii) allow those enclosing Inner Ward buildings to remain the focus of the observer. It is considered that the iconic, strategic landmark siting and dominance of the White Tower would be unchanged in relation to OUV attributes and components, while the relationship between the WHS set away from the City beyond would be maintained, the proposal being a proportionate addition to the emerging Cluster as a distinct, long-established backdrop entity.

320. Under both baseline and cumulative scenarios, the proposal would preserve the relevant attributes and components of OUV and comply with the guidance in the LSS.

Inner Curtain Wall (S)

321. Views from the Inner Curtain Wall were assessed. The guidance in the LSS recognises it as a 360 degree viewing experience where the aim is to maintain an appreciation of the Tower as a riverside gateway, the historic relationship between the Tower and the river, whilst under the associated guidance seeking to maintain the White Tower as the key focus to the north, appearing more dominant than buildings in the Inner Ward or those beyond.

322. From the identified viewpoints from the south section of the Inner Curtain Wall, looking northwards, the proposal would appear immediately to the east of the Gherkin and, in the cumulative scenario, the consented scheme at 100 Leadenhall Street. Of a clearly modern architectural form and design, it would be clearly visually disassociated and distant from the WHS and be read as part of the existing

Cluster. The height and stepped profile of the proposal would ensure it read as an eastern endpiece to the Cluster. It would assist in consolidating the Cluster's distinct urban form and separate, long-established identity.

323. With its substantive, rock-built architectural presence, the White Tower would continue to command the foreground of these views, while the WHS's relationship with the river would remain undiluted by the proposal. The LSS recognises that 'modern buildings provide a clear contrast between the historic Tower and contemporary city outside its walls' – an acknowledgement of the concept of the contrast between ancient and modern buildings helping to reinforce one another's presence and contributing to the Landmark Siting attribute of OUV and the component of this which is the established relationship between the WHS and the City beyond.

324. Under both baseline and cumulative scenarios, the proposal would preserve the relevant attributes and components of OUV and comply with the guidance in the LSS.

Inner Curtain Wall (N)

325. The LSS, in assessing views from this place, acknowledges that this is a 360-degree experience and demonstrates a 'clear contrast between the historic Tower and the modern city outside its walls.' The identified aim is to (i) maintain views that reveal the relationship between the Tower and the City and (ii) maintain an appreciation of the defences as an outstanding example of concentric castle design. Under 'Key Issues' it recognises that future tall buildings could reduce the perceived prominence of the Tower in its setting, stating that such buildings, under the associated guidance, should continue to reveal the historic relationship between Tower and City and that clear views of the concentric defences should be preserved.

326. From the identified viewpoints from the north section of the Inner Curtain Wall, looking northwards, the proposal would appear immediately to the east of the Gherkin and, in the cumulative scenario, the consented scheme at 100 Leadenhall Street. Of a clearly modern architectural form and design, it would be clearly visually disassociated and distant from the WHS and be read as part of the existing Cluster. The height and stepped profile of the proposal would ensure it read as an eastern endpiece to the Cluster. It would assist in consolidating the Cluster's distinct urban form and separate, long-established identity. The concentric defences would remain pre-eminent and their appreciation undiluted.

327. Under both baseline and cumulative scenarios, the proposal would preserve the relevant attributes and components of OUV and comply with the guidance in the LSS.

Main Entrance

328. The LSS acknowledges that this is a 360-degree experience which reveals the 'Tower's relationship to the river Thames and the City and emphasises the Tower's defensive architecture. The identified aims are (i) to maintain views which reveal the relationship between the Tower, the river to the south and the City to the north and (ii) enhance appreciation of the medieval military architecture of the Tower.

329. In the view from the Main Entrance, the proposed building, appearing to the east of the existing form of 40 Leadenhall Street and slightly lower than it, would consolidate and augment the eastern profile of the Cluster. In the baseline and cumulative scenarios, both the Tower's relationship with the City and Thames and the qualities and pre-eminence of its defensive architecture and their appreciation would remain undiluted.

330. Under both baseline and cumulative scenarios, the proposal would preserve the relevant attributes and components of OUV and comply with the guidance in the LSS.

Other Views

331. In other the views and approaches to the WHS identified in the LSS, the proposal, though visible, appears as a peripheral feature on the skyline some distance from the WHS. The City Cluster has become an integral, long-established part of the setting and views of the WHS and the proposal would be consistent with this. In these other views and approaches, under both baseline and cumulative scenarios, the proposal would preserve the relevant attributes and components of OUV and comply with the guidance in the LSS.

Conclusion – Tower of London

332. The proposal would preserve the OUV of the WHS and the ability to recognise and appreciate the WHS as a Strategically Important Landmark and would accord with the visual management guidance in the LVMF SPG.

333. The proposal's relationship with the WHS has drawn strong objections from Historic England, Historic Royal Palaces and others; whilst giving great weight to these representations, officers reach a different conclusion. At the heart of the matter are differences in opinion on the visual resilience of so famous a monument as the Tower and the ability of the average viewer to be capable of discerning between ancient and modern entities in the same field of view, comprehending the visual proximity and physical distance involved, and appreciating them individually and as part of an overall skyline.

334. Perhaps most fundamentally, officers consider that, for all the reasons set out in preceding paragraphs, the evolving City Cluster, and therefore the proposal, is consistent, in principle, with the ancient dynamic between Tower and City which is particularly enshrined in the OUV attribute 'Landmark Siting'. The proposal would appear as a new element of the Cluster, with varying degrees of prominence in the views of the Tower, but officers, for the reasons set out in the preceding paragraphs, do not consider that it would upset the balance of this existing relationship and cause harm to the WHS in the way objectors have claimed.

335. As such, the proposal would not harm the setting or significance of the Tower of London, whether in relation to the WHS or any of the component heritage assets which comprise it. The proposal would not harm the attributes and their components and would preserve the Outstanding Universal Value and significance, authenticity and integrity of the WHS, in accordance with Local Plan policies CS12, CS13 (3), City Plan 2040 policies S11, HE1, HE3, London Plan policy HC2 and HC4 and the associated guidance in the World Heritage Site Management Plan, Local Setting Study, LVMF SPG and CoL Protected Views SPD. Although Officers conclude that the proposal would not harm the setting or the significance of the WHS, for good practice, DCMS will be notified about the scheme (see paragraph 172 of the Operational Guidelines for the Implementation of the World Heritage Convention).

London View Management Framework (LVMF)

336. The London View Management Framework (LVMF) designated pan-London views deemed to contribute to the capital's character and identity at a strategic level.

London Panoramas

337. The application site is not affected by the Protected Vistas designed by the LVMF, which crisscross the capital to protect views of the Strategically Important Landmarks (SILs) which, in the City, are the Tower of London and St Paul's Cathedral. The Protected Vistas impose height ceilings on the areas below them, and the application site does not fall into one of these.

338. However, the proposal's height means that it would be visible to varying degrees in some of the London Panoramas of which these Protected Vistas are part. In Views 1 (Alexandra Palace) and 2 (Parliament Hill), the proposal would be largely occluded behind the existing tall buildings of the Cluster; it would be fully occluded in Views 3 (Kenwood) and 4 (Primrose Hill). From Views 5 (Greenwich Park) and 6 (Blackheath Point) it would be more obvious, but would appear in front of 30 St Mary Axe (the Gherkin) and largely occupying its established silhouette on the skyline, and in so doing leading only to a minor change in the overall shape and hues of the Cluster.

339. The magnitude of change created by the proposal in these Panoramas would be ultimately minor and the proposal would accord with the LVMF SPG by assisting with the consolidation of the City Cluster, which is identified as a landmark in these views, preserving their composition and the viewer's ability to recognise and appreciate the Strategically Important Landmarks.

River Prospects

340. The proposal would be visible in some of the LVMF River Prospects, which unlike the Panoramas discussed above do not have an element of geometrically defined view protection, but instead are to be assessed qualitatively.

Waterloo Bridge (15B.1 and 15B.2)

341. In this famous sequence of views, St Paul's Cathedral is the commanding presence, with the historic townscapes of the Strand, the Temples and the Whitefriars immediately before and to the west of it while, to the east, the existing City Cluster of towers is seen as a dramatic, modern counterpoint to the Cathedral.

342. Seen from the north of the bridge (15B.1), the proposal would appear in the centre of the Cluster, partially occluded by the existing form of 122 Leadenhall Street (the Cheesegrater). It would assist with the consolidation of the Cluster, of which it would clearly read as a part, set away from and disassociated from the Cathedral. As one moves south over the bridge to the centre (15B.2), the proposal would become partly occluded by 1 Leadenhall Court; in the cumulative scenario it would be totally obscured at all points by the consented 100 Leadenhall Street scheme.

343. As such, the proposal would not draw tall buildings closer to St Paul's Cathedral, would not affect its clear sky backdrop and would not dominate or cause a 'canyon effect' around the Cathedral, in accordance with guidance in paras 264-7 of the SPG. It would not obscure or detract from any identified landmark element in the view and would give further context to those relevant Cluster landmarks identified.

Gabriel's Wharf (16B.1 and 16B,2)

344. This viewing experience is similar to that of Waterloo Bridge, except that the lower position on the South Bank allows for more of an appreciation of the historic frontages of the Temples and Whitefriars; the Cathedral is again seen as the commanding presence and with greater sky space between it and the Cluster.

345. As with Waterloo Bridge, the proposal would appear in the centre of the Cluster when seen from here, but largely occluded by 1 Leadenhall Court. In the cumulative scenario it would be totally occluded by that building and the consented scheme at 100 Leadenhall Street. Accordingly, the proposal would preserve the setting of St Paul's Cathedral and that of the identified landmarks in this view, all in accordance with the visual management guidance of paras 280-81, 283 and 57 of the SPG.

Hungerford Bridge (17B.1 and 17B.2)

346. These views are, again, similar to those from Waterloo Bridge which lies further east, except that the overall field of view is greater and the Cathedral is seen as the central presence of a wider urban skyline. Due to the similarities between these views and those from Waterloo Bridge, the impact of the proposal would be

extremely similar to that described in the paragraphs above, but at a greater distance. Accordingly, the proposal would preserve the setting of St Paul's Cathedral and that of the identified landmarks in this view, all in accordance with the visual management guidance of paras 301,302, 304, 305 and 57 of the SPG.

Lambeth Bridge (19A.1)

347. Views downstream from this point includes a glimpse of the City Cluster, seen extremely distantly across South London. The proposal would be very largely occluded by 52 Lime Street (the Scalpel) with a slight portion of its uppermost storeys visible behind; it would be completely occluded in the cumulative scenario. As such there would be not impact on the setting of any Strategically Important Landmark or other identified landmarks in the view.

Conclusion – LVMF

348. The proposal would preserve settings of the Tower of London World Heritage Site and St Paul's Cathedral as the Strategically Important Landmarks and it would preserve the composition and characteristics of all the LVMF views assessed. Lighting will be managed to ensure the development would not command the focus or distract unduly after dark. The proposal would comply with London Plan policy HC4, Local Plan policy CS13 and draft City Plan 2040 policy S13.

Other Strategic Views (Local)

St Paul's Cathedral

349. The proposal is not located within the St Paul's Heights grid, would not be visible and would be out of scope of many of the Viewing Points identified in the Protected Views SPD (fig. 3).

350. It would be visible to minor degrees in the kinetic riparian sequences along the South Bank and from the Thames bridges, where its impact would be as described in the sections above on Waterloo and Hungerford Bridges and Gabriel's Wharf. The proposal would appear between existing Cluster towers or be screened by them and is located on the other side of the Cluster to the Cathedral. It would be a comparatively marginal presence in these views and would not affect the sky space between the Cluster and Cathedral or intrude into its backdrop.

351. The proposal would be concealed by 8 and 22 Bishopsgate and the Cheesegrater in views from Fleet Street and Ludgate Hill and would be almost entirely occluded by the Cheesegrater in views from the Golden gallery of the Cathedral.

352. The Dean and Chapter of St Paul's Cathedral have queried why a fuller assessment of the impact on the Cathedral was not undertaken and the methodology behind scoping in and out certain viewing positions. The scoping exercise is consistent with the position of the site on the eastern side of the Cluster and proportionately reflects the fact that, due to this siting and its height, the proposal has only comparatively minor degrees of visibility in views of the Cathedral. Officers have interrogated this thoroughly using 3D modelling techniques.

353. The proposal would cause no erosion of the setting of the Cathedral and would be consistent with Local Plan policy CS13 (2), draft City Plan 2040 policy S13 and associated guidance in the Protected Views SPD and LVMF SPG.

The Monument

354. The proposal site is outside the spatially defined views from the Monument which are protected under Local Plan policy. The proposal would be completely obscured in views from the north of the Monument viewing gallery; it would not be in the Monument's 'Immediate Setting' and would not therefore harm or obstruct important views from afar or locally.

City Landmarks and Skyline Features

355. The proposal would have the potential to affect views of historic City Landmarks and Skyline Features which, in accordance with CS13, should be protected and enhanced. These are addressed individually below:

St Botolph Aldgate

356. As a component of the Cluster's eastern edge, the proposal would be visible in views of this church looking west and there would be intervisibility between the proposal and the brick tower and obelisk spire. The proposal would rise to the base of the spire and form a modern new element behind the church when viewed from Aldgate High Street. This visual relationship would quickly change as the viewer moves westward; moreover, the proposal would clearly be read as part of the modern Cluster seen in the backdrop to the church, rather than appearing overly close or domineering. As such, the church's skyline presence would be preserved.

PLA Building

357. The proposal would be visible in views of the former PLA building, forming part of a backdrop of tall buildings of the Cluster when seen from various points, including the South Bank, Trinity Square and Tower Hill. Officers consider that the proposal would read as an edge component from the Cluster and clearly set apart from the PLA Building and, while visible in relation to it, the proposal would not conflict, compete or detract from the PLA Building's silhouette and its skyline presence would be preserved.

Tower of London

358. The proposal would be visible in views from and of the WHS, which have been discussed in greater detail above. Within these views, it has been found that the visual impact of the proposal would be acceptable and for the reasons set out in the paragraphs above, it is considered that views of this Landmark are considered preserved.

359. The proposal would protect views of relevant City Landmarks and Skyline Features in compliance with CS13 (2) and City Plan policy S13 and associated guidance in the Protected Views SPD and LVMF SPG.

Elevated Public Spaces

360. The City Cluster forms a key element in a number of views from the elevated public spaces in the Cluster towers. Such areas are increasing in number and are proving to be highly popular and much-visited areas of elevated public realm, offering exceptional pan-London views.

361. In particular, the Cluster forms a dynamic element in views from the Skygarden at 20 Fenchurch Street and the roof terraces at 120 Fenchurch Street and One New Change. The impact of the proposed building has been assessed from these places. Due to its location on the eastern edge of the Cluster, it would be largely hidden by existing tall buildings. As such, the proposal, where visible, would appear as another dynamic addition to the Cluster, and would not detrimentally affect the viewing experiences from these places.

Neighbouring Borough Views

362. The proposal's appearance in views from neighbouring boroughs has been considered. In many instances the proposal's appearance would be very similar to the strategic views assessed above, and the impact would not change.

363. The London Borough of Tower Hamlets have objected to the proposal's impact on the view of the World Heritage Site from Tower Bridge, and this impact is assessed in detailed above; officers conclude that no harm would be caused by the proposal in this view.

Conclusion - Strategic Views

364. The proposal would be sited at the eastern edge of the City Cluster, which seeks to consolidate strategic levels of growth in the area with the least impact on pan-London and strategic views which go to the heart of the character and identity of

the City and London. As a clear endpiece to the eastern edge of the Cluster, the proposal would play an important role in defining this side of it as an overall composition and would represent a key act of its consolidation.

365. The proposal would preserve the settings and significance of the Tower of London World Heritage Site, St Paul's Cathedral and the Monument. The proposal would preserve the composition and characteristics of all relevant strategic views.

366. Overall, the proposal would comply with Local Plan policy CS13, draft City plan 2040 policy S13, London Plan policy HC4, the LVMF SPG, City of London Protected SPD and associated guidance.

Heritage

Direct and Indirect Impacts

Holland House

367. Offices of 1914-16, a rare example of the work of Dutch architect H.P. Berlage in Britain, his only work in the UK. Built for a German-Dutch shipping, steel and mining conglomerate (Wm. Muller & Co.) to serve as its UK headquarters at the time, the building is a striking landmark, particularly in its use of light coloured faience and subtle nautical theming, in addition to some arresting interior architecture. The building's grade II* listing reflects this architectural and historic interest.

368. It is unique in the city as an example of a skilfully crafted, fully faience-fronted building by a highly regarded architect whose work is rare in Britain, constructed in the middle of the First World War when building work had virtually ceased. The architect used some innovative and emerging architectural ideas and construction techniques, upon completion, its design pointed to the future of the office building.

369. As well as the principal frontage, architectural interest is found in the tiled interiors of the building at basement and ground floor levels, which survive as designed by Berlage, most of these interiors are intact, although the building has received many alterations throughout its lifespan.

370. When initially constructed, Holland House sat in and amongst a rapidly changing 20th century townscape, in which purpose-built large floorplate office buildings were beginning to emerge alongside the older, finer grain buildings. The

now lost Baltic Exchange (1908) sat opposite the site at 30 St Mary Axe, which has subsequently been replaced by the Gherkin in 2004. The wider area was a tight knit neighbourhood, with narrow streets and a strong sense of enclosure resulting from buildings which fully occupied their plot boundaries.

Architectural, Artistic and Historic Interest

371. The purpose-built office building is an interesting part of H.P. Berlage's portfolio, it is thought to take inspiration from American architect Louis Sullivan. Berlage is a renowned architect from the early 20th Century, also known for the Amsterdam Stock Exchange. The remarkable idiosyncratic design, innovation, use of materials, and construction techniques give architectural interest, detailed below.

372. Designed for the oblique views along the original narrowness of Bury Street, the strong verticals on the principal façade were an unusual design for the time period, giving the building a commanding and solid presence whilst incorporating a significant amount of glazing. The arrangement of the facade in this way, to maximise light to the interiors resulting from the narrow structural grid, is structurally 'honest' and points to the integrity, and clarity of architectural concept behind Berlage's work. Finished in high quality faience, the materials were shipped at "considerable expense" by Wm Muller & Co, to deliver the quality of building they sought to occupy. The horizontal, decorative faience spandrel panels denote the floor levels of the interiors behind, these horizontal panels are embossed behind the vertical protrusions, accenting the dramatic vertical emphasis.

373. Lower down the building, black granite plinths give the building a robust and sturdy base, the building was designed with privacy in mind, the lower windows are smaller and slightly raised, particularly at ground floor level, to give privacy to the building occupants. On the southwest corner, an art deco ship motif is a nod to the buildings mercantile associations.

374. The building possesses high architectural interest from the quality of its exterior, particularly its boldness and individuality in an era where conventional architectural styles were transitioning from classicism to modernism. Furthermore, much of the external appearance largely stems from the emerging architectural and construction techniques of the time.

375. Holland House also derives architectural and artistic interest from the ornate interior spaces. A painter from the 1930s, Bart Van de Lack, worked with Burlage on the intricate design of the entrance halls and circulation spaces at ground and first floor level, specifically the attractive flooring and ceiling. The interiors exhibit traces of the origins of early Art Deco design in the interwar period, a noteworthy aspect of the design aesthetic when considering the period of the building. The

other office floors were more utilitarian in appearance and have since been heavily modernised. The building's architectural and artistic interest makes a high contribution to its overall significance.

376. Holland House has historical interest due to its former use, it was a purpose built office building at a time of dramatic change in the built environment. The intended use of the building and its associations with the shipping industry are thematic of the City of London's urban morphology, representing a historical confluence of finance, maritime commerce and the built environment. The materials were shipped from Holland by Muller & Co's own vessels and the building was subsequently occupied by a shipping or commerce organisation, although the Munitions Disposal Board (part of the Government), occupied the building for a brief period during WW1. These historical associations, and the historic interest provide a moderate contribution to the significance of the listed building.

377. The building has been considerably altered over its lifespan, most significantly with the construction of Bury House in 1967, which saw the demolition of most of its eastern elevation to St James' Court. A party wall was reintroduced on the eastern elevation of Holland House, finished in Portland Stone. The construction of Bury House also resulted in the loss of St James' Court and the truncation of Heneage Lane. Throughout the latter half of the twentieth century the building was altered in a piecemeal fashion, with various internal works resulting in the loss of many of the original office interiors and the reconfiguration of parts of the floor plans and entrances; the windows and roof structures are wholly modern. Despite these alterations, a significant amount of the historic fabric with architectural and historic interest remains.

Setting and Contribution to Significance

378. Holland House has a principal frontage facing north-west onto Bury Street and a secondary frontage facing south-east onto a small open space off Bury Street, James' Court. Both facades are seen as part of a dense urban townscape, which is characterised by a juxtaposition of hyper-modern, high density commercial office buildings and a lower density varied historic townscape, the site is closely neighboured by the tall buildings of the Cluster with the Gherkin, opposite, prominent in the foreground of views of the principal frontage and a prominent backdrop to the building's secondary elevation.

379. Holland House was designed to address the oblique views available along Bury Street before the loss of the Baltic Exchange and the creation of the more open Gherkin Plaza. The narrow street and the lustrous, exquisite faience and projection of the closely spaced chamfered piers made the building appear solid in oblique views despite being highly glazed. Accordingly, the narrow zones

around Bury Street from which these views are possible are considered to make a positive contribution to significance by illustrating the original design intent; this is also illustrated by the existing form of Renown House, which pre-dates the listed building and led to its configuration around it; stylistically the two buildings are leagues apart yet they were constructed in the same decade, which in turn illustrates the stylistic context then prevailing in the City. Accordingly, Renown House is an element of setting which contributes positively to significance.

380. Following damage caused by the 1992 IRA Bomb, the Baltic Exchange was demolished and replaced by the Gherkin in 2004, opening up longer views of Holland House across the north-east and south-east corners of the new Gherkin plaza. As stated, the original, narrowly oblique views of the façade along Bury Street contribute to significance. Historic England have stated that the views from the Gherkin Plaza give an enhanced ability to appreciate the significance of Holland House, but this was not how the building was originally designed to be seen; the strongly vertical design and ordering of the façade were not created for these perspectives and do not have the same force in them. As such, officers consider that these views, whilst they allow the building to be observed from new angles, do not specifically contribute to significance.

Impact

381. The proposed works to the exterior would include necessary repair works to address the mild deterioration of areas of heritage significance. The south and west facades have varying degrees of damage to the faience, there is minor deterioration to both the external material and the steel structure behind. Some of the faience tiles have been secured by green netting on the top of the building. The repair works to the façade are necessary and the application would safeguard a part of the building of the highest significance. It is therefore critical that the works are an accurate replication to avoid any visual disparity in the completed works, these details would be secured through condition. The applicant would be required to appoint a specialist contractor, repair and replace concrete downstands and beams, replace ‘fake’ terracotta a spandrel panels, clean the façade with specialist advice, with new works and finishes to make good of the existing fabric and match the existing adjacent work with specific regard to be had to the methods used, materials, colour, texture and profile. Existing, original bricks will only be replaced where absolutely necessary. These alterations would preserve and enhance elements of the historic fabric of the building which substantially contribute to the building’s significance and would result in a minor enhancement overall.

382. The original Crittall windows have been removed, the current window frames are non-original, and are therefore of no heritage significance, these would be replaced by modern aluminium framed substitutes across all facades, the original

form of the windows would be respected using Crittall frame units. On the eastern elevation, the external materials would be repaired and replaced with reinstated glazed bricks, to replace modern alterations and use materials which would have been originally used, the existing Portland Stone is a non-original feature which was implemented in earlier alterations, this elevation is considered to detract from the buildings significance, the alterations would represent an improvement.

383. The former tenants access on Bury Street has been closed off, again by earlier alterations, the existing fabric here is of neutral significance, the proposals would reinstate the access point and provide an additional tenants entrance, following the original design intent, this would represent a positive contribution to the buildings significance. The package of façade alterations set out above would make positive steps to restoring the building to its original appearance, supporting the integrity of the original architectural design. The façade alterations are considered to contribute positively to preserving elements of the building which make a substantial contribution to its significance. They would result in a minor enhancement to significance overall.

384. The rather clumsy 1960s, 70s and 80s alterations above level 5 of Holland House would be replaced with 3 additional floors, plus an additional floor which partially covers the plan extent. The 1960s rooftop additions are an element of the building which currently detract from its heritage significance. The 5th floor would be slightly set back from the building line of the architecturally significant facades below, it would follow the line of the existing extension, but it would be slightly taller, this additional floor to ceiling height would follow the proportions of the existing facades below. Furthermore, the extension at 5th floor level would extend on to the roof of Renown House in part, this would maintain the strong cornice reading on the existing roofscape.

385. On floors 6 to 8, the façade line would step inwards from the principal façade at each level. The 20th Century Society, the Victorian Society, Save Britian's Heritage and Historic Buildings and Places and others have objected to the application, their objections (in part) relate to the additional storeys, which they state would have a negative impact on the listed buildings fabric, ability to appreciate significance and/or its setting.

386. These floor levels would be clad in a light-coloured pre-cast concrete, following a loose interpretation of the geometry of the existing facades of heritage significance below, the scalloping and shaping of the vertical elements would echo the character of the façade below and complement it. The stepping of the elevations and the light colour, would read as detached alterations at a high level, appearing as recessive, high quality additions in longer range views, they would have limited visibility.

387. Where they are visible, they would appear a well-considered design response. These additional storeys would have very minimal visibility in the oblique views for which the building was designed, and would only be visible in views where the original elevations of Holland House were never intended to be seen, in views from Gherkin Plaza. As set out above, these views do not contribute to the ability to appreciate Holland House's significance, therefore, these additions are considered to have a neutral impact on the buildings significance overall.

388. At the topmost 8th floor, the proposed terrace and greening would provide visual interest at a high level. The façades on these new elevations would be finished in white glazed concrete, this is considered to be an appropriate material palette to reflect the existing elevations whilst also respecting the primacy of the facades below.

389. The rooftop alterations listed above would have no negative impact on the ability to appreciate the historic facades lower down the building, they would be an improvement on the current, more recent and low quality rooftop alterations, it is the original facades give architectural interest and make a substantial contribution to the significance of the listed building, these original facades would retain their primacy. However, the rooftop additions would result in the partial infilling of the existing atrium, which would cause a degree of harm to the listed building and is discussed in more detail below.

390. Internally, Holland House would be combined with Renown House and the tower element of the proposal on the 31 Bury Street site, with which it would share a core and various functional elements. This principle of combination would take some of the functional pressure off the listed building, boosting its occupational density, improving the tenant services, improving the sustainability and M&E standards, providing accessibility/DDA compliance, providing end of trip facilities for the buildings occupants and upgrading the building to meet modern fire regulations. Whilst of course the current proposal is not the sole way of delivering some or all of the benefits above, these would flow from it.

391. The proposed internal works would include alterations to re-imagine the use of the heritage asset, plus necessary works to upgrade the building to meet modern standards. Overall, the alterations would enable the building to accommodate publicly accessible uses, inviting the wider public into the interior of the listed building for the first time in its 100-year history, in addition to providing more office accommodation.

392. The existing building at 31 Bury Street would be demolished and the new core located at the point where it linked to Holland House. Here, the proposal would result in some loss of floor slab and associated structure to Holland House, between floors LG to 5, which are of no heritage significance. Most of this area

was altered in the 1960s when Bury House was created and it is considered the most appropriate location for the core and the interconnections between Holland House and the tower element of the proposal.

393. The 20th Century Society, the Victorian Society and Historic Buildings and Places have objected on the basis of these alterations. As set out above, the fabric that would be lost in these areas makes a low contribution to significance. The building was listed after these alterations were made, nevertheless, the buildings' significance and heritage value lies in the quality of the external facades and the ornate internal decorative features, neither of which would be markedly affected through the creation of the shared core.

394. The interconnection between Holland House and Renown House by the removal of the party wall would create a larger floor plate. This enables the productive use of an otherwise limited and constrained space within Renown House and the party wall fabric that would be lost as a result of this alteration is considered to be of no heritage significance, the position of the party wall being maintained with nibs so that the original separation would remain legible.

395. The greatest single change to the interior would be the infilling of the atrium at level, creating bigger floor plates and accommodating the roof extensions above. The lower levels of the atrium would be preserved and would form a new internal space, although the functionality of the atrium as a way of bringing natural light into the building would be lost. As such, the proposals would result in a low degree of harm to the significance of the building by removing an element of its floorplan and original functional design.

396. At basement level, openings would be made in the existing, modern window apertures to provide direct access into the lower levels of the atrium, these modern apertures have no heritage significance. In this area the glazed brick wall surface would also be repaired to match the original. These alterations are considered to have no impact on the listed buildings significance.

397. In the heritage lobbies at ground and first floor, the decorative tiles will be cleaned, repaired and re-instated where lost, these are a key part of the buildings significance. The modern doors to the stair core will be replaced with Crittall replicas of the original design, to re-instate the design intent of the original architect in fabric that has previously been lost. In addition, a new lift car in a metal cage enclosure will be added to replicate the original design. A new stair core will be introduced to improve circulation between the basement and ground floor levels, the Victorian Society have objected to this aspect of the proposals, this alteration will remove fabric which is non-original and that currently detracts from the building significance. These elements of the proposal would re-present the

heritage lobbies in a more sympathetic manner and would result in a minor enhancement overall.

398. At first floor level, the panelled boardrooms will be repaired if necessary, some modern additions, such as carpets, will be removed to reveal the original tiles floor finish, and the modern boarded ceiling will be removed to reveal the original. These works will reverse unsympathetic changes which resulting in the loss or covering up of original elements, these changes would make a positive contribution to the buildings significance, in addition, new publicly accessible uses within these areas will give the public the opportunity to appreciate these elements of the building, enhancing the ability to appreciate the buildings significance.

399. In the modern office areas on floors 2-5, some of the 1980s stud walls will be removed and the interiors will be refurbished, this occurs in areas where there is no historic fabric of interest, these works will therefore have no impact on the buildings significance.

Indirect Impact – Setting

400. In views of the principal west façade of the listed building from and across Gherkin Plaza, the proposed tower would appear behind Holland House, occupying clear sky which presently exists as a backdrop to the west façade, introducing a prominent new element above the listed building the view. Historic England, LAMAS, the 20th Century Society, the Victorian Society, SAVE and Historic Buildings and Places have objected to the application and consider that the proposed building would diminish the appreciation of Holland House and have identified harm to the significance of the listed building as a result.

401. Officers do not concur with the conclusion of these objections in relation to the tower's indirect impact on the setting of Holland House. The dramatic juxtaposition of scale, materiality and architectural design is a characteristic of the City Cluster. The visual impact of the proposed building would be mitigated by the very high quality of the modelling and materiality of its pale blue faience elevations, architecture which has been directly inspired by that of Holland House and which would read as complementary. Moreover, as previously set out, these newer views of the listed building across the Gherkin plaza make no contribution to the significance or appreciation of the listed building.

402. The tower would be barely visible in the areas of setting from which the original oblique views across Holland's House principal Bury Street elevation, which contribute to significance, are possible. The tower element would be more prominent in the oblique views from the junction of Bury Street and Creechurch Lane along Holland House's smaller, secondary façade to that part of Bury Street. The lower levels of the tower would obscure a sliver of this elevation, but it would

remain discernible in the view and would come into greater prominence as one moves towards it along Bury Street.

403. Accordingly, it is considered that the proposed tower would not cause harm to the setting and therefore significance of the listed building.

404. Renown House would be extended by 2 floors, with an additional full floor above the cornice line in the form of a mansard roof. Renown House does not form part of Holland House's listing, but is an element of setting which contributes positively to significance, chiefly because of the stylistic differences between the two. Some consultees have objected in relation to this additional mass, arguing it would have a negative impact on the setting of the listed building.

405. The proposed mansard roof and the new facades of the extension are considered to be attractively detailed, and are sympathetic to the facades of Renown House below. The 2 storey extension and new mansard roof would replace the existing attic storey (overtopped with a lift overrun), in a more coherent manner. The mansard would follow a more contemporary design, differentiating it from the traditional design of the facades below. The overall design of the extensions to Renown House would maintain the existing qualities of its relationship with Holland House; the interconnections between them would be sufficiently disguised so that the two would continue to read as separate buildings originating from different times, executed in different styles, preserving this important quality of the setting of Holland House.

Conclusion

406. In conclusion, the proposed development would result in minor degrees of harm and enhancement to Holland House. The alterations to re-present the external facades and internal heritage lobbies would result in a low level of enhancement to significance and are considered heritage benefits. The infilling of the upper levels of the atrium would result in a low level of harm to significance. The provision of public access to the heritage lobbies would result in a minor enhancement of the ability to appreciate significance.

407. Officers consider that there is clear and convincing justification for the harm that would be caused to the significance of the listed building. The works proposed which result in that harm would assist in unlocking benefits in the scheme and that the scheme would, overall, strike the right balance between conserving the main areas of the building's significance and reimagining it for the future. The benefits would not be achieved without the interventions which result in that harm. The heritage harms and heritage benefits identified are considered as part of the overall planning balance set out later in this report.

Creechurch Conservation Area

408. The proposal site is located within the Creechurch Conservation Area, near the western edge of the conservation area where it meets the City Cluster. As set out above, the site forms the southern half of a street block which includes Holland House and Renown House, the principal frontage of which forms part of the CA's western boundary along Bury Street.

409. On its east side, the proposal site includes 31 Bury Street which faces the group of characterful C19 and C20 warehouse buildings which are particularly distinctive elements of the conservation area and forms a terminus to the view looking west along Mitre Street.

410. On its north side, the proposal site is framed by 33 Creechurch Lane, Heneage Lane, Valiant House and Copenhagen House; the Synagogue and its courtyard lie beyond Valiant House to the north.

Character, Appearance and Significance

411. The conservation area was designated in January 2024. While no Character Summary and Management Strategy SPD has yet been adopted, the CCA Proposal (December 2023) document approved by Planning and Transportation Committee and Court of Common Council assesses the special interest and character and appearance of the conservation area.

412. Of the buildings that comprise the proposal site, the CCA Proposal notes (section 3.2) that No. 31 Bury Street 'is not considered to possess inherent interest, but is important in framing Heneage Lane'; that Renown House is a 'characterful survival of a small-scale, early 20th-century office building…it has good quality carved stone detailing and makes an effective contrast with the adjacent Holland House'; that Holland House 'has a very high quality of detailing and execution and is one of the architecturally standout buildings in the locality'.

413. Furthermore, the CCA Proposal sets out (section 4.2) the overarching summary of special interest of the conservation area. This comprises the attributes:

- Strong and visible associations with the Roman and medieval City wall and Holy Trinity Priory, visible in the modern street pattern;
- A characterful group of late C19/early C20 warehouses on Creechurch Lane/Mitre Street that are fine examples of their kind and survivors of a type now rare in the City;
- Three places of worship of (in a City context) unusually diverse origins and of outstanding architectural and historic interest: Bevis Marks Synagogue (first purpose-built since the resettlement and now the oldest in the UK), St

Katherine Cree (a former Priory church) and St Botolph Aldgate (an extramural parish church);

- Strong and continuing associations with the Jewish community following resettlement in the C17, exemplified by the presence of Bevis Marks and the site of the First and Great Synagogues;
- A place of contrasting architectural scales, juxtaposed dramatically with the backdrop of tall buildings in the City Cluster.

414. Officers consider that the proposal would have the potential to affect attributes (ii), (iii) and (v). It is relevant to note that none of the objections to the impact of the proposal on the conservation area have taken this approach; they rely on generalised perceptions of impact rather than assessment against these formal attributes endorsed by Planning and Transportation Committee.

Setting

415. The setting of the conservation area is sharply contrasting, with the heart of the City Cluster of tall buildings neighbouring immediately to the west, acknowledged by attribute (v) listed above, which this element of setting supports to a minor degree. To the north and east are the fringe areas of the City, which make a neutral contribution to setting because the architectural character and historic environment is quite fragmentary; the same is true of the south. While the Lloyd's Avenue CA lies close by to the south, it possesses few affinities in architectural or historic character with Creechurch.

Impact

416. The proposal's visual impact on the Creechurch CA is the subject of numerous objections from the City's Conservation Area Advisory Committee (CAAC), Historic England and others. In particular, the CAAC's strong objection asserts that the proposal would result in 'gross overdevelopment… with significantly negative impact on the character and appearance… the lack of architectural quality and refinement…was noted, together with their significant negative impact on wider townscape views and heritage context.' These comments generally capture the objections on this theme; the full representations made have been considered by officers, and should be referred to.

417. The demolition of 31 Bury Street is not considered harmful in principle, noting its essentially neutral contribution to the CA. The provision of the Heneage Arcade across the footprint of this part of the proposal site is considered a minor enhancement of the character and appearance of the CA, by reinstating the lost extent of Heneage Lane; Historic England agree on this point. The roof extensions to Holland House and Renown House are not considered harmful in principle; in

relation to the CA, officers' conclusions in respect of these elements are as set out in the Holland House section above.

418. In many of the longer views of and through the conservation area, such as from Aldgate looking west, or at the bottom of Mitre Street looking north-west, the tower element of the proposal would appear as closely associated with the existing towers of the City Cluster within which the CA is partially embedded. This would be true of closer views from within the CA where only the tower element of the proposal is visible, such as of Bevis Marks Synagogue from within the courtyard, or from Bury Street looking obliquely across Holland House. The proposal's impact on views of the Synagogue is assessed in greater detail in the section below; the conclusion reached there would apply to the proposal's impact on this element of the CA.

419. In views of the proposal along Heneage Lane, Mitre Street and looking south along Creechurch Lane, the tower of the element would be seen coming to ground; in these specific views it would read as part of the City Cluster than of the CA; it would clearly `be disassociated from the historic scale of the CA.

420. In the view looking north along Creechurch Lane and away from the City Cluster, the tower element of the proposal would read as a more pronounced departure in scale from the relative consistency of the group on the north side of the street and the south side, which includes the characterful warehouses noted in attribute (ii). However, this would be mitigated to an extent by the visibility of 70 Bevis Marks and, in the cumulative, Bevis Marks House, and the contrasting scale of the proposal would elide with attribute (v) of the CA's special interest set out above.

421. In summary, therefore, when considering the impact of the proposals on the significance of the CA, officers reach a different conclusion from the various objectors on this matter, whilst attaching great importance to their views. The proposal would not conflict with any of the attributes of special interest set out above and would result in a modest degree of enhancement to special interest through the provision of the Heneage Arcade.

Indirect Impacts – listed buildings

Bevis Marks Synagogue

Significance

422. Synagogue of 1699-1701 by Joseph Avis. This is the oldest Synagogue in the country and survives to a remarkably little-altered degree. Avis had links to Wren's office and, architecturally, the building reflects the simple vernacular of some contemporaneous City churches and nonconformist chapels. Of a simple, rectangular plan form with simple red brick and Portland stone elevations with a pitched, slated roof behind a plain parapet. The principal, west elevation is symmetrically composed around the centered, main entrance door, flanked by two tiers of windows which run around the building, with the upper tier being large, round-arched windows to optimise daylight to the interior in what has always been a dense urban location. Above the entrance door is a tablet with the Synagogue's name etched in Hebrew: 'The Gate of Heaven/Sky'.

423. The interior is a single, double-height volume, galleried on three sides, with a flat plaster ceiling from which hang seven original chandeliers. The plan form, fixtures and fittings are largely of 1701, barring some minor later additions such as early C20 electric lighting. This place plays host to the religious traditions of the Sephardi Jewish community in Britain, known as *minhag*. Whilst practice here shares common worship and liturgical practice with other Jewish communities, for example reading from the Torah, there are particular rituals unique to this Synagogue (the *mitzvot*), such as the use of specific sung melodies by the *Hazan* in the reading of the Torah, which have been passed from generation to generation of the Synagogue's community.

424. It is a rich and intricate manner of worship, which cannot be experienced anywhere else, in a building of great age and rarity in a national context. Accordingly, this very old and rare intangible inheritance is considered to be of exceptional historical and communal interest; the building is of outstanding architectural, artistic and historic interest.

Contribution of Setting

425. The building retains its original setting, albeit with more recent buildings on some of the surrounding plots, located in an undemonstrative, off-street location in a private courtyard. It has no direct street presence except its south-east elevation to Heneage Lane, a quintessential city alley, on which the Synagogue manifests as a plain brick elevation pierced with three prominent, round-arched windows. This forms the centrepiece of a characterful ensemble of brickwork elevations including the former Vestry and Beadle's House fronting the north side of Heneage Lane and seen obliquely from Bevis Marks.

426. The inspector who reported on the Tulip proposal stated (at paragraph 14.52 of his report, with which the Secretary of State agreed):

"*Bevis Marks Synagogue (Grade I) is listed largely for its age, rarity and internal features. This does not mean that its setting is necessarily unimportant, but in this case it is largely limited to what can be experienced from within its courtyard*."

427. Otherwise, the principal approach to the Synagogue is through a gateway in a modern building fronting Bevis Marks which provides access to the courtyard, consisting of two narrow rectangles of paved area flanking the Synagogue's north-east and north-west elevations. Within the tight confines of this space, the Synagogue is a massive, commanding presence. The courtyard acts as an extension of the Synagogue, a place where people can gather before and after services (and indeed the last place males and females can interact before entering for worship). There have been recent alterations to the courtyard including the construction of a ramp and steps to the new museum in the western arm and two booths, for ticketing and security, inside the entrance and in the eastern arm. Seen from the courtyard, the Synagogue is hemmed in by other buildings of a similar historic scale and mostly of the same brickwork materiality, including the former Vestry and Beadle's House which directly adjoins it to the east. There is a specific sense of an architecturally reserved and deliberately secluded setting.

428. Bevis Marks was the first purpose-built Synagogue in Britain following the formal resettlement of the Jewish community after centuries of exclusion. Its discreet, secluded setting is considered to be powerfully representative of this, making a strong contribution to the building's significance; the importance of the relationship between the Synagogue, its courtyard, Heneage Lane and Bevis Marks cannot be overstated. Consequently, it is proposed that these elements of setting form part of a bespoke Immediate Setting policy area in the City Plan 2040 to recognise and help preserve these qualities. For clarity, the application site is not within this proposed Immediate Setting policy area.

429. The sense of privacy, seclusion and reservation, coupled with the tight urban grain of this area of setting, means that the Synagogue is experienced through a series of informal vistas and closeups, rather than formally recognised views. However, it has been argued by S&PSC and other objectors that there is a 'sky view' of the Synagogue from the entrance to the courtyard, where the building is seen with clear sky above, which is important for religious and spiritual reasons.

430. Moreover, it has been argued by the Rabbi of the Synagogue and other objectors that the sky and views of it are especially significant for the Sephardi community, holding 'practical and symbolic' significance in the view of one authority (part of their objection dated 15 November). Officers do not profess expertise in these areas of religious history and practice and accept the view of these sources that the sky, in general terms, holds significance for the Jewish community in general and the Bevis Marks community in particular.

431. However, when it comes to translating this into a consideration of the Synagogue's setting as a listed building, officers take a different view to the various objectors. Clearly, it follows from the general significance that the sky holds to the Bevis Marks community, and the very name of the Synagogue ('The Gate of Heaven/Sky'), that there is a general affinity between the Synagogue and the sky or heavens. However, this is a dynamic which is true of many places of worship, many of which arguably express this more obviously through the use of architectural elements such as spires and pinnacles to create a skyline presence. As such, officers do not consider that the Synagogue's general affinity with the sky or heavens necessarily translates into a specific view of the Synagogue requiring the preservation of open sky. The sky is visible above the Synagogue in various viewing points from within the courtyard. It is to be noted that no formal designation or identification exists, or ever has existed, of the 'sky view' described by the objectors in relation to the Synagogue's heritage significance.

432. Officers therefore consider that, when it comes to identifying and quantifying elements of setting, what is clearly more tangible, unique and more important to the heritage significance of the Synagogue, as a listed building, is the special sense of seclusion described above, and it is this element of setting that is considered to make the greatest contribution to significance.

433. Further to this, it has been argued by the Rabbi of the Synagogue that the building was deliberately designed to have "prominence in relation to the buildings in view all around it. This prominence was not achieved in the manner of church spires, but through the massing of the synagogue itself in contrast to the buildings around it. This prominence is only maintained by ensuring its scale continues to dominate its surroundings, by carefully managing visible growth around it."

434. Officers fully agree with this statement: the Synagogue is a very prominent presence in the tight confines of the courtyard, easily commanding the space, and obviously the most prominent of the buildings which frame the courtyard around it. Officers have proposed the aforementioned 'Immediate Setting' policy area around the synagogue and its courtyard buildings to capture this very important quality. While some of the existing courtyard buildings around the Synagogue are presently higher than it, as a result of modern redevelopments in the intervening centuries since it was constructed, the Synagogue, through its powerfully simple architecture and massing, continues to be the most prominent building seen within the tight confines of the courtyard.

435. The Synagogue and its courtyard are located within the City Cluster and a number of existing and consented tall buildings are or would be visible from within the courtyard, notably (E-W) One Creechurch Place, 40 Leadenhall Street, 100 Leadenhall Street (consented), the Scalpel, the Gherkin, No. 6 Bevis Marks and

Bevis Marks House (consented). Otherwise, there is an open sky setting over the Synagogue and its courtyard. The narrowness of the spaces from which the Synagogue is seen makes it a commanding presence; many of these existing tall buildings are not immediately in the field of view and can only be fully appreciated by deliberately looking upwards.

436. While the contrast between the scale and character of the Synagogue and its taller modern setting is very noticeable, the contrast between the historic ensemble of the Synagogue and these new buildings is entirely characteristic of this part of the City, in which ancient and hypermodern buildings are frequently juxtaposed and throw one another into sharp relief. Seen from the courtyard, these modern tall buildings are perceived as being part of the modern City at a crucial remove from the secluded confines of the courtyard. They do not affect that prominence which the Synagogue has in relation to its courtyard setting identified above. With its fundamentally different scale and architectural character, this wider setting of the Synagogue is considered to make a neutral contribution to its significance.

Impact

437. The impact of the proposal would be indirect, via change in its wider setting, rather than direct and physical; the Synagogue would not be directly affected, its fabric would remain untouched, and the important sense of seclusion created by those elements of setting identified above would be preserved.

438. Given the secluded, off-street siting of the Synagogue, there would be little to no interface between it and the proposal before the observer reaches the courtyard. The exception would be in the sharply oblique views along Heneage Lane, where the lower stages of the proposal would be seen at the end of the existing Lane above the proposed Heneage Arcade. Here, it would appear as a bookend terminating the southern axis of Heneage Lane, while opening up new sightlines through the Heneage Arcade down to Bury Street. It would read as disassociated and set apart from the characterful ensemble of the historic brickwork frontages of the Vestry, Synagogue and Beadle's House.

439. In views from the courtyard entrance, from where both the Synagogue and the proposal can be viewed to their fullest extent, the proposal would appear directly behind the Synagogue's principal north-west elevation. It would mostly obscure the existing form of 40 Leadenhall Street, already visible in this view, and some clear sky space above and to the east of it; in the cumulative scenario, it would be seen alongside the consented (and technically implemented) form of 100 Leadenhall Street. The proposal would be seen behind Valiant House, which frames the Synagogue to the south-west, leaving the sense of seclusion established by Valiant House and the encircling courtyard buildings unbroken.

440. For clarity, the topmost storey of the proposed roof extension to Holland House would be visible as a sliver of development behind Copenhagen House, but this would be extremely minimal, would quickly recede from view and be barely impactful.

441. The proposal would be at its most visible from this viewpoint and would appear as a subtly articulated form of sophisticated pale blue faience. As one looks up the proposal would be seen to taper in width as it rises. It is this view which is the focus of the objections, some of which as mentioned refer to it as a 'sky view' of the Synagogue. Currently, from this viewpoint, there is clear sky over the Synagogue between the existing forms of One Creechurch Place and 40 Leadenhall Street. As described above, the proposal would infill a section of this clear sky, but would not result in the total loss of clear sky over the Synagogue. Clear sky would remain appreciable above the Synagogue from various other points within the courtyard. Even so, as discussed above, whilst recognising the role of sky views in religious observance, officers do not consider the sky to be an element of setting fundamental to the Synagogue's significance as a listed building, instead forming part of that wider setting which makes a neutral contribution.

442. When one is in the courtyard, one is already conscious of the Cluster of tall buildings in which the Synagogue and its secluded setting are located. Existing tall buildings are already visible in these courtyard views, and more would be in the cumulative scenario, especially the scheme at 100 Leadenhall Street. In this respect, officers consider that the proposal would form another part of this layer of the modern City, coexisting with the Synagogue and held at a crucial remove from it by the intervening, low-rise form of Valiant House and the encircling courtyard buildings. Its presence would be a visual manifestation of the modern City beyond, rather than a visual intrusion.

443. In views further into the eastern and western arms of the courtyard – approaching the Beadle's House and the ramped entrance to the Museum – the proposal would be far more recessive. The uppermost storeys of the proposal would appear as a small section of slender blue faience above the brick parapet of the Synagogue. Aside from the view from the courtyard entrance, these other courtyard views of the proposal would be glimpses, caught when deliberately craning the neck beyond a comfortable field of view.

444. The S&P Sephardi Community (S&PSC), Historic England, the Georgian Group and many others have objected the proposal's visual impact on the setting of the Synagogue as a listed building. This impact formed part of the Reason for Refusal of the previous scheme on the 31 Bury Street site.

445. There are subtle but material differences in the designs of the previously refused scheme and the current proposal which are appreciable in the key views of the Synagogue. There would be a different degree of articulation to the proposed north elevation which can be seen from the Synagogue courtyard, though this difference is a rather subtle one and the overall impression created by this area of both schemes may be said to be similar. A more obvious difference between the two is that the top of the proposal would be lower and more articulated, in a way which may be said to be quite noticeable.

446. The S&PSC's heritage consultant asserts that: 'by reason of its height and proximity the proposed tower will overwhelm the Synagogue.' Historic England state 'that the synagogue's 'precedence would be all but lost with a roofline that would become framed against distracting modern development of a very large scale', and that the 'new tall building would become a dominant feature of the courtyard at the expense of the Synagogue, diminishing the latter's role as the focal point of the space'. The S&PSC find that the proposal would cause substantial harm to the setting and significance of the Synagogue; Historic England identify a medium level of less than substantial harm arising to the Synagogue as a result of the proposal (and a departure from the 'small degree of incremental harm' they found the previously refused scheme to cause).

447. Whilst attaching great importance to the views of the S&PSC as the building's occupiers, the statutory consultees and other concerned parties, and with great respect to the strength of feeling expressed in many of the objections on this matter, officers find that the visual impact of the proposal would not cause the damage which consultees refer to.

448. Officers consider that the many objections have overplayed the visibility of the proposal in the general experience of the Synagogue from within the courtyard, and underplayed how the tight confines of the courtyard means the Synagogue easily commands the space and is the pre-eminent and prominent presence. Officers further consider that the objections have downplayed the very clear distinction between the historic scale and materiality of the Synagogue and its courtyard setting, the obvious modernity of the proposal, and the fact that the Synagogue is already seen with a backdrop of tall buildings in the courtyard experience.

449. Officers consider the Synagogue to have a simple, resilient and commanding presence in the courtyard experience which is clearly disassociated from the modern city beyond, the existing towers of which have relatively brief prominence in the courtyard arrival experience before being largely occluded behind the Synagogue and its courtyard buildings when one is closer to the Synagogue. The proposal would, in most of the areas of the courtyard, be seen only as a glimpsed

and partial presence when one is looking up at the Synagogue's roofline and the clear sky which would remain over the courtyard.

450. At its most prominent, the proposal would be seen directly behind the Synagogue, as another architecturally sophisticated element of the modern city beyond. But, as with the visibility of the proposal from with the Inner Ward of the Tower of London, officers strongly consider the average viewer to be capable of distinguishing between ancient and modern elements in the same field of view and, in this case, discerning between the self-contained seclusion of the Synagogue and (its prominence within) its courtyard ensemble and the dynamic urban environment in which it resides.

451. Accordingly, officers find that, in baseline and cumulative scenarios, the proposal would preserve the setting and significance of the Synagogue.

452. The S&PSC, Historic England and other objectors have raised concerns about how the proposal's prominence in the courtyard arrival experience would impact on the ability to see clear sky above the Synagogue; in the words of Historic England, that the 'ability to see clear sky from the courtyard would be lost'; for the reasons set out in preceding paragraphs, it is the view of officers that the HE statement is not correct. The S&PSC, Historic England the other objectors assert in turn that the proposal would prevent the Synagogue's community from observing the emergence of the stars and the transit of the new moon from the courtyard, an important part of the Synagogue's liturgy, and so seriously inhibit their ability to continue worshipping at Bevis Marks. In the words of the Synagogue's Rabbi, from his objection dated 15 May, "each month, Jews gather outside after dark to recite *kiddush levana*, as the moon's waxing crescent appears in the night sky. This proposed tower will obstruct our visibility of this phenomenon, making it impossible to recite this prayer".

453. This did not form part of the previous Reasons for Refusal. As set out above, the differences between the two schemes, as they would appear in views of the Synagogue, are relatively subtle; there is no obvious design change between the two schemes that clearly relates to this theme of objection.

454. The S&PSC objection dated 15 May 2024 includes three photographs taken from a point in the courtyard which show the appearance of the moon over the Synagogue at different times. The applicants have taken this viewpoint as a basis for a Lunar Transit Study which has been submitted as part of the application and which the City has had independently reviewed by the BRE. Subsequently, the Rabbi of the Synagogue has indicated that it is in fact a different viewpoint from which the moon is viewed, further back towards the entrance portal where less of the Synagogue (and the sky above) can be seen. As a result the relevant position has been clarified. This alternative has been considered in an addendum to the

Lunar Transit Study. The Rabbi has submitted a further response to this, assessing the applicant's Study and providing more details about how the prayer is performed and how the moon relates to the culture and liturgy of the Synagogue.

455. The Lunar Transit Study and addendum put forward by the applicants and independently reviewed by BRE assesses the various passages of the moon in these views throughout the 18.6-year lunar cycle. It charts the positions of the moon at various stages over these cycles and maps them onto two aforementioned two viewpoints in diagrammatic form. These charts illustrate how, for the majority of the time, the moon is not visible at all from within the courtyard, being obstructed by the buildings in the observer's line of sight.

456. At the times in the cycle when the moon could be visible, it would appear just above the Synagogue and the courtyard buildings. The Lunar Transit Study maps the silhouette of the proposal onto these charts and demonstrates how it would result only in a comparatively small degree of obstruction to this experience, though proportionally greater from the point indicated by the Rabbi, with much of the moon's transit remaining visible from the courtyard even in the cumulative scenario with 100 Leadenhall Street. The charts further show how the moon would still be visible above the Synagogue as well as the courtyard buildings which frame it.

457. Officers have extensively considered the data and conclusions submitted by the applicants and the objectors on this matter. Officers conclude that the proposal would result in varying reductions of the number of hours available to see the moon on each relevant occasion, though in theory there would always be enough visibility to recite the prayer, and there would not be a reduction in the number of occasions (i.e. months) per year against the future baseline.; officers conclude that the presence of the proposal would still allow the prayer to be said, but there nevertheless would be an impact on the ability to carry out this ritual.

458. Officers are very cognisant of the strength of feeling expressed and attach great importance to the views of the S&PSC as the building's occupiers, the statutory consultees and other concerned parties when considering this matter. However, on the basis of the available evidence, which is comprehensive and independently verified, officers conclude that, at the times in the lunar cycle when the lunar transit could be visible from the courtyard, the proposal would preserve open sky above the courtyard and therefore the ability to see emergence of the stars and the new moon from there; and whilst the proposal would lead to a small reduction in open sky for the stars to inhabit and the moon to transit, it would not completely remove the ability to see the stars or the moon from the courtyard.

459. As such, officers conclude that the proposal would allow the stars and the new moon still to be seen from the courtyard. Although it is matter of religious

observance, being a matter on which the officers do not profess expertise, based upon the information provided by those making representations, and on the analysis contained in the studies referred to, officers have concluded that there would be a continued ability to see emergence of the stars and the new moon from the courtyard at the necessary times (although the proposal would have an impact on the duration of the moon's visibility at these times) allowing that element of the ceremony of *kiddush levana* to take place, and that this aspect of the functioning of the Synagogue would not be prevented by the physical attributes and impact of the proposal. As such, and momentarily laying aside consideration equalities/amenity point of view of the impact identified, addressed later in this report, officers find no harm arising to the Synagogue's setting and heritage significance arising from this matter.

460. Further objections from the S&PSC and others relate to the perceived overshadowing of and impact on daylight and sunlight to the courtyard. This impact formed part of the Reasons for Refusal for the previous 31 Bury Street scheme and is treated from an amenity point of view and in greater technical detail in the relevant sections of the report. The findings as they relate to the heritage significance of the Synagogue are summarised below.

461. The S&PSC's consultant has alleged that the proposal's 'visual and psychological impact on the courtyard would be catastrophic'; the S&PSC assert that the proposal would seriously inhibit their ability to use the courtyard, but do not provide evidence as to why. The applicant has submitted studies – which the CoL has had independently reviewed by third parties – that confirm that the proposal would not cause any discernible reduction in daylight and sunlight to the courtyard and that, overall, its amenity would not materially change. Again, officers have no objective evidence to contradict this conclusion, and accordingly find no harm to the Synagogue's setting and significance arising from this perceived impact.

462. Many objections have been received in relation to the potential impact of the proposal on daylight and sunlight levels to the interior of the Synagogue and its ability to function. This potential impact did not form part of the Reason for Refusal of the previous scheme.

463. During daylight hours, the Synagogue's capacious windows provide a level of ambient light which enables an appreciation of the exceptional interior and allows services and readings to take place. There are large windows on all four elevations, resulting in a multi-aspect interior receiving daylight throughout the day. The building's densely urban location means that the levels of ambient natural light are relatively low, though enough to appreciate the historic interior and for the building to be used for its current purpose. Artificial light within the building is minimised and largely restricted to historic fittings.

464. The potential impact on the amenity and usability, rather than the heritage significance, of the Synagogue is fully set out in the Daylight and Sunlight section of the report below. Assessments of the impact of the proposal on daylight and sunlight into the Synagogue have to be grounded in quantifiable, BRE-compliant evidence, rather than subjective assertions. The extensive technical assessments undertaken show that the diminishment of the internal light levels within the Synagogue would be negligibly noticeable in the main, ground floor area of the building and slightly more noticeable, but in a limited area, at the mezzanine level on the south side. This evidence leads officers to conclude that the proposal would not affect (i) the visual appreciation of the historic interior, (ii) the visual appreciation of those particularly significant features such as the *bimah* or the *ark* and that, therefore, most importantly, the proposal's impact on light levels would not diminish the ability of the Synagogue to function or prevent any of the activities within, including circumcision, to be undertaken.

465. A further theme of objections is that the proposal would negatively affect the Synagogue's new Heritage Centre, although this is not substantiated with evidence, and from the findings of the technical and professional assessments above officers do not consider that any adverse impact could occur.

466. As set out above, the variations between the previously refused scheme and the proposal are, in respect to experiences of the Synagogue, comparatively minor. In relation to the previous scheme, officers considered all the areas of impact set out above, with the exception of the lunar transit. In all these areas officers concluded that the previously refused scheme would not result in a harmful impact upon the Synagogue or its setting.

467. A different view was taken by the City's Planning and Transportation Committee, which refused permission for the development because it would, in part, 'adversely affect the setting of the Grade I listed Bevis Marks Synagogue and its setting and amenities by reason of the overbearing and overshadowing impact of the development on the courtyard of the Synagogue.'

468. Officers are extremely cognisant of the strength of feeling in the objections relating to the Synagogue and have required extensive and at times unprecedented levels of detail and assessment from the applicants in order to consider the impacts discussed above, whilst noting the relative similarity between the two schemes in these experiences. Officers have had regard to the previous decision of the Committee and to the principle of consistency in decision-making. However, officers consider that the technical evidence upon which this application is assessed does not support the previous reason for refusal.

469. As such, in respect of the proposal now under consideration, for all the reasons set out above, officers reach the same conclusions as for the previous scheme. Overall, in visual, physical and environmental terms, under both baseline and cumulative scenarios, the proposal would preserve the setting and significance of the Synagogue and the ability to appreciate it.

470. In their objections the S&P Sephardi Community argue that the proposal would cause harm to the significance of the Synagogue and that public benefits will only outweigh that harm if it is demonstrated that what is proposed is the minimum necessary to achieve the claimed benefits. As set out later in this report when considering the heritage balance, within the statutory process and under NPPF policy the decision-maker must adopt a sensible approach to assessing likely harm to the significance of a listed building and weighing that harm against the benefits. The decision maker does not have go about balancing harm against benefits in a particular way. The legal advice relied upon by the S&P Sephardi Community states that "it would be amply open to the Council to take the view that clear and convincing justification for the harm to the significance of Bevis Marks Synagogue and the Tower of London does not exist with (clear and convincing) evidence that the benefits relied upon cannot be achieved without the extent of the harm that would be caused-including viability evidence.". In the view of officers no harm would be caused to the significance of the Synagogue (or the Tower or London) and therefore there is no requirement to balance harm to the significance of those designated heritage assets against benefits.

Renown House (Non-Designated Heritage Asset)

471. Renown House, Nos. 33-34 Bury Street, is on the corner of Bury Street. It is a non-designated heritage asset, its significance is derived from its historic, architectural and artistic interest, it also derives significance from its group value and setting with its neighbours on Bury Street, which form the eastern edge of the Creechurch Conservation Area, marking the transition between a historic townscape to the east and the modern City Cluster to the west. The Victorian Society, Save Britain's Heritage and Historic Buildings and Places have objected to the proposals relating to Renown House, stating that Renown House is a non-designated Heritage Asset and the proposed impacts to the building would harm its significance.

Architectural, artistic and historic interest

472. Renown House is a four-storey building with a basement and attic, built for a successful Dutch import-export trading business Bunge & Co. in 1912. Bunge & Co. Bunge & Co. expanded internationally through the 20th century and the firm established its London headquarters on Bury Street as a result of this rapid

international expansion, these offices were purpose built. It was occupied by shipping firms until the late 20th century.

473. It was designed by one of the City's leading commercial architects from the early 20th Century, Delissa Joseph, who completed numerous high quality buildings across London throughout his career. It is not statutorily listed, and is considered to be one of Delissa Joseph's lesser known works. It is stylistically conservative for its time, particularly when compared to its neighbour Holland House, the historic associations with the architect and the former use of the building give historic interest, which makes a moderate contribution to its significance.

474. Renown House is a Portland Stone clad building, with a grey granite ground floor, designed in a neo-classical manner. It is a characterful survival of a small-scale early 20th-century office building, once a common type in the City. The ground floor has attractive detailing above the entrance portal, it has typical classical proportions and restrained classical detailing, the cornices are relatively simple but contribute to the overall character of the building. The windows at ground floor level are modern replacements but fit the prevailing aesthetic, railings in front of the lower ground floor levels are also coherent with the architectural style.

475. The upper levels, predominantly finished in Portland Stone have good quality carved detailing, the carved stone has a variety of relatively simple forms which decorate the pilasters, spandrels and cornices, overall the facade has an attractive and well considered external appearance. The windows are dark green metal modern replacements. At the upper levels, a chimney stack adds character, but several excrescences at roof level, such as balustrades, dormer windows and a lift overrun detract from the design quality.

476. Holland House wraps around Renown House and appears either side of its street facing elevations. Overall, it makes an effective contrast with the adjacent Holland House which is Grade II* listed, and makes a positive contribution to the character and appearance of the Creechurch Conservation Area. The quality of the external appearance gives architectural and artistic interest, which makes a moderate contribution to its significance, this significance overall is however limited as the building is not statutorily listed.

Setting

477. Renown House has southern and eastern elevations facing Bury Street. These facades are seen as part of a varied townscape, its immediate neighbours are historic buildings, with more modern commercial office developments framing

wider views of these facades, the site is in close proximity to the City cluster and Gherkin Plaza.

478. The backdrop to the Renown House elevations are clear sky and roof level modern excrescences on Holland House, no. 5-10 Bury Street and Bury House. The building remains part of a street block of a comparable scale and density to when it was originally constructed, this element of setting gives a low contribution to the significance of Renown House. The rooflines and building heights vary slightly, the roof level of neighbouring Holland House is slightly higher, the cornice lines are slightly offset resulting in limited coherence between the roofscape, this element of setting could be improved.

479. Originally positioned on a narrow street opposite the former Baltic Exchange. Following damage caused by the 1992 IRA Bomb, the Baltic Exchange was demolished and replaced by the Gherkin in 2004, opening up longer views of Renown House across Gherkin Plaza. These views provide a low contribution to the ability to appreciate the significance Renown House.

Impact

480. The proposed development includes window replacements, façade alterations at ground level, the insertion of 2 new floors, a new mansard roof and a new internal interconnection with Holland House as part of the alterations to Renown House. The most significant external change is the increase in height, at street level this will be seen as 1 additional floor in the same architectural style as the main body of the existing façade, with a new, modern mansard on top.

481. On the new ‘full’ floor, the proportions, architectural detailing, appearance and materials would match the facades below, the extension to the ‘main body’ is considered to be sensitive and an appropriate high quality design, the materials would be conditioned to match the existing, special care and attention will be paid to the material selection, colour palette, and jointing, so the extension fits seamlessly with the historic façade below.

482. The windows would be replaced with PPC metal framed windows, which respect the existing proportions of the facade, they would be an upgrade on the existing, non-original windows. At ground floor level, the windows, doors, cills and slabs would be dropped to be level with the street, giving the base of the building a more permeable and open street level presence, improving the buildings relationship with the street.

483. The existing attic story, which is overtopped with a lift overrun, chimney stacks and untidy balustrades/rooftop access, would be removed and replaced with the modern mansard design and dormer windows, it would differentiate the new

addition from the more traditional style building below, tidying up the roofscape with a sympathetic yet contemporary design. The proposal preserves the existing buildings external expression with a thoughtful and appropriate, albeit contemporary, architecture. These external alterations, whilst being high quality, would alter the original design intent of the building and remove a large proportion of original fabric, causing a low level of less than substantial harm.

484. Renown House would remain subservient to Holland House when viewed from the west, this massing change would improve the massing relationship of the street block, creating better parity in building heights, but Holland House's pre-eminence would remain. The positioning of Renown House within and its relationship to the rest of the historic block forms part of its setting. The rooftop extensions to Holland House and the proposed tower on Bury House would be visible above the roofscape of Renown House. Discussed elsewhere in the report, the design and appearance of these would high quality, these new additions to the buildings would be visible in conjunction with Renown House when viewed from the south side of Gherkin Plaza. Close up, particularly from the south, the additional upper levels of Holland House would be visible, the existing upper floors of Holland House appear as set back elevations which fold and cascade away from Renown House, the proposals for Holland House would largely have the same effect, the experience for the viewer would be very similar in these views, Renown House would still read as part of a historic block due to its relationship with Holland House. The increased height of Holland House would have a neutral impact on the setting Renown House which contributes to its significance.

485. At present, clear sky appears above Renown House, which gives visual clarity and coherence to the scale of the historic street block, this would be eroded by the construction of a tower on Bury House, the proposed tower would be disturb the viewers ability to appreciate the architectural interest of Renown House. Historic England, Historic Buildings and Places, Save Britain's Heritage and the Victorian Society objected to the proposals, stating the additions and would be overbearing and distracting, which officers concur with to a degree. Renown House has always sat as part of a tight knit, historic urban block, however, its context is also characterized by other tall buildings and taller modern commercial office developments. The proposals for the tower on Bury House would erode clear sky and the viewers ability to appreciate the significance of Renown House, this negative impact on setting would result in a low level of less than substantial harm to Holland House.

Conclusion

486. Overall, officers consider that the proposed designs for Renown House would successfully integrate with the existing building and its neighbours, however, the proposals would detract from its architectural, artistic and historic interest and

setting due to the scale of the interventions proposed to the fabric of Renown House, in addition, the scale of the tower would have a negative impact on the setting, both these consequences amount to a low level of less than substantial harm.

487. The essence of its architecture and appearance will not negatively change under the proposals. The proposals will enable the building to continue to positively contribute to the City and the wider development within the application redline. The modest change to the building's massing is entirely appropriate and proportionate to its low level of heritage significance. Its ability to make a positive contribution to the townscape will not be removed, despite the low level of less than substantial harm.

Indirect Impacts on significance and setting of Designated Heritage Assets

Church of St Katharine Cree: grade I

Significance:

488. At the corner of Leadenhall Street and Creechurch Lane is the Guild Church of St Katharine Cree, established by 1631 with a tower of c. 1504, is of outstanding historic, architectural and archaeological interest. It predates the Great Fire and is a rare example of the early use of classical architectural motifs (internally) alongside the then more traditional perpendicular gothic (externally).

Setting

489. The church benefits from an enclosed churchyard to the north-east that contributes to its significance. Part of a street block, the setting of the church is complemented by buildings of broadly sympathetic scale. These neighbouring buildings include historic warehouses but also modern office buildings which form quieter, neutral components of the church's setting.

490. The City Cluster, including the Leadenhall Building, the Scalpel, 40 Leadenhall Street, 30 St Mary Axe, and 22 Bishopsgate, forms a significant part of the wider setting of the listed building and can be seen in views along Leadenhall Street. The upper part of the existing Aviva Tower is also visible in some of these views. These buildings do not contribute to the Church's significance. They define however, its wider setting characterised by modern, tall commercial buildings at the heart of the City Cluster. The site, which is presently views obliquely from the church, makes a neutral contribution to an appreciation of its significance. The

twentieth century character of the main facades as existing set it apart from the neighbouring Victorian and Edwardian architecture, and it is altogether much plainer in appearance and does not follow the prevailing parapet height along the street.

Impact:

491. The proposed building would appear in views of the church. When looking from the south and south-east, (View 46) the proposed building would appear in the backdrop as part of the City cluster of towers. While the scale of the site will change in these views, this maintains the present character of the site which is currently experienced as a modern intervention to the northern end of the street, noting that the existing relationships in the foreground between the Victorian and Edwardian buildings will be preserved. The location of the site in relation to the church also ensure that views towards its tower are preserved.

492. The GLA consider that the proposed building would, by altering the scale of the built form and reducing the level of open sky on the street, cause harm to the setting of the church.

493. One of the distinctive characteristics of the townscape of the City Cluster is the striking and dynamic contrast in scale between the historic buildings like this church and the new towers. In other townscapes in London, such a contrast might be uneasy in terms of the setting of historic buildings, whereas in this small part of the City the striking juxtaposition of old and new has become a defining characteristic. From most vantage points, the church is already seen against a backdrop of towers. Moreover, the materiality and architectural design of the proposed building has been conceived to relate it closely to the local context of which St Katherine Cree is such an important part. Your officers do not concur with the GLA's conclusion. Within this specific context, the proposed building is not considered to harm the setting or significance of the listed building. Moreover, the proposed building would not diminish daylight to the church to the point that appreciation of the historic interior or its use would be compromised.

Gateway in churchyard of Church of St Katherine Cree (Grade II)

494. The contribution of setting to an appreciation of the significance of this listed building, is limited primarily to the church yard of St Katherine Cree. Due to the very enclosed character of the setting of this asset, the proposals are considered to preserve those aspects of setting which have been found to contribute to significance. Therefore, the proposed development would have a neutral impact upon the listed building's significance or the way this significance is appreciated.

St Andrew Undershaft (Grade I)

Significance

495. The Church of St Andrew Undershaft is located at the intersection of Leadenhall Street and St Mary Axe, to the south-east of the site. A rare survival, dating to the 12th century, rebuilt in the 16th century, of squared rubble and stone incorporating an 15th century tower with a polygonal stair turret, which is partially rendered. Inside, there are several notable monuments and fittings.

496. Similarly to Church of St Helen, the church is of high historic interest as a rare medieval church that survived the Great Fire of London and the Second World War. Damage from an IRA bombing in 1992 resulted in the loss of its remaining 16th-century windows.

497. Architectural interest survives from the appreciation of its medieval architectural style and materials including the distinctive silhouette of the tower. It is a fine example of its kind and a particularly good, and now rare, example of a City church that predates the Great Fire.

Setting

498. St Andew Undershaft is located at the southern end of St Mary Axe, just before it meets Leadenhall Street. Both streets are historic, and originally developed on all sides - Leadenhall and ancient route connecting Cornhill to Aldgate and St Mary Axe reflecting part of the City's medieval layout.

499. The setting of the Church was originally densely developed and has changed dramatically over the years, with the most drastic changes in the 20th century, and is now characterised in the main by modern, tall commercial developments which make a neutral contribution to its significance.

500. The small surviving churchyard to the north, including its walls and railings, contributes to the building's setting and significance. A group of small and medium sized 19th and 20th century buildings adjacent to the church on Undershaft and Leadenhall Street provide an appropriate townscape setting, with tall buildings of the City Cluster in close proximity to the north, south and west. These elements make a neutral contribution to the asset's significance.

501. Modern office buildings and tall towers of the City Cluster, such as the Leadenhall Building 30 St Mary Axe, 52 Lime Street, and 40 Leadenhall Street are some of the tall buildings in the immediate vicinity of the Church. The relationship of the asset and 30 St Mary Axe which is visible directly behind of the Church tower in views from Leadenhall Street has become an iconic and frequently photographed one, joined recently (in the cumulative scenario) by the form of 100

Leadenhall Street directly to the east of the church. Apart from the juxtaposition in terms of height, the contrast of the design and materiality of these buildings add further interest to this view, amplifying the historic character of the masonry church, albeit in a way unrelated to heritage significance, setting and an appreciation of it.

Impact

502. The GLA have identified a less than substantial, low to middle degree of harm to the significance of the listed building through impact upon setting.

503. Under the baseline scenario, the proposed building would appear as a prominent feature on the skyline in views of the church. Views 53 and 54 show the upper levels of the proposed building would rise above the neighbouring buildings to the east of the church and present a prominent new element in the view. However, under the cumulative scenario, the proposed building would be completely occluded by the consented form of 100 Leadenhall Street.

504. As with St Katherine Cree, the church is already seen in dynamic contrast to the taller buildings of the City Cluster. Officers therefore do not agree with the conclusions of the GLA. While visible, the proposals preserve views towards the church tower across the junction and from the immediate locality. Similarly, the proposals are considered in keeping with the existing backdrop character within these views. As such, it is considered that the proposed building would not harm the setting or significance or setting of St Andrew Undershaft.

505. Overall, in both baseline and cumulative scenarios, while the proposed development would introduce changes to the Church's setting, it would clearly preserve the setting and significance of the church and the ability to appreciate it. The proposal would be the latest addition to the now arguably iconic setting of modern high-rise buildings which frame the church, and its medieval charisma would remain undimmed.

Church of St Helen Bishopsgate: Grade I

Significance:

506. The Church of St. Helen's at Bishopsgate (Grade I) is a rare survival of a medieval building in the City of London. Uniquely, it combines a nunnery church and a parish church side by side. The Church dates back to a Benedictine priory for nuns which was founded in 1210. While most of the outer structure dates from the 13th century, there are elements from the 12th, 14th, 15th, and 16th centuries. The church is of outstanding architectural, historic and archaeological significance. It is one of the City's few surviving pre-Fire buildings.

507. It is built of partly rendered rubble, brick and ashlar. In 1992 and 1993 IRA bombs caused damage to the church. Despite some reordering of the interior many internal fixtures and decorative elements installed in the 15th to 19th centuries have survived and contribute to the building's historic interest and significance.

Setting:

508. The churchyard to the west contributes to the significance of the listed building. From the west, the church's immediate setting comprises a group of 19th and 20th century buildings, with the tall buildings of the City Cluster providing a long-established, dramatic contrast in scale and materiality immediately to the south and west. The Gherkin is prominent behind the church in views looking east. There is a narrow slice of clear sky above the church between the Gherkin and No. 1 Undershaft obscured by a prominent tree in the churchyard.

509. Due to its location within the City Cluster, the setting of the church has changed considerably in more recent years. There is a pronounced contrast between St Helen's Church and the modern tall buildings of the City's Eastern Cluster, which lie in close proximity to the church. This includes Aviva Tower, the Leadenhall Building, Tower 42 and 100 Bishopsgate and 22 Bishopsgate, to the north and south. The setting of the church today is characterised by these long-established contrasting modern buildings that characterise this part of the City of London townscape. The juxtaposition between the historic church and the surrounding tall commercial buildings emphasises the venerable historic character of the church, albeit in a way unrelated to heritage significance and setting.

Impact:

510. The GLA have concluded that there would be a very low level of less than substantial harm caused to the significance of the Church through contribution to its setting as a result of the proposals.

511. In the baseline scenario, the proposed building would partially infill the existing clear sky gap between the Gherkin and No. 1 Undershaft (View 44). It would be partially occluded by the churchyard tree when in leaf but would be more visible in the winter months. However, the setting of the church in this view is predominantly of taller modern forms and the proposed building would be an augmentation of this. Additionally, in the cumulative scenario, the proposed building would be occluded by the consented 1 Undershaft and 100 Leadenhall Street. The proposed building is not considered to harm the setting or significance of St Helen Bishopsgate.

Church of St Botolph Aldgate: grade I (and associated grade II listed street furniture)

Significance:

512. The Church of St Botolph Aldgate has historic interest as it dates to 1741-4, to the designs of George Dance the Elder. Architectural interest derives from the appreciation of its architectural styles, materials including stock brick and classical stone detailing and a distinctive obelisk tower. The church tower and spire rise prominently from the body into open clear sky and have a landmark quality.

513. The Church has group value with the Grade II listed wrought iron gates (probably dating from the early 19th century) with open work piers on Portland stone base, to the entrance of the churchyard.

Setting:

514. The setting of the church includes the churchyard, with its associated planting, trees, drinking fountain and police call box, enclosed by the listed railings and gates. These elements make a very positive contribution to the significance of the church. A positive element within the Church's setting, only recently added in the early 21st century, is Aldgate Square. The whole ensemble of the Grade II* Aldgate School, the Square and the Church form a striking and sympathetic townscape group of great character and interest. The setting is otherwise characterised by modern commercial buildings of medium scale in the City and Tower Hamlets, with tall buildings of the Cluster set some distance away to the west. Aviva Tower is visible to the west of the church, between 30 St Mary Axe and 122 Leadenhall Street. These modern elements of the setting make a neutral contribution to the significance of the church.

Impact:

515. The proposed building would be seen in the backdrop of the church as part of the City Cluster (View 38 and 39). The GLA and The Georgian Group consider that the proposed building would cause a low to middle level of less than substantial harm to the setting of the church. Your officers do not concur with this conclusion. In the baseline scenario, the upper levels of the proposed building would appear above existing tall buildings within the cluster, to the left of the church when viewed from the east (View 38). In the cumulative scenario, the proposed building would sit in front of 1 Undershaft and 100 Leadenhall, partially occluding them, but the consented schemes would rise much higher behind the proposed building. In view 39 where the cluster appears directly behind the church tower, in the baseline scenario the building would introduce new, taller built form immediately adjacent to the church spire; however, in the cumulative scenario,

again the consented towers at 100 Leadenhall and 1 Undershaft would rise higher than the proposed building behind the spire. Overall, the proposed building would read as a distant element of the established City Cluster of towers in the backdrop to the church when seen from the east. The proposal would preserve its setting or significance and the ability to appreciate it.

Church of All Hallows by the Tower (grade I)

516. Church of Saxon origins, medieval fabric, a brick tower of 1659 and extensive post-war rebuilding by Seely and Paget. The building is of very high historic and architectural significance as an ancient survivor whose myriad architectural phases testify to the waves of change that have characterised the City of London for the past thousand years.

Setting

517. The building's setting is greatly changed, and it now draws only a modicum of significance from its setting. Due to distance and intervening development, the site is not visible from the church, making a neutral contribution to an appreciation of its significance.

Impact

518. The GLA have identified a less than substantial, very low degree of harm to the listed building, through impacts to its setting. Under both cumulative and baseline scenarios, (Views 56 and 57) the proposed building would be seen at a distance to the north or occluded by the fabric of the church itself. In both bases the proposals do not interact the silhouette of the church, but are seen in the backdrop behind further intervening development demonstrably as part of the existing City Cluster. Officers therefore do not agree with the conclusions of the GLA. The proposals are considered to preserve the existing contribution of setting to an appreciation of this listed building's significance, with no harm arising to its significance.

Lloyds Building (Grade I and Grade II)

Significance:

519. The Lloyd's Building, designed by Richard Rogers Partnership (RRP) with engineers Ove Arup and Partners, opened in 1986. The stone façade, originally designed by Sir Edwin Cooper between 1925-1928 and listed at Grade II in 1977, is included in this assessment as it was integrated into the RRP building's design in the 1980s.

520. The Lloyd's building has historic interest as a highly inspirational late 20th century building by one of Britain's most significant modern architects for an internationally important organisation that successfully integrates the traditions and fabric of earlier Lloyd's buildings (including the Adam Room, originally from Bowood House and the 1925 Cooper façade).

521. The building has architectural interest as a prominent and high-quality example of high-tech architecture, with its design exemplifying architectural innovation, high quality materials and flexibility of plan throughout its impressive interior and exterior. The building's futuristic appearance and the clear architectural expression of different functional spaces contribute to a bold aesthetic.

522. Situated in the heart of the City, the Lloyd's Building forms a strikingly incongruous backdrop to many listed neighbouring buildings. It has notable group value with the nearby Grade II* Leadenhall Market, an important Victorian commercial building to which Lloyd's nods with its glazed atrium. To its neighbouring buildings it presents a strikingly original aesthetic which has never been replicated in quite the same way within the Cluster. Its high-tech facades, shining metalwork panels and complex elevational design consistently draw the eye and make it one of the most standout buildings in the heart of the Cluster.

Setting

523. Such is its architectural singularity that the significance of Lloyd's relies very little on its setting. Tall commercial buildings define its immediate context, the Leadenhall Building, 8 Bishopsgate, and 22 Bishopsgate to the north, the Willis Building and 52 Lime Street to the east, and 1 Leadenhall to the west. Most of these buildings make a neutral contribution to the significance of the Lloyd's Building. However, the Leadenhall Building, also designed by the Richard Rogers Partnership, with similar architectural elements such as exposed circulation and services is considered to make a low contribution to the Lloyd's Building's significance.

524. The existing building on the application site makes a neutral contribution to the significance of the Lloyd's Building with no intervisibility between the two.

Impact

525. The proposed building would be seen as a new skyline feature to the east of the Gherkin. It would appear as an elegant new addition to the existing Cluster of modern towers which already frame the setting of the listed building. In this respect, the proposed building would complement the setting of Lloyd's and would not harm the setting or significance of the listed building.

526. Dramatic contrasts between old and new are a characteristic trait of the Lloyd's Building's setting. The proposed development would be consistent with this character by adding a high-quality architecture to the existing group of tall, modern buildings, reinforcing the City Cluster's character, and in its different footprint creating townscape drama and interest that would not be harmful to the setting of the Lloyd's Building but, indeed, would create new ways to engage with it. The relationship and juxtaposition of the Lloyd's Building with both historic and modern buildings that contribute to its significance would remain unaffected. As such, the proposal would preserve the setting and significance of the listed building and the ability to appreciate it.

Trinity House: grade I

Significance and Setting:

527. Offices and headquarters building of 1796 by Samuel Wyatt, gutted by bombs in 1940 and rebuilt internally by Albert Richardson. Predominantly Portland stone-faced in the classical style of the Georgian era, an important and rare example of this architectural expression in the City. It is the headquarters of Trinity House, the lighthouse authority for England, Wales and the Channel Islands; they have been based in the City since the Tudor period. The building possesses high architectural and historic significance and draws significance from its dignified setting of Trinity Square and the ensemble of seagoing structures and buildings surrounding.

Impact:

528. The proposed building can be seen behind Trinity House in View 25, where it would be seen to the right of the established Cluster. In the cumulative scenario, it would remain in clear sky behind Trinity House. However, it would be read as part of the emerging, dynamic backdrop of modern tall buildings in the City Cluster, also as shown in View 28, and in View 47 where it would be occluded by trees in Trinity Square Gardens. There would be no harm to the setting or the significance of the listed building which would remain pre-eminent in the immediate foreground setting. The GLA have concluded a very low level of less than substantial harm to the setting of Trinity House. Officers do not agree with this conclusion and find that the setting and significance and ability to appreciate the listed building would be preserved.

Tower Bridge: grade I

529. Tower Bridge was designed by the by the architect Sir Horace Jones, for the City of London Corporation in 1894 with engineering by Sir John Wolfe Barry. It represents a triumph of Victorian engineering as a low, hybrid suspension and bascule bridge with a steel frame, clothed in revivalist French gothic towers, turrets

and pinnacles. The dramatic symmetrical composition acts as a ‘portal’ to central London from the River and has become an iconic and internationally recognised landmark of London.

530. The building possesses very high architectural/artistic interest for its iconic silhouette, refined Victorian revivalist gothic stylings and marriage of modern functionality with High Victorian aesthetics. It possesses very high historic significance for its associations with the aforementioned architectures, of national repute, and for its iconic, worldwide fame as a symbol of London. The dramatic setting of the building astride the Thames, its approaches to the north and south, and its juxtaposition with the Tower of London nearby make a significant contribution to significance, in particular an appreciation of it.

Setting

531. Elements of setting which make a substantial/significant contribution to the significance and appreciation of the heritage asset are set out in relative order of contribution below:

532. The broad riparian views from the River Thames, its embankments and Bridges, including from London Bridge, Southwark Bridge, the Queen’s Walk, the North Bank and Butler’s Wharf. From here its commanding, strategic siting, architecture and silhouette stands sentinel, guarding the entrance to central London from the sea and as a City (and London) Landmark.

533. That strategic siting and historic intrinsic connection with the operational River Thames is accentuated when appreciated in a 360 degree panoramic context with those other defining landmarks and features of the historic Pool, including City Hall, the Tower of London, the Monument, St Paul’s Cathedral, Old Billingsgate and the London Custom House. In addition to those the remains of the quays, wharfs and warehouses of the historic Pool contribute to a wider familial shared setting. These collectively make a substantial contribution to significance and an appreciation of it.

534. The local and wider townscape views/approaches, many of which are coincidental and fortuitous, perhaps the most important from in and around the Liberties of the Tower of London, from main vista at ‘More London’ on the South Bank and others which are more fortuitous, even incidental, townscape moments/glimpses where its inspiring architectural form makes an unexpected announcement. This includes broad panoramas such as from Greenwich Park (where it is seen alongside St Paul’s), where the strategic role of the Pool of London is announced by its towering and dramatic architectural form and silhouette. These make a significant contribution to significance and an appreciation of it.

Impact

535. The GLA has identified a less than substantial, very low level of harm to the significance of the listed building.

536. The proposals will be visible, seen from and in the backdrop of the bridge from the south-east, from Butlers' Wharf and other locations along the South Bank (Views 8, 10, 16, 17, 18, 21, 29, 30). In these views the proposed building would be seen as a high-quality architectural addition, experienced as part of an established City Cluster of modern towers to the north of the bridge. In all views the tower would remain the commanding foreground landmark guarding the Upper Pool of London. While visible in the backdrop, the overall contribution of setting to an appreciation of the listed building's significance is considered to be preserved. Officer's therefore do not agree with the conclusions of the GLA. There would be no harm to the setting or the significance of the listed building.

537. In both the baseline and cumulative scenarios, the proposal would not change the existing composition of the view, nor the visual focus in the view; it would read, like the rest of the Cluster to the north of the bridge, as disassociated from the iconic listed building. It would preserve those elements of setting identified above and thus the significance of the listed building and an appreciation of it.

Lloyd's Register of Shipping: grade II*

Significance:

538. The Lloyd's Register building, 71 Fenchurch Street, was completed in 1900 by architects T.E. Collcutt and B. Emannuel, was developed alongside a masterplan for the street by property developer James Dixon. This three-story building with an attic has long elevations on Lloyd's Avenue and a shorter one on Fenchurch Street.

539. It has historic interest as a grand classical building to act as the headquarters of a leading independent shipping classification organisation. Architectural interest derives from the appreciation of its free classical style described by Pevsner as "arts and crafts baroque," featuring extensive sculptured and carved decoration, being a superb example of the integration of architecture with sculpture. It reflects the late 19th and early 20th-century trend for grand classical stone-clad buildings in the City of London and features a 14-storey extension by Richard Rogers Partnership (2000) which is not included in the listing. Despite the tall extension, it retains a clearly legible setting with the Edwardian enclave of masonry offices along Lloyd's Avenue, which enhance its architectural and historic significance.

Setting:

540. The coordinated development flanking both sides of Lloyds Avenue, overseen but not individually designed by Colcutt (now known as the Lloyd's Avenue Conservation Area), forms a positive element of the setting of the listed building and enhances its significance.

541. The City Cluster, positioned to the north and west of the listed building, forms part of its wider context and setting. Tall buildings including 20 Fenchurch Street, visible from along Fenchurch Street to the west, while 40 Leadenhall Street defines the views north along Lloyd's Avenue. The surrounding modern mid-rise and tall buildings do not directly contribute to the significance of the listed building but contribute to a visually interesting, contrasting modern context.

Impact:

542. The listed building is visible in Views 40 and 52 of the THVIA. In View 40, northerly from Lloyd's Avenue, the listed building is only glimpsed. The proposed development would appear to the right of 30 St Mary Axe in this view, forming a prominent new element in the background of the listed building in northerly views from Lloyd's Avenue. However, it is significantly offset from the listed building, which remains legible, albeit obliquely, in the foreground. In the cumulative scenario, 100 Leadenhall would infill much of the sky gap presently seen in the northerly views, appearing as more prominent in this view than the proposed development. In View 52, taken on Fenchurch Street to the east of the listed building, the proposed development would appear as new built form behind the mid-rise buildings in the middle ground, showing some intervisibility with the listed building.

543. The proposed development would not affect the relationship of the Lloyd's Registry with the historic buildings along Lloyd's Avenue or other positive elements of the setting of the listed building. Due to its distance from the site, intervening buildings and its location in the context of established tall buildings in the wider context of the asset, the proposals be read as part of the modern Cluster distant and disassociated from the listed building. The proposals would preserve the setting and significance of the listed building and the ability to appreciate it. The GLA have identified a low level of less than substantial harm to the setting of the Lloyd's Registry, but your officers do not agree with that conclusion for the reasons outlined.

Former Port of London Authority Building: grade II*

544. Offices of 1922 by Sir Edwin Cooper for the former Port of London Authority. Crowned by a distinctive tower incorporating allegorical sculpture, the building is

a rich and robust essay in the Edwardian Baroque and possesses high architectural and historic significance. It draws much significance from its setting, too, with Trinity Square and its monuments in the foreground and the neighbouring Trinity House all coalescing to form a dignified group of buildings illustrating London's seagoing past.

545. In views from Trinity Square, the upper storeys of the proposed building would be visible to the right of the listed building. It would appear suitably divorced from the foreground ensemble of historic buildings and would read as part of the emerging City Cluster in the distance, as a subsidiary player to the consented silhouettes of 100 Leadenhall Street, 1 Undershaft and 40 Leadenhall Street. This character of a modern skyline context being so, the proposed building would not be harmful to the setting of significance of the listed building.

The Aldgate School (listed as Sir John Cass School): grade II*

Significance and setting:

546. A school of 1908, of red brick with classical stone detailing in the 'neo-Wren' manner. The associated playground and railings all contribute to the building's setting and significance. To the east, the church's setting is further enhanced by the open space of Aldgate Square and the group relationship with St Botolph's church; to the west, the school is framed by the finer grain and historic townscape of Mitre Street. The setting is otherwise characterised by modern commercial buildings of medium scale in the City, with the tall buildings of the Cluster located to the west.

Impact:

547. The proposed building would be seen in the backdrop of the school as part of the City Cluster in views looking northwest from the junction of Aldgate and Leadenhall Street (looking down Mitre Street), with the Aldgate School glimpsed in the foreground. The proposed building would sit in front of 30 St Mary Axe in this view (View 41), where one would appreciate the stepped form of the proposed building, appearing to mediate in height between the mid-to-high rise buildings in the middle ground, with the much taller buildings in the background, in the cumulative scenario. Despite this intervisibility, as it would form part of the established modern City Cluster, it would not be harmful to its setting or significance. In particular, the proposed building would form a dynamic new terminus to Mitre Street in the background of north-westerly views of the school's western frontage. The GLA have identified a very low level of less than substantial harm to the setting of the Aldgate School; your officers do not agree with this conclusion for the reasons above.

Bishopsgate Institute and Library: grade II*

548. The building is a decorative red brick structure, located prominently on Bishopsgate. Completed in 1895 by Charles Harrison Townsend, the building retains rarity value as a more unusual typology within the city, through its civic and educational function. The use of free gothic elements and terracotta detailing are typically eclectic, making a good example of turn of the century design. The main frontage to Bishopsgate is most elaborate while the longer Brushfield Street elevation is more subdued. The building has high architectural and historic significance.

Setting

549. The building derives a degree of significance from its setting on the south side of Brushfield Street, where it forms a group with two eighteenth century grade II listed buildings. As the viewer moves northwards views along Bishopsgate towards the institute are oblique, and the two turrets of the main frontage are almost entirely backdropped by 70 St Mary Axe, which is seen as part of the wider City Cluster seen distantly to the south. The site is presently not visible from or with the listed building, making a neutral contribution to an appreciation of its significance.

Impact

550. The GLA has identified a very low, less than substantial level of harm to the significance of this listing building.

551. The proposed building would be visible some distance away as part of the established backdrop of the City Cluster (View 37). This view shows the proposals will be seen in the backdrop of the institute including the top of the northern turret. While this will slightly reduce the extent to which the turret is seen against open sky at this specific viewpoint, the overall contribution of this view to an appreciation of the buildings significance is limited given the distance and oblique angle. Furthermore, the majority of the façade in this view is already backdropped by existing development. Therefore while a small loss of open sky to the rear of the turret is identified, this change is considered to preserve the overall character of the view, and the extent to which it contributes to the building's significance. It is noted more immediate views of the Institute, which best reveal the buildings prominence on the street front, and group value with neighbouring buildings will be preserved. Officers do not agree with the conclusions of the GLA. Accordingly there would be no harm to the setting or significance of the listed building, preserving the extent to which setting contributes to an appreciation of its significance.

38 St Mary Axe: grade II

Significance:

552. The Baltic Exchange has historic interest as an inter-war office building (1922) in the City, designed by Sir Edwin Cooper. This stone-faced building of four storeys with two additional attic storeys illustrates an important phase of office development in the City, characterised by grand, classically enriched stone facades and Classical proportions to St Mary Axe, with a plainer stone elevation to Bury Court.

553. Architectural and artistic interest derives from an appreciation of the Classical style and ornamentation of the building, including a Doric entablature at the ground floor and an enriched frieze and dentil cornice at the fourth floor.

Setting:

554. The setting of the listed building is defined by its prominent corner location, addressing both St Mary Axe and Bury Court. It includes office buildings of similar scale, adjacent to the east and north, and on the west side of St Mary Axe, of a later date that make a neutral contribution to the setting of the listed building.

555. Due to its location in the City Cluster, the setting of the listed building is mainly characterised by large-scale, tall modern commercial buildings that make a neutral contribution to the asset's significance. These include 30 St Mary Axe, directly to the south of the asset, but also the Aviva Tower and 22 Bishopsgate, to the south-east. Additional tall buildings including 70 St. Mary House and 100 Bishopsgate are located to the north and west, respectively.

Impact:

556. In views looking east (View 55), the upper levels of the proposed building would be glimpsed behind and above the listed building, to the left of the Gherkin, slightly infilling the sky gap presently seen above the Baltic Exchange from Clerks Place. Although of a larger scale than other buildings in this tight view, the proposed development would be consistent with the much-altered setting of the listed building which is characterised by tall, modern development. As such, the proposal would preserve the setting and significance of the listed building and the ability to appreciate it.

557. The GLA have concluded a low-to-middle level of less than substantial harm to the setting of the Baltic Exchange. Officers do not agree with this conclusion for the reasons set out above.

Nos. 2-16 Creechurch Lane: grade II

Significance

558. Nos. 2-16 Creechurch Lane is tea warehouse building of 1887. The building is five storeys high, of brick, iron and stone and gives a typical flavour of the locality. It incorporates many surviving warehouse features such as external cranes and loading bays which contribute to its special historic and architectural interest and also its townscape value. The complex forms a group with the warehouse buildings immediately to the east and on Mitre Street.

Setting

559. The buildings form a group with the other warehouse buildings in the vicinity, of similar age and materiality though unlisted and classed as non-designated heritage assets. The overall architectural and historic significance of the buildings is considered to be high, as a good example of an important and rarer typology in the city context.

560. The proximity of the listed group to St Katherine Cree church to the south and neighbouring Victorian and Edwardian buildings, creates a positive group value along the immediate length of the lane, contributing positively to the listed building's wider setting and enhancing its architectural and historic significance. The setting of this listed building and its unlisted neighbours is also presently characterised by the general proximity of the City Cluster and framed by specific modern buildings such as One Creechurch Place, the Gherkin and 100 Leadenhall Street seen to the north. While the site is visible to the north, its twentieth century architectural character sets it apart from those historic buildings in nearer proximity, lacking an aesthetic or functional relationship. The site therefore presently makes a neutral contribution to the setting of the listed buildings.

561. The GLA has identified a degree of low to middle less than substantial harm to the significance of the listed buildings.

562. The proposed building would be visible in views north along Creechurch Lane (View 46). The design of the facades has sought to create a high-quality architectural addition within these views which its materiality and modelling sympathise to a high degree with the brickwork and terracotta materiality of these historic buildings. While the overall character and scale within the site will change, in view of the site's current neutral contribution, this change is considered to preserve the extent to which these views positively contribute to an appreciation of the buildings' significance. Officers therefore do not agree with the conclusions of the GLA. In this context officer's consider the proposal would not harm the listed building's setting or significance.

563. In both baseline and cumulative scenarios, the proposals would preserve the setting and significance of the listed building and the ability to appreciate it.

72-75 Fenchurch Street (Dixon House): grade II

Significance and setting:

564. Offices of 1900, of Portland stone in the Edwardian baroque style of its fellow buildings in the Lloyd's Avenue Conservation Area. The building has high architectural significance. It draws significance from its setting as part of the enclave of Edwardian buildings in the Lloyds Avenue Conservation Area.

Impact:

565. The listed building is visible in Views 40 and 52 of the THVIA. In View 40, northerly from Lloyd's Avenue, the listed building is only glimpsed in the middle ground. The proposed development would appear to the right of 30 St Mary Axe in this view, directly above the listed building, forming a prominent new element in the background of the listed building in northerly views from Lloyd's Avenue. However, it is read in the background of the listed building as part of the established modern cluster, and the listed building remains legible in short range views along Lloyd's Avenue, from which it derives its significance from its setting. In the cumulative scenario, 100 Leadenhall would appear as much more prominent in the background of this listed building, although offset to the west, infilling much of the sky gap presently seen in the northerly views. In View 52, taken adjacent to the listed building from the west, the proposed development would appear as new built form behind the mid-rise buildings in the middle ground, showing some intervisibility with the listed building.

566. The proposed development would not affect the relationship of the listed building with the historic buildings along Lloyd's Avenue or other positive elements of the setting of the listed building. Due to its distance from the site, intervening buildings and its location in the context of established tall buildings in the wider context of the asset, the proposals be read as part of the modern Cluster distant and disassociated from the listed building. The proposals would preserve the setting and significance of the listed building and the ability to appreciate it. The GLA have identified a low level of less than substantial harm to the setting of the building, but your officers do not agree with that conclusion for the reasons outlined.

Conservation Areas

Lloyd's Avenue Conservation Area

567. This small conservation area has a tightly drawn boundary, comprising the small lane of Lloyd's Avenue, a secondary route located between Fenchurch Street and Crutched Friars. The architectural character is decorative and varied, but largely consistent in date, comprising a number of significant Edwardian and later buildings, which together create a strong group value within the conservation area interior and consistent material palette. The overall architectural and historic significance of the conservation area is considered to be high.

Setting

568. The existing view north up this street terminated by 105 Fenchurch Street and flanked by Lloyd's Register (grade II*) and Dixon House (grade II). Additionally the Gherkin is a distinctive focal point in views along Lloyd's Avenue, which along with the consented 100 Leadenhall Street tower create a modern termination to the view. The conservation area, draws little from its setting, with a strong degree of contrast between the interior and immediate surroundings beyond the lane and junction to the north. The site is presently not visible from the conservation area, making a neutral contribution to an appreciation of the conservation area's significance, character or appearance.

Impact

569. The GLA has identified a low to middle level of less than substantial harm to the significance of the conservation area.

570. The proposals will be visible from the conservation area, seen to the north (Views 40 and 52). The proposed building would introduce elegant faience architecture into this seen as part of an existing backdrop of tall buildings to the north, upholding a high architectural quality and offer a material counterpoint to the existing largely glazed modern towers. Officers disagree with the conclusions of the GLA. Given the characteristic backdrop of tall buildings in this view and the enclosed character of the conservation area, the proposed building would not harm its significance, with no diminishment of the extent to which setting contributes to appreciating this significance.

Trinity Square Conservation Area

Significance:

571. This relatively small conservation area lies to the south of the site, on the border with LB Tower Hamlets, to the north of the Tower of London WHS. It encompasses

buildings around Pepys Street, Seething Lane and Seething Lane Garden, Savage Gardens and Muscovy Street, extending between Hart Street/Crutched Friars to the north, and Byward Street to the south. It comprises a significant group of Georgian and later buildings with strong maritime associations, including Trinity House (Grade I), the Port of London Authority (Grade II*), Hart Street Church of St Olave (Grade I) and the wall and railings to St Olave (Grade II*), which together create a strong group value within the conservation area interior and consistent material palette. The overall architectural and historic significance of the conservation area is considered to be high.

Setting:

572. The conservation area and its buildings share a historic relationship with Trinity Gardens (within the Tower of London Conservation Area in LB Tower Hamlets). They also form part of the local setting of the Tower of London, and form the immediate backdrop to the WHS from the south. The setting of the conservation area to the south contributes positively to its significance. The setting of the conservation area to the north is more varied, including some historic buildings in the Fenchurch Street Station and Lloyd's Avenue Conservation Areas, with the presence of the modern City Cluster of tall buildings visible behind, which create a contrasting scale and character to the Trinity Gardens CA. The setting of the conservation area to the north makes a neutral contribution to its heritage significance. The site is presently not visible from the conservation area, making a neutral contribution to an appreciation of the conservation area's significance, character or appearance.

Impact:

573. In views looking north from Trinity Square Gardens (View 47), located immediately to the south of the conservation area, the upper storeys of the proposed building would appear visible to the east of the Gherkin and above the roofline of the buildings within the conservation area. It would be seen as a new element of the City Cluster between the former PLA building and the grade I listed Trinity House. However, it would be occluded by trees in the foreground, in Trinity Square Gardens, which would provide screening. In the worst-case scenario with the trees not in leaf, and especially in the cumulative scenario, it would appear as an addition to the established City Cluster of modern tall buildings which already forms a prominent backdrop to this view. Given this characteristic backdrop, the proposed building would not harm its significance, with no diminishment of the extent to which setting contributes to appreciating this significance.

574. The GLA have identified a low level of less than substantial harm to the significance of the conservation area through contribution by its setting. Officers disagree with the conclusions of the GLA.

Non-designated heritage assets

575. The Creechurch area harbours a number of unlisted historic buildings of merit, considered to be non-designated heritage assets, of which a number are located within the environs of the proposed building.

576. The Rabbi's House adjoins Bevis Marks synagogue to the east and presents a simple frontage to the synagogue courtyard of stock brickwork and stone dressings. Its more architecturally significant elevation is that to Heneage Lane, of red brick and Mansfield stone dressings incorporating Tudor detailing. It possesses a high level of historical significance for its associations with the synagogue and a moderate level of architectural significance for its well-composed, high-quality elevations. The building's setting as part of the synagogue complex contributes highly to its significance.

577. 113-116 Leadenhall Street is a stone-built bank of 1891 with refined detailing. As one of few remaining historic buildings on Leadenhall Street, the building is an important element of local townscape and reinforces and contributes to the setting of the church of St Andrew Undershaft. It possesses a moderate level of architectural significance for its high-quality, refined architecture. It forms a group with the Church of St Andrew Undershaft but its setting otherwise contributes neutrally to its significance.

578. 33-34 Bury Street is an office building of 1912, built for Messrs Burge, grain dealers. The building typifies the kind of diminutive, early 20th century office building once very common in the City and now hardly to be seen. It has high-quality stone carved stone detailing and makes a strong local townscape contribution, particularly as a group with Holland House. It possesses a moderate level of architectural and historic significance for its high-quality design and as a now-rare example of this building typology. Its forms a group with Holland House but otherwise its setting contributes neutrally to its significance.

579. To the east of Creechurch Lane are a characterful group of 19th century former warehouse buildings. Each is considered a non-designated heritage asset for the positive contribution it makes to the townscape and the setting of the church of St Katherine Cree. The buildings form a strong, cohesive group intrinsically and with the listed warehouses in this location, united by the shared use of brickwork and sophisticated terracotta detailing. Collectively they are a valuable survival of historic townscape at the eastern edge of the City Cluster and make a very strong local townscape contribution. The buildings are: 18-20 Creechurch Lane (Cree House), 24 Creechurch Lane (Fibi House), 12-14 Mitre Street (Mitre House) and 27-31 Mitre Street. They possess high architectural significance for their high-quality materials and stone/terracotta detailing and high historic significance as a

good surviving group of a now-rare building type in the City. Their immediate setting as a cohesive group strongly contributes to their significance. Their wider setting is a mix of buildings of various heights and ages which makes a neutral contribution to their significance.

580. The proposed building would have a visual impact on the settings of the above non-designated heritage assets due to its scale and proximity, though this would not cause harm to their significance as the sophisticated faience materiality and architectural modelling which is inspired by careful study of these buildings would ensure that the proposed building is appropriate for the setting. As such, it is not considered that the proposed building would be harmful to the setting or significance of these non-designated heritage assets.

581. 30 St Mary Axe (the Gherkin) has been identified as a non-designated heritage asset. Its setting is not considered to be adversely affected by the proposal, a high-quality tall building which would be commensurate with the Gherkin's existing character and positioned and designed in such a way as to form a complimentary neighbour to it.

Other Heritage Assets

582. Setting of a heritage asset is defined in the NPPF as "The surroundings in which a heritage asset is experienced. Its extent is not fixed and may change as the asset and its surroundings evolve. Elements of a setting may make a positive or negative contribution to the significance of an asset, may affect the ability to appreciate that significance or may be neutral." Given the dense central London location, the site is within the setting of a large number of heritage assets. As part of the application process a scoping exercise was conducted so as to identify heritage assets the setting of which may be affected. Section 8 of the Heritage, Townscape and Visual Impact Assessment (ES Volume 2) explains which heritage assets were scoped in and out of the assessment. The designated heritage assets considered by officers were:

- 38 St Mary Axe
- 20 & 21 Billiter Street
- Front block of Fenchurch Street Station
- Sir John Cass College
- Gatepiers at entrance to Port of London Authority's warehouses
- House east of entrance to Port of London Authority's warehouses
- Pair of houses to north of entrance to Port of London's Authority's warehouses
- 139-144 Leadenhall Street
- 52-68 Bishopsgate
- 48 Bishopsgate
- 46 Bishopsgate

- Guild Church of St Ethelburga the Virgin
- Lloyd's Building, listed Grade I and the associated Nos 12 and 14-19 Leadenhall Street, listed Grade II
- Port of London Authority Buildings including warehouses, house and pair of houses, listed Grade II
- Nos 139 to 144 Leadenhall Street, listed Grade II
- Nos 46, 48 and 52-68 Bishopsgate, listed Grade II
- Nos 20 and 21 Billiter Street, listed Grade II
- Front block of Fenchurch Street Station, listed Grade II
- Sir John Cass College (now David Game College), Jewry Street, listed Grade II
- Fenchurch Street Conservation Area

583. Officers have considered the potential impact on these designated heritage assets. Officers have also scrutinised all of the designated heritage assets using the THVIA and a digital model. The report has only assessed in detail in those listed buildings where, in the expert view of officers, there is expected to be any meaningful physical or visual proximity and/or intervisibility between the asset and the proposed development and thus a potential impact.

584. The settings and the contribution they make to the significance of the heritage assets which were scoped out of detailed assessment, would not be affected by the proposals due to the level of influence the proposals in question would have over the setting of the assets in question. It is the view of Officers that the proposed development would not harm the setting or the contribution that the setting makes to the significance of these heritage assets. The assets assessed in detail in this report are those affected by the proposed development. Officers consider that the identification of heritage assets which may be affected, and the assessment of impact on significance as set out in the THVIA and in this report, are proportionate to the significance of the assets and to the nature and extent of the proposed development. Officers are confident that the analysis that has been undertaken is sufficient to identify the heritage assets which may be affected, to understand their significance, and to assess impact on that significance.

Conclusion on Strategic Views and Heritage

585. The proposal would preserve the OUV/significance of the Tower of London World Heritage Site in accordance with London Plan policy D9m HC2, HC3, HC4, Local Plan policies CS12, CS13

586. The proposal would preserve the characteristics and composition of all relevant strategic views.

587. The proposal would cause a low level of less than substantial harm to the significance of Holland House through the infilling of the upper levels of the atrium. The proposal would also result in a low level of enhancement to Holland House through various works of repair, reinstatement and re-presentation. There would be a minor enhancement to the ability to appreciate significance through the broadening of access to the building.

588. There would be a low level of enhancement to the Creechurch Conservation Area through the creation of Heneage Arcade.

589. As such, the proposals would fail to preserve the special architectural and historic interest of Holland House as a listed building and lead to conflict with Local Plan policies CS12, DM12.1, DM12.3, emerging City Plan policies S11, and London Plan policy HC1.

590. The proposal would otherwise preserve the settings and significance of all other heritage assets assessed

591. The low levels of harm and enhancement highlighted above are carried forward into the paragraph 208 balancing exercise set out below.

Archaeology

592. Section 16 of the NPPF and Policy HC1 of the London Plan recognise the positive contribution of heritage assets of all kinds and the conservation of archaeological interest is a material planning consideration. Paragraph 200 of the NPPF states that applicants should provide an archaeological assessment if the development could affect a heritage asset of archaeological interest.

593. The proposed development is in an area of archaeological interest. The City of London was founded almost two thousand years ago, and London has been Britain's largest and most important urban settlement for most of that time. Consequently, the City of London Local Plan states that all of the City is considered to have archaeological potential, except where there is evidence that archaeological remains have been lost due to deep basement construction or other groundworks.

594. 760 The application is accompanied by an archaeological desk-based assessment (AOC Archaeology, July 2023) which is contained within the Environmental Statement as an Appendix.

595. The site lies in an area which was formerly within the walls of the Roman city of Londinium. A large Roman ditch was identified to the west of the site at St Mary Axe and a Roman road was identified to the south of the site, both of which are likely to have continued through the site. Roman buildings have also been identified close to the site. The Augustinian Holy Trinity Priory (founded 1108) was formerly located partially within the east of the site. The site was occupied by a series of buildings during the post-medieval period, including a school.

596. The desk-based assessment has indicated a low potential for surviving Roman and medieval features within the site. It is acknowledged that there is evidence of activity during these periods on the site, however it is stated that the impact of successive brickearth extraction and redevelopment within the site has likely had an adverse impact upon earlier archaeological remains. Notwithstanding, the presence of remains cannot be wholly discounted, and truncated remains may survive and that dependant on the extent of truncation, they'd likely be considered of "Medium" importance.

597. The highest potential for direct impacts results from the proposed basement extension beneath Bury House, which would extend for four levels (two additional levels below existing) and would therefore result in complete truncation of any surviving remains.

598. The proposals at Holland House and Renown House are less likely to have an impact due to them not extending beyond the existing basement levels, however, works associated with the new crane base and foundations, as well as propping up and underpinning have the potential to impact upon archaeological remains.

599. It is therefore possible that remains of Roman and medieval date survive on the site, although remains of high significance are not expected due to truncation from the current buildings.

600. Historic England GLAAS have advised that the proposed development would have a high impact on these potential remains. It is recommended that an archaeological evaluation take place, if consent is granted, in order to establish the nature and extent of archaeological survival. In the first instance, geotechnical investigations should be monitored by an archaeologist as they are carried out. If archaeological remains are encountered, a full programme of archaeological mitigation, which covers all below ground impacts should be implemented.

601. As a cultural and education space is to be provided within the proposed development. The archaeological work should therefore include public engagement to feed into the cultural and education programme for the site. It is

noted that the story of Holy Trinity Priory is of particular interest as little information about this site is currently available to view within the City.

602. Although the NPPF envisages evaluation being undertaken prior to determination, in this case considering the nature of the development, the archaeological interest and/or practical constraints are such that Historic England consider a archaeological conditions could provide an acceptable safeguard. This would comprise firstly, of evaluation to clarify the nature and extent of surviving remains, followed, if necessary, by a full investigation.

603. In addition, a condition requiring a detailed design and method statement for foundations and piling configuration, as well as for public engagement is also recommended.

604. Subject to compliance with the recommended conditions, the proposals comply with the required initial steps of archaeology investigation Local Plan Policy DM 12.4, emerging City Plan 2040 HE2, HE1 and London Plan HC1.

Public Access and Inclusivity

Accessible and inclusive design

605. Accessible and inclusive design is covered by NPPF paras 96 and 135, London Plan 2021 Policy D5, Local Plan 2015 Policy DM 10.8 and City Plan 2040 – Revised Proposed Submission Draft HL1. Policies require the highest standards of accessible and inclusive design, securing development that is welcoming, safe and easy to use without disabling barriers, undue effort, separation, or special treatment.

606. London Plan policy D5 3.5.3 sets out how development should be informed by an inclusive design statement and detail engagement with relevant user groups. An inclusive design statement has been provided. The proposals were subject to review by the City of London Access Group (CoLAG) on 12th January 2024.

Arrival and departure

607. The site is well-served by public transport, noting that public transport is not accessible to all people. The nearest station providing step-free access is Tower Hill at 600 metres away from the site and the nearest bus stop is 150m away from the site, on St Katherine Cree, albeit it is noted that buses are not suitable for all people.

Parking

608. Whilst there is a high PTAL, step-free public transport routes to the site are significantly further away than the recommended 50m from principal entrance points as set out in Inclusive Mobility and British Standard BS 8300 (1). Accordingly, disabled people may require access to parking, or drop-off at the site. Details of rest points at 50 metres intervals and dropping-off are reserved through the Travel Plan and S278.

609. The Red Badge parking scheme is for disabled residents and workers in the City. Red Badge holders may park in pay and display and disabled persons parking bays in the City without time limits. Blue Badge holders may park for up to four hours in these bays and six hours in the bays nearest to St Bartholomew's hospital. Therefore, disabled people who hold a Blue Badge, but not a Red Badge, are limited to four hours of on-street parking. London Plan T6.5 states that for non-residential uses that 'at least one on or off street' disabled persons parking space is provided. Following negotiations with the Applicant a blue badge parking bay has been incorporated within the designated servicing bay. This should be reserved for use for free by the disabled persons parking bay only between the hours of 7.00am and 11.00pm for the life of the development. Details of controlled entry and use of the space, its layout and surface are reserved by condition. Arrangements for booking the space and its management are reserved as part of the Inclusive Access Management Plan.

610. There are three existing on-street disabled persons parking bays in the vicinity of the development which should be re-provided if any are affected during the construction period and details reserved through the Construction Management Plan.

Dropping-off

611. Good practice guidance is that setting-down points should be positioned close to the accessible entrance of a building on firm and level ground. No drop-off points are identified in the proposals. It is recommended that details of secure drop-off on firm and level ground are reserved by condition and secured through Section S278 works.

Cycle parking

612. Cycle parking should accommodate a range of people, so as not to exclude or disadvantage riders of certain types of cycle. London Plan policy and London Cycle Design Standards recommend that 5% of cycle spaces should be suitable for larger cycles with associated, and appropriately-sized lifts and end-of-trip facilities. The 5% should be spread across both short and longer stay spaces. Routes to cycle parking should include no more than two sets of doors and those should be automated.

613. The application states that 5% of spaces for larger cycles will be provided. Larger cycle storage spaces are provided at level B1 and Lower Ground Floor, accessed by a stepped entrance with cycle ramp or a cycle lift from the northern end of Heneage Arcade. The cycle lift is dual purpose, shared with refuse transfer. There is larger cycle parking at the southern end of the Lower Ground Floor which is not accessible by lift by larger and adapted cycles. It is recommended that details of accessible cycle parking, including controlled points of entry, swept paths, and end of trip facilities are reserved by condition in the Travel Plan to ensure that all spaces are easy to access and are consistent with LCDS.

614. Larger cycle storage is at B1 or Lower Ground Floor. Cyclists will move between levels from the cycle storage via lifts A and F to access end of trip facilities on level B2. Cyclists requiring step-free routes will transfer from the cycle lift, put the cycle into storage and then move across to the passenger lifts in the central lift lobby. The cycle lift allows access to B2 but connects directly into the refuse store. Details of how this lift will be managed and cleaned are reserved by condition through the Inclusive Access Management Plan to maintain independent and dignified access and avoid inadvertent access to the refuse store. No mobility scooter storage charging or storage points have been shown in the submitted plans; however, provision of both would be secured by condition.

615. It is recommended that passive EV charging should be provided for all larger cycle spaces and details reserved through the Travel Plan.

Entrances

616. Guidance in the London Plan is that entrances should be easy to identify and accessed without undue effort, special treatment or separation. Automated sliding doors are proposed to principal entrance points, and for which step free access is provided. Step free access routes and sliding doors are welcomed. Sliding doors are more inclusive of a range of people than revolving doors, which reinforce separation and are not considered inclusive.

617. A new arcade will be created which will improve the permeability of the site. Some of the retails units are shallow and may not have sufficient passing or turning

space for wheelchair users. Details of all shopfronts are reserved by condition to ensure that doors are of sufficient width and have suitable door furniture and surface contrast.

618. Reception facilities should be consistent with AD M(2) 3.6 and include facilities for both standing and seated visitors, have non-slip surfaces, lowered sections of any desks, options for seating and an audio induction loop. As these are not currently shown on the drawings details of reception facilities are reserved by condition.

Vertical access

619. London Plan 2021 Policy D5 requires that at least one lift per core is a fire evacuation lift suitably sized for step-free access out from the building in addition to fire-fighting lifts. Two evacuation lifts are identified in the central lift core, with separate firefighting lifts.

620. Details of the management protocol for assisting people who require Personal Emergency Escape Plans (PEEPs), including staff training and guidance, should be reserved by condition through the IAMP to ensure that there is sufficient training and awareness as part of the building's management.

621. Reference is not made to the use of Easy Access to Historic Buildings. However, the proposals would bring greater access to the listed buildings, which is welcome in principle. The Statement of Community Involvement indicates that some relevant disabled persons user groups were engaged during project development.

Culture/education space

622. An end-user has not been identified for the culture use and conditions are imposed to ensure that the cultural offer is inclusive of the greatest range of people at all levels of operation with opportunities for co-creation, co-curation, mentoring and volunteering for relevant groups.

Sanitary facilities

623. Policy in the London Plan and Local Plan requires free, publicly accessible toilets for a range of people where there is major development, particularly when they are near significant attractions, public open spaces or existing transport

interchange. Sanitary facilities will need to meet standards in both Approved Documents M and, the updated, T.

624. Changing Places toilets are a requirement of Building Regulations for certain types and/or scales of development. The criteria are set out in Approved Document M of the Building Regulations. Changing Places toilets are intended for people with multiple and/or complex impairments. They are not intended for independent use. A 'Changing Place' toilet is indicated on the proposed drawings, accessed from Heneage Arcade. This is not currently shown fitted out as a Changing Places toilet.

625. Under the requirements of current Building Regulations and relevant policy, separate wheelchair accessible toilet and baby changing facilities should also be provided as well as ambulant accessible toilets. Whilst indicative layouts show some scope for inclusive toilet provision this needs further development, and an Inclusive Toilet Strategy is recommended to be reserved by condition encompassing the whole development. Signage and wayfinding would be secured by condition to direct the public to those facilities.

Landscape

626. Terraces and external spaces have the opportunity to create areas of calm and engagement with nature. They should allow easy and step-free access for a range of people. Paths should be slip-free and allow room for people using wheelchairs to pass and options for lone, or grouped seating, shelter and planting that is not highly scented and does not result in unwelcome touch. Seating should be at a range of heights and provide recesses in seating lines to allow wheelchair users or people with assistance animals to sit alongside companions, options for seating with backs and armrests for support when rising, as well as a wheelchair user to transfer.

627. Spend areas for assistance animals are not currently identified but could be reserved by condition. It recommended that details of all landscaping are reserved by condition including surface materials, planting, seating (with options to include seating with backs and arm rests for support).

Public Access and Inclusivity Conclusion

628. Overall, and subject to the imposition of conditions, S106 and S278 obligations, the proposal would accord with the access policies outlined above.

Highways and Transportation

Surrounding Highway Network and Site Accessibility

629. There is an established network of footways in the area immediately surrounding the site, with footways provided along each of the adjacent roads.

630. To the south, the site is bounded by Bury Street, which operates a one-way system from a south to north direction and connects to Leadenhall Street and Bevis Marks respectively. Pedestrian footways are provided on both sides of the carriageway.

631. The east of the site is bound by Creechurch Lane, a one-way street for northbound traffic only, which connects to Leadenhall Street in the south and Bevis Marks in the north. There are footways present on both sides of the carriageway along this street. A section of Creechurch Lane is pedestrian only, providing walking links to Bevis Marks and Houndsditch when heading northeast. Heneage Lane is another pedestrian only walkway which runs parallel to Creechurch Lane, providing access to Bevis Marks.

632. Bury Street runs along the south-west and north-west perimeter of the site. Part of the east of the site is bound by Bevis Marks. Both Bury Street and Bevis Marks are one-way streets, with footways on both sides of the carriageway.

633. There is only one signalised pedestrian crossing located in close proximity to the site, which provides a safe crossing location. It is located on Bevis Marks, which allows pedestrian movement along the pedestrianised sections of Creechurch Lane, moving in a southwest to northeast direction.

634. The surrounding road network enables pedestrians to travel directly to and from the site and permeate through the City to public transport nodes and other destinations. The site is within close proximity of Bank, Aldgate, Liverpool Street, Monument, Aldgate East and Fenchurch Street stations.

635. These stations provide access to various services on the Underground, DLR and National Rail networks.

636. The site is therefore considered well located (PTAL of 6B) to enable and encourage sustainable trip making in accordance with policy T1 of the London Plan which seeks to ensure that all development makes the most effective use of land, reflecting its connectivity and accessibility by existing public transport, walking, and cycling routes.

637. Regarding step free access, step free is available at Liverpool Street/Moorgate stations (Elizabeth Line, Circle, Hammersmith & City and Metropolitan Line) and Bank station (Northern Line and DLR)

Trip Generation

638. A trip generation assessment was undertaken to determine peak hour and daily person trips generated by the scheme, comparing forecast trips associated with the proposed development to the existing land uses.

639. The average hourly trip rates used were from 08:00 to 09:00 for the AM peak and 17:00 to 18:00 for the PM peak.

640. The predicted impact of the trip generation and the impact of the new development on the transport network is summarised from extracts of the Transport Assessment (TA) in Table 6.10 and 6.11. These represent the total proposed development trip generation and net trip generation for the total development.

Table 6.10: Total Proposed Development Trip Generation

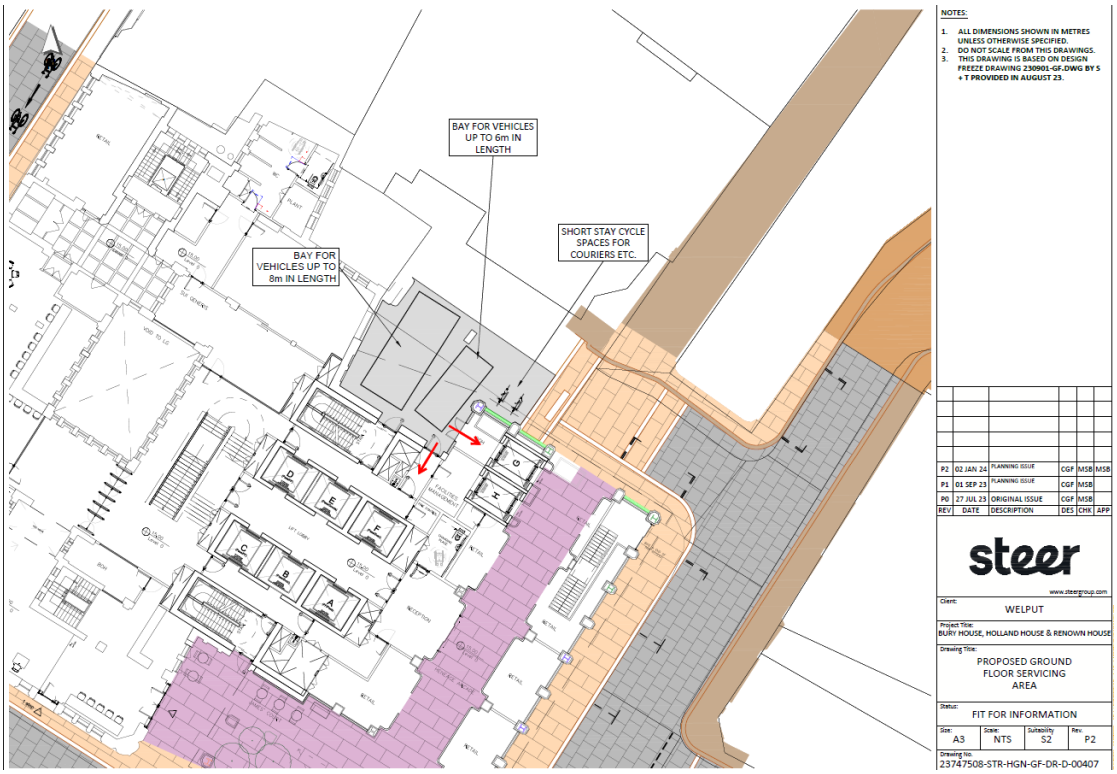
Total	**646**	**45**	**691**	**91**	**597**	**688**	**2908**	**2834**	**5742**

641. The net development trip generation of 691 total trips in the 08:00 – 09:00 AM peak, 688 total trips in the 17:00 – 18:00 PM peak and 5,742 daily total trips are considered acceptable, given the scale of the proposals and the fact that the majority of these trips will be done via walking, cycling and public transport, with no adverse impacts on the network and immediate surrounds. The permeable nature of the site featuring Creechurch Lane and Heneage Lane as key pedestrian routes through the site is advantageous.



Trip Generation - Servicing and Delivery

642. The servicing area for the proposed development will be located off-street via Heneage Lane. This will serve Bury House, Holland House and Renown House.

643. Servicing area access points would be set back from the highway to ensure an arriving vehicle has place to wait off the highway to prevent any congestion/ delays to pedestrians, cyclists and other vehicles. The motorcycle parking bays on Heneage Lane once reinstated will be adjusted to allow access to the proposed off-street servicing area, and will not interfere with a new through-route via the proposed Heneage Arcade, publicly accessible from 7am to 11pm. If identified during detailed design of the S278 works, that the current location of the

motorcycle parking bays pose a threat to road safety, a relocation might be considered.

644. One fully dedicated loading bay is proposed to accommodate the maximum servicing demand per hour of the proposed scheme. This loading bay will operate alongside one adjacent hybrid loading bay/ blue badge bay, as part of the developments requirement to provide on-site disabled parking. This is demonstrated in the drawings below.

645. A ‘Dockmaster’ will be employed to manage the servicing area. Using the vehicle management system, they will ensure that delivery slots are honoured and that they will be managed and monitored to eliminate or minimise loading and unloading times, and service vehicles waiting times. Following arrival to the servicing area, the ‘Dockmaster’ will review the booking/delivery note, with the vehicle then allocated to a loading bay where goods will be unloaded.

646. The blue badge bay adjacent to the loading bay will act as a secondary loading bay, in the event that it is not used and if there are no requests to park there during the day. This flexible arrangement will be fully managed by the on-site facilities management (FM) team.

647. In the event that the blue badge bay is occupied, delivery slots could still be allocated over the course of the day, but more deliveries could be received later in the early evening once the blue badge bay user has departed the office. An indicative example of deliveries made over the course of the day, if the blue badge bay is presented in the table below.

Typical Day	
8 x 15 minute delivery slots per hour provided by two bays	
Time	Predicted number of deliveries
06:00:00	4
07:00:00	0
08:00:00	0

20:00:00	4
21:00:00	3
22:00:00	2
	33

648. The proposed servicing trip generation was based on the following assumptions:

- Class E Office – Daily trip rate of 0.21 vehicles per 100sqm Net Internal Area (NIA)
- Class E Retail – Daily trip rate of 2.00 vehicles per 100sqm NIA
- Sui Generis – Daily trip rate of 0.5 vehicles per 100sqm NIA

649. The proposed servicing trip generation analysis anticipates a total of 33 vehicle trips servicing the site per day, including refuse vehicles and facilities

management. To ensure clarity, trips are defined as both the arrival and departure of the vehicle.

650. Part of the assumptions in producing the vehicle trip generation was establishing the percentages of vehicle type that would be used to service each use class. This is summarised in the table below.

Land Use	Floor Area (NIA)	Daily Vehicles			Maximum Vehicles per hour
		MGV	Car/ Vans <4.6T	Total	
Class E Office	24,258	9.7	38.8	48.55	4.86
Class E Retail	478	0.96	8.6	9.56	1.9
Sui Generis	1,298	1.62	4.9	6.4	0.66
Total	26,034	12	52	64.6	7.4

651. A consolidation strategy for the scheme calculated a reduction in the number of deliveries by 50%. Therefore, a maximum of 33 daily delivery and servicing trips were forecast for the scheme. This number remains the same for the current proposals.

652. The scheme provides that no deliveries would be undertaken during the CoL peak network times, as follows:

- AM peak period (07:00-10:00);
- Lunchtime peak period (12:00-14:00); and
- PM peak period (16:00-19:00).

653. Policy VT2: Freight and Servicing states Developers should minimise congestion and emissions caused by servicing and deliveries. The City supports deliveries made by cycle and low emission modes such as cargo bikes, and it is encouraging to see allocated provision for two Sheffield stands, so that cargo bikes could park up, and unload any deliveries.

654. To conclude, it is recommended that a S106 obligation be secured, to ensure the delivery management system is used effectively, that delivery slots are honoured and that deliveries are made where possible, via sustainable delivery modes as discussed.

655. An additional condition is recommended to restrict the size of the vehicles for delivery and servicing, to no larger than 9m in length.

656. A full Delivery and Servicing Management Plan will be secured via condition, which will provide full details on the receiving of deliveries, and the method & management of refuse collection.

Pedestrian Comfort Level's (Pedestrian Footway Assessment)

657. Transport for London (TfL) Guidance states that Pedestrian Comfort Levels (PCL) classify the level of comfort based on the level of crowding a pedestrian experience on the street.

658. Pedestrian crowding is measured in pedestrians per metre of clear footway width per minute. It is noted that these results simply reflect the level of crowding on pedestrian links and do not account for more holistic factors (such as those included within the Healthy Streets Design Check) which influence the on-street experience (i.e. crossing environment, safety, desire lines etc.)

659. Pedestrian Comfort Levels are graded A+ (Comfortable) to E (Uncomfortable) and a target of B+ is commonplace across the City. TfL's own guidance suggests that scores of C+ are acceptable for office and retail developments.

660. A PCL assessment has been undertaken on key footways and crossings within the local area based on thresholds set by TfL's 'Pedestrian Comfort Guidance for London' document.

661. A Pedestrian Comfort Level (PCL) assessment and a pedestrian movement forecast were carried out. A pedestrian flow survey was conducted on Wednesday 7th to Saturday 10th June 2023. The results of the survey were then used to establish a baseline pedestrian flow.

662. The PCL assessment was carried out for two weekday peaks: 08:00 to 10:00 and 16:00 to 19:00. 13 points of observation points were surveyed. For this analysis, PCL for links with a total width below 1.9, (clear width below 1.5m) were automatically classified with a PCL of F based on the assessment criteria.

663. In the PCL assessment, analysis showed that 8 of the 13 tested locations within the site boundary and adjacent highways are within PCL B+ which is the target set by the City. Locations 1 and 4 on Bury Street, 6 and 7 on South Creechurch Lane and 9 on Upper North Creechurch Lane, are below the target of PCL B+ during all

peak periods, and therefore having no adverse impacts on pedestrian comfort levels.

664. The pedestrian movement forecast provides an estimated pedestrian flow for each direction, as a percentage expressed as a flow ratio. This estimates the total percentage for pedestrians using links between the North of the site at 53.5%, 28.8% to the West, 13.0% to the South and 4.7% to the East.

665. The additional peak hourly flow for each direction resulted in 349 extra walking journeys to the North, 188 to the West, 85 to the South and 31 to the East.

666. The results of the pedestrian comfort study demonstrate that the net uplift in walking trips expected can be, from a pedestrian comfort perspective, satisfactorily accommodated via the proposed pedestrian network and highways interventions.

Cycle Parking

667. London Policy T5 Cycling requires cycle parking be provided at least in accordance with the minimum requirements set out within the plan. Policy T5 (Cycling) requires cycle parking to be designed and laid out in accordance with the guidance contained in the London Cycling Design Standards and that developments should cater for larger cycles, including adapted cycles for disabled people.

668. The tables below shows that this proposal is compliant with the policy in terms of overall number of the proposed cycle parking spaces, as well as the parking split of the long stay cycle parking spaces.

London Plan Requirement		**Proposed**	
Long Stay	Short Stay	Long Stay	Short Stay
582	85	582	85

Use class	**GEA Area (sqm)**	**London Plan Standard**	**Long Stay**	**London Plan Standard**	**Short Stay**
Class E Office	43,206	1 space per 75 sqm	577	first 5,000 sqm: 1 space per 500 sqm	18

				thereafter: 1 space per 5,000 sqm (GEA)	
Class E Retail	851	1 space per 175 sqm	5	first 750 sqm: 1 space per 20 sqm; thereafter: 1 space per 150 sqm (GEA)	43
Sui Generis	2,312		N/A		24
Total	46,369		582		85

Long Stay Cycle Spaces – parking split				
Sheffield Stands (2 spaces per unit)	Accessible Sheffield Stands (2 per unit)	Folding bike lockers (1 per unit)	Other high-density solutions (1 per unit)	Total long-stay spaces provided
87	29	58	407	582

669. Long-stay cycle parking will be provided in the basement B1 and B1 Mezzanine, with cyclists being able to access the basement from ground level via stairs and a wheeling channel.

670. Long-stay cycle parking access will be via Creechurch Lane at the north east corner of the site. The dedicated cycle entrance is separated from the pedestrian entrance and is equipped with a sliding door and stairs.

671. An alternative access for cycle parking is provided via the eastern Holland House entrance, from James Court via lift or stairs.

672. Short-stay cycle parking for all users has been provided within the building. It is proposed that the visitor parking will be compliant with London Plan standards. The 85 required short stay cycle parking spaces will be located within basement level B1 and B1 mezzanine level, accessed via the Creechurch Lane cycle

entrances. No short stay/ visitor cycle parking spaces are provided within the public realm surrounding the development.

673. The new development will offer changing and showering facilities (located at basement B2) for use by all staff and building occupants, this will be of particular use to those travelling by cycle and other active travel modes.

674. The proposed development will provide a minimum of 1 shower per 10 long-stay cycle parking spaces, equating to 59 showers. The London plan recommends shower facilities (at least one per ten long-stay spaces). However, due to the size of the proposed development it is unlikely that all of showers will be in use at all times therefore a degree of flexibility is applied, and the proposed provision is considered acceptable in principle.

675. The proposed development will provide 582 locker spaces in the shower rooms. The changing facilities will ensure that cyclists have access to a private space where they can change before and after working and separate from their workspace facilities. The London Plan recommendation for lockers is at least two per three long-stay spaces. The provision is considered acceptable.

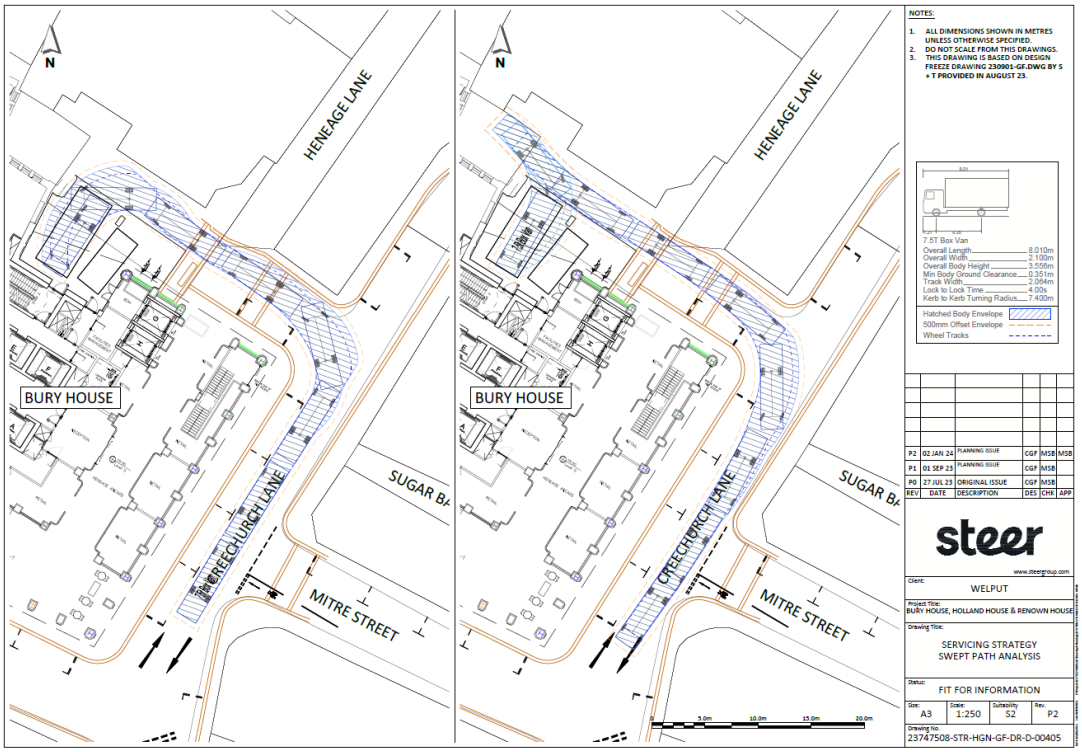
676. There are currently plans for cycle repair stations to be provided within parking areas to allow cyclists to service their bikes. Such stations will provide essential tools to allow for repairs to be undertaken much more efficiently and with ease for a wider range of users.

677. In conclusion, the policy requirement on cycle parking have been met. A recommendation for condition to secure 582 long stay cycle spaces and 85 short stay cycle spaces, along with the provision of accessible changing facilities is required, to ensure accessibility requirements are met.

Refuse Management/Waste Strategy

678. The proposed development will be car free. As a result, all vehicle trips generated by the development will be associated with delivery and servicing.

679. For the proposed development each of the commercial tenants will be required to comply with the Site's Waste Management Strategy and may bring their own waste to the allocated refuse stores within the basement, the dedicated refuse collection store at basement or could arrange for waste to be collected regularly by the facilities management (FM) team.



680. In addition to the containers for refuse and recyclables, producers of large quantities of glass, organic waste, waste food oil and other dry mixed recyclables will be required to provide additional separate containers for these waste streams.

681. At regular intervals the tenants' staff or their FM contractor will transport their segregated waste and refuse from the shared waste store at Basement Level 2 to the main off-street loading bay off Heneage Lane. The details of vehicle collection and specification are to be submitted for further consideration via condition.

682. It is acceptable for refuse collection to be carried out by private waste collection companies and will ensure this takes place in the off-street servicing area. It is anticipated that the vehicles utilised will be approximately 8m in length or the equivalent of a 7.5T box van.

683. The swept path analysis for a 7.5T box van is considered acceptable, ensuring that facilities management staff are on hand to guide with an internal reverse manoeuvre. This is to ensure the vehicle can depart in forward gear, departing in reverse from the loading bay onto the highway is not accepted

684. To conclude, the proposals for refuse collection comply with City Plan policy S9: Transport and Servicing, due to the provision of on-site servicing facilities and encouragement of deliveries by bicycle and cargo bike.

685. The Corporation's Community Facilities Manager has been consulted and advised that the proposed waste and storage collection facilities indicated on

drawings no. 4458-ST-PR-02-100 & 4458-ST-PR-02-097 and in the Delivery and Servicing Plan, Jan 2024, comply with their requirements.

686. A full Delivery and Servicing Management Plan will be secured via condition, which will provide full details on the receiving of deliveries and will include a Waste Management strategy detailing the method & management of refuse collection.

Travel Plans

687. With an expected uplift of over 5,500 trips generated from this proposed development, steps should be taken to mitigate the impact on this development by requesting a Workplace Travel Plan be put in place; this will not be required to cover the retail areas of the site as it does not meet thresholds to be needed. Travel Plans are an effective tool for managing visitors, volunteers and employees at a site by helping to promote sustainable transport and raising awareness of their benefits.

688. If planning permission is granted a Workplace Travel Plan would need to be secured as a section 106 planning obligation in order to meet London Plan policy T4 and Local Plan Policy 16.1. The travel plan would need to be approved by the CoL prior to completion of the proposed works. This would include a requirement for a Travel Plan Co-ordinator to be appointed no less than 3 months before occupation.

Car Parking

On-site

689. Policy T6 of the London Plan, sets out car parking standards and strategic direction to facilitate new developments with the appropriate levels of parking. Appropriate disabled persons parking for Blue Badge holders are to be provided in accordance with Policy T6.5 for Non-residential elements of the development.

690. The proposals would be ‘car free’ with the exception of one on-site disabled parking bay, located within the servicing area. The parking bay due to site constraints, only has the full 1.2m clearance on the driver side and rear of the parking space.

691. A car-free development has no general parking but still must provide disabled persons parking, in line with the aforementioned policy. In order bring this proposal fully in line with the policy a Travel Plan (TP) has been recommended, to be secured via the Section 106 Agreement.

692. The foundation of the TP is supporting disabled people of this development through different measures. Each disabled staff member to have a tailored travel plan, on how to get to/from this site, and supported through different initiatives. The foundation of the TP is to support the inclusion of disabled people.

693. Similarly, disabled visitors of this development, could request support to get to/from the site, if the public transport is lacking to meet their needs.

694. Not all London Underground (LU), nearby stations are step-free access, thus some users of this development may require additional support, such as: arranging a pickup from a nearby LU station which has step-free access or at a pre-arranged location

695. The TP must also monitor the demand for on-street car parking spaces coming from this development. If records show that demand is higher than the available spaces nearby, the developer will be required to provide additional travel plan measures to support the needs of the disabled users of this development.

696. The Travel Plan (TP) is required to monitor the demand for the disabled car parking spaces and to encourage the use of public transport through travel planning measures.

Off-site

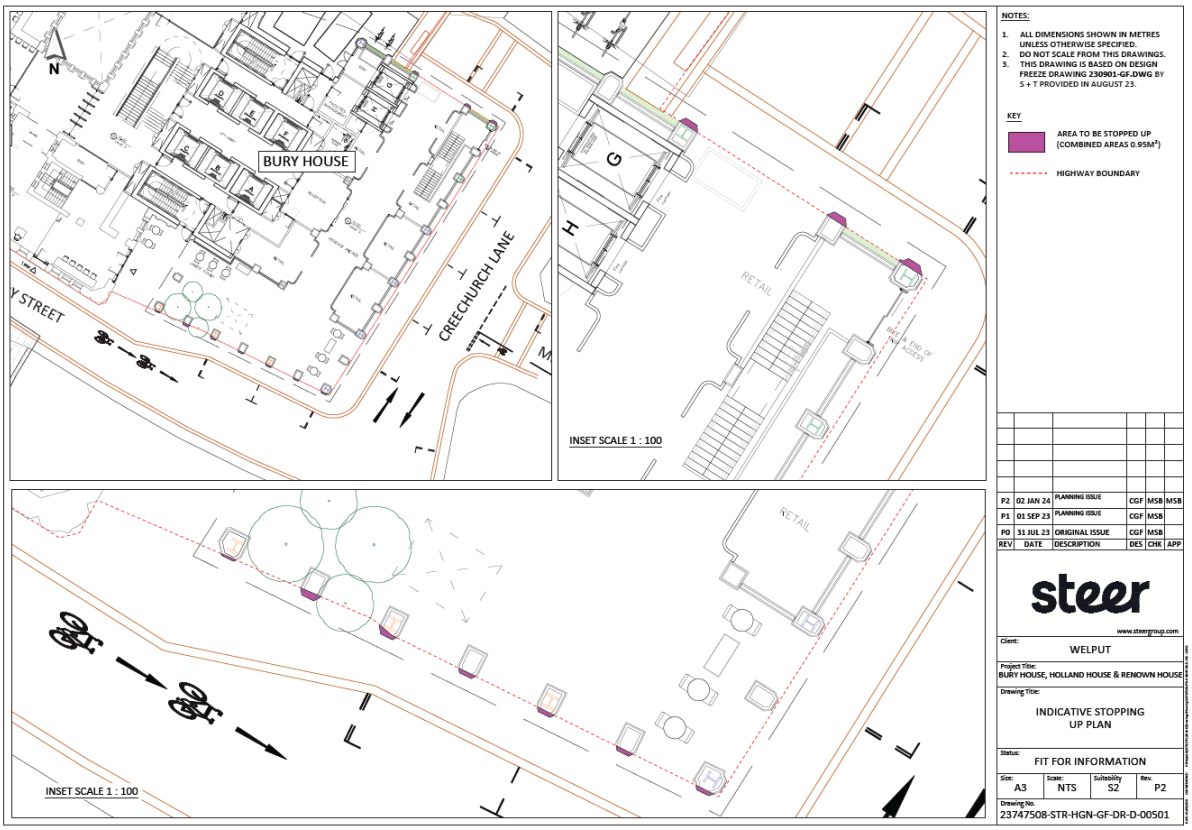
697. There are three disabled parking bays on Creechurch Lane and Mitre Street that are located in close proximity to the building entrances as per the requirements of the London Plan T6.5 and the Draft City Local Plan 2040.

698. Car-free development can in some cases lead to parking displacement on the surrounding highway network. However, the whole of the City of London is covered by a controlled parking zone, (CPZ) active Monday to Friday from 0700-1900 and Saturdays from 0700-1100. During these times motorists must pay to park in pay and display bays and must not park on single or double yellow lines. When different times apply, signage displays the controlled parking hours for specific locations.

699. Office workers and visitors are expected to travel via sustainable modes of transport. There are existing parking restrictions within the area and it is acknowledged by the City, that a robust enforcement will be required in the area to prevent illegal parking and obstruction of the highway.

Oversailing & Undersailing

700. No oversailing and undersailing have been identified at this stage, as part of the planning submission.



Highway Boundary/Stopping Up and Adoption

701. As the highway authority the City of London has the power to stop up areas designated as highway land by making orders known as a 'stopping up' order. The term 'stopping up' means that once such an order is made, the highway land ceases to be a highway, road, or footpath i.e. the highway rights are extinguished in law. The land can then be enclosed or developed, subject to any necessary planning consent. Section 247 of the Town & Country Planning Act 1990 empowers the City of London to make an order authorizing the stopping up or diversion of a highway if it is satisfied that it is necessary to do so in order to enable development to be carried out. That process would be carried out under separate procedures to considerations of the applications currently before you.

702. Areas of privately owned land can alternatively be ‘offered up’ for adoption as public highway, for instance for the creation of a new ‘estate road’ to be adopted and maintained by the local authority.

703. As a result of the proposals, sections of the highways within the vicinity of the site will need to be stopped up, reconstructed and eventually adopted with areas to be dedicated as public highway. The area to be stopped up is approximately 0.95m2 and the area to be adopted is 2.7m2.

704. The draft stopping up / public highway offering plan, was produced by the applicant and is shown below, which illustrates the proposed changes. The plan is preliminary and will be subject to further refinement in consultation with the City’s Highways Authority, following any planning approval. The process to formalize stopping up orders can only be made at the appropriate point. In principle, the plan with reference 23747508-STR-HGN-GF-DR-D-00501 is considered acceptable, as well as the plan reference 23747508-STR-HGN-GF-DR-D-00502 for highways adoption is considered acceptable.

Section S278/38 - Highways Works

705. The proposed development will attract a substantial number of pedestrians within the area.

706. It is acknowledged that meaningful changes are ongoing in the area due to the construction of tall buildings. Therefore, an increase in pedestrian flows will be able to be accommodated within the existing footways, with no adverse impacts to the surrounding area.

707. The highways works necessary to mitigate the impact of the development (including post-construction), will be carried out as part of a Section 278/38 Agreement under the Highways Act 1980.

708. The proposed works within the adjacent highways of the planning application site are (and not limited to):

Creechurch Lane

- Reconstruction of the adjacent footways to the application site, as per the City's approved materials
- Resurfacing and raising of the carriageways adjacent to the planning application site
- Removal of redundant street furniture
- Removal of redundant vehicle crossing
- Improvements to highways drainage
- Provision of road markings and associated traffic orders
- Provision of planters or alternative infrastructure, with the dual-use of acting as rest stops and appropriate access arrangements
- Provision of greenery

Bury Street

- Reconstruction of the adjacent footways to the application site, as per the City's approved materials
- Resurfacing and raising of the carriageways adjacent to the planning application site
- Removal of redundant street furniture
- Improvements to highways drainage
- Provision of road markings and associated traffic orders
- Provision of planters or alternative infrastructure, with the dual-use of acting as rest stops and appropriate access arrangements
- Provision of greenery

Heneage Lane

- Reconstruction and raising of the footway, as per the City's approved materials
- Removal of redundant street furniture
- Improvements to footway drainage
- Provision of greenery

Mitre Street Junction with Creechurch Lane

- Reconstruction of the adjacent footways to the application site, as per the City's approved materials
- Resurfacing and raising of the carriageway

Construction Logistics Plan (CLP)

709. The London Plan, Policy T7 on deliveries, servicing and construction, indicates that the development must address the impacts during the construction phase, and when the site becomes operational.

710. The detailed plans to be developed in accordance with TfL guidance and latest standards and approved by CoL prior to the start of the construction of this development.

711. A preliminary Construction Logistics Pan (CLP) has been submitted in support of the planning application. This provides useful information to describe the proposed works and how they would be undertaken. It also provides useful information to describe how the impacts associated with the construction period would be mitigated. A more detailed CLP would be prepared once a Principal Contractor has been appointed, which will need to be in line with TfL's Construction Logistics Plan Guidance and outlines the initial method

712. This should consider the following points:

- Expect the Principal Contractor to prepare travel planning guidance to encourage workers to use sustainable transport instead of private motor vehicles.
- Various highway licenses would need to be obtained from the CoL prior to works commencing on site (e.g. temporary parking bay suspensions, scaffolding licence, hoarding licence, crane licence etc).
- Expect construction vehicle movements to be scheduled to avoid 0800 to 0930 and 1600 to 1830 hours on Monday to Friday.
- Details will be required to describe how pedestrian and cyclist safety will be maintained, including any proposed alternative routes (if necessary), and any Banksman arrangements.

713. Full details of the CLP to be submitted and agreed prior to start of construction phase. Temporary works will be required to be implemented on the public highway and subject to approvals.

714. Details of facilities and methods to accommodate and manage all freight vehicle movements to and from the site during the construction of the building(s) hereby approved shall be submitted to and approved by the Local Planning Authority in writing prior to the commencement of work. The details shall be completed in accordance with the latest guidance and shall specifically address the safety of vulnerable road users through compliance with the Construction Logistics and Community Safety (CLOCS) Standard. The Plan must demonstrate how Work-Related Road Risks are to be managed. No demolition or construction shall be carried out other than in accordance with the approved details and methods. The Demolition and Construction Management Plan to include:

715. Detailed information will be required relating to how potential conflicts / complaints with adjacent stakeholders would be recorded, reported, and dealt with.

716. Details specific to the demolition phase should be captured within the overarching CLP document; this will ensure that a Principal Contractor is appointed early and prior to any demolition commencing.

717. Construction vehicle routes to and from the site to be approved with CoL Highways.

718. Various highways licences would need to be obtained from the CoL prior to works commencing on site (e.g. temporary parking bay suspensions, scaffolding licence, hoarding licence, crane licence etc).

719. Construction vehicle movements to be scheduled and must avoid peak hours. Records to be kept of timings of such deliveries and presented to the LPA upon request. The use of cargo bike should be encouraged throughout the construction process.

720. Details on how pedestrian (including most vulnerable) and cyclist safety will be maintained, including any proposed alternative routes (if necessary) and any Banksman arrangements.

721. A commitment to the use of FORS Silver vehicles (or above) throughout construction will be required.

722. The site should be registered with the Considerate Constructors Scheme. We will also expect the proposed works to be undertaken in accordance with the best practice guidelines in TfL's Standard for Construction Logistics and Cyclist Safety (CLOCS) scheme: http://www.clocs.org.uk/standard-for-clocs/

Conclusions

723. The proposals are acceptable in transport terms: provided the required alteration, condition and obligation are set out as discussed above

724. Should planning permission be granted the following S106 planning obligations and conditions, along with a s278 agreement which would need to be secured:

725. A condition to secure a Workplace Travel Plan (TP) for the development. The Section 106 agreement shall state that the TP shall be approved prior to the first occupation of the site and the approved plan shall be followed, unless otherwise agreed with the Highway Authority. The Section 106 agreement shall require the applicant to undertake a TRICs after survey and to provide TfL and CoL with a copy of the results as part of the travel plan review and monitoring process.

726. A condition securing a full Delivery and Servicing Management Plan, which will provide full details on the receiving of deliveries, and the method & management of refuse collection. This condition must be approved prior to first occupation of the site, and the approved plan shall be followed, unless otherwise agreed with the Highway Authority.

727. A condition to restrict the size of the vehicles for delivery and servicing, to longer than 9m in length.

728. A condition requiring the provision of 582 long stay cycle parking spaces and 85 short stay cycle parking spaces within the entire development, designed to London Cycle Design Standards, and the ongoing retention of these facilities.

729. A condition requiring the provision of accessible changing facilities, to ensure full accessibility needs are met.

730. A condition to secure a Construction Logistic Plan (CLP). The Section 106 agreement shall state that the CLP shall be approved prior to any works starting on site and the approved plan shall be followed, unless otherwise agreed with the Highway Authority. It should also restrict HGV movement to and from the site to with in the hours of 9:30 to 16:30 Monday to Friday, 8 till 13:00 Saturdays and fully restrict movement on Sundays and Bank Holidays unless agreed with the CoL in advance.

Environmental Impact of Proposals on Surrounding Area

731. Local Plan policy DM10.1 requires the design of development, and materials used to ensure that unacceptable wind impacts at street level and in the public realm are avoided, and to avoid intrusive solar glare effects and to minimise light pollution. Policy DM10.7 is to resist development which will noticeably reduce daylight and sunlight to nearby dwellings and open spaces. Draft City Plan 2040 Strategic Policy S8 and Policy DE2 requires development to optimise microclimatic conditions addressing solar glare, daylight and sunlight, wind conditions and thermal comfort.

Wind Microclimate

732. In accordance with the City of London requirements, a Wind tunnel testing has been undertaken to predict the local wind environment associated with the completed development and the resulting pedestrian comfort within and immediately surrounding the site. Computational Fluid Dynamics (CFD) simulation and analysis has also been carried out in accordance with the City of London's Planning Advice Note, Wind Microclimate Guidelines for Developments in the City of London.

733. Wind conditions are compared with the intended pedestrian use of the various locations, including carriageways, footways, buildings entrances, bus stops, ground and terrace level amenity spaces. The assessment uses the wind comfort criteria, referred to as the City Lawson Criteria in the Planning Advice Note, Wind Microclimate Guidelines for Developments in the City of London, being five Comfort Categories defining conditions suitable for: frequent sitting, occasional sitting, standing, walking and uncomfortable.

734. A separate safety criterion is also applied to ascertain if there are any safety risks to pedestrians or cyclists.

735. In considering significance and the need for mitigation measures, if resulting on-site wind conditions are identified as being unsafe (major adverse significance) or unsuitable in terms of the intended pedestrian use (moderate adverse significance) then mitigation is required. For off-site measurement locations, mitigation is required in the case of major adverse significance – if conditions become unsafe or unsuitable for the intended use as result of development. If wind conditions become windier but remain in a category suitable for the intended use, or if there is a negligible or beneficial effect, winds mitigation is not required.

736. Assessments have been carried out for both the windiest and the summer season.

737. The wind tunnel testing and CFD results broadly give the same assessment results. However, variance can occur as the two methods use different tools to predict the wind microclimate; the purpose of the two assessments is to give the broadest picture and to ensure that in either test the conditions are acceptable.

738. The wind microclimate across the site was tested for the following configurations:

- Configuration 1: Baseline - The existing Site with the existing surrounding buildings within the 450m radius of the site. The following development, which are currently under construction have been included in the assessment as existing buildings in the baseline:
    - One Leadenhall Court (Planning Reference: 18/00740/FULEIA);
    - 6-8 Bishopsgate (Planning Reference: 17/00447/FULEIA); and
    - 40 Leadenhall (Planning Reference: 13/01004 FULEIA)
    - Following testing, it was identified that 100 Leadenhall Street (Planning Reference: 22/00790/FULEIA) has commenced. Therefore, qualitative analysis of 100 Leadenhall Street in the Baseline scenario is provided.
- Configuration 2: The Proposed Development with the existing surrounding buildings.
- Configuration 3: Future Baseline -The existing Site with the consented cumulative schemes which have commenced construction.
- Configuration 4: Tier 1 - The Proposed Development with the consented cumulative schemes. These include:
    - 1 Undershaft (Planning Reference: 16/00075/FULEIA)
    - 100 Leadenhall Street (Planning Reference: 22/00790/FULEIA);
    - 123 Houndsditch (Planning Reference: 21/00622/FULEIA);
    - Bevis Marks House (Planning Reference: 17/00330/FULMAJ);
    - Fountain House (Planning Reference: 19/00713/FULMAJ);
    - Mark Lane (Planning Reference: 19/01307/FULEIA);
    - 70 Gracechurch (Planning Reference: 20/00816/FULEIA);
    - 153 Fenchurch Street (Planning Reference: 16/00345/FULMAJ);
    - 55 Bishopsgate (Planning Reference: 22/00981/FULEIA); and
    - Friary Court (Planning Reference: 22/00882/FULMAJ)
- Configuration 5: Tier 2 - The Proposed Development with the consented and non-consented cumulative schemes. The non-consented schemes that have been considered include:

- 85 Gracechurch (Planning Reference: 22/01155/FULEIA). Following testing, 85 Gracechurch (Planning Reference: 22/01155/FULEIA) achieved planning consent and is now considered a Tier 1 cumulative scheme. Therefore, its effect of being a Tier 1 cumulative scheme in Configurations 3 and 4 has been assessed qualitatively based on results of Configuration 5.
- Boundary House (Planning Reference: 21/00826/FULMAJ); and
- 15 Minories (Planning Reference: 16/00406/FULMAJ).

739. All configurations were assessed without existing or proposed landscaping to assess the worst-case scenario.

740. The City of London is characterised in part by a collection of tall commercial buildings of differing geometries and shapes. Tall buildings naturally create an obstruction to the strong upper-level winds and can increase the windiness in their surroundings. The magnitude of this impact depends on the design of a proposed scheme, in particular its size, shape, orientation, and architectural features.

741. The City of London Lawson criteria, set out in the Wind Microclimate Guidelines 2019, defines the safety limit as once-a-year exceedance of 15m/s mean wind speed. This safety limit captures the effects of rare but very strong storm-fronts that periodically impact the UK and attempts to identify areas where vulnerable pedestrians (e.g. elderly) would start to feel unsafe.

742. The significance of on-site measurement locations are defined by comparing the wind comfort/safety levels with the intended pedestrian activity at each location, using the following table:

On-site Receptors		
Significance	**Trigger**	**Mitigation required?**
Major Adverse	Conditions are 'unsafe'.	Yes
Moderate Adverse	Conditions are 'unsuitable' (in terms of comfort) for the intended pedestrian use.	Yes
Negligible	Conditions are 'suitable' for the intended pedestrian use.	No
Moderate Beneficial	Conditions are calmer than required for the intended pedestrian use (by at least one comfort category).	No

Figure 13:On-Site Measurement Locations Nature and Scale of Effect

743. The significance of off-site measurement locations are defined not only by comparing the wind comfort levels with the intended pedestrian activity, but also by comparing the conditions to those experienced prior to the introduction of the proposed development (baseline), using the table below:

Off-site Receptors		
Significance	**Trigger**	**Mitigation required?**
Major Adverse	Conditions that were 'safe' in the baseline scenario become 'unsafe' as a result of the Proposed Development. OR Conditions that were 'suitable' in terms of comfort in the baseline scenario become 'unsuitable' as a result of the Proposed Development. OR Conditions that were 'unsafe' in the baseline scenario are made worse as a result of the Proposed Development.	Yes
Moderate Adverse	Conditions that were 'suitable' in terms of comfort in the baseline scenario are made windier (by at least one comfort category) as a result of the Proposed Development, but remain 'suitable' for the intended pedestrian activity.	No
Negligible	Conditions remain the same as in the baseline scenario.	No
Major Beneficial	Conditions that were 'unsafe' in the baseline scenario become 'safe' as a result of the Proposed Development.	No
Moderate Beneficial	Conditions that were 'unsuitable' in terms of comfort in the baseline scenario become 'suitable' as a result of the Proposed Development. OR Conditions that were 'unsafe' in the baseline scenario are made better as a result of the Proposed Development (but not so as to make them 'safe').	No

Figure 14: Off-Site Measurement Locations Nature and Scale of Effect

744. The City of London Lawson Comfort Criteria are as follows:

- Frequent sitting - Acceptable for frequent outdoor sitting use, e.g. restaurants, cafe.
- Occasional sitting - Acceptable for occasional outdoor seating, e.g. general public outdoor spaces, balconies and terraces intended for occasional use etc.
- Standing - Acceptable for entrances, bus stops, covered walkways or passageways beneath buildings.
- Walking - Acceptable for external pavements, walkways.
- Uncomfortable - Not comfortable for regular pedestrian access.

745. The Wind Tunnel Testing was submitted with the application and was undertaken in July 2023. As noted above, after testing, it was identified that 100 Leadenhall Street (Planning Reference: 22/00790/FULEIA) has commenced.

Therefore, qualitative analysis of 100 Leadenhall Street in the Baseline scenario is provided.

746. In terms of receptors, these have been splits into two categories, as follows:
- On site locations:
  - Pedestrian thoroughfares, including areas that are immediately adjacent to the Proposed Development (i.e. within 5m of the building line). This also includes thoroughfares within the Proposed Development;
  - Entrances, including entrances at ground level; and
  - Amenity areas, including those at ground level and terraces (includes terraces located on the upper levels of the buildings).
- Off site locations:
  - All receptors falling outside the definition of the boundary of the Site, such as thoroughfares, along roads, bus stops, surrounding building entrances, pedestrian crossings and amenity areas, including terraces influenced on upper levels.

747. The following existing receptors have been identified at those in close proximity to the site with terraces:
- One Creechurch Place terrace;
- The Ace Building terrace;
- 11-12 Bury Street; and
- The Aldgate School terrace.

748. The methodology considers that the target condition for seating in residential amenity areas is a wind microclimate that is suitable for frequent sitting or occasional sitting during the summer season. This is because these areas are more likely to be frequently used during the summer when pedestrians would expect to be able to sit comfortably. Occasional sitting or calmer conditions are required at public outdoor seating areas. Frequent sitting conditions are required at spill out seating areas such as permanent café.

749. It is noted that if an area is classified as suitable for occasional sitting in the summer, the windier conditions that occur during the winter season usually mean that the area would be classified as suitable for standing in the windiest season, unless additional shelter was provided. This is considered to be tolerable on the basis that such an area would be most frequently used for sitting during the summer months. At other times of the year, the expectation of usability is lower due to other factors such as temperature and precipitation.

750. Upper-level terraces and large amenity spaces are assessed on the basis that these are intended for good weather use only. Occasional sitting conditions during the summer are considered acceptable for these areas.

Configuration 1: Baseline

751. There are no strong winds threshold in this configuration. The development at 100 Leadenhall would increase windiness along Bury Street to the east. Conditions are generally suitable for frequent sitting around the Site, with mainly occasional sitting or standing to the west and frequent sitting or occasional sitting to the east.

Safety criteria

752. Both the Wind Tunnel testing and CFD assessment concluded that there are no instances of strong winds exceeding the safety threshold at the Site and the nearby surrounding area.

Comfort criteria

Pedestrian Comfort

753. Wind conditions around the existing Site are mostly acceptable for a mixture of frequent sitting and occasional sitting use with some areas having wind conditions acceptable for standing use during the windiest season. This range in conditions would be considered relatively calm. The CFD assessment has identified wind conditions appropriate for walking use only during the windiest season at the Paradise Green building amenity space to the north-west of the Site.

Throughfares

754. On-Site thoroughfare locations have frequent sitting and occasional sitting use wind conditions during the windiest season. These wind conditions are suitable for the intended use.

755. Off-Site thoroughfare locations have wind conditions ranging from frequent sitting to standing use during the windiest season. These wind conditions are suitable for the intended use.

Entrances

756. On-Site entrance locations have frequent sitting use wind conditions during the windiest season. The CFD assessment results reported similar wind conditions, ranging from frequent sitting to standing use during the windiest season. These wind conditions are suitable for the intended use.

757. Off-Site entrance locations have wind conditions ranging from frequent sitting to standing use during the windiest season. These wind conditions are suitable for the intended use.

Bus Stops

758. Tunnel testing has shown that bus stop locations have occasional sitting use wind conditions during the windiest season, whilst CFD has identified a mixture of frequent sitting and occasional sitting use. These wind conditions are suitable for the intended use.

Pedestrian crossings

759. Pedestrian crossings have occasional sitting and standing use wind conditions during the windiest season. These wind conditions are suitable for the intended use.

Ground level amenity areas

760. Mixed use amenity areas have frequent sitting and occasional sitting use wind conditions during the summer season. These wind conditions are suitable for the intended use.

761. Wind tunnel testing results reported bench style seating areas have frequent sitting and occasional sitting use wind conditions during the summer season. These wind conditions are suitable for the intended use. The CFD assessment results reported wind conditions, ranging from frequent sitting to standing use during the summer season. Standing use wind conditions have been identified:

- to the south of 1 Undershaft,
- to the north and to the west of the Gherkin, and
- in the Paradise Green building amenity space to the north-west of the Site.

762. The above are one category windier than suitable for bench style seating.

763. Café style seating areas have frequent sitting and occasional sitting use wind conditions during the summer season. Occasional sitting use wind conditions that are one category windier conditions than required have been identified:
- at the café style seating areas along Bevis Marks,
- to the east and west of the Gherkin and
- near the Costa kiosk along St Mary Axe (measurement locations 15, 40, 42, 43, 53 and 84).

764. CFD assessment results have also identified standing use wind conditions to the east of the Gherkin, which are two categories windier than suitable for the intended use.

Roof level amenity

765. Off-Site roof level amenity areas have frequent sitting and occasional sitting use wind conditions during the summer season. These wind conditions are suitable for the intended use.

Potential effects during demolition and construction

766. It is expected that wind conditions during demolition would be suitable for a working construction site and use as existing of pedestrian thoroughfares, crossings, road users, entrances, bus stops, ground and roof level amenity areas around the Site with the hoarding in place. Therefore, the likely effect is expected to be Negligible (not significant), and no specific wind microclimate mitigation or management procedures are considered necessary during the demolition.

767. As construction of the Proposed Development progresses, wind conditions at the Site would gradually adjust from those of the existing Site to those of the completed Proposed Development. The effects would range from direct, local, short-term (temporary), Moderate Beneficial (Not Significant) to Negligible (Not Significant) at on-Site receptor locations. These wind conditions would be acceptable for construction workers representing a Negligible (Not Significant) effect. Health and safety measures would be implemented also through the CEMP.

768. The wind conditions off-Site would gradually adjust to that with the Completed Development in situ, largely representing a Negligible (Not Significant) effect.

Configuration 2: Proposed Development with Existing Surrounding Buildings

769. Overall the high rise buildings from south through to north-west shelter the Proposed Development from the predominant south-westerly winds; resulting in calm wind conditions at and around the Proposed Development.

Safety Criteria

770. Both Wind tunnel testing and CFD assessment result that there would be no instances of strong winds exceeding the safety threshold at the Site and the nearby surrounding area.

771. As the existing buildings are of the comparable height as the cumulative development, 100 Leadenhall is not expected to draw large amount of winds on the ground level, therefore, it is expected that similar wind conditions as in the Configurations 4 and 5 would prevail along the Bury Street with the inclusion of the 100 Leadenhall in the existing context.

Comfort Criteria

Pedestrian Comfort

772. Wind conditions on Site and in the nearby surrounding area of the Proposed Development would mostly be appropriate for a mixture of frequent sitting and occasional sitting use during the windiest season, with some areas having standing use wind conditions. This is because the Proposed Development is sheltered by the existing mid-rise developments to the west and south-west, where the prevailing winds originate.

773. The CFD assessment results reported similar wind conditions with walking use wind conditions in the Paradise Green amenity space to the north-west of the Proposed Development during the windiest season, consistent with the baseline scenario.

Thoroughfares

774. All on Site thoroughfares would have frequent sitting and occasional sitting use wind conditions during the windiest season. These wind conditions would represent Moderate Beneficial (Not Significant) effect.

775. All off Site thoroughfares surrounding the Proposed Development would have wind conditions ranging from frequent sitting to standing use during the windiest

season, suitable conditions for the intended use. Wind conditions at the majority of these areas would be consistent with or calmer than in Configuration 1 and would represent a Negligible (Not Significant) effect.

776. Reported occasional sitting use conditions are identified along Bury Street and Creechurch Lane (measurement locations 28, 119 and 159) and standing use wind conditions along St Mary Axe (measurement location 1). These would be one category windier than the baseline scenario (Configuration 1). This would represent a Moderate Adverse (Not Significant) effect. These conditions would remain suitable for the intended use.

Entrances

777. On Site entrances to the Proposed Development would have frequent sitting and occasional sitting use wind conditions during the windiest season, suitable conditions for the intended use. These wind conditions would represent Moderate Beneficial (not significant) effects.

778. Off Site entrances surrounding the Proposed Development would have wind conditions ranging from frequent sitting to standing use during the windiest season, suitable conditions for the intended use. Wind conditions at the majority of the areas would be consistent with or calmer than in Configuration 1 and would represent a Negligible (Not Significant) effect.

779. The entrances to the retail outlets to the south along Creechurch Lane (measurement locations 108 and 123), along Bury Street to the north (measurement location 25), along Heneage Lane to north-east (measurement location 134) and the entrance to 18 Bevis Marks (measurement location 142) would be one category windier than the baseline scenario (Configuration 1). This would represent a Moderate Adverse (Not Significant) effect.

Bus stops

780. Bus stops would have occasional sitting use wind conditions during the windiest season, suitable for the intended use. Wind conditions at all of these areas would be consistent with the baseline scenario (Configuration 1) and would represent a Negligible (Not Significant) effect.

Pedestrian crossing

781. Pedestrian crossings would have occasional sitting use and standing use wind conditions during the windiest season, suitable for the intended use. Wind conditions at these areas would be consistent with Configuration 1 and would represent a Negligible (Not Significant) effect.

Ground level amenity spaces

782. Off Site ground level mixed use amenity areas would have frequent sitting and occasional sitting use wind conditions during the summer season, suitable for the intended use. These wind conditions would be consistent with the baseline scenario (Configuration 1) and would represent a Negligible (Not Significant) effect.

783. The on site bench style seating on the ground level would have frequent sitting use wind conditions during the summer season, suitable for the intended use. These wind conditions would represent a Moderate Beneficial (Not Significant) effect.

784. Off-Site bench style seating areas would have frequent sitting and occasional sitting use wind conditions during the summer season, suitable for the intended use. These wind conditions would be consistent with the baseline scenario (Configuration 1) and would represent a Negligible (Not Significant) effect.

785. The CFD assessment reports standing use wind conditions to the south of 1 Undershaft, to the north and to the west of the Gherkin and at bench style seating provisions in the Paradise Green building amenity space to the north-west of the Proposed Development. These are one category windier than suitable for bench style seating, albeit they are consistent with the baseline scenario. These wind conditions would represent a Negligible (Not Significant) effect.

786. Off-Site ground level café style seating areas would have frequent sitting and occasional sitting use wind conditions during the summer season. Occasional sitting use wind conditions are reported:

- at the café style seating areas along Bevis Marks, and
- to the east and to the west of the Gherkin (measurement locations 15, 40, 42, 43 and 53)
- south of the proposed development (measurement location 107)

787. The above would be one category windier than suitable. These wind conditions at Bevis Marks and west of the Gherkin would be consistent with the baseline scenario (Configuration 1) and would represent Negligible (Not Significant) effect.

788. The café style seating provisions near the Costa kiosk along St Mary Axe (measurement location 84) would have frequent sitting use wind conditions during the summer season. These wind conditions would be one category calmer than in the baseline scenario (Configuration 1) and would represent Moderate Beneficial (Not Significant) effect. However, the CFD assessment reports occasional seating at this location. Furthermore, the CFD assessment results represent standing use wind conditions at the café style seating area to the east of the Gherkin, which would be two categories windier than suitable for the intended use. However, this would be slight improvement as compared to the baseline scenario, which were suitable for standing across the entire space. This would represent a Negligible (Not Significant) effect.

Roof level amenity

789. Roof level amenity areas on the Proposed Development would have a mixture of frequent sitting and occasional sitting use wind conditions during the summer season, suitable for the intended use. These wind conditions would represent Moderate Beneficial (Not Significant) and Negligible (Not Significant) effects. However, CFD assessment has reported wind conditions ranging from frequent sitting to standing use during the summer season. Standing use wind conditions are identified at roof level amenity area on Level 8 and Level 9. These would be one category windier than suitable for the intended use. This would represent a Moderate Adverse (Significant) effect. Furthermore, the wind tunnel testing reports occasional sitting along the western façade of the level seven terrace of the Proposed Development (measurement locations 214 and 215), which is one category windier than suitable. These conditions would represent a Moderate adverse effect and would require mitigation measures in the form of localised landscaping.

790. The following mitigation measures would be expected to improve conditions:
- A 1.5m tall balustrade, at least 50% solid on all sides of the level seven roof terrace; or
- 1.5m tall planters with planting around the seating provisions; or
- 1.5m tall hedging around the seating provisions.

791. All the off-Site roof level amenity areas would have wind conditions suitable for frequent sitting and occasional sitting use during the summer season, suitable for the intended use. The majority of the wind conditions would be consistent or calmer than in the baseline scenario (Configuration 1) and would represent a Negligible (Not Significant) effect.

792. There is one roof level amenity space, on the Ace Building to the south of the proposed development which would have occasional sitting use wind conditions during the summer season, one category windier than in the baseline scenario. This would represent a Moderate Adverse (Not Significant) effect.

793. Bench style seating areas on the roof level of the Proposed Development would have frequent sitting use wind conditions during the summer season, suitable for the intended use. These wind conditions would represent a Moderate Beneficial (Not Significant) effect.

Configuration 3: Future Baseline

794. Configuration 3 assesses the existing Site with the consented cumulative schemes that have commenced construction and are likely to be built out prior to commencement of construction of the Proposed Development.

795. It is noted that the Future Baseline conditions were not modelled explicitly as part of the CFD assessment. From the CFD results it can be inferred that the impact of the Tier 1 cumulative schemes would result in calmer conditions directly west of the Site on Bury Street, and windier conditions to the southwest of the Site on Leadenhall Street and west of the Site around 1 Undershaft. These changes would not be so extensive as to alter the overall suitability of conditions relative to the Baseline conditions.

796. In terms of the demolition and construction phases, the wind conditions would be suitable for a working construction site and pedestrian thoroughfares, entrances and ground level amenity around the Site. Therefore, the likely effect is expected to be Negligible.

Configuration 4: Proposed Development with Consented Cumulative Surrounding Buildings

797. The development at 85 Gracechurch was assessed as non-consented (Tier 2) cumulative development in Configuration 5, however as it has since achieved planning consent it should now be assessed as a Tier 1 cumulative development. Given that there are other taller buildings in between 85 Gracechurch and application site and that this building is located approximately 390m away from the site, it is considered that any affects would not be significant in the future baseline (Configuration 3) and consented cumulative context (Configuration 4). As such, the discussions for the Configuration 3 and Configuration 4 remain valid.

Safety exceedances

798. In configuration 4, there would be no instances of strong winds exceeding the safety threshold at any measurement location at the Site and the nearby surrounding area.

Comfort Criteria

Pedestrian Comfort

799. In terms of the suitability of the intended uses on site, the wind tunnel testing reports conditions around the Proposed Development that would generally be suitable for frequent sitting and occasional sitting use during the windiest season, with some areas having standing use wind conditions.

800. The CFD assessment results that there would be walking use wind conditions in the Paradise Green amenity space to the north-west of the Proposed Development during the windiest season, consistent with the baseline scenario.

Thoroughfares

801. With regard to the suitability of thoroughfares, all those at the Proposed Development would range from being suitable for frequent sitting to standing use during the windiest season. These wind conditions would represent a Moderate Beneficial (Not Significant) effect, similar to that observed in Configuration 2.

802. Off-site all thoroughfares would be suitable for frequent sitting to standing use during the windiest season, suitable conditions for the intended use. Wind conditions at the majority of the areas would be consistent with or calmer than in Configuration 3 and would represent a Negligible (Not Significant) effect, similar to that observed in Configuration 2.

803. Although suitable for their intended use, the following locations would be one category windier than the future baseline (Configuration 3):

- along Bury Street to the north (measurement location 26)
- along Creechurch Lane (measurement locations 126, 128, 129, 130 137 and 159) and
- along Heneage Lane (measurement location 137)

804. These wind conditions would represent a Moderate Adverse (Not Significant) effect.

Entrances

805. Frequent sitting and occasional sitting use wind conditions during the windiest season are reported for all entrances to the Proposed Development. These would be suitable conditions for the intended use and represent a Moderate Beneficial (Not Significant) effect, similar to that observed in Configuration 2.

806. All the entrances surrounding the Proposed Development would range from being suitable for frequent sitting to standing use during the windiest season, suitable conditions for the intended use. Wind conditions at all the entrances would be consistent with or calmer than the future baseline scenario (Configuration 3) and would represent a Negligible (Not Significant) effect, representing calmer wind conditions than in Configuration 2.

Bus Stops

807. All bus stops would have frequent sitting and occasional sitting use wind conditions during the windiest season, suitable for the intended use. Wind conditions at all the areas would be consistent with the future baseline scenario (Configuration 3) and would represent a Negligible (Not Significant) effect, similar effect to that observed in Configuration 2.

Pedestrian crossing

808. Occasional sitting use and standing use wind conditions during the windiest season are reported, which are suitable for the intended use. Wind conditions at all the areas would be consistent with the future baseline scenario (Configuration 3) and would represent a Negligible (Not Significant) effect, similar effect to that in Configuration 2. The CFD assessment reports standing use or calmer, which represent Negligible to Moderate Adverse effects, both not significant effects.

Ground Level Amenity Spaces

809. Mixed use amenity areas off site would have frequent sitting use wind conditions during the summer season, suitable for the intended use. These would represent a Negligible (Not Significant) effect, consistent with the future baseline scenario (Configuration 3). The CFD assessment reported wind conditions with a mixture of frequent sitting and occasional sitting use. This still represents a Negligible (Not Significant) effect.

810. Both the wind tunnel testing and CFD assessment report frequent sitting use wind conditions during the summer season, on on-site bench style seating provisions on the ground level, suitable for the intended use. These wind conditions would represent a Moderate Beneficial (Not Significant) effect, similar to that observed in Configuration 2.

811. Off-Site bench style seating areas would have frequent sitting and occasional sitting use wind conditions during the summer season, suitable for the intended use. These wind conditions would be consistent with or calmer than in the future baseline scenario (Configuration 3) and would represent a Negligible (Not Significant) effect, similar to that observed in Configuration 2.

812. CFD assessment reported standing use wind conditions during the summer season to the north and to the west of the Gherkin and Paradise Green building amenity space. These are one category windier than suitable for bench style seating. These wind conditions would be consistent with the baseline scenario. These wind conditions would represent a Negligible (Not Significant) effect.

813. On site café style seating provisions would have frequent sitting use wind conditions during the summer season, suitable for the intended use. These wind conditions would represent a Negligible (Not Significant) effect, similar to that observed in Configuration 2. Furthermore, the off-Site café area represented by probe location 107 would have suitable wind conditions, with windier conditions alleviated due to the shelter from cumulative buildings.

814. Off-site café style seating will range from frequent sitting and occasional sitting use wind conditions during the summer season. Occasional sitting use is reported:
- to the east of the Gherkin (measurement locations 40, 42, 43) and
- near the Costa Kiosk to the west of the Gherkin (measurement location 84)

815. The above reported conditions are one category windier than the suitable conditions. These wind conditions would be consistent with the future baseline scenario (Configuration 3) and would represent a Negligible (Not Significant) effect, similar effect to that observed in Configuration 2.

816. The café style seating provisions along Bevis Marks to the north (measurement location 15) would have frequent sitting use wind conditions during the summer season. These wind conditions would be one category calmer than in the future baseline scenario (Configuration 3) and would represent a Moderate Beneficial (Not Significant) effect. In the CFD assessment though, the seating area along Bevis Marks reports occasional sitting conditions, similar to the baseline scenario.

817. Standing use wind conditions at the café style seating area to the east of the Gherkin would be up to two categories windier than suitable for the intended use,

however, would be slight improvement as compared to the baseline scenario, which were suitable for standing across the entire space. This would represent a Negligible (Not Significant) effect.

Roof Level Amenity

818. The roof level amenity space at the proposed development would range from frequent sitting and occasional sitting use wind conditions, suitable for the intended use. These wind conditions would represent a Moderate Beneficial (Not Significant) and Negligible (Not Significant) effect, similar to that observed in Configuration 2).

819. The CFD assessment reports standing use wind conditions on areas of level 8 and 9. These would be one category windier than suitable for the intended use; however, a substantial proportion of the terraces would remain suitable for the intended use. These would represent a Moderate Adverse (Not Significant) effect.

820. Off-site roof level amenity areas would have wind conditions suitable for frequent sitting and occasional sitting use during the summer season, suitable for the intended use. Majority of the wind conditions would be consistent or calmer than in the baseline scenario (Configuration 1) and would represent Negligible (Not Significant) effect, similar to Configuration 2.

821. One off site roof level amenity area on top of 11-12 Bury Street development (measurement location 205) would have occasional sitting use wind conditions during the summer season. This would be suitable for their intended use, albeit one category windier compared to the future baseline scenario (Configuration 3). These would represent a Moderate Adverse (Not Significant) effect.

822. Bench style seating areas on the roof level of the Proposed Development would have frequent sitting use wind conditions during the summer season, suitable for the intended use. These wind conditions would represent a Moderate Beneficial (Not Significant) effect, similar to that in Configuration 2. Although the CFD assessment result report some occasional sitting use, this is still suitable for the intended use and represents a Moderate Beneficial (Not Significant) effect.

823. Although the occasional sitting use wind condition at the café style seating area at level seven (measurement location 215) is more localised than Configuration 2, mitigation would still be required in the form of a 1.5m balustrade, at least 50% solid on all sides.

Configuration 5: The Proposed Development with Consented and Non-consented Cumulative Surrounding Buildings

824. In configuration 5, the wind conditions reported for each type of use are similar to those reported in configuration 4.

Safety exceedances

825. In configuration 5, there would be no instances of strong winds exceeding the safety threshold at any measurement location at the Site and the nearby surrounding area.

Comfort Criteria

Pedestrian Comfort

826. In terms of the suitability of the intended uses on site, the wind tunnel testing reports conditions around the Proposed Development that would generally be suitable for frequent sitting and occasional sitting use during the windiest season, with some areas having standing use wind conditions.

827. The CFD assessment results that there would be walking use wind conditions in the Paradise Green amenity space to the north-west of the Proposed Development during the windiest season, consistent with the baseline scenario.

Thoroughfares

828. With regard to the suitability of thoroughfares, all those at the Proposed Development would range from being suitable for frequent sitting to standing use during the windiest season. These wind conditions would represent a Moderate Beneficial (Not Significant) effect, similar to that observed in Configuration 2.

829. Off-site all thoroughfares would be suitable for frequent sitting to standing use during the windiest season, suitable conditions for the intended use. Wind conditions at the majority of the areas would be consistent with or calmer than in Configuration 3 and would represent a Negligible (Not Significant) effect, similar to that observed in Configuration 2.

830. Although suitable for their intended use, the following locations would be one category windier than the future baseline (Configuration 3):

- along Bury Street to the north (measurement locations 26 and 71)

- along Creechurch Lane (measurement locations 126, 128 and 159) and
- along Heneage Lane (measurement location 137)

831. These wind conditions would represent a Moderate Adverse (Not Significant) effect.

Entrances

832. Frequent sitting and occasional sitting use wind conditions during the windiest season are reported for all entrances to the Proposed Development. These would be suitable conditions for the intended use and represent a Moderate Beneficial (Not Significant) effect, similar to that observed in Configuration 2.

833. All the entrances surrounding the Proposed Development would range from being suitable for frequent sitting to standing use during the windiest season, suitable conditions for the intended use. Wind conditions at all the entrances would be consistent with or calmer than the future baseline scenario (Configuration 3) and would represent a Negligible (Not Significant) effect, similar to that in Configuration 2. The CFD assessment reports similar results, representing a Negligible (Not Significant) to Moderate Adverse (Not Significant) effect.

Bus Stops

834. All bus stops would have frequent sitting and occasional sitting use wind conditions during the windiest season, suitable for the intended use. Wind conditions at all the areas would be consistent with the future baseline scenario (Configuration 3) and would represent a Negligible (Not Significant) effect, similar effect to that observed in Configuration 2.

Pedestrian crossing

835. Occasional sitting use and standing use wind conditions during the windiest season are reported to all pedestrian crossings, which are suitable for the intended use. Wind conditions at all the areas would be consistent with or calmer than in the future baseline scenario (Configuration 3) and would represent a Negligible (Not Significant) effect, similar effect to that in Configuration 2. The CFD assessment reports standing use or calmer, which represent Negligible to Moderate Adverse effects, both not significant effects.

Ground Level Amenity Spaces

836. Mixed use amenity areas off site would have frequent sitting use wind conditions during the summer season, suitable for the intended use. These would represent a Negligible (Not Significant) effect, consistent with the future baseline scenario (Configuration 3). The CFD assessment reported wind conditions with a mixture of frequent sitting and occasional sitting use. This still be suitable for their intended use and represents a Negligible (Not Significant) effect.

837. Both the wind tunnel testing and CFD assessment report frequent sitting use wind conditions during the summer season, on on-site bench style seating provisions on the ground level, suitable for the intended use. These wind conditions would represent a Moderate Beneficial (Not Significant) effect, similar to that observed in Configuration 2.

838. Off-Site bench style seating areas would have frequent sitting and occasional sitting use wind conditions during the summer season, suitable for the intended use. These wind conditions would be consistent with or calmer than in the future baseline scenario (Configuration 3) and would represent a Negligible (Not Significant) effect, similar to that observed in Configuration 2.

839. Whilst suitable for their intended use, bench style seating in the pocket park along the One Creechurch Place (measurement location 186) would have occasional sitting use wind conditions during the summer season, which is one category windier than in the future baseline scenario (Configuration 3), this would represent a Moderate Adverse (Not Significant) effect.

840. CFD assessment reported standing use wind conditions during the summer season to the north and to the west of the Gherkin and Paradise Green building amenity space. These are one category windier than suitable for bench style seating. These wind conditions would be consistent with the baseline scenario. These wind conditions would represent a Negligible (Not Significant) effect.

841. On site café style seating provisions would have frequent sitting use wind conditions during the summer season, suitable for the intended use. These wind conditions would represent a Negligible (Not Significant) effect, similar to that observed in Configuration 2.

842. Off-site café style seating will range from frequent sitting and occasional sitting use wind conditions during the summer season. Occasional sitting use is reported:

- to the east of the Gherkin (measurement locations 40, 42, 43) and
- near the Costa Kiosk to the west of the Gherkin (measurement location 84)

843. the above reported conditions are one category windier than the suitable conditions. These wind conditions would be consistent with the future baseline

scenario (Configuration 3) and would represent a Negligible (Not Significant) effect, similar effect to that observed in Configuration 2.

844. The café style seating provisions along Bevis Marks to the north (measurement location 15) would have frequent sitting use wind conditions during the summer season. These wind conditions would be one category calmer than in the future baseline scenario (Configuration 3) and would represent a Moderate Beneficial (Not Significant) effect. In the CFD assessment though, the seating area along Bevis Marks reports occasional sitting conditions, consistent with the baseline scenario.

845. Standing use wind conditions at the café style seating area to the east of the Gherkin would be up to two categories windier than suitable for the intended use, however, would be slight improvement as compared to the baseline scenario, which were suitable for standing across the entire space. This would represent a Negligible (Not Significant) effect.

Roof Level Amenity

846. The roof level amenity space at the proposed development would range from frequent sitting and occasional sitting use wind conditions, suitable for the intended use. These wind conditions would represent a Moderate Beneficial (Not Significant) and Negligible (Not Significant) effect, similar to that observed in Configuration 2.

847. The CFD assessment reports standing use wind conditions on areas of level 8 and 9. These would be one category windier than suitable for the intended use; however, a substantial proportion of the terraces would remain suitable for the intended use. These would represent a Moderate Adverse (Not Significant) effect.

848. Off site roof level amenity areas would have wind conditions suitable for frequent sitting and occasional sitting use during the summer season, suitable for the intended use. Majority of the wind conditions would be consistent or calmer than in the baseline scenario (Configuration 1) and would represent Negligible (Not Significant) effect, similar to Configuration 2.

849. One off site roof level amenity area on top of 11-12 Bury Street development (measurement location 205) would have occasional sitting use wind conditions during the summer season. This would be suitable for their intended use, albeit one category windier compared to the future baseline scenario (Configuration 3). These would represent a Moderate Adverse (Not Significant) effect.

850. Bench style seating areas on the roof level of the Proposed Development would have frequent sitting use wind conditions during the summer season, suitable for the intended use. These wind conditions would represent a Moderate Beneficial (Not Significant) effect, similar to that in Configuration 2. Although the CFD assessment result report some occasional siting use, this is still suitable for the intended use and represents a Moderate Beneficial (Not Significant) effect.

Wind Microclimate Conclusion

851. In terms of the safety, there will be no strong winds with a potential to give rise to safety concerns at any of the configurations, including the proposed development within its existing surrounds, consented and non-consented schemes.

852. With the proposed development built, on-site conditions are suitable for the intended uses without landscaping or mitigation measures. This applies to all proposed entrances, seating, benches, seating terraces and mixed amenity terraces. However, café style seating area off-site to the south of the proposed development and café style seating areas on-site on the level seven of the proposed development would have windier than suitable conditions. Landscaping mitigation measures are suggested for level seven of the development. The café seating area to the south of the site is expected to get some protection from existing trees.

853. The wind tunnel testing shows that when the consented cumulative schemes come forward, wind conditions would become one category windier along Creechurch Lane. However, these areas would remain suitable for the intended use. Wind conditions would be suitable for the intended use at the windier than suitable café style seating area to the south of the proposed development. As such, there would be no additional areas that would have windier than required wind conditions, compared to those in the existing context.

854. The CFD assessment results that all off-site conditions are suitable for their intended use, including thoroughfares, crossings, mixed amenity spaces and roof terraces. Seating areas although one or two categories windier, they are consistent with or slightly improved from the baseline conditions. Regarding off-site benches, for those one category windier, conditions are consistent with the baseline conditions. Therefore, impacts are considered negligible.

855. The inclusion of Tier 1 cumulative schemes has a marginal impact on conditions, but does not alter the suitability of conditions for any receptor.

856. The inclusion of Tier 2 cumulative schemes did not have a material impact on conditions.

Daylight, Sunlight, Overshadowing

857. Policy D6(D) of the London Plan states that the design of development should provide sufficient daylight and sunlight to (new) and surrounding housing that is appropriate for its context. whilst avoiding overheating, minimising overshadowing and maximising the usability of outside amenity space.

858. Local Plan 2015 Policy DM10.7 'Daylight and Sunlight' seeks to resist development which would reduce noticeably the daylight and sunlight available to nearby dwellings and open spaces to unacceptable levels, taking account of the Building Research Establishment (BRE) guidelines.

859. Draft City Plan 2040 Policy DE7 states that development proposals will be required to demonstrate that daylight and sunlight available to nearby dwellings and other sensitive receptors, including open spaces, is appropriate for its context and provides acceptable standards taking account of the Building Research Establishment's guidelines.

860. Paragraph 3.10.41 of the Local Plan indicates that BRE guidelines will be applied consistent with BRE advice that ideal daylight and sunlight conditions may not be practicable in densely developed city centre locations. Policy HS3 of the draft City Plan 2040 states when considering impact on the amenity of existing residents, the Corporation will take into account the cumulative effect of development proposals.

861. The BRE guidelines 'Site layout planning for daylight and sunlight – A guide to good practice' (2022) present the following methodologies for measuring the impact of development on the daylight and sunlight received by nearby existing dwellings and any non-domestic buildings where the occupants have a reasonable expectation of natural light:

- **Daylight:** Impacts to daylight are measured using the Vertical Sky Component (VSC) method: a measure of the amount of sky visible from a centre point of a window; and the No Sky Line (NSL) method, which measures the distribution of daylight within a room. The BRE advises that this measurement should be used to assess daylight within living rooms, dining rooms and kitchens; bedrooms should also be analysed but are considered less important. The BRE Guide states that diffuse daylight of an existing buildings may be adversely affected if either the VSC measure or the daylight distribution (NSL) measure is not satisfied.

- **Sunlight:** Impacts to sunlight are measured using Annual Probable Sunlight Hours (APSH) for all main living rooms in dwellings if they have a window facing within 90 degrees of due south. The guidelines consider kitchen and bedrooms to be less important, but care should be taken to not block too much sun from these rooms.

Interpreting results

862. In undertaking assessments, a judgement can be made as to the level of impact on affected windows and rooms. Where there is *proportionally* a less than 20% change (in VSC, NSL or APSH) the effect is judged as to not be noticeable. Between 20-40% it is judged to be minor adverse, 30-40% moderate adverse and over 40% major adverse. All these figures will be impacted by factors such as existing levels of daylight and sunlight and on-site conditions. It is for the Local Planning Authority to decide whether any losses result in a reduction in amenity which would or would not be acceptable.

Overshadowing

863. Overshadowing of amenity spaces is measured using sunlight hours on the ground (SHOG). The BRE guidelines recommends that the availability of sunlight should be checked for open spaces including residential gardens and public amenity spaces.

Assessment

864. An assessment of the impact of the development on daylight and sunlight to surrounding residential buildings and public amenity spaces has been undertaken in accordance with the BRE Guidelines and considered applying the policies set out in policy D6 of the London Plan, policy DM10.7 of the Local Plan 2015 and policy DE7 of the draft City Plan 2040.

865. The application is supported by an Environmental Statement including an assessment (Chapter 10 with associated annexes) of the Daylight, Sunlight, Overshadowing, Solar Glare and Light Spillage. A Radiance Assessment has also been submitted including visual imagery visually representing the daylight and sunlight results. This analysis has been carried out for Bevis Marks Synagogue, 2 Heneage Lane, 18-20 Creechurch Lane and 2 & 10-16 Creechurch Lane.

866. The Local Planning Authority has commissioned a third party review by BRE, who have reviewed both abovementioned documents.

867. The Radiance Assessment contains Average Daylight factor (ADF) and median daylight factor results for some of the existing buildings. However, the BRE Report states "*Use of the daylight factor or daylight illuminance for loss of light to existing buildings is not generally recommended. This tends to penalise well-daylit existing buildings, because they can take a much bigger and closer obstruction and remain above the minimum recommendations in BS EN 17037. Because BS EN 17037 quotes a number of recommended values for different qualities of daylight provision, such a reduction in light would still constitute a loss of amenity to the room. Conversely if daylight factor and / or daylight illuminance values in an existing building were only just over the recommended minimum, even a tiny reduction in light from a new development would cause them to go below the minimum, restricting what could be built nearby*." The BRE Report goes on to list situations in which use of these methods may be appropriate, such as to a consented, but not yet built, property. According to the BRE review, since the selection of existing buildings assessed in the Radiance Assessment does not include these examples then the use of these methods is not in line with the BRE guidelines. Care should therefore be taken in their interpretation and when giving weight to the outcome of those elements of the assessment.

868. Whilst there is currently no established guidance regarding what constitutes a 'noticeable' or 'significant' change in daylight when using the BRE guidelines ADF formula or Radiance methodology, the radiance based assessments can draw upon the BRE's recommended ADF target values. Radiance assessment results are presented as colour rendered images to illustrate the individual daylight factors within room. It should be noted that the radiance assessment is not to be relied on solely and should be read in conjunction with the daylight and sunlight assessment submitted in the Environmental Statement in line with BRE Guidelines. The he local plan (paragraph 3.10.41) states that the CoL will apply the methods set out in the BRE guidelines. That approach is carried forward in the draft City Plan 2040 (paragraph 9.8.1).

869. BRE note that visual imagery are a form of qualitative assessment and it is advised that care should be taken if using and interpreting these images as their appearance will depend on a number of factors including the contrast and brightness of the viewing medium and individual perceptions. In contrast, the BRE guidelines give clear cut measures by which the acceptability of loss of light may be judged. It is noted that officers have considered and interpreted the visual images submitted as part of the radiance assessment qualitatively only. The actual daylight and sunlight impacts have been assessed against the BRE guidelines.

870. Officers consider that the applicants have completed a comprehensive daylight assessment, as set out within Environmental Statement (ES) Chapter 10 and ES Volume 3, Technical Appendix: Daylight, Sunlight and Overshadowing, Solar Glare and Light Spillage. BRE has confirmed that the daylight effects were generally correctly assessed in accordance with BRE Report, 'Site layout planning for daylight and sunlight – A guide to good practice', 2022 (the BRE Guidelines). This is the principal reference document used by local authorities in consideration of daylight and sunlight matters, throughout the UK and including CoL, and is referenced in key planning policy including in Local Plan policy DM 10.7 and in Emerging City Plan policy DE7.

871. The assessment submitted by the applicant considers the existing baseline conditions as the prevailing conditions across the site and of the surrounding area at the time of writing (August 2023), including relevant schemes under construction at the time (with massing due to be predominantly constructed / completed by the commencement of the construction works for the Proposed Development). It is advised that the baseline characterisation was based on site visits and on information and data sources online from the Valuation Office Agency.

872. The evolution of the baseline is an alternative baseline condition at an indeterminate point in the future for a scenario that assumes all relevant neighbouring developments outlined in the 'Cumulative Schemes' for the EIA (refer to ES Volume 1: Chapter 2 EIA Methodology) are built in the surrounding environment, prior to the implementation of the Proposed Development.

873. The Tier 1 cumulative schemes are as follows:

- 2-3 Finsbury Avenue
- Tenter House, 45 Moorfields53
- 1 Undershaft
- 100, 106 & 107 Leadenhall Street
- 115-123 Houndsditch
- Bevis Marks House, 24 Bevis Marks
- Fountain House, 130 Fenchurch Street
- Site bounded by Fenchurch Street, Mark Lane, Dunster Court and Mincing Lane
- 70 Gracechurch Street
- 55 Gracechurch Street
- Seal House, 1 Swan Lane
- 41 Tower Hill
- 1-5 London Wall Buildings
- Finsbury Circus Gardens
- 150-152 & 153 Fenchurch Street

- City Tower and City Place House, 40-55 Basinghall Street
- 55 Bishopsgate
- 85 Gracechurch Street
- 1 Exchange Square
- 65 Crutched Friars
- 1-27 The Arcade Liverpool Street
- 34-40 Whitechurch Lane and 29-31 Commercial Road
- Former Beagle House (Maersk House), Braham Street

874. In terms of the Assessment Methodology in the Environmental Statement, the following scenarios have been assessed in relation to daylight, sunlight and overshadowing:
- Existing Baseline Scenario - This scenario considers the existing daylight, sunlight and overshadowing condition of the Site and surrounding context.
- Future Baseline Scenario - This scenario assumes all Cumulative Schemes have been built out in the absence of the Proposed Development.
- Proposed Development Scenario - This scenario consists of the completed Proposed Development in the context of the surrounding environment; and
- Cumulative Scenario - This scenario considers the effects of the Proposed Development in conjunction with consented Cumulative Schemes in close enough proximity to the site.

875. Of the abovementioned Tier 1 cumulative schemes, the following have been considered with the potential to generate effects to daylight, sunlight, and overshadowing, in conjunction with the Proposed Development, and have been included within the Cumulative Assessment:
- 1 Undershaft (planning reference: 16/00075/FULEIA)
- 100 Leadenhall Street (planning reference: 22/00790/FULEIA)
- 24 Bevis Marks (planning reference: 17/00330/FULMAJ)
- 115-123 Houndsditch (planning reference: 21/00622/FULEIA)

876. For the assessment of the daylight and sunlight the following residential buildings have been considered in the ES:
- 2 Heneage Lane
- 4-8 Creechurch Lane
- 2&10-16 Creechurch Lane
- 18-20 Creechurch Lane
- 27-31 Mitre Street

877. The following places of worship have been considered, as sensitive receptors:
- St Helen’s Church Bishopsgate

- Bevis Marks Synagogue
- St Katherine Cree Church
- St Andrew Undershaft Church

878. The following educational building has been considered, as sensitive receptor:
- Sir John Cass Primary School

879. In terms of overshadowing, the following open spaces, as sensitive receptors, have been assessed:
- 30 St Mary Axe
- Bevis Marks Synagogue Courtyard
- 19 Bevis Marks Rooftop
- 1 Creechurch Place
- Mitre Square Garden
- Three education building amenity areas at Aldgate School
- 11 – 12 Bury Street Rooftop

880. When referring to the degree of effect (negligible, minor, moderate and major) in this report, Officers have adopted the terminology used in the Environmental Statement when describing the degree or extent of adverse impacts. Officers agree with these judgements reached in the ES and daylight/sunlight review when arriving at the assessment of the degree or extent of adverse impact. The criteria set out in the BRE Guidelines: Site Layout Planning for Daylight and Sunlight (2022) are used as guidance to inform the assessment in the ES in forming a judgement on whether the proposed development provides for sufficient daylight and sunlight to surrounding housing and is appropriate for its context (Part D of London Plan Policy D6), and when considering whether the daylight and sunlight available to nearby dwellings is reduced noticeably to unacceptable levels (Local Plan Policy DM10.7) and in considering whether daylight and sunlight is appropriate for its context and provides acceptable living standards (Emerging City Plan Policy DE7).

881. The ES considers moderate and major effects to be significant effects, whilst minor and negligible effects to be not significant effects. In the context of the BRE review all adverse impacts, including minor impacts, have been considered significant. As this is an EIA development and the BRE guidelines do not provide guidance on effect significance in EIA terms, it is considered that professional judgement is reasonable to be applied. The BRE guidance advises that the guidelines should be interpreted flexibly considering the built environment of each area and allows for local authorities to adopt different target values in certain circumstances. Considering that the site is located in a highly dense urban environment, with high-rise buildings in the vicinity, a pragmatic approach, in terms of significance of the effects, is considered reasonable to be applied. Whilst minor

adverse effects may be of local concern, they are not necessarily considered significant in the context of an EIA development in CoL.

882. Local Plan Strategic Policy CS10 seeks to ensure that buildings are appropriate to the character of the City and the setting and amenities of surrounding buildings and spaces. The BRE daylight guidelines are intended for use for rooms adjoining dwellings where daylight is required and may also be applied to non-domestic buildings where the occupants have a reasonable expectation of daylight; this would normally include schools, hospitals, hotels and hostels, small workshops and some offices. The BRE sunlight guidelines are intended for dwellings and non-domestic buildings where there is a particular requirement for sunlight. In this case officers do not consider that the offices surrounding have a particular requirement for sunlight. The surrounding commercial premises are not considered as sensitive receptors and as such the daylight and sunlight impact is not subject to the same daylight/sunlight test requirements as residential properties. The dense urban environment of the city in and around the Cluster is such that the juxtaposition of commercial buildings is a characteristic that often results in limited daylight and sunlight to those premises. Commercial buildings in such locations require artificial lighting and are not reliant on natural daylight and sunlight to allow them to function as intended, indeed many buildings incorporate basement level floorspace or internal layouts at ground floor and above without the benefit of direct daylight and sunlight. Whilst the proposed development would inevitably result in a diminution of daylight and sunlight to surrounding commercial premisses, it would not prevent the beneficial use of their intended occupation. As such the proposal is not considered to conflict with Local Plan Policy CS10 in this respect.

Daylight and Sunlight

883. Daylight has been assessed using both the Vertical Sky Component (VSC) and No Sky Line (NSL) tests these are complementary assessments for daylight: VSC is the measure of daylight hitting a window, NSL assessed the proportion of a room in which the sky can be seen from the working plane. Daylighting will be adversely affected if either the VSC or NSL guidelines are not met.

884. The BRE criteria states that a window may be adversely affected if the VSC measured at the centre of a window is less than 27% and less than 0.8 times its former value (i.e. experience a 20% or more reduction). In terms of NSL, a room may be adversely affected if the daylight distribution (NSL) is reduced beyond 0.8 times is existing area (20% or more reduction).

885. Both the London Plan 2021 and draft City Plan 2040 require daylight and sunlight to residential buildings to be appropriate to their context, and this will need

to be considered alongside reductions in daylight and sunlight assessed under the BRE methodology.

886. A total of 10 buildings, including residential, educational and places of worship, have been considered as sensitive receptors and assessed in the baseline condition in relation to daylight and sunlight, as stated above. Within these 10 buildings, a total of 586 windows serving 139 rooms were assessed. 219 windows were assessed for sunlight.

887. The third party reviewer (BRE) concurs that the scope of the study in terms of properties assessed appears reasonable covering the nearest applicable buildings. This includes residential properties, places of worship and a school. It is also noted that other nearby buildings contain offices, to which loss of daylight and sunlight would be less of an issue in the context of the BRE Report. It is therefore appropriate to exclude them from the detailed assessment. Some of the surrounding offices were noticed to be vacant or “to let”. Any loss of daylight and sunlight would only be relevant if they were converted to residential properties in the future.

888. Three scenarios are presented in the ES results in Chapter 10 including:

- Existing baseline vs Proposed
- Existing baseline vs Cumulative (future baseline and proposed) and
- Future baseline vs Cumulative.

889. The BRE reviewer considers that the existing baseline vs cumulative scenario should be seen as the primary assessment of cumulative impact. The future baseline vs proposed scenario is useful in ascertaining the proposed development’s contribution to any cumulative impact. For example, if the results of the future baseline vs proposed analysis contribution to any cumulative impact. For example, if the results of the future baseline vs proposed analysis show little difference in the results, it is other schemes, and not the proposed development, which are responsible for the cumulative impact results.

Existing Baseline

890. In relation to daylight, 20 (3.5%) of the 586 windows assessed for VSC have a baseline equal to or greater than the 27% VSC outlined in the BRE Guidelines. 53 (38.1%) of the 139 rooms assessed for NSL have a baseline daylight distribution of at least 80% or more of the total room area.

891. With regard to sunlight, 49 (22.4%) of the 219 windows meet the BRE criteria for both APSH and WPSH in the baseline condition.

892. The abovementioned assessment indicates that the surrounding receptors currently receive low light levels compared to the initial numerical values of 27% VSC, 80% NSL, 25% APSH and 5% WPSH, outlined in the BRE Guidelines (2022). This is representative of the very dense urban context of the area, which is characterised by a mixture of buildings, including tall buildings. To those windows receiving low levels of daylight and sunlight in the baseline scenario, even very small light losses can translate into large relative or percentage alterations, albeit the perceptible changes may be negligible.

St Andrew Undershaft Church

893. St Andrew Undershaft Church, which is place of worship is located to the southwest of the site

Existing baseline vs Proposed

894. The results suggest that all windows and rooms assessed would meet the BRE loss of daylight guidelines. The proposed development is to the north so would not impact sunlight provision. Therefore, the loss of daylight and sunlight would be assessed as negligible.

Existing baseline vs Cumulative

895. The cumulative scenario suggests that 37 windows would be below the BRE VSC guidelines. The relative losses would be 25-100, compared to the guideline 20% (7 would experience an alteration in VSC between 20-29.9% which is considered a Minor Adverse effect and 16 would experience an alteration between 30-39.9% which is considered a Moderate Adverse Effect. The remaining 14 windows would experience an alteration in excess of 40% which is considered a Major Adverse effect). However, many of the windows have low values of existing VSC so a small absolute loss results (equating to 0.1% to 5.4% VSC) in a larger relative loss. 35 of the affected windows would serve the main nave and two would serve further auxiliary rooms. The BRE reviewer advises that the ES Chapter assessment of a minor to moderate adverse cumulative impact is reasonable.

Future baseline vs Cumulative

896. In the future baseline vs cumulative scenario the results show no difference in values of VSC or daylight distribution. This suggests that the cumulative impact is driven by other schemes and not the proposed development.

2 Heneage Lane

897. This is a residential receptor to the north of the site.

898. Concerns have been raised regarding the use of this residential property and in particular the light levels on the upper floors. It has been raised that upper floor rooms are utilised throughout the day as rooms for reading (with reading chairs), a key need for a rabbi as study is a religious requirement, and as a playroom for the rabbi's family.

Existing baseline vs Proposed

899. The windows and rooms analysed at 2 Heneage Lane would meet BRE guidelines in terms of daylight. Loss of sunlight would not be an issue since the windows face northerly. Therefore, the loss of daylight and sunlight would be assessed as negligible.

900. In light of the above, the proposed development alone would meet the BRE guidelines in terms of daylight and sunlight and therefore, it would not adversely impact upon the light levels experienced in this residential property, including the upper floor rooms.

Existing baseline vs Cumulative

901. A total of six rooms were assessed. The cumulative scenario suggests that one window would be below the BRE VSC guidelines with a relative loss of 23.3% compared to the guideline 20% which is a Minor Adverse effect. The alteration equates to an absolute change of 2.4% VSC. This is located on the third floor and serves a bedroom with another window that would just meet the guidelines. The ES Chapter states that a weighted average of results gives a 20.8% relative reduction, just below the 20% guideline. The Radiance Assessment gives results of VSC averages for rooms, but the result suggests a slightly different 22.4% reduction. For NSL, all rooms assessed would meet BRE criteria. The ES Chapter suggests a negligible cumulative impact to daylight. However, the BRE review suggests that since one room would be below the VSC guidelines (albeit marginally) a minor adverse cumulative impact would be more appropriate. A Minor Adverse impact is not significant. It is noted that the room would meet the

daylight distribution criteria and therefore, the light levels would be such that even if the room is not only or primarily used for sleeping, other activities including reading and playing would still be able to be carried out.

Future baseline vs Cumulative

902. The future baseline vs cumulative results, show a small difference to one window. This suggests that the primary cause of the cumulative loss comes from other consented schemes than the proposed development.

St Helen's Church Bishopsgate

903. St Helen's Church is located to the northwest of the site, beyond 30 St Mary Axe (the Gherkin).

Existing baseline vs Proposed

904. Although the window map for St Helen's Church was missing from the Annex submitted with the ES, it has thereafter been submitted by the applicant. It should be noted though that a full assessment of St Helen's Church was reported in the assessment of effects in the ES Chapter, and this does not alter outcomes.

905. The windows and rooms analysed at St Helen's Church Bishopsgate would meet BRE loss of daylight guidelines. Loss of sunlight would also meet the BRE guidelines. Loss of daylight and sunlight would therefore be assessed as negligible.

Existing baseline vs Cumulative

906. In the cumulative assessment a total of 49 windows serving 13 rooms were assessed for daylight within this building. Of the 49 windows 23 windows would be below the BRE VSC daylight guidelines. The relative losses would be 33-100% (compared to the guideline 20%), with resultant values in the range 0-7.4% VSC. There are some low existing values which can at least partly explain the larger relative losses. However, there would also be daylight distribution results below the BRE guidelines to eight rooms. The relative losses of the areas able to receive direct skylight would be 24-82% (compared to the guideline 20%).

907. In terms of daylight distribution eight out of 13 rooms would experience an alteration in NSL between 20-29.9% which is considered a Minor Adverse effect

and two would experience an alteration between 30-39.9% which is considered a Moderate Adverse Effect. The remaining four rooms would experience an alteration in excess of 40% which is considered a Major Adverse effect. It is noted that the nave would see a minor adverse NSL loss, retaining 52% NSL.

908. The ES Chapter states that the absolute changes in VSC to the nave may not result in a noticeable change, as shown by the minimal absolute average change to VSC and assesses an overall minor to moderate cumulative adverse impact. The BRE review suggests this would tend to at least moderate for the worst-case rooms based on the daylight distribution results, if they had a particular requirement for daylight. Given the reductions in both VSC and NSL, officers concur with the view taken by the BRE reviewer that the effects would be moderate adverse

909. There would also be windows to St Helen's Church Bishopsgate below the BRE loss of sunlight guidance in the cumulative scenario. Five windows would be below the guidelines with removal of all, or nearly all, of their currently available annual probable sunlight. The ES Chapter assesses a moderate to major impact, which BRE review considers reasonable. However, as noted below the assessment of the future baseline against the cumulative, demonstrates that this is due to other consented schemes.

Future baseline vs Cumulative

910. The results of the future baseline vs cumulative scenario, where one window would be below the VSC guidelines but it has a very low existing value and small absolute loss of 0.1% VSC, suggest that other consented schemes are predominately responsible for the cumulative loss and not the proposed development.

911. In terms of sunlight, ES Chapter presented results suggest the proposed development makes no difference to sunlight at these windows and therefore the cumulative loss is due to other consented schemes, one of which is directly to the south of the church.

Sir John Cass Primary School (Aldgate School)

912. This is an educational receptor located approximately 130m to the east of the application site.

913. It is noted that a few rooms and windows were not included in the initial assessment for daylight and sunlight. However, additional information has been provided during the process of the application.

914. A total of 111 windows serving 21 rooms were assessed for daylight within this building.

Existing baseline vs Proposed

915. The windows and rooms analysed would meet the BRE guidelines in terms of daylight and sunlight. These effects are therefore assessed as negligible.

Existing baseline vs Cumulative

916. The cumulative assessment shows that one room would be below the BRE daylight distribution guideline. The area able to receive direct skylight is reduced by 26.6% compared to the guideline 20%. This room is labelled as a “Play Centre Room” on the second floor. The ES Chapter assessed a negligible cumulative impact to daylight. However, the BRE reviewer considers that since there is an area below the BRE guidelines a minor cumulative loss of daylight would be more appropriate. However, as discussed below, the results suggests that the proposed development does not impact the area able to receive direct skylight in that room and thus, the impact is due to other consented schemes.

Future baseline vs Cumulative

917. The results presented do suggest that the proposed development does not impact the area able to receive direct skylight in the room affected and therefore other consented schemes are the primary reason for the cumulative loss of daylight.

Bevis Marks Synagogue

918. Bevis Marks Synagogue is a place of worship, and it is located to the north of the application site. This building is labelled as 4 Heneage Lane Spanish and Portuguese Synagogue in the results in Annexes 4 and 5 and the window maps in Annex 6.

919. The building comprises the ground floor central space, which has north, west and south facing windows, with a row of windows along the gallery level above.

Due to the open design, the central room is served by both the ground and gallery level windows, albeit the ES Chapter has counted the gallery as a separate room for the NSL assessment. It is understood that prayers are read from the central raised platform (the Bimah). The third room assessed is the Synagogue's visitor centre, situated between Valiant House and the Bevis Marks Synagogue. This room has a glazed 'canopy' roof, a roof light window and four north facing windows by the entrance.

920. The future use of those spaces when in full operations has been clarified by the Rabbi. It has been confirmed that their use will include daily worship, both in the morning and midday, and on the Sabbath and Jewish festivals. Evening events, and weekend weddings would also be conducted. Finally, the visitor centre will be opened Sunday-Friday. It has been forecasted that the visitor centre would be welcoming at least 25,000 visitors a year including local school-children.

921. It is noted that several objections have been received in relation to the impact of the development on the daylight and sunlight within the Synagogue. The effects of the proposed development onto this place of worship are assessed in detail below. As noted above, the applicant aside of the daylight and sunlight assessment has submitted a radiance assessment including visual imagery, providing a contextual narrative, only used as a qualitative assessment to visualise whether there are any noticeable daylight and sunlight differences.

Existing baseline vs Proposed

922. A total of 29 windows serving three rooms were assessed for daylight within this building, of which five are south facing at gallery level. The ES Chapter results suggest that five windows would be below the BRE VSC guidelines. These are the south facing windows which directly face the proposed development. The relative losses would be 27-36% (compared to the guideline 20%), with resultant values in the range 2.3-4.8% VSC. The absolute changes in VSC to these five windows equates to 1.3% to 1.9% VSC. These windows light spaces which are also lit by other windows on other aspects of the building. These are considered minor for four windows and moderate adverse effects for one window, which results in VSC alterations higher than 30%.

923. The ES Chapter and separate radiance assessment discuss the weighted average for the results, indicating a reduction of 0.4% VSC. Since the two main spaces these five windows light (gallery and central room) are large spaces, a loss of light from one area may not be compensated by daylight from a window on the other side of the building and the BRE reviewer considered that a weighted average is not suitable.

924. For NSL, all three rooms assessed (central room, gallery and exhibition/visitor centre) would meet the BRE criteria and so are considered to experience a Negligible effect.

925. The ES Chapters assessed minor adverse impact to daylight is reasonable. In the context of the BRE review report, all impacts, including minor adverse, are considered significant. This is to maintain adequate natural light in existing properties. Although this perspective is aimed to minimise potential negative effects on wellbeing and promoting healthier living environments, it is a precautionary principle. The BRE guidelines do not advise on effect significance in EIA terms and therefore, to assess an EIA development, such as the one currently being assessed, professional judgement should be applied. Effectively, whilst minor adverse effects may be of local concern, they might not be considered significant in the context of the EIA development in CoL. In their review of this position, the BRE reviewer has considered it reasonable. The effect is therefore considered minor adverse.

926. The BRE review also states that the radiance assessment includes Average Daylight Factor and median daylight factor results for the existing baseline, consented baseline and proposed development (with the consented baseline). The results do show a small decrease in the values with the proposed development. However, the BRE guidelines do not recommend the use of these metrics to assess loss of daylight in existing buildings.

927. It is the officers view that given that the VSC and NSL assessments have been carried out in accordance with the BRE suggested methodology for the loss of daylight, the use of an alternative assessment (radiance assessment) to provide a contextual narrative for the daylight in the space is useful for the assessor and the decision makers. Whilst it is understood that the spaces (central room and gallery) are large spaces, they are also served by large windows on all aspects of the building, mainly to the north and south. It is therefore considered that, taking into account the very low absolute VSC values, the daylight distribution results which meet the BRE guidelines, the existing open layout of the Synagogue and existing large windows on all aspects of the building which would largely not be affected (24 out of 29 windows would not be impacted), it is considered that the light levels within the building would not be reduced to an extent that would make impossible to function as a place of worship or as an exhibition centre. It is also not considered that the development, if erected, would diminish the visual appreciation of the internal features of the Synagogue, including the Bimah and Ark.

928. Loss of sunlight to windows would meet the BRE guidelines. Although there would be a loss of sunlight to south facing windows and the rooflight to the exhibition/visitor centre, this would meet the BRE guidelines since the absolute

loss of annual sunlight would be 4% or less. In two cases this is 4%. Given that the loss of sunlight does not relate to losses to living rooms, the effect is not considered to result in adverse impacts on living conditions. The BRE reviewer advises that if there is a particular requirement for sunlight, the loss could be assessed as minor adverse, since the guidelines are only just met. Whilst it is understood form representations received by the Rabbi and the Sephardi community that daylight is necessary to be able to carry out daytime rituals within the Synagogue, direct sunlight is not understood being a requirement for the place of worship to be used for its intended use. Nevertheless, the results indicate that the BRE guidelines for sunlight will be met and therefore, the impact is considered Negligible.

929. Concerns have been raised by a number of objectors regarding the levels of light in the Synagogue. It has been highlighted that these are important to maintain Jewish worship and carry out rituals. Although the matters raised are taken in careful consideration, it is considered that for the reasons explained above, the impacts would be limited and localised. The VSC effects are minor adverse, the BRE guidelines for NLS and sunlight are met and therefore, overall, the daylight and sunlight effects are not considered significant, in EIA terms. It is noted that the BRE consultant has considered this position reasonable.

Existing baseline vs Cumulative

930. In the cumulative assessment, there would be 17 affected windows. These include the five south facing windows below the guidelines with the proposed development, four north facing windows to the exhibition centre, five west facing windows and three north east facing windows.

931. Out if the 17 affected windows, three are located on the north facing elevation at gallery level and would experience an alteration in VSC of 20.5%, 20.9% and 25.4% compared to the guideline 20%. This is considered a Minor Adverse effect. These windows would see absolute reductions of 0.8% to 1.8% VSC.

932. Of the five windows located on the west facing elevation at ground and gallery level, four would see alterations of 32.4%, 32.6%, 37.5% and 38.2% which are considered Moderate Adverse, and the fifth seeing a 42.6% alteration, which is considered Major Adverse. These alterations equate to absolute changes ranging from 1.1% to 2% VSC.

933. On the south facing elevation, the five facing the application site would experience an alteration in VSC between 40.2% and 52.9% which are considered a Major Adverse effect. However, the absolute reductions at these five windows

would be between 1.8% VSC and 3.1% VSC. These windows light spaces which are also lit by other windows on other aspects of the building.

934. It is noted that the 13 windows servicing the Synagogue's central room and gallery have baseline values of 3.4% to 7.1% VSC, due to the constrained location of the site and relationship with adjacent taller buildings.

935. The final four north facing windows at the entrance of the exhibition centre would see alterations greater than 40% (46% to 72%) which is considered Major Adverse. The absolute reductions equate to 1.4% to 1.8% VSC. The exhibition/visitor centre would continue to receive light through the canopy and rooflight, and so this room would continue to meet the BRE criteria on a room basis.

936. The daylight distribution results for the three areas of the Synagogue (gallery, central room and exhibition/visitor centre) analysed meet the BRE guidelines. It is noted that for the gallery, the area able to receive direct skylight is reduced by 20%, which is the guideline target. The ES Chapter assesses a minor to moderate adverse impact to daylight. The BRE review suggests this would tend to moderate due to the increased number of results below the guidelines. Other schemes are responsible for the loss of daylight to northerly facing areas whilst the proposed development is a factor in the loss of light to the southerly facing windows.

937. Cumulative loss of sunlight results are the same as those reported in the existing vs proposed scenario, meeting the BRE guidelines. The BRE reviewer advises that the same conclusions of an impact to sunlight that could tend to minor adverse, as the southerly facing windows just meet the guidelines, can be drawn.

938. Additional alterations to windows on the north and west elevations of the central room would be due to other consented schemes. The five windows to the south elevation would incur additional alterations as a result of the proposed development and together with consented schemes. However, there are small absolute VSC changes and the BRE criteria are meet on a room basis in terms of daylight distribution. The exhibition centre would see some changes in daylight to the north facing windows as a result of consented schemes; however, would have access to daylight through the canopy and rooflight. The NSL to all three rooms would be BRE compliant. Therefore, due to the additional impact occur from cumulative schemes, the cumulative effect to daylight within this building is considered Minor to Moderate Adverse.

Future baseline vs Cumulative

939. The results of the future baseline vs cumulative scenario show that for VSC, 24 of the 29 (82.8%) windows assessed would meet BRE's criteria and are therefore considered to experience a Negligible effect. The five remaining windows are located on the south facing elevation at gallery level, thereby serving the main central room. Four of these would experience an alteration in VSC of 34.5%, 32.1%, 31.6% and 32.7%, 37.0% which is considered a Moderate Adverse effect. Although the percentage values are greater than the 'Existing vs Proposed' development, it is noted that the absolute changes remain almost unaltered (between 1 and 1.9% VSC). This is because these five windows and other windows serving the central room at the Future Baseline values, are lower as a result of consented schemes.

940. For NSL, all rooms assessed would meet BRE's criteria and so are considered to experience a Negligible effect.

941. In terms of sunlight, Bevis Marks Synagogue would meet the BRE criteria and therefore, the effects would be negligible.

942. On the basis of the above, it is considered that, given that the absolute VSC reductions would be limited and all rooms would meet the BRE criteria for NSL, it is considered that the effects would be Minor Adverse. This is therefore indicative of the minor to moderate effects of the cumulative scenario assessment occur as a result of all cumulative schemes than the proposed development alone.

943. The application is supported by a radiance assessment and Radiance generated images. Although a qualitative assessment, these images show that the impact on the level of daylight will be more localised to a limited area of the mezzanine floor on the south side (an area which is understood to be used by female members of the congregation) than the gallery.

944. Having due regard to the need to advance equality of opportunity between persons who share a relevant protected characteristic and persons who do not share it involves having due regard, in particular, to the need to—

(a) remove or minimise disadvantages suffered by persons who share a relevant protected characteristic that are connected to that characteristic;
(b) take steps to meet the needs of persons who share a relevant protected characteristic that are different from the needs of persons who do not share it;
(c) encourage persons who share a relevant protected characteristic to participate in public life or in any other activity in which participation by such persons is disproportionately low.

945. The relevant protected characteristics include sex, race, and religion or belief.

946. Giving due regard to the matters identified in the public sector equality duty with respect to this place of worship and the community associated with it, it is the view of officers, taking into consideration all material factors into consideration, in particular the quantifiable daylight results, the effects would not be such that to cause an adverse effect on the ability to manifest religion in worship in the Bevis Marks Synagogue or prevent the ability to carry out religious activities, including circumcision. Indeed, it is considered that the development would not adversely affect the Synagogue as a place of worship for all who share relevant protected characteristics and those who do not do so and that the duty is complied with in this respect.

4 – 8 Creechurch Street

947. This is a four storey residential building and it is located to the southeast of the application site, approximately 35 metres away. The ES chapter assesses rooms and windows on the north, west and south facing elevations. A total of 59 windows serving 21 rooms are assessed.

Existing baseline vs Proposed

948. Of the 59, 19 windows would be below the BRE VSC guidelines with relative losses between 20.3% and 29.9% compared to the guideline 20%, which are considered minor adverse effects. Resultant values would be in the range 2.6-11.2% VSC.

949. Of these 19 windows, five serve bedrooms. Two of these bedrooms on the fourth storey have a second window and would meet the VSC criteria for the room as a whole. The three other bedrooms, located at first to third storey, would see absolute reductions of 2.4% VSC or less. Therefore, it is unlikely that these alteration would materially affect the function of these rooms. Two of the affected windows serve small galley kitchens on second and third floors. The absolute reductions to those windows equate to 1.3% VSC and 2.3% VSC. Six of the affected windows serve three dual aspect living rooms which each have four windows with absolute VSC reductions ranging from 1% to 3.2%. Due to all three living rooms having two further windows facing away from the Site which are unaffected in terms of daylight, the change is unlikely to be materially harmful and adversely impact the function of these rooms. Two windows which serve a dual aspect living kitchen dining (LKD) room would also be affected, however, the room as a whole would meet BRE's criteria. Finally, four affected windows serve a dual aspect studio apartment on the fourth storey. These two windows would see

minimal absolute alterations of 3% and 3.4% VSC and as a whole it would meet the BRE criteria.

950. Daylight distribution would meet the BRE guidelines.

951. In light of the above, the daylight effects are considered Minor Adverse.

952. Loss of sunlight would not be an issue since the development is to the north. The effects would therefore be negligible.

Existing baseline vs Cumulative

953. In the cumulative assessment a total of 23 windows would be below the BRE VSC guidelines with relative losses of 20,3% – 53% compared to the 20% guideline. Therefore, four additional windows would be impacted compared to the Proposed Development scenario, with 19 seeing a similar or greater magnitude of VSC impact. nine would experience an alteration in VSC between 20-29.9% which is considered a Minor Adverse effect and five would experience an alteration between 30-39.9% which is considered a Moderate Adverse Effect. The remaining nine windows would experience an alteration in excess of 40% which is considered a Major Adverse effect. Resultant values would be 2.5-11.1% VSC.

954. Of the 23 windows, nine serve bedrooms. Four of the bedroom windows previously affected would see no change to the magnitude of impact in the cumulative scenario, except for one fourth storey bedroom which would see a Major Adverse cumulative effect. The remaining four bedrooms, which were not affected in the 'Proposed Development' scenario, would result in Minor to Major Adverse effects because of other consented schemes. The effect on the two small galley kitchens would experience the same absolute reduction as the 'Proposed Development' scenario. The same six windows serving three dual aspect living rooms discussed in the Proposed Development scenario would see a greater magnitude of impact in the cumulative scenario. Two of these living rooms would continue to meet BRE's criteria for VSC on a room bases, with the third living room seeing an overall 23% (Minor Adverse) effect. The two windows serving the dual aspect living kitchen dining (LKD) room would also see virtually no change in the magnitude of VSC impact in the cumulative scenario. The four affected windows serve a dual aspect studio apartment on the fourth storey would see additional reductions. These four windows would see alterations of 6.4% to 7% VSC. The room would not meet BRE's criteria for VSC overall, with the additional alterations occurring due to consented schemes.

955. In terms of daylight distribution, all rooms would meet the BRE NSL criteria.

956. The ES Chapter assesses a minor to moderate adverse impact to daylight. This is reasonable, but the BRE review report suggests that the effects would tend to moderate. Given that all rooms would meet the daylight distribution and taking into account the existing dense urban environment at the City, it is the view of officers that the appropriate classification is minor to moderate. Given that the impact on the 'Existing vs Proposed' scenario resulted in Minor Adverse effect, it is considered that the additional effect would be due to other consented schemes.

957. Loss of sunlight would not be an issue since the development is to the north. The effects would therefore be negligible.

Future baseline vs Cumulative

958. Of the 59 windows, 20 would be affected, which are located on the north and west facing elevations. 13 would experience an alteration in VSC between 20-29.9% which is considered a Minor Adverse effect whilst seven would experience an alteration between 30-39.9% which is considered a Moderate Adverse Effect.

959. For NSL, all rooms assessed would meet BRE's criteria and so are considered to experience a Negligible effect in that regard.

960. Overall, the VSC and NSL impacts are virtually unchanged from the Existing Vs Proposed assessment and so are considered to remain Minor Adverse.

961. Loss of sunlight would not be an issue since the development is to the north. The effects would therefore be negligible.

962. The results of the future baseline vs cumulative suggest the cumulative loss of light is due to the impact of the proposal with other schemes rather than the development in isolation.

2 and 10-16 Creechurch Street

963. This is a four storey residential building and it is located to the southeast of the application site, 12 metres away at each closest point. Consent for residential use was granted in 2000 for the "*Retention of use as residential Class C3 and temporary sleeping accommodation (as defined in the Greater London Council (General Powers) Act 1973 s.25 (as amended)) and office Class B1(a) in lieu of Class B1(a) office and/or C3 residential at 1st-4th floors of 2 and 10-16 (even) Creechurch Lane and 1st-5th floors of 18-20 (even) Creechurch Lane/24-26 (even) Mitre Street.*" (Ref no: 4118CE). Enforcement complaints were thereafter

lodged for the use of the premises for short term lets. Following assessment and on the limitation imposed by s.44 of the Deregulation Act 2015 and the new s.25A of the Greater London Council (General Powers) Act 1973 (as amended), the enforcement cases closed. Although online searches show that some properties are used as short term lets, the ES Chapter assumes the worst case scenario that they are permanent residential properties.

964. A total of 72 windows on the west facing elevation, serving 16 rooms, have been assessed.

Existing baseline vs Proposed

965. Of the 72 windows, only four meet the BRE VSC guidelines. 68 windows would therefore be below the guidelines with relative losses between 23.9% and 58.5%, compared to the guideline 20%. The ES Chapter states in paragraph 10.143 that "*Due to the close proximity of this neighbour to the Site, the tightly constrained location and being lower compared to the surrounding context, the existing daylight values are generally very low, such that high percentage changes may arise in relation to small absolute reductions*." The BRE review report considers that there is some validity to this point and there are some existing low values of VSC. The values of existing VSC for the 68 windows below the guidelines would be 2.6-9.5% VSC, which would be reduced to 1.5-5.8% VSC.

966. Three of the affected windows would experience an alteration between 30-39.9% which is considered a Moderate Adverse effect and 69 windows would experience an alteration in excess of 40% which is considered a Major Adverse effect.

967. There are two living/dining rooms at first and second storey, and two living rooms at third and fourth storey. These four rooms are each served by five affected windows (20 affected windows in total). These rooms do not meet the BRE light distribution criteria, resulting in minor to moderate effects (between 21% and 37% reductions).

968. A total of 16 windows affected serve a bank of four bedrooms in the central portion of the elevation. Each of these bedrooms has four windows, which would see absolute reductions of 1.4% to 3.3% VSC. Three of these bedrooms would see NSL alterations greater than 40% which is considered a Major Adverse effect, and the fourth would see an alteration of 36% (Moderate Adverse). However, it is noted that BRE Guidance suggests that daylight distribution may be considered less important in bedrooms than living areas, as they are mainly used for sleeping.

969. The remaining 32 affected windows serve eight living rooms, at the northern end of the elevation which is closest to the Proposed Development. Each of these living rooms have four windows. The absolute reductions equate to VSC levels between 2.9% and 7.3% VSC. One living toom would see a Moderate Adverse NSL alteration, whilst seven would see Major Adverse light distribution alterations.

970. Given the low baseline values, the percentage alterations are very high and disproportionate to absolute reductions. For that reason, the effects are considered moderate to major adverse.

971. The separate 'Radiance Assessment' gives weighted VSC values (an approach recommended in the BRE Report in situations such as the layout here where it is suggested that all rooms analysed are lit by multiple windows). However, no value for the proposed development with the existing baseline appears to have been given, so the results cannot be commented on. Similarly, the submitted visual radiance generated images submitted do not consider the 'Existing vs Proposed' scenario. Further assessment is provided in the sections below.

972. The ES Chapter assesses an overall impact of minor to moderate adverse. The BRE review report suggests this should be at least moderate adverse. Although part of the reason for larger relative losses is due to existing lower values, the vast majority of windows would be below the VSC guidelines and half the rooms, including four living rooms, would be below the daylight distribution guideline. Officers agree with the view taken from the BRE reviewer in terms of the magnitude of overall effects.

973. Loss of sunlight would not be an issue since the development is located to the north. The effects would therefore be negligible.

Existing baseline vs Cumulative

974. All 72 windows would be below the VSC guidelines in the cumulative scenario with relative losses in the range 23.9-58.5%, compared to the guideline 20%. Resultant values would be between 1.2% and 2.8% VSC. Three windows would experience a reduction between 30-39.9% which is considered a Moderate Adverse effect and 69 windows would experience an alteration in excess of 40% which is considered a Major Adverse effect.

975. There are two living dining rooms at first and second storey, and two living rooms at third and fourth storey. These four rooms are each served by five affected windows (20 affected windows in total). The absolute reductions equate to VSC levels between 1.4% and 2.9%. The living dining rooms would see NSL alterations of 21% and 37%, which are considered Minor and Moderate Adverse respectively.

Due to the low existing NSL values, which are below 18% NSL in the baseline, the daylight distribution reduction would be very high and potentially not as experienced in these rooms.

976. A total of 16 windows affected serve four bedrooms in the central portion of the elevation. Each of these bedrooms has four windows, which would see absolute VSC reductions of 1.4% to 3.3%. Three of these bedrooms would see NSL alterations greater than 40% which is considered a Major Adverse effect, and the fourth would see an alteration of 36% (Moderate Adverse). BRE Guidance suggests that daylight distribution may be considered less important in bedrooms, due to their main use for sleeping.

977. The remaining 32 affected windows serve eight living rooms, at the northern end of the elevation which is closest to the Proposed Development. Each of these living rooms have four windows. The absolute reductions equate to VSC levels between 2.9% and 7.3% VSC. One living toom would see a Moderate Adverse NSL alteration, whilst seven would see Major Adverse NSL alterations over 40% against the guideline 20%.

978. The separate report contains weighted averages of VSC results for each room. In the cumulative scenario (existing vs cumulative) all 16 rooms would also be below the VSC guidelines with relative losses of 47-78%, compared to the guideline 20%. All 16 rooms would be below the daylight distribution guideline with the areas able to receive direct skylight being reduced by 27.7-57.3%, compared to the guideline 20%.

979. The ES Chapter considers that overall, the VSC and NSL impacts are virtually unchanged from the Existing Vs Proposed assessment and so are considered to remain moderate to major adverse. The BRE review report advises that these should be considered as major impacts. Although there are lower existing values, all windows and rooms assessed at the building would be below the guidelines in general by a large margin. Officers concur with the view taken by the BRE consultant.

980. Loss of sunlight would not be an issue since the development is to the north. The effects would therefore be negligible.

Future baseline vs Cumulative

981. Of the 72 windows 71 will be below the BRE guidelines. Three windows would experience an alteration in VSC between 20-29.9% which is considered a Minor Adverse effect and eight would experience an alteration between 30-39.9% which is considered a Moderate Adverse Effect. The remaining 60 windows would

experience an alteration in excess of 40% which is considered a Major Adverse effect.

982. 23 of the affected windows serve two living dining rooms at first and second storey, and two living rooms at third and fourth storey. These four rooms are each served by five or six affected windows. The absolute reductions equate to VSC levels between 1.2% and 2.2%. The living dining rooms would see NSL alterations of 30% and 38%, which are considered Moderate Adverse. The living rooms would see NSL alterations of 27% and 34% which are also Minor and Moderate Adverse effects. Due to the low future baseline NSL values, which are below 18% NSL in the baseline, the alterations are higher than would potentially be experienced in those rooms.

983. 16 of the affected windows serve four bedrooms. Each of these bedrooms has four windows, which would see absolute reductions of 1.4% to 2.5% VSC. Three of these bedrooms would have NSL alterations greater than 40% which is considered a Major Adverse effect, and the fourth would result in an alteration of 36%. BRE Guidelines suggest that daylight distribution may be considered less important in bedrooms, due to their use primarily for sleeping.

984. The remaining 32 affected windows serve eight living rooms, at the northern end of the elevation which is closest to the Proposed Development. Each of these living rooms have four windows. The absolute reductions equate to VSC levels between 2.2% and 3.7% VSC. Five rooms would meet BRE's criteria for NSL and thus will have a Negligible effect, whilst three would see alterations of 22.2%, 26.4% and 32.4% which are Minor and Moderate Adverse effects, respectively.

985. The VSC and NSL impacts are almost unchanged from the Existing Vs Proposed assessment and so are considered to remain minor to moderate adverse.

986. The VSC assessment shows that the level of daylight at these flats is generally very low, which is typical within a highly built up urban environment. The alterations from the Proposed Development (with consented schemes) are in line with reductions already caused from the consented schemes.

987. The separate assessment including Average Daylight Factor and Median Daylight Factor results for the existing baseline, consented baseline and proposed development (with the consented baseline) has been submitted, although this is not recommended in the BRE guidelines. The visual radiance images prepared show that some rooms would not experience noticeable differences, whilst others will experience limitedly noticeable changes. Although it is considered that the proposed development would be a factor in the cumulative loss, it is considered that due to existing dense urban environment, low existing VSC and NSL values

and limited absolute changes, the effects would not be such a to adversely impact the use of these rooms for their intended use.

18 - 20 Creechurch Street

988. This is a four storey residential building, located approximately 12 metres to the southeast of the application site. Consent for residential use was granted in 2000 for the "*Retention of use as residential Class C3 and temporary sleeping accommodation (as defined in the Greater London Council (General Powers) Act 1973 s.25 (as amended)) and office Class B1(a) in lieu of Class B1(a) office and/or C3 residential at 1st-4th floors of 2 and 10-16 (even) Creechurch Lane and 1st-5th floors of 18-20 (even) Creechurch Lane/24-26 (even) Mitre Street.*" (Ref no: 4118CE). Enforcement complaints were thereafter lodged for the use of the premises for short term lets. Following assessment and on the limitation imposed by s.44 of the Deregulation Act 2015 and the new s.25A of the Greater London Council (General Powers) Act 1973 (as amended), the enforcement cases closed. Although online searches show that some properties are used as short term lets, the ES Chapter assumes the worst case scenario that they are permanent residential properties.

989. The building wraps around the corner of Creechurch Lane, meaning that corner windows look directly towards the Proposed Development. Windows on the west and north elevation would have an oblique view of the Proposed Development. Layouts obtained show that a total of 82 windows serving 43 rooms, which are relevant for daylight assessment.

Existing baseline vs Proposed

990. Of the 82 windows assessed, 42 would be below the BRE VSC guidelines. Relative losses of VSC would be 21.4-65.5% compared to the guideline 20%. The values of existing VSC for the 42 windows below the guidelines would be 6.9-20.4% VSC and would be reduced to 4.1-15.4% VSC.

991. Of the 42 affected windows, 13 would experience an alteration in VSC between 20-29.9% which is considered a Minor Adverse effect and five would experience an alteration between 30-39.9% which is considered a Moderate Adverse Effect. The remaining 24 windows would experience an alteration in excess of 40% which is considered a Major Adverse effect.

992. 16 of the affected windows serve nine bedrooms, and five serve single aspect kitchens. These rooms, which see VSC impacts ranging from Minor to Major Adverse, are not considered primary living spaces due their use and so are

considered less sensitive to daylight reductions. The remaining 21 windows serve seven living dining rooms. Four of the living dining rooms are located on the corner of 18-20 Creechurch Lane, which each have four windows facing directly towards the application site. At each living dining room, three of the windows see Moderate to Major Adverse effects, with the stack of windows located on the north facing elevation seeing Minor to Moderate Adverse losses. The absolute alterations to these four living dining rooms on a VSC by room basis range from 6.1-7.7% VSC. It is therefore expected that these reductions would be perceptible. The remaining three living dining areas, each have two windows that are located on north facing elevation. These rooms would experience absolute reductions to VSC on a room basis ranging from 3-3.4% VSC, which is considered unlikely to result in perceptible change.

993. For NSL, all rooms assessed would meet BRE's criteria and so are considered to experience a Negligible effect.

994. Considering the type of rooms and their effect, the ES Chapter assessed the overall impact as moderate adverse. This is reasonable overall by the BRE reviewer, but it is suggested that the effects would tend to major for the living area on each of the first to fourth floors where all windows would be below the guidelines, some by a large margin. It is the officers view that taking into consideration of the dense urban nature of the City and the fact that daylight distribution criteria will be met, the overall effects can be considered moderate adverse.

995. Loss of sunlight would not be an issue since the development is located to the north. The effects would therefore be negligible.

Existing baseline vs Cumulative

996. In the cumulative scenario, of the 82 windows 62 would be below the BRE VSC guidelines. Relative losses of VSC would be 21.0-86.6%, compared to the guideline 20%. 27 windows would experience an alteration in VSC between 20-29.9% which is considered a Minor Adverse effect and nine would experience an alteration between 30-39.9% which is considered a Moderate Adverse Effect. The remaining 26 windows would experience an alteration in excess of 40% which is considered a Major Adverse effect.

997. Of the 43 rooms 34 will experience reductions in daylight distribution. 28 of the affected windows serve 16 bedrooms, where a similar or greater magnitude of impact occurs as a result of cumulative schemes. An additional 12 bedrooms windows would be affected due to cumulative schemes, compared to the

Proposed Development scenario. However, these additional losses equate to less than 2% VSC. Six affected windows serve small kitchens, which is one more than in the Proposed Development scenario. The sixth kitchen would see a 24.2% reduction which is a Minor Adverse effect. However, these bedrooms and kitchens are not considered primary living spaces and so the BRE guidance considers them less sensitive to daylight alterations.

998. The remaining 24 affected windows serve the corner and north living dining rooms. These windows would see a similar or greater magnitude of impact in the cumulative scenario. The fourth floor living dining room on the north elevation is not affected in the Proposed Development scenario and so the impacts occur as a result of cumulative schemes. Finally, three living rooms located further east along the north facing elevation, which were BRE compliant in the Proposed Development scenario, would see reductions from other consented schemes.

999. Of the nine rooms affected for NSL, all would experience an alteration in NSL greater than 40% which is considered a Major Adverse effect. These are all bedrooms and small kitchens where daylight distribution is considered less important due to their use.

1000. The separate report also includes visual Radiance generated images from points in the spaces. Although a qualitative assessment, it provides an indication of whether changes in the daylight will be noticeable. The submitted radiance images suggest that there will be some changes that will be limitedly noticeable.

1001. The ES Chapter suggests a moderate to major cumulative impact. The BRE reviewer considered that these would be major for three rooms on each of first to fourth floor rooms on the west façade to Creechurch Lane and the corner of Creechurch Lane and Mitre Street and two rooms in this area on the fifth floor. Officers considered that overall moderate to major impacts would be reasonable, considering the magnitude of effects and the dense urban environment.

1002. Loss of sunlight would not be an issue since the development is to the north. The effects would therefore be negligible.

Future baseline vs Cumulative

1003. Of the 82 windows 46 will be below the BRE guidelines in this scenario. Of the 46 affected windows, 16 would experience an alteration in VSC between 20-29.9% which is considered a Minor Adverse effect and four would experience an alteration between 30-39.9% which is considered a Moderate Adverse Effect. The remaining 26 windows would experience an alteration in excess of 40% which is considered a Major Adverse effect.

1004. A total of 16 windows affected for VSC serve nine bedrooms, and five serve kitchens. These rooms are not considered primary living spaces and therefore are not afforded the same protection in terms of daylight. The remaining 27 windows serve eight living dining spaces, and the final window affected serves one living room. Due to the living dining rooms being located on the corner, with windows fronting the proposed development, are expected to result in large percentage reductions. The living room which is located further east along the north facing elevation would meet the BRE criteria for VSC on a room basis.

1005. In terms of daylight distribution, 34 of the 43 (79.1%) rooms assessed would meet the BRE criteria and are therefore considered to experience a Negligible effect. Of the nine affected rooms, four would experience an alteration in NSL between 20-29.9% which is considered a Minor Adverse effect and three would experience an alteration between 30-39.9% which is considered a Moderate Adverse Effect. The remaining two rooms would experience an alteration in excess of 40% which is considered a Major Adverse effect.

1006. Overall, the effects of this scenario are very similar to those of the 'Existing vs Proposed' scenario and are considered moderate adverse. It is considered that the building is a factor for the resultant reductions in daylight.

1007. Although it is considered that the proposed development would be a factor in the cumulative loss, it is considered that due to existing dense urban environment, low existing VSC and NSL values, the effects would not be such as to warrant refusal of the application on those grounds.

1008. Loss of sunlight would not be an issue since the development is to the north. The effects would therefore be negligible.

27 – 31 Mitre Street

1009. This is a four-storey residential building located approximately 35 metres to the east of the application site. A total of 28 windows serving 16 rooms were assessed for daylight within this building.

1010. It is noted that some windows were missing from the windows maps submitted in Annex 6; however, since the submission of the application, further information has been submitted including the additional window maps.

Existing baseline vs Proposed

1011. Of the 28 windows assessed two would be below the BRE VSC guidelines with relative losses of 21.1% and 26.3%, which are considered a Minor Adverse effect. The results suggest that the windows light rooms also lit by other windows which meet the guidelines.

1012. Daylight distribution results show that the BRE guidelines will be met.

1013. Therefore, due to the VSC and NSL compliance, the effect is considered Negligible.

1014. Loss of sunlight would not be an issue since the development is to the northwest. The effect is therefore negligible.

Existing baseline vs Cumulative

1015. In the cumulative scenario, four windows would be below the BRE VSC guidelines with relative losses of 22.1-60.9%, compared to the guideline 20%. One affected window serving a living/kitchen/dining room would experience an alteration in VSC of 22.1%, which is considered Minor Adverse. The three remaining windows serve a bedroom and two LDs, seeing alterations greater than 40%, but the rooms as a whole continue to meet BRE's criteria for VSC.

1016. In terms of daylight distribution, results show that the BRE guidelines will be met. Therefore, the effect would be negligible.

1017. The BRE reviewer considered that the negligible assessed cumulative loss of daylight in the ES Chapter is reasonable. Officers concur within this view.

1018. Loss of sunlight would not be an issue since the development is to the northwest. The effect is therefore negligible.

Future baseline vs Cumulative

1019. Of the 28 windows three will be below the BRE guidelines in this scenario. Of the three affected windows, all would experience an alteration in VSC between 30-39.9% which is considered a Moderate Adverse effect. All three rooms would continue to meet BRE's criteria for VSC on a room basis.

1020. For NSL, all rooms assessed would meet the BRE criteria and so are considered to experience a Negligible effect.

1021. The ES Chapter considered that overall, the effects would be almost the same as the 'Existing vs Proposed' scenario and would remain negligible. Officer concur that due to compliance with VCS and NSL criteria on a room basis, the effects would be negligible.

1022. Again, loss of sunlight is not an issue due to the position of the proposed development in relation to this building.

St Katharine Cree Church

1023. This is religious building, which is located approximately 40m south of the Proposed Development.

1024. A total of 79 windows serving two rooms, which are the nave and an auxiliary room, were assessed for daylight within this building.

Existing baseline vs Proposed

1025. Of the 79 windows analysed to the church, 15 would be below the BRE VSC guidelines with relative reductions of 21.7-42.4% compared to the guideline 20%. The values of existing VSC for the 15 windows below the guidelines would be 3.3-18.6% VSC and, with the proposed development in place, would be reduced to 1.9-13.5% VSC.

1026. All 15 windows serve the main chapel nave, of which 12 would experience an alteration in VSC between 20-29.9% which is considered a Minor Adverse effect and two would experience an alteration between 30-39.9% which is considered a Moderate Adverse effect. The remaining window would experience an alteration in excess of 40% which is considered a Major Adverse effect. All windows are located on the north facing elevation and situated in a constrained location due to their position in relation to adjoining buildings. The absolute reductions would be less than 5.1% VSC and the room would continue to meet BRE's criteria for VSC.

1027. In terms of daylight distribution, it is noted that the BRE guidelines are met.

1028. Although the space within the church is large and loss of light to one window, might not be easily mitigated from windows on another elevation, the ES Chapter assessed minor adverse effect to daylight appears reasonable to both the BRE reviewer and officers. Although there are losses of daylight below the BRE guidelines, the space does have other windows which meet the guidelines.

1029. Loss of sunlight would not be an issue since the development is to the north. The effect is therefore negligible.

Existing baseline vs Cumulative

1030. In the cumulative scenario 21 windows would be below the BRE VSC guidelines with relative reductions of 20.2-51.5%, compared to the guideline 20%.

1031. Except for two windows which serve an auxiliary room and see Minor Adverse alterations, the 19 affected windows serve the main nave, of which seven would experience an alteration in VSC between 20-29.9% which is considered a Minor Adverse effect and 12 would experience an alteration between 30-39.9% which is considered a Moderate Adverse effect. The remaining two would experience alterations in excess of 40% which is considered a Major Adverse effect.

1032. For NSL, all rooms assessed would meet the BRE criteria and so are considered to experience a Negligible effect.

1033. The ES Chapter suggests a minor adverse cumulative impact to daylight. This is reasonable if other windows to the spaces would mitigate the loss to those below the BRE guidelines. There is a greater loss of daylight with the other consented schemes, although the proposed development is still a factor in the loss. Officers are in agreement with the ES Chapter assessment of the overall effects and the view taken by the BRE reviewer.

1034. Loss of sunlight would not be an issue since the development is to the north. The effect is therefore negligible

Future baseline vs Cumulative

1035. Of the 79 windows 18 will be below the BRE guidelines in this scenario. Of the 18 affected windows, six would experience an alteration in VSC between 20-29.9% which is considered a Minor Adverse effect and 11 would experience an alteration between 30-39.9% which is considered a Moderate Adverse Effect. The remaining window would experience an alteration in excess of 40% which is considered a Major Adverse effect.

1036. The 16 windows are located on the north facing elevation and situated in a constrained location, as explained above, resulting in high reduction percentages. A further two are located on the west facing elevation. The absolute reductions

would be less than 5.1% VSC, and the room would continue to meet BRE's criteria for VSC.

1037. For NSL, all rooms assessed would meet the BRE criteria and so are considered to experience a Negligible effect.

1038. Overall, the VSC and NSL impacts are virtually unchanged from the 'Existing Vs Proposed' assessment and so the effect is considered to remain Minor Adverse. Considering that the rooms would meet the VSC criteria for the rooms overall as well as the daylight distribution effects, it is considered that the function on the church would not be adversely affected.

1039. Again, loss of sunlight is not an issue due to the position of the proposed development in relation to this building.

Conclusion on Daylight and Sunlight Impact

1040. In conclusion, it is considered that the ES Chapter 10 has correctly used the methodology assessing daylight and sunlight in accordance with the latest BRE Report 'Site layout planning for daylight and sunlight: a guide to good practice'.

1041. In summary, the results of the of daylight effects are as follows:

- In the 'Existing vs Proposed' scenario there are only two out of ten properties that would experience a Moderate adverse effect. Three would experience Minor adverse effects and the rest result in Negligible effects. These effects show that the development on each own would have limited effects to the nearby receptors.
- In the 'Existing vs Cumulative' scenario, there is one receptor that would experience Major adverse effects. Moderate to major effects are also expected to another receptor. Moderate effects would experience one more receptor, whilst Minor to Moderate effects are expected to three more receptors. There will be Minor effects experienced by two properties and three will experience Negligible effects.
- In the 'Future baseline vs Proposed (with cumulative)' scenario, there is one receptor that would experience Moderate effects and one Minor to Moderate. The majority of the receptors would receive Negligible effects, with three experiencing Minor adverse effects.

1042. In terms of sunlight, there would only be Negligible effects to both 'Existing vs Proposed' and 'Future baseline vs Proposed (with cumulative)' scenarios. There is only one receptor, St Helen's Church that would experience Moderate to Major Adverse effects, but this appears to be the result of another consented scheme.

1043. In the ‘Existing vs Proposed’ scenario, two of the residential receptors (2 and 10-16 Creechurch Lane and 18-20 Creechurch Lane) would experience a Moderate effect (significant). The rest of the receptors would experience a Miror or Negligible effect (not significant) on daylight. In respect of sunlight, all receptors would experience Negligible effects (not significant) in this scenario. Whilst officers do acknowledge that there are properties that would experience impacts greater than the BRE guidance levels, it is considered that due to the existing low baseline values and the dense urban context, the percentage alterations are disproportionate compared to the absolute alterations. The absolute alterations in most instances are either very limitedly or not likely to be noticeable and as such, the daylight and sunlight to these properties is not considered to be reduced to unacceptable levels. As a result the scheme complies with policy DM10.7 of the Local Plan 2015. The daylight and sunlight for these properties is considered to be appropriate for their context in accordance with policy D6(d) of the London Plan 2021 and policy DE7 of the draft City Plan 2040, and these properties are considered to still have acceptable living standards in accordance with part c of paragraph 129 of the NPPF.

1044. In the ‘Existing vs Cumulative’ scenario, three of the residential properties considered would experience an effect greater than negligible. Of these three, one (2 and 10-16 Creechurch Lane) would experience a Major Adverse (significant) effect, one (18-20 Creechurch Lane) would experience a Moderate to Major Adverse (significant) effect; and one (4-8 Creechurch Lane) would experience a Minor to Moderate (significant) effect. None of the properties would experience sunlight impacts greater than Negligible. Whilst officers do acknowledge that the properties listed above would experience effects greater than the levels indicated in the BRE Guidance, it is considered that due to the existing low baseline values and the dense urban context, the percentage alterations are higher and therefore, disproportionate compared to the absolute alterations. The absolute alterations in most instances, although perceptible, that would be limited and as such the daylight and sunlight to these properties is not considered to be reduced to an extend that would warrant refusal of the application on those grounds. The proposal together with other consented schemes would not reduce sunlight and daylight to unacceptable levels and the proposal accords with policy DM10.7 of the Local Plan 2015. Sufficient daylight and sunlight would be provided to surrounding housing and other uses, and policy D6(d) of the London Plan 2021 is complied with. The sunlight and daylight would be appropriate for its context and provides acceptable standards, and therefore and policy DE7 of the emerging City Plan 2040 is complied with. The properties are considered to still have acceptable living standards in accordance with part c of paragraph 129 of the NPPF.

1045. In addition, in the cumulative scenario, three religious buildings (Bevis Marks Synagogue, St Helen's Bishopsgate Church and St Andrew's Undershaft Church) would experience an effect greater than negligible. Of these sensitive receptors, one (St Helen's Bishopsgate Church) would experience a Moderate (significant) effect and two (Bevis Marks Synagogue and St Andrew's Undershaft Church) a Minor to Moderate Adverse (significant) effect. Whilst officers do acknowledge that these sensitive receptors would experience impacts greater than the levels indicated in the BRE Guidance and due regard has been given to the matters set out in section 149 of the Equality Act 2010 and the protected characteristics of users of these places of worship, it is considered that due to the existing baseline values, due to the dense urban context, the percentage alterations are disproportionate compared to the absolute alterations. The absolute alterations are not likely to be noticeable and as such the daylight and sunlight to these sensitive receptors is considered to be appropriate for the context and provide these buildings with acceptable levels of daylight and sunlight in accordance with policy DE7 of the draft City Plan 2040. Further justification for each property is provided in the relevant section of the daylight and sunlight report above.

1046. In the 'Future baseline vs Proposed (with cumulative)' scenario, two of the residential receptors (2 and 10-16 Creechurch Lane and 18-20 Creechurch Lane) would experience a Minor to Moderate and Moderate effect (significant). The rest of the receptors would experience a Minor or Negligible effect (not significant) on daylight. In respect of sunlight, all receptors would experience Negligible effects (not significant) in this scenario. These results are virtually the same as those of the 'Existing vs Proposed' scenario and therefore, the daylight and sunlight levels would not be reduced to unacceptable levels and the scheme accords with policy DM10.7 of the Local Plan 2015. Sufficient daylight and sunlight would be provided to surrounding housing and other uses, and policy D6(d) of the London Plan 2021 is complied with. The sunlight and daylight would be appropriate for its context and provides acceptable standards, and therefore and policy DE7 of the emerging City Plan 2040 is complied with. The properties are considered to still have acceptable living standards in accordance with part c of paragraph 129 of the NPPF.

Overshadowing

1047. Overshadowing of amenity spaces is measured using sunlight hours on the ground (SHOG). The BRE guidelines recommends that the availability of sunlight should be checked for open spaces including residential gardens and public amenity spaces

1048. The BRE guidelines do not include criteria for the scale and nature of effects and subsequent significance of transient overshadowing other than to identify the

different times of the day and year when shadow would be cast over a surrounding area.

1049. To assess overshadowing the ES has used the following methodologies:
- Transient Overshadowing (TOS); and
- Sun Hours on Ground (SHOG)

1050. BRE Guidelines (2022) suggest that 'sun hours on ground' assessment should be undertaken on the Equinox (21st March and 21st September). It is recommended that at least half of an amenity area should receive at least 2 hours of sunlight on March 21st or the area which receives two hours of direct sunlight should not be reduced to less than 0.8 times its former value (i.e. there should be no more than a 20% reduction).

1051. For the sun on ground and transient overshadowing, the ES Chapter considers all of the private and public amenity spaces to be of high sensitivity.

1052. A total of 9 outdoors spaces have been considered as sensitive receptors, and these are:
- 30 St Mary Axe (public amenity area)
- Bevis Marks Synagogue Courtyard (religious amenity area)
- 19 Bevis Marks Rooftop (office building rooftop amenity area)
- 1 Creechurch Place (office building rooftop amenity area)
- Mitre Square Garden (public amenity area)
- Three education building amenity areas at Aldgate School – playgrounds 1, 2 and 3 (educational building amenity areas)
- 11 – 12 Bury Street Rooftop (office building rooftop amenity area)

1053. Other nearby open spaces identified by the BRE reviewer include the following:
- The area next to the Leadenhall building. This area is predominantly to the south of the proposed development and the overshadowing diagrams suggest that the shadow of the proposed building would only have the potential to reach this area in the early mornings in summer. The proposed development would therefore not impact the results on 21 March
- Abbott's Park, immediately to the west of St Helen's. The shadow of the proposed development does not appear to reach this area as it would be overshadowed by other existing buildings.
- A roof terrace to a building on the northwest (on the northwest corner of the junction of St Mary Axe with Bevis Marks). The overshadowing diagrams suggest that the shadow of the proposed development would pass over this space around mid to late morning on 21 March. However, it does not seem likely to significantly impact the areas able to receive at least two hours of sunlight on 21 March.

- Aldgate Square, to the east of the development. The overshadowing plots suggest that the proposed development would not cause an additional shading to this area on 21 March.

Existing baseline

1054. At the existing baseline, six of the nine surrounding receptors currently meet the BRE 50% area guideline for receiving at least 2 hours of direct sunlight on ground. The remaining three areas, which do not meet the BRE criteria in the baseline condition are:

- 30. St. Mary Axe Public Amenity (4%)
- Bevis Marks Synagogue Courtyard (0%)
- Aldgate School Playground 1 (35%)

Existing Baseline vs Proposed

Transient overshadowing

Equinox (21st March/September)

1055. On these days, shadows are cast from the proposed development from 08:00, which move in a clockwise direction. At this time, the area at 30 St. Mary Axe Plaza would become partially overshadowed by the proposed development. This would clear by approximately 12:00, at which time shadow from the proposed development begins to move over 11-12 Bury Street Rooftop for a short period, clearing by 13:00. Between 11:00 and 14:00, the proposed development shadow passes over the Bevis Marks Synagogue Courtyard; however, due to the depth of this area within the surrounding buildings, which cause the majority of shading, only a very minimal portion of the proposed development shadow hits the floor. From 13:00 to 14:00, the proposed development shadow passes over the 19 Bevis Mark Rooftop.

1056. The proposed development would not result in any additional shadow to the remaining sensitive amenity areas on these days.

Summer Solstice (21st June)

1057. On this day, shadows are cast from the proposed development from 06:00 in a south-westerly direction. No areas are affected until 09:00, when the area at 30 St. Mary Axe Plaza would become partially overshadowed by the proposed

development. This would clear by approximately 13:00, at which time shadow from the proposed development begins to move over 11-12 Bury Street Rooftop for a short period, clearing by 14:00. Between 13:00 and just before 15:00, the proposed development shadow passes over the Bevis Marks Synagogue Courtyard. However, due to the depth of this area within the surrounding buildings, which cause the majority of shading, only a very minimal portion of the proposed development shadow hits the floor. At 14:00, the proposed development shadow passes over 19 Bevis Mark Rooftop for a very short period. For a very short time at 18:00, then 1 Creechurch Place would see a very small amount of shading from the proposed development alongside shading from existing structures.

1058. The proposed development would not result in any additional shadow to the remaining sensitive amenity areas on this day.

Winter Equinox (21st December)

1059. On this day, shadows are cast from the proposed development from 09:00, which moves in a clockwise direction. At 10:00, the at 30 St. Mary Axe Plaza would see a very small amount of shading from the proposed development in the north eastern corner, which would clear before 11:00. At this time shadow from the proposed development would move over 11-12 Bury Street Rooftop, clearing by 13:00. Between 11:00 and just after 12:00, the proposed development shadow passes over the Bevis Marks Synagogue Courtyard; however, as noted above, due to the depth of this area within the surrounding buildings, which cause the majority of shading, only a very minimal portion of the proposed development shadow hits the floor.

1060. The proposed development would not result in any additional shadow to the remaining sensitive amenity areas on this day.

Sun Hours on Ground

1061. The nine amenity areas have been quantitively assessed against the BRE sun hours on ground criteria. Eight of the nine areas would meet BRE's criteria, either retaining at least two hours of direct sunlight on at least 50% of their total area on March 21st or seeing no alteration greater than 20%.

30 St Mary Axe Plaza

1062. This area receives 2 or more hours of sun on March 21st on just 4% of its total area, due to the built up nature of the surrounding context. This would be reduced to none with the proposed development in place. The northeastern corner of this area where the alteration occurs is likely to only just meet the BRE criteria, due to

the built up nature of the surrounding context and the absolute reduction would likely equate a short period of time where sunlight is reduced. The ES Chapter assessed a minor adverse impact to sunlight. This is reasonable as although there is a large relative loss and any area able to receive at least two hours of sunlight is removed, the existing area is small. The cumulative and future baseline scenarios suggest that although other consented schemes make a small reduction in the results, the impact is predominately due to the proposed development.

19 Bevis Marks Rooftop

1063. This area would see a 7% reduction to the area which receive at least 2 hours of sun on March 21st, retaining 2 or more hours of sunlight on 92% of the total area, and would therefore meet the BRE criteria. The effect would therefore be Negligible.

11-12 Bury Street Rooftop

1064. This area would see a 19% reduction to the area which receive at least 2 hours of sun on March 21st, retaining 2 or more hours of sunlight on 60% of the total area, and would therefore meet BRE's criteria. As such, the effect is considered Negligible.

11-12 Bury Street Rooftop

1065. This area would see a 19% reduction to the area which receive at least 2 hours of sun on March 21st, retaining 2 or more hours of sunlight on 60% of the total area, and would therefore meet BRE's criteria. As such, the effect is considered Negligible.

Bevis Marks Synagogue Courtyard

1066. As it is noted in the 'Relevant history and background' section of this report, as application was at Bury House, 31 Bury Street, was refused by reason of the overbearing and overshadowing impact of the previously proposed development on the setting and amenities of the Grade 1 listed Bevis Marks Synagogue.

1067. It is noted that since the determination of the previous application the courtyard of the Synagogue has undergone changes to include a new ramp to the visitor centre, permanent security booth at the entrance of the site and ticketing booth on the northern part of the courtyard. It is also noted that part of the courtyard will be used in the future for outdoor seating in association with the new café.

1068. Concerns have been raised in the objection letters received regarding the importance of the courtyard to the community's religious and communal activities

and the Synagogue's new exhibition centre and café. The courtyard is used for celebrations and gatherings, such as celebrating a Bar or Bat Mitzvah or celebrations of Succot and weddings.

1069. The courtyard to the Bevis Marks Synagogue would meet the BRE guidelines, although none of its area would be able to receive two hours of sunlight on 21 March currently. There would be 0% reduction, given that the at baseline scenario no area receives two hours of sunlight on 21 March. The submitted Radiance Assessment document includes Sun Exposure analysis and sunlight availability in different months of the year. The BRE reviewer considered that this could be used in conjunction with the shadow diagrams (Annex 7) for an understanding of sunlight provision in the courtyard throughout the year if sunlight at specific times is required, albeit the numerical guidelines in the BRE Report apply to 21 March only.

1070. Although the submitted analysis does not include a scenario of Existing baseline vs Proposed, the results of the proposed development (plus consented schemes) are very similar to those of the consented schemes alone. The changes between the two are almost imperceptible between April and August. For the other half of the year (September till March) the sunlight levels in the courtyard are as low as the baseline scenario. In respect of average sunlight availability, in the baseline scenario, the average sunlight varies from one hour in April to two hours in June. The consented scenario follows a similar pattern, albeit with a 30 min loss on average, reaching a maximum of 1.5 hours in June. In the Proposed Development scenario, which is based on a 'clear sky' assumption, the results show a reduction in the average sunlight availability within the courtyard of 16 minutes to 19 minutes when compared to the consented scenario. It is therefore considered that the proposed development alone would not materially change the sunlight on the Bevis Marks Synagogue courtyard. Therefore, it is not considered that the development would result in overshadowing in the Synagogue's courtyard that would preclude continuing use for religious events and/or as part of the visitor experience visiting the Synagogue's exhibition centre.

Existing Baseline vs Cumulative

Transient overshadowing

Equinox (21st March/September)

1071. On these days, shadows are cast from the proposed development from 08:00, which move in a clockwise direction. At this time, 30 St. Mary Axe Plaza would become partially overshadowed by the Proposed Development. Cumulative

Schemes would begin to overshadow this area at 09:00. The proposed development shadow would clear by approximately 12:00, with Cumulative Schemes overshadowing the area for the remainder of the day. At 12:00, shadow from the proposed development would move over to 11-12 Bury Street Rooftop for a short period, clearing by 13:00. Cumulative Schemes overshadow this area from 15:00 until the end of the day. Between 11:00 and 14:00, the proposed development shadow passes over the Bevis Marks Synagogue Courtyard. However, similar to the Existing vs Proposed scenario, due to the depth of this area within the surrounding buildings, which cause the majority of shading, only a very minimal portion of the proposed development shadow hits the floor. From 14:00 until the end of the day consented schemes shadow would pass over the area, although also would not reach the floor. From 13:00 to 15:00, the proposed development and cumulative schemes shadow would pass over 19 Bevis Mark Rooftop.

1072. The cumulative schemes would not result in any additional shadow to the remaining sensitive amenity areas on these days.

Summer Solstice (21st June)

1073. On this day, shadows are cast from the proposed development from 06:00 in a south-westerly direction. No areas are affected until 09:00, when the 30 St. Marys Axe Plaza would become partially overshadowed by the proposed development. Cumulative schemes begin to overshadow this area from 11:00. The proposed development shadow would clear by approximately 13:00, and consented schemes would shadow would clear by 16:00. At 13:00, shadow from the proposed development begins to move over 11-12 Bury Street Rooftop for a short period, clearing by 14:00. At this time, the area becomes overshadowed by other cumulative developments until 16:00. Between 13:00 and 14:00, the proposed development shadow passes over the Bevis Marks Synagogue Courtyard; however, due to the depth of this area within the surrounding buildings, which cause the majority of shading, only a very minimal portion of the proposed development shadow hits the floor. At 14:00, cumulative schemes shadow would pass over the area, although would also be unlikely to reach the floor. At 14:00, the proposed development shadow would pass over 19 Bevis Mark Rooftop for a very short period, before cumulative schemes overshadow the area. For a very short time period at 18:00 the proposed development would shadow 1 Creechurch Place. Aldgate School area 3 would see a very small amount of shading from the other consented schemes alongside shading from existing structures.

1074. The cumulative development would not result in any additional shadow to the remaining sensitive amenity areas on this day.

Winter Equinox (21st December)

1075. On this day, shadows are cast from the proposed development from 09:00, which moves in a clockwise direction. At 10:00 30 St. Marys Axe Paza would see a very small amount of shading from the proposed development in the north eastern corner, which would clear by before 11:00. At this time shadow from the proposed development would move over to 11-12 Bury Street Rooftop, clearing by 13:00, with a small amount of additional shading from cumulative schemes at 14:00. Between 11:00 and just after 12:00, the proposed development shadow would pass over the Bevis Marks Synagogue Courtyard. As noted before, the majority of shading is due to other existing buildings, only a very minimal portion of the proposed development shadow hits the floor. At 14:00, cumulative scheme shadows would pass over the area at 13:00, although would also be unlikely to reach the floor.

1076. The cumulative development would not result in any additional shadow to the remaining sensitive amenity areas on this day.

Sun Hours on Ground

1077. The nine amenity areas have been quantitively assessed against the BRE sun hours on ground criteria. Eight of the nine areas would meet the BRE criteria, either retaining at least two hours of direct sunlight on at least 50% of their total area on March 21st, or seeing no alteration greater than 20%.

1078. There would be no magnitude of impact beyond the BRE criteria in the cumulative scenario for 30 ST Mary Axe Plaza and the Bevis Marks Synagogue courtyard and therefore, the effects would remain the same (Minor Adverse and Negligible, respectively). The 19 Bevis Marks rooftop would see a 10% reduction to the portion seeing at least 2 hours of sun, however, would remain BRE compliant. Therefore, there would overall be no change in the Cumulative Scenario and the effect would remain Negligible. 11-12 Bury Streett Rooftop would see a 41% reduction to the portion seeing at least 2 hours of sun, receiving 74% in the existing baseline condition, which is reduced to 44% due to the Proposed Development and Cumulative Schemes. The areas seeing a reduction are slightly stepped down, resulting in self-shading. The main portion of this area would still see 2 or more hours of sunlight on March 21st, increasing to 6 or more hours in June, when the space is most likely to be enjoyed. Therefore, the ES Chapter considers this effect Minor Adverse. The BRE review considers this is reasonable when considering that 44% of the area would still be able to receive at least two hours of sunlight (compared to the guideline 50%), albeit the large relative loos.

1079. All other sensitive amenity areas would have a Negligible effect.

1080. The impacts based on the Sun Exposure analysis and average sunlight availability submitted with the Radiance Assessment document are addressed in the Existing vs Proposed section above.

Future Baseline vs Cumulative

Transient overshadowing

1081. The results of the transient overshadowing at this scenario are virtually identical to those of the Existing vs Proposed scenario. Therefore, no further assessment is required.

Sun Hours on Ground

1082. The nine amenity areas have been quantitively assessed against the BRE sun hours on ground criteria. Eight of the nine areas would meet the BRE criteria, either retaining at least two hours of direct sunlight on at least 50% of their total area on March 21st, or seeing no alteration greater than 20%.

1083. In the Future Baseline condition, 3% of the St Mary Axe Plaza would receive 2 hours of sun on March 21st, which is 1% lower than the Existing Baseline condition, due to consented schemes being built out. In terms of the Bevis Marks Synagogue courtyard, there would be a 0% alteration from the Proposed Development compared to the Future Baseline condition and therefore the effect would remain Negligible. The Future Baseline conditions reduce the portion of the area of the 19 Bevis marks rooftop receiving 2 hours of sun on March 21st to 92%. This area would see a 3% reduction to the portion seeing at least 2 hours of sun, however, would remain BRE compliant. The Future Baseline conditions reduce the portion of the 11-12 Bury Street Rooftop receiving to 67%. This area would see a 34 % reduction to the portion seeing at least 2 hours of sun. The effect would therefore, considered Minor Adverse. All other sensitive amenity areas would have a Negligible effect.

1084. The impacts based on the Sun Exposure analysis and average sunlight availability submitted with the Radiance Assessment document are addressed in the Existing vs Proposed section above.

Overshadowing conclusion

1085. In conclusions, the results show that there would be no materially harmful overshadowing effects caused by the development to any public amenity areas and therefore, the proposal complies with policy D6 of the London Plan, policy DM10.7 of the Local Plan 2015 and policy DE7 of the draft City Plan 2040.

Comparison to the Previously Refused Scheme

1086. As part of the previously refused application (ref number: 20/00848/FULEIA) Daylight, Sunlight and Overshadowing assessment was prepared by Avison Young and thereafter independently reviewed by BRE, who have also reviewed the application that is currently under determination.

1087. For the purposes of comparing the two schemes, it is considered reasonable for the existing and proposed scenarios at the properties in the closer proximity to be assessed to be considered, using the data from the two EIAs. The cumulative scenarios in both assessments are not considered as part of this assessment due to differences in the cumulative scenarios used. Given that the two assessments were undertaken by different consultants a direct comparison of some areas is not possible, due to how they have been performed. However, a third party review from BRE who was both the previous and current reviewer of the daylight and sunlight has been commissioned for the comparison and the following findings are mainly focused on this review.

The Bevis Marks Synagogue

1088. In the assessment for the current proposal, five windows at the Bevis Marks Synagogue would be below the BRE vertical sky component (VSC) guidelines, as discussed in the relevant section above. These are the first floor south west facing windows which light the main space (the central ground floor space and first floor gallery). The space has other windows on other sides of the building, which would not be impacted. The existing values of VSC to the five windows are in the range of 3.6-6.7% VSC. The relative losses to the five windows would be 27-36% with absolute losses of VSC between 1.3-1.9% VSC and resultant values in the range 2.3-4.8% VSC. The impact to daylight would be assessed as minor adverse.

1089. In the previous application the same five windows were also below the BRE guidelines. There are minor differences in the calculated values, which may be expected due to being undertaken by different consultants at different times. The existing values of VSC in this assessment are in the range of 4.1-7.0% VSC. The relative loss of daylight to the five windows was in the range of 25-32% with absolute losses of VSC between 1.3-1.8% VSC and resultant values between 2.8-5.2% VSC. The impact to daylight was assessed as minor adverse.

1090. The differences between the results for the two schemes is therefore very small. The impact to daylight would still be assessed as minor adverse for both schemes.

1091. The results for loss of sunlight to windows with the current scheme suggest that although there would be some loss of sunlight to the south facing windows, the BRE guidelines would be met, albeit with two windows just meeting the guidelines with a loss of annual probable sunlight hours of 4%.

1092. In the previous application, the same windows are affected in terms of loss of sunlight; however, the results of the previous scheme suggest a greater loss of sunlight with three of the five south west windows discussed reduced to below the BRE annual probable sunlight hours guidelines. These three windows below the guidelines would have absolute losses of annual probable sunlight hours in the range of 7-12%. Three further windows to the southeast facing façade would also be below the guidelines. The previous BRE review assessed a moderate adverse impact to sunlight. The worst-case window for loss of sunlight (the most westerly of the five windows on the first floor of the current proposal) is suggested to have a value of 10% with the previously proposed development in place.

1093. In light of the above, it is considered that the loss of sunlight to windows results with the current proposed scheme would represent an improvement compared to the previous scheme.

1094. With regard to overshadowing of the Synagogue's courtyard, the assessment of the previously refused scheme found that 1.5% of the Synagogue courtyard area would receive 2 hours of sun on the equinox in the baseline condition. The updated assessment for the Proposed scheme finds the none of the Synagogue courtyard area would receive 2 hours of sun on the equinox. This is likely a result of the evolving baseline, modelling and software factors noted above.

1095. Overall, it is considered that the result of the daylight and overshadowing effects remain relatively comparable between the previously refused and currently proposed scheme. The sunlight effects of the proposed scheme represent an improvement when compared to the refused scheme.

2 Heneage Lane

1096. The results, when comparing the existing and proposed scenarios, of both the previously refused and currently proposed schemes are assessed to be negligible as the BRE guidelines are met. Loss of sunlight is not an issue for this property due to its orientation.

2 and 10-16 Creechurch Lane

1097. For these properties to the southeast, a comparison of the effects of daylight distribution between the previously refused and currently proposed schemes is not possible because the previously submitted assessment based on assumed layouts, whilst the current one is based on known layouts and the layouts are different.

1098. Of the 72 windows analysed across both assessments, 68 would be below the VSC guidelines with the current proposal. With the previous proposal 67 windows would be below the guidelines. For the current scheme the relative reduction of VSC would be in the range of 24-58%, with absolute losses of VSC in the range of 1.0-3.8%. This compares to a relative reduction of VSC in the range of 21-54% with absolute losses of VSC in the range of 1.0-4.1%. This suggests the two sets of results are similar and there is not a significant difference in impact between the two schemes.

1099. Sunlight is not an issue due to the northernly facing windows.

18 - 20 Creechurch Lane

1100. Similar to the other properties analysed on Creechurch Lane a direct comparison of daylight distribution results is not possible due to different layouts being used between the two assessments.

1101. For the section of the building to Mitre Street, Five windows would be below the BRE guidelines with the previous proposal and six would be below the guidelines with the current proposal. Relative reductions in VSC for windows below the guidelines with the previous proposal would be in the range of 21-28% with absolute losses of 1.9-2.5% VSC. This compares to relative reductions in VSC of 21-28% with the current scheme with absolute losses of 1.5-2.2%. The loss of daylight impact to this section of the building is therefore very similar between the two proposals. Taken those results individually the effects would be considered minor adverse in both schemes.

1102. For the corner section of the building, the relative reduction in VSCs with the previous proposal would be in the range of 20-67%, with absolute losses of 2.9-11.7% VSC. This compared to relative reductions in VSC of 22-66% with the current proposal with absolute losses of 2.8-11.2% VSC. The loss of daylight results between the schemes are therefore very similar. These effects are assessed as major adverse in both schemes.

Conclusion

202 Overall, it is considered that the daylight, sunlight and overshadowing effects of the previously refused scheme and the one currently proposed to the nearby sensitive receptors are very similar, with the exception of the sunlight impacts on the Synagogue, which represent an improvement.

Addressing the daylight/sunlight report submitted on behalf of The S&P Sephardi Community

1103. As part of their response to the latest consultation, the S&P Sephardi Community has submitted a daylight and sunlight empirical report for the Synagogue, using two illuminance meters. The daylight report provides an assessment of the existing daylight levels in Bevis Marks Synagogue and considers how these would be likely to be affected by proposed development. The assessment was carried out between 26th February 2022 to 2nd April 2024 and the illuminance meters were positioned in the central area of the ground floor (Sanctuary), both at a height normal for holding a prayer book at locations BM1 (on the edge of the Bimah) and BM2 (on the pew closest to the Ark). The daylight report advises that light levels were recorded at five minute intervals continuously throughout the monitoring period and that some monitoring data was lost due to practicalities around long-term monitoring in an occupied space, primarily due to human interference related aspects.

1104. This report was review by a third party consultant on behalf of the City and the findings and conclusions are set out below.

1105. The report refers to 767 daily plots; and all of these are stated to have been used for data plotting. These plots could not be found in the material provided and therefore, it was not entirely clear to the reviewer what data was actually included in the analysis.

1106. The independent reviewer states that BS ISO/CIE 19476:2014 'Characterization of the performance of illuminance meters and luminance meters' defines quality indices to characterise the performance of such devices in a general lighting measurement situation, considering two main factors, namely spectral correction and cosine correction. However, it was not possible to source detailed technical data for the type of logging illuminance meter used for monitoring light levels inside the Synagogue. Therefore, the accuracy of the recorded light levels could not be ascertained.

1107. The reviewer of the Bevis Marks daylight also states that "*It is debatable whether the illuminance levels recorded at the two measurement locations are representative for daylight achievable across the entire core area on the ground floor*." The chosen locations can only provide evidence of the daylight levels in those specific locations as opposed to an overall representation of the daylight

across the entire Synagogue. This is evident given the notable differences in the average daily hours that specific illuminances were achieved on a monthly basis, suggesting that location BM1 was visibly better daylit than location BM2. The reviewer considers that this raises the question as to how representative the data recorded for the two measurement locations chosen are for the rest of the space.

1108. With regard to contribution of electric lighting, the daylight report states that this was subtracted from the recorded values only for some dates during the monitoring period (namely 26 February to 7 June 2022) and also that the contribution is small, around 10lux. However, it is not clear whether this is applicable to one or both measurement locations, or indeed to the rest of the space.

1109. In relation to the key illuminance levels chosen to characterise daylight provision for the Bevis Marks Synagogue daylight report (25 lux, 50 lux, 100 lux and 200 lux), the reviewer advises that these are leaning towards the lower values than the key illuminance levels used in British standards, which recommend higher illuminance levels (300 lux horizontally on the book stand and vertically at speaker height in the Bimah, 300 lux vertically over the vertical reader area in the Amud, and 150 lux horizontally at floor level across the Sanctuary). As a result, the data presented in Table 1 of the Bevis Marks Synagogue daylight report indicates that the two locations used for illuminance monitoring generally receive low levels of daylight in the current context.

1110. The Bevis Marks Synagogue daylight report compares the internal illuminance monitoring results against simultaneous external data for the same location. However, the submitted details contain a description of the illuminance data and refers to a complete report for daily plots, which was not provided and therefore, the daily plots of internal versus external illuminance could not be checked.

1111. The results presented in the Bevis Marks Synagogue daylight report suggest that sunlight reflected from neighbouring building façades that penetrates the Synagogue windows contributes significantly to the daylight levels achieved within the core of the ground floor area of the Synagogue throughout the year. A similar argument was also raised in one of the objection letters received during the consultation period, which argued that the proposed development would cast a shadow over the building facades of the nearby buildings, which would impact the daylight levels in the Synagogue.

1112. The analysis of reflected sunlight in section 2.4 of the Bevis Marks Synagogue daylight report is based on shadow plotting and therefore purely geometric. That section concludes that, given the contribution of reflected light to internal daylight levels, computer modelling which adequately accounts for reflected sunlight and skylight can assess more accurately the impacts from the proposed development.

The reviewer considers that this is an appropriate statement based on a sound analysis of reflected sunlight.

1113. Section 3 of the Bevis Marks Synagogue daylight report discusses the results of climate-based daylight modelling, using an approximate as opposed to accurate scenario in terms of the Synagogue and its current surroundings. The daylight report states that the 3D model used for the simulations based on detailed drawings for the Synagogue, but on estimates massing models for the surrounding buildings. The daylight report accepts that the results presented "*should be considered as illustrative until more accurate building geometry is available*."

1114. The Bevis Marks daylight report introduces the total annual illumination (TAI) as the measure to quantify all daylight illumination received at a point indoors for an entire year. The reviewer considers this sensible as it accounts for both direct and reflected light from the sun and the sky which can reach the point indoors. Full details of the results have not been provided and it is also not clear whether the results relate to the locations of the logging illuminance meters used or particular zones of the core area, or the entire core area. Nevertheless, the presented results suggest almost no contribution from direct sunlight and around 99% contribution from sunlight or skylight reflected off the neighbouring buildings. However, the reviewer states that light reflection is fundamentally influenced by reflective surface characteristics including material, texture, and reflectance. No information on surface characteristics could be found in the Bevis Marks Synagogue daylight report and therefore it is not clear what types of material and surface reflectances were used in the calculation model. This is applicable to both external and internal surfaces. Therefore, the proportions of direct and reflected light stated in the report could not be verified.

1115. It is acknowledged that reflected light contributes to internal daylight illumination. However, the results in the daylight report cannot be verified and also reflectivity is highly dependent on the finishing materials of the buildings abutting the Synagogue's courtyard that the development does not relate to. Furthermore, in the context of the BRE guidelines, which is used by local planning authorities to determine planning applications, daylight and sunlight are assessed separately and reflected light is not considered in the metrics used. This is in order to limit the uncertainty related to surface reflectances in an existing context, both outdoors and indoors, and improve the efficiency of the loss of light assessment process.

1116. The Bevis Marks Synagogue daylight report does not give TAI results for the proposed development, albeit the estimated effects show that the light levels would be reduced between 11am and 2pm by the proposed development. Therefore, it does not predict the impacts of the proposed development on daylight levels achievable inside the Synagogue building. The analysis contained therein is only used to support the argument that prediction methods commonly used at

the planning stage to assess impacts on daylight in existing buildings in typical situations are not suitable for the context of the Synagogue because they do not account for contribution from the sun and/or reflected light.

1117. The report concludes that the Synagogue is currently experienced as a *"functionally daylit space for considerable periods of the year"*. This appears to be contradicted by the illuminance monitoring results provided for the two locations chosen inside the Synagogue. In particular, the submitted table suggests that BM1 receives only a few hours daily on the spring and summer months of over 100lux, while BM2 records substantially lower levels. These indicate levels of daylight below the minimum recommended in BS EN17037. Furthermore, the report itself states that current daylight levels are *"at or very close to a 'tipping point'",* which actually deviates from the notion of a *"functionally daylit space"*.

1118. The Applicant's daylight consultants in their response to the submitted Bevis Marks Synagogue daylight report conclude that "While GIA agree that it may be possible to read at 50-100 lux, even if this were the median lux levels exceeded over 50% of the whole ground floor, it would firmly position the Synagogue within the category of dimly daylit space, where additional artificial lighting is likely to be needed during daylight hours, according to the British Standards and BRE Guidance". The Corporation's appointed reviewer agrees with that point.

1119. Whilst the reviewer considers the methodology used in the Bevis Marks Synagogue daylight report is generally reasonable, in their conclusions they note that "*alternative metrics that account for contribution from the sun and reflected light, such as daylight illuminance as defined in BS EN17037 or TAI as proposed in the Bevis Marks daylight report, could be applied when assessing the loss of daylight to the Bevis Marks Synagogue building provided they are part of a climate-based daylight modelling methodology based on a detailed massing model and appropriate calculation parameters. The latter include actual surface reflectances and glazing transmittance as measured in situ for existing indoor and outdoor surfaces and Synagogue windows, alongside suitable calculation points and/or grids, weather data and modelling parameters. Most of these details are missing from the Bevis Marks daylight report.*"

1120. Overall, based on the results of the submitted data it is accepted that the Synagogue currently experiences low levels of light, which accords with the results of the Daylight, Sunlight and Overshading Assessment submitted by the Applicant. Officers, based on the findings and conclusions of the reviewer, consider that the although the Bevis Marks Synagogue daylight report is not based on a published or generally used method, if carried out appropriately with adequate equipment and controlled methodology it can give an understanding of the current and proposed light levels. However, it is considered that the submitted daylight report, is not complete or entirely accurate, due to the lack of necessary information and

other limitations, as discussed above, and therefore, it can be attributed limited weight. It is considered more appropriate that officers give substantial weight to the findings of the Daylight, Sunlight and Overshadowing Assessment submitted by the Applicant and reviewed by the Corporation's appointed daylight consultant, as this follows the BRE guidelines as referred to in Local Plan policy DM10.7, and paragraph 3.10.41 of the reasoned justification to that policy. The BRE guidelines are also referred to in draft City Plan 20240 policy DE7.

Solar Glare

1121. Glare is the discomfort or impairment of vision caused by excessive or large contrast in luminance within the observer's field of view and can occur when sunlight is reflected from a glazed façade. There are two categories of glare; distracting glare (excessive brightness of surfaces or luminaires within the field of view that cause discomfort) and disability glare (presence of a high illuminance source within a low luminance scene which impairs vision).

1122. For discomfort glare, the key issue is the total duration for which the sun can be reflected to the sensitive location. Duration of less than 50 hours per year are unlikely to cause serious problems, except in very sensitive locations. Longer durations of reflection could result in significant discomfort glare issues depending on the type of space, the height of the reflected sun (low angle sun usually presents the most problems), whether shading devices are already in use, and the way the space is used.

1123. It is noted that Solar Glare is not a comparative assessment, so the assessment considered the effect of the proposed development in absolute terms.

1124. The solar glare assessments undertaken assume a worst-case scenario whereby the sun will shine every day during daylight hours which is not the case within the UK.

1125. Solar glare has been assessed via the times of day and year able to receive instances of reflection at example road points and one rail point surrounding the site. All of the road and rail viewpoints assessed are considered to be of high sensitivity.

1126. 41 road locations and one railway location have been identified in the Environmental Statement as sensitive to solar glare. The potential effect of the impact of solar glare on road users has been assessed at the traffic junctions, pedestrian crossings, and railway lines at these locations.

1127. From the 41 nearby roads, the proposed development would not be visible from 32 viewpoints. Roads and junctions in the vicinity where points are not considered appear to be based on not having a view of the building, either because it would be blocked by other buildings or one way roads with vehicle traffic facing away from the building. For example, Mitre Street, immediately to the east of the proposed development is a one way street with vehicles moving easterly away from the proposal. However, the third party reviewer has highlighted that for some one way streets in the area, including Mitre Street, cyclists can travel in the opposite direction to the one way street towards the development. It is advised that although solar glare may be an issue to cyclists it could be considered less of an issue than to motorists, as a cyclist may be able to more easily stop, shield their eyes or look away without potential of causing a serious accident. Solar glare could also be an issue if traffic direction is changed in the future.

1128. Since the proposed development is tall there may be the potential of solar glare outside of the area tested. However, the building would be smaller in in size from a distance and the effects would be more limited. The scope of the study focusing on worst-case areas closest to the proposal which is considered appropriate. The viewpoints that face multiple traffic lights have been assessed to include view to each relevant light, which is considered a sensible approach.

1129. There are nine viewpoints that would potentially see solar reflections from the proposed development. Following review of the ES Chapter, some typographical errors in relation to the locations and viewpoints have been corrected.

1130. For three of the nine viewpoints, the instances of reflection would occur on very small areas of glazing, which are broken up by solid elements and occur beyond 20° of a road user's line of vision. Therefore, they will occur for a very short time and the effect would be Negligible (not significant). At five viewpoint locations solar reflections are visible within 10° to 20° or between 10° to 5° of the driver's line of sight for a short period of time. These effects are considered Minor Adverse (not significant). At the remaining location, two viewpoints have been identified, looking left and right at the two traffic lights visible. The potential reflections would be visible within 3° to 5° of a road users' line of sight at various times throughout the year. However, any potential reflections at the lower portion of the proposed development would be shielded by existing buildings. For those reflections which are visible, the majority of reflections would occur above the visor line. Due to the orientation of the two façades where reflections are potentially visible, the period of time and duration of reflections would be limited. Overall, the ES Chapter concludes that the effect to this location would be Minor Adverse (not significant).

1131. The BRE reviewer has suggested further investigation of some viewpoints. However, as highlighted by the applicant, further technical assessments are

typically undertaken when the exact glazing specifications are agreed. These details are not available at this stage of the planning process.

1132. Overall, the potential impact of solar glare from the proposed development is considered at it worse to be minor adverse but the effects are not significant.

1133. If planning permission were to be granted, a S106 obligation would be recommended to require a solar glare assessment to be submitted post completion but prior to occupation which would include details of a mitigation measures (if considered necessary). The proposed development would comply with Policy D9C(g) of the London Plan, Local Plan policy DM10.1 and draft City Plan 2040 policy DE7 to avoid intrusive solar glare impacts and to mitigate adverse solar glare effects on surrounding buildings and public realm.

Light Spill

1134. Local Plan policy DM15.7 and draft City Plan policy DE8, requires that development incorporate measures to reduce light spillage particularly where it would impact adversely on neighbouring occupiers, the wider public realm and biodiversity.

1135. The potential light spillage impacts arising from the proposed development has been assessed on the following residential and religious buildings:

- Bevis Marks Synagogue
- 2 Heneage Lane
- 10-16 Creechurch Lane
- 6-8 Creechurch Lane

1136. The assessment in the ES states that it is based on a typical internal lighting design and therefore not a final design. The assessment therefore includes the impact of a notional proposed interior lighting on surrounding areas only and does not include any exterior lighting.

1137. The ES Chapter suggests negligible (not significant) effects to Bevis Marks Synagogue, 2 Heneage Lane, 10-16 Creechurch Lane and 6-8 Creechurch Lane and a minor adverse (not significant) effects post-curfew (after 11pm) at 18-20 Creechurch Lane. This is based on coloured plots representing the illuminance on windows at the buildings (no numerical results are given). The results for 18-20 Creechurch would meet the guideline but have values closer to the 5 lux post-curfew target. The BRE reviewer considered the assessment of a minor adverse impact being reasonable based on the information provided.

1138. The suggested mitigation measures would include the submission of detailed lighting scheme to minimise the illuminance levels to the southeast end of the floor plan. This could include the dimming of lights at the perimeter of the floor plan post-curfew and automatic blinds post-curfew. These are sensible for a future detailed internal lighting design. It is considered that similar details for proposed external lighting should also be submitted.

1139. A condition has been included which requires a detailed lighting strategy to be submitted prior to the occupation of the building, demonstrating the measures that would be utilised to mitigate the impact of internal and external lighting on light pollution and residential amenity. The strategy shall include full details of all luminaires, associated infrastructure, and the lighting intensity, uniformity, colour and associated management measures to reduce the impact on light pollution and residential amenity.

1140. Subject to the imposition of the condition for the submission of necessary details, the development would comply with Local Plan policy DM 15.7 and draft City Plan 2040 Policy DE8 and has been designed to avoid light spill.

1141. London Plan Policy D8 and D9 and Policies S8, S12 and S21 of the Emerging City Plan 2040, indicate that development proposals should ensure that microclimatic considerations, including temperature and wind, should be taken into account in order to encourage people to spend time in a place and that the environmental impacts of tall buildings – wind, daylight, sun penetration and temperature conditions around the building and neighbourhood, must be carefully considered and not compromise comfort and the enjoyment of open spaces and seeks to optimise micro-climatic conditions, addressing solar glare, daylight and sunlight, wind conditions and thermal comfort and delivering improvements in air quality and open space. Strategic Policy S15 indicates that buildings and the public realm must be designed to be adaptable to future climate conditions and resilient to more frequent extreme weather events. The Thermal Comfort Guidelines for Developments in the City of London was published in December 2020 which sets out how the thermal comfort assessment should be carried out.

1142. In accordance with City of London Thermal Comfort Guidelines, an outdoor thermal comfort assessment has been prepared using high resolution Computational Fluid Dynamics (CFD). The technique involves merging the effects of wind, air temperature, humidity and solar radiation data at a seasonal level to gain a holistic understanding of Thermal Comfort and how a microclimatic character of a place actually feels to the public. The assessment quantifies the thermal comfort conditions within and around the site, by comparing the predicted felt temperature values and frequency of occurrence.

1143. The assessment was graded against the City of London Thermal Comfort Criteria, as set out in "Thermal Comfort Guidelines for Developments in the City of London". Categories are based upon the seasonal percentage for which thermal conditions are acceptable (UTCI values of between 0° and 32°).

London Thermal Comfort Criteria

KEY	USAGE CATEGORY	% OF HOURS WITH ACCEPTABLE UTCI	DESCRIPTION
	All Season	>90% in each season	Appropriate for use year-round (e.g. parks).
	Seasonal	>90% spring-autumn AND >70% winter	Appropriate for use during most of the year (e.g. outdoor dining).
	Short-term	>50% all seasons	Appropriate for short duration and/or infrequent sedentary uses (e.g. unsheltered bus stops or entrances) year-round.
	Short-term seasonal	>50% spring-autumn AND >25% winter	Appropriate for short duration and/or infrequent sedentary uses during most of the year.
	Transient	<25% winter <50% any other season	Appropriate for public spaces where people are not expected to linger for extended period (e.g. pavements, cycle paths).

1144. The thermal comfort conditions have been assessed for entrances, bus stops and amenity spaces.

1145. The purpose of the tests is to compare conditions with and without the proposed development. To assess those conditions the following conditions have been tested:

- Configuration 1: The existing site with existing surrounding buildings (The Baseline);
- Configuration 2: The Proposed Development with existing surrounding buildings;
- Configuration 3: The Proposed Development with the tier 1 cumulative schemes (schemes for which planning permission has been granted, including 6-8 Bishopsgate, Leadenhall Court, 40 Leadenhall Street, Emperor House, Boundary House and 29 - 15 Minories, 57-60 & 62 Aldgate High Street and 1 Little Somerset Street);
- Configuration 4: The Proposed Development with the tier 1 and tier 2 cumulative schemes (schemes which have been submitted and are awaiting determination, including 1 Undershaft, 100, 106 & 107 Leadenhall Street, 115-123 Houndsditch, Bevis Marks House, 24 Bevis Marks, Fountain House, 130 Fenchurch Street, Site bounded by Fenchurch Street, Mark Lane, Dunster Court and Mincing Lane, 70 Gracechurch Street, 150-152 & 153 Fenchurch Street, 55 Bishopsgate, 65 Crutched Friars and 85 Gracechurch Street).

Configuration1: Existing site with the existing surrounding buildings

1146. In the existing baseline configuration, entrances and bus stops are suitable for seasonal or short term use, which satisfies the target condition.

1147. The spill out sitting areas adjacent to 1 Undershaft, west of 30 St Mary Axe and on the corner of Bevis marks and Bury Street are suitable for seasonal use. To the east of 30 St Mary Axe the area is suitable for a mix of seasonal and short term use, which is a category above the target condition. The benches in St Helen's churchyard and west of 30 St Mary Axe are suitable for seasonal use, which satisfies the target condition. The benches to the south of 1 Undershaft are suitable for a mix of seasonal and short term use. The benches to the north of 30 St Mary Axe are suitable for short term use. These are one category above the target condition. The benches to the east of 30 St Mary's Axe and in Mitre Square Garden are suitable for a mix of seasonal and all-season use. These satisfy the target conditions.

1148. The conditions at the Aldgate School playground and the Aldgate Station Memorial are suitable for a mix of seasonal and all-season use. The Aldgate School roof terraces would be suitable for seasonal use. These satisfy the target conditions. There are also terraces at the ACE building, 11-12 Bury Street and One Creechurch Place. These terraces are suitable for seasonal use, which satisfies the target condition.

Configuration 2: Proposed development with the existing surrounding buildings

1149. In the proposed development configuration, all entrances to the proposed development would be suitable for a mixture of all-seasonal or seasonal use, which satisfies the target condition. Off-site entrances and bus stops are suitable for all-season to short term use, which satisfies the target condition.

1150. The proposed seating at the south east of the site would be suitable for all-season use. This satisfies the target condition. The spill out sitting areas adjacent to 1 Undershaft, west of 30 St Mary Axe and on the corner of Bevis Marks and Bury Street are suitable for seasonal use, which accords with the target condition. To the east of 30 St Mary Axe the area is suitable for a mix of seasonal and short term use, which is a category above the target condition, same as the baseline conditions.

1151. The proposed benches at the southern end of the site would be suitable for all-season use. This satisfies the target condition. The benches in St Helen's churchyard and west and north of 30 St Mary Axe are suitable for seasonal use,

which satisfies the target condition. The benches to the north of 30 St Mary Axe have improved by one category from the baseline scenario. The benches to the south of 1 Undershaft are suitable for a mix of seasonal and short term use. These are one category above the target condition. The benches to the east of 30 St Mary's Axe and in Mitre Square Garden are suitable for a mix of seasonal and all-season use. These satisfy the target conditions.

1152. The conditions at the Aldgate School playground and the Aldgate Station Memorial are suitable for a mix of seasonal and all-season use. The Aldgate School roof terraces would be suitable for seasonal use. These satisfy the target conditions. The terraces at the ACE building, 11-12 Bury Street and One Creechurch Place would be suitable for seasonal use, which satisfies the target condition.

1153. On site, the proposed Level 6 and 7 amenity terraces would be suitable for a mix of all-season and seasonal use. This satisfies the target condition. The proposed Level 8 amenity terrace would be suitable for seasonal use. This satisfies the target condition. The proposed Level 9 amenity terrace is suitable for seasonal use across the majority of the terrace, but has localised regions which are suitable for short-term use at the outer edges of the terrace. Conditions in these locations are driven by the winter conditions, but are still over 90% acceptable throughout spring, summer and autumn. Taking into consideration the extent of the terrace, which is still suitable for seasonal use, it is considered that this terrace will still be suitable for the intended use. At the tower, the proposed Level 22 and roof level amenity terraces would be suitable for a mix of all-season and seasonal use. The proposed Level 36 amenity terrace would be suitable for all-season use. These satisfy the target condition.

Configuration 3: Proposed development with Tier 1 cumulative surrounding buildings

1154. In the proposed development with Tier 1 cumulative buildings configuration, all entrances to the proposed development would be suitable for a mixture of all-seasonal or seasonal use, which satisfies the target condition. Off site entrances and bus stops are suitable for all-season to short term use, which satisfies the target condition.

1155. The proposed seating at the south east of the site would be suitable for all-season use. This satisfies the target condition. The spill out sitting areas adjacent to 1 Undershaft, west of 30 St Mary Axe and on the corner of Bevis Marks and Bury Street are suitable for seasonal use, which accords with the target condition. To the east of 30 St Mary Axe the area is suitable for a mix of seasonal and short term use, which is a category above the target condition, same as the baseline conditions.

1156. The proposed benches at the southern end of the site would be suitable for all-season use. This satisfies the target condition. The existing benches in St Helen's churchyard and west and north of 30 St Mary Axe are suitable for seasonal use, which satisfies the target condition. The benches to the north of 30 St Mary Axe have improved by one category from the baseline scenario. The benches to the south of 1 Undershaft would be suitable for seasonal use, an improvement from Configurations 1 and 2. The benches to the east of 30 St Mary's Axe and in Mitre Square Garden are suitable for a mix of seasonal and all-season use. These satisfy the target conditions.

1157. The conditions at the Aldgate School playground and the Aldgate Station Memorial are suitable for a mix of seasonal and all-season use. The Aldgate School roof terraces would be suitable for seasonal use. These satisfy the target conditions. The terraces at the ACE building, 11-12 Bury Street and One Creechurch Place would be suitable for seasonal use, which satisfies the target condition.

1158. On site, the proposed Level 6 and 7 amenity terraces would be suitable for a mix of all-season and seasonal use. This satisfies the target condition. The proposed Level 8 amenity terrace would be suitable for seasonal use. This satisfies the target condition. The proposed Level 9 amenity terrace is suitable for seasonal use across the majority of the terrace but has localised regions which are suitable for short-term use at the outer edges of the terrace. Conditions in these locations are driven by the winter conditions, but are still over 90% acceptable throughout spring, summer and autumn. Taking into consideration the extent of the terrace, which is still suitable for seasonal use, it is considered that this terrace will still be suitable for the intended use. At the tower, the proposed Level 22 and roof level amenity terraces would be suitable for a mix of all-season and seasonal use. The proposed Level 36 amenity terrace would be suitable for all-season use. These satisfy the target condition.

Configuration 4: Proposed development with Tier 1 and Tier 2 cumulative surrounding buildings

1159. In the proposed development with Tier 2 cumulative buildings configuration, the comfort levels recorded would be very similar to Configuration 3. The suitability of conditions is therefore consistent with what was reported for Configuration 3. This applies to on-site entrances, off-site entrances, bus stops, on-site seating, off-site seating, on-site benches, off-site benches, off-site mixed ground level amenity, proposed amenity terraces and off-site amenity terraces.

Thermal Comfort Conclusion

1160. All ground level thermal comfort conditions were either suitable for the intended use, or no worse than the baseline conditions. This applies to all entrances, bus stops, spill-out seating areas, benches and mixed amenity spaces within the study area. The results show that the proposed development would result in a beneficial impact on the existing benches to the north of 30 St Mary Axe, which are made suitable having not been so for the baseline. With regard to off-site terraces, all would be suitable for their intended use. For terraces proposed on site, there will be some localised exceedances at Level 9 terrace, which will be colder than desirable in winter. However, this is not considered to result in an unacceptable level in terms of thermal comfort to an extent to that would make the use of the terrace unsuitable. All other terraces on the proposed development would be suitable for their intended use.

1161. In light of the above, it is considered that the thermal comfort in and around the site would be acceptable and in accordance with London Plan Policy D8, Policy D9 and emerging City Plan 2040 policies S8 and S12, and the guidance contained in the Thermal Comfort Guidelines for Development in the City of London.

Air Quality

1162. Local Plan 2015 policy CS15 seeks to ensure that developments positively address local air quality. Policy DE1 of the draft City Plan 2040 states that London Plan carbon emissions and air quality requirements should be met on sites and Policy HL2 requires all developments to be at least Air Quality Neutral, developers will be expected to install non-combustion energy technology where available, construction and deconstruction must minimise air quality impacts and all combustion flues should terminate above the roof of the height of the tallest part of the development. The requirements to positively address air quality and be air quality neutral are supported by policy SI1 of the London Plan.

1163. The Environmental Statement at Chapter 8 and appendices 8.1 to 8.5 and includes assessment of the likely impact of the proposed development on air quality as a result of demolition, construction and operational phases of development.

1164. An air quality positive statement has been submitted, which details the approach to be undertaken in association with the construction and operation of the proposed development. The air quality positive approach has identified the following:

- The main constraints to air quality at the Application Site are the existing high pollutant concentrations resulting from road traffic emissions, existing high pollutant background concentrations, as well as the proximity of nearby sensitive land uses;

- Design opportunities considered throughout the design stage include proposed energy and ventilation strategies, transport, public and green spaces, and land use;
- Measures will be adopted under the four key areas (better design and reducing exposure, building emissions, transport emissions, innovation and future proofing); and
- An implementation and monitoring plan will ensure that the measures agreed are upheld and adhered to.

1165. The air quality officer has confirmed the air quality positive approach set out in the statement to be acceptable.

1166. During demolition and construction dust emissions would increase and would require control through the implementation of good practice mitigation measures contained in the Construction Environmental Management Plans to be submitted and approved under conditions attached to the planning permission.

1167. The proposed development would be car free and heating is through air source heat pumps which is welcomed. The development meets both the transport and building emissions benchmarks for the Air Quality Neutral Assessment and would be Air Quality Positive, and there are mitigations set out within the Air Quality Positive Statement.

1168. Secondary power is proposed to be supplied by a second mains connection, and it has been confirmed there is to be no backup generator installed.

1169. Particulate filtration has been proposed as part of the full mechanical ventilation strategy. Due to the majority of predicted NO2 annual mean concentrations being within 10% of the annual mean objective, and the uncertainty value of the modelling being >10%, NOx filtration will also be required.

1170. The City's Air Quality Officer has no objections following clarifications on the ES Chapter. Conditions are recommended including a restriction on the use of diesel generators, submission of evidence of installation of an appropriate NOx and Particulate filtration system and Non-Road Mobile Machinery Registration.

1171. Subject to conditions, the proposed development would have a minimal impact on local air quality. The scheme meets the air quality neutral and positive benchmarks and has demonstrated an approach that positively addresses air quality. The proposed development would accord with Local Plan Policy 2015 policy policies HL2 and DE1 of the draft City Plan 2040, and Policy SI1 of the London Plan which all seeks to improve air quality.

Noise and Vibration

1172. Local Plan policy DM15.7 and London Plan Policies D13 and D14 require developers to consider the impact of their developments on the noise environment. It should be ensured that operational noise does not adversely affect neighbours and that any noise from plant should be at least 10dBa below background noise levels.

1173. The Environmental Statement at Chapter 9 and Appendices 9.1 to 9.4 assess the impact from noise and vibration associated with the proposed development, including noise and vibration from demolition and construction; noise from the proposed development during operation; and noise associated with increases in road traffic, which could be attributed to the proposed development.

1174. The Environmental Statement identifies the following as receptors that would be sensitive to noise and vibration from the proposal (the sensitive receptors):

- Religious: Bevis Marks Synagogue; St Katherine Cree C of E Church (Both identified as “Medium Risk”).
- Residential: 2 Heneage Lane; 18-20 Creechurch Lane; 10-16 Creechurch Lane; 4-8 Creechurch Lane (all identified as “High Risk”)
- Commercial: 4-10 Heneage Lane; 33 Creechurch Lane; 24 Creechurch Lane; 12-14 Mitre Street; 88 Leadenhall Street; 100 Leadenhall Street; 30 St Mary Axe (The Gherkin); 5-10 Bury Street (all identified as “Low Risk”)

1175. In most City redevelopment schemes the main noise and vibration issues occur during demolition and construction phases. In respect of noise, the assessment identifies that for the two medium sensitivity religious institutions, there would be a negligible impact.

1176. During the majority of the construction period the impact to some high sensitivity residential receptors at 2 Heneage Lane and 4-8 Creechurch are expected to be negligible to minor adverse.

1177. The impact to 10-16 Creechurch Lane however would potentially be significant, being classed as minor adverse to moderate adverse for the majority of the construction phase. The impact to 18-22 Creechurch Lane would also be significant as major adverse effects are expected during demolition and excavation works. Noise mitigation measures and management plans would therefore be required, with specific measures for those expected to be impacted significantly during the works. A Scheme of Protective Works is recommended to be secured by condition.

1178. The statement does not identify any significant effects resulting from construction traffic.

1179. In respect of vibration, the construction works would not result in significant effects to nearby receptors.

1180. Noise and vibration mitigation during the deconstruction and construction phases, including control over working hours and types of equipment used would be included in a Demolition, and a Construction and Environmental Management Plan to be secured by condition, and freight movements would be controlled through the Construction Logistics Plan, secured by condition. These would need to demonstrate compliance with the City's Code of Practice for Deconstruction and Construction Sites and the Mayor of London's Construction Logistics Plan Guidance.

1181. Regarding the operational phase of the development, there would not be a significant impact due to road traffic as the number of vehicle attributed to the proposed development would be negligible.

1182. Noise levels from mechanical plant in the completed development would need to comply the City of London's standard requirements that noise output should be 10dB below the background noise levels and would be approved under planning conditions to ensure that there would not be an adverse effect on the surrounding area. The environmental statement confirms this to be the intention, and it would be a condition of development.

1183. The Proposed Development provides for active uses at lower levels, including retail, food and beverage, and community uses. At this stage specific users have not been identified so the precise commercial activity and associated noise level cannot be accurately defined however, the levels of noise generated from the likely type of commercial activity are expected to be relatively low.

1184. The retail, food and beverage, and community premises could include low levels of background music, in addition to noise from people conversing within the space and using outdoor seating areas.

1185. A series of conditions are proposed to be attached in respect of the hours of use of the office amenity terraces, as well as a restriction on the use of amplified music on these terraces. Operational management plans for each of the commercial elements would be secured by legal agreements, and these will be expected to set out the appropriate noise control measures to minimise disturbance to nearby sensitive receptors. The appropriate noise control measures are likely to be largely based around opening hours and effective security.

1186. Overall, at worse the cumulative effects would be considered minor adverse, which is not significant throughout the construction and demolition phase, as well as during operation.

1187. Environmental health officers have confirmed, that subject to the recommended conditions, they would have no objections with regard to the noise impacts.

1188. The submitted Environmental Statement considers the impact of the development on the noise environment. Subject to a series of conditions to mitigate noise and vibration during the deconstruction/construction and operational phases of the development, the proposed development would comply with polices D13 and D14 of the London Plan and policy DM15.7 of the Local Plan (2015).

Overlooking and overbearing impact to residential properties and other sensitive receptors

1189. Local Plan policy DM21.3 and draft City Plan 2040 policy seek to protect the amenity of existing residents. Proposals should be designed to avoid overlooking and protect privacy. It is highlighted that the current Local Plan and Draft City Plan 2040 assess residential amenity and not the amenity of office occupiers.

1190. Policy DM10.3 'Roof Gardens and Terraces' of the Local Plan seeks to encourage high quality roof gardens and terraces where they do not, inter alia, immediately overlook residential premises.

1191. Consideration has to be given as to whether the scheme would give rise to any unacceptable levels of overlooking and loss of privacy to nearby residential properties.

1192. The proposed amenity terraces for the office accommodation on levels 22, 36 and roof level (level 43), due to their height, separation distance and high balustrade (2.6 metres high) would not result in overlooking and loss of privacy to nearby residential properties to the southeast or the residential unit to the north (2 Heneage Lane).

1193. There are no residential properties to the south or west of the site and therefore, the proposed terraces at Holland House and Renown House would not give rise to overlooking.

1194. The proposed development would result in an increased massing and height. Although the proposed development and in particular the tower element would be

located in close proximity to residential units, it is considered that by nature of the development within the Eastern Cluster, incorporating tall buildings, the proposal would not result in a greater impact to these units greater than that already caused by other consented schemes. It is therefore considered that the development would not be reasonable to be refused on the grounds of resulting in an unacceptable overbearing impact to the nearby residential properties.

1195. A similar development was previously refused due to its adverse effect on the setting of the Grade 1 listed Bevis Marks Synagogue and the setting and amenities of its courtyard by reason of the overbearing and overshadowing impact. Whilst the proposed development would be visible from the Synagogue's courtyard when facing south, it is noted that the massing and height of the development has been reduced since the refusal of the previous application. Furthermore, there is an existing building (Valiant House) intervening between the proposed tower and Bevis Marks Synagogue, which results secures a separation distance between the courtyard and proposed development. It is therefore considered that the proposed development would not detrimentally impact upon the amenities or usability of the courtyard for religious events, by way of being overbearing.

1196. The proposals would not result in any undue overlooking, loss of privacy or overbearing impact. As such, it would comply with Local Plan policy DM21.3 and CS5 and policies HS3 and S23 of the draft City Plan 2040.

Contaminated Land

1197. Local Plan policy DM15.8 and draft City Plan 2040 policy HL4 requires developers to carry out detailed site investigation to establish whether the site is contaminated and determine the potential of pollution of the water environment or harm to human health and non-human receptors. Suitable mitigation must be identified to remediate any contaminated land and present potential adverse impacts.

1198. Policy S1 of the draft City Plan 2040 expects developers to address land contamination.

1199. The Environmental Statement at Chapter 10 and appendix 10.1 assess the impact of ground conditions associated with the proposed development, including potential effect on construction workers, potential effect on adjacent sensitive users, potential effect on controlled waters and potential effect on groundwater and recharge during operation.

1200. The Environmental Statement concludes that subject to mitigation, no likely significant effects have been identified.

1201. The submission has been reviewed by Environmental Health Officers who have suggested a series of conditions in respect of site investigation and a risk assessment to establish if the site is contaminated and a condition in respect of the process/remediation if contamination is found when carrying out the works. Thames Water have also requested a condition in respect of a piling method statement. Subject to the imposition of conditions, the proposal is in accordance with Local Plan policy DM15.8 and policies S1 and HL4 of the draft City Plan 2040.

Sustainability

Circular Economy

1202. London Plan Policy SI7 ('Reducing waste and supporting the circular economy') sets out a series of circular economy principles that major development proposals are expected to follow. The Local Plan Policies CS15 and DM 17.2, and the emerging City Plan 2040 policy S8 and DE1 set out the City's support for circular economy principles. The application includes considerations as to whether there is an opportunity to retain and refurbish any of the buildings or building elements currently on site.

1203. The site consists of the following existing buildings: Bury House (31 Bury Street), Holland House (1-4 Bury Street) and Renown House (33-34 Bury Street). The existing Bury House was constructed in the 1967 and is formed of a concrete frame with flat roof and curtain walling with stone-clad sections and large areas of tinted glazing. The main office floors have varying floor to ceiling heights (top of floor slab to underside of floor slab) of 3.29 -3.83m. The structure and core would not be able to facilitate a meaningful adaptation and extension, in particular regarding fire safety, equality and access, energy efficiency, facilities, building services and structural capacity. The current form of the building would also not be easily adaptable for significant public realm improvements and the activation of the ground floor. The basement retaining walls can be retained.

1204. Holland House is a Grade II* listed building constructed in 1916. In addition to the identified required repair and refurbishment works, some local demolition proposed at the rear could connect the building with the other buildings on site via a proposed lift and stair core within Bury House that would serve all three buildings, with minimal interventions into the historic fabric.

1205. Renown House is the smallest of the 3 buildings and was constructed in 1912. The building's constraints are similar to those of Bury House and therefore only the facades are proposed to be retained. All internal floors including the basement

slab would be replaced to allow interconnection between the 3 buildings and improve fire safety, access, energy efficiency and facilities.

Optioneering

1206. An options assessment has been carried out that includes information about how the options would address circular economy principles, set out in this section. Whole life-cycle carbon impacts of the options are set out in the Whole life-cycle carbon emissions section of this report. The optioneering exercise is designed to establish the potential of retention, reuse of materials and the carbon impacts of the options. The options are also evaluated with regard to their opportunities for wider environmental benefits and other planning benefits in order to address the economic, social and environmental objectives of achieving sustainable development as set out in the NPPF 2023, chapter 2, paragraph 8.

1207. The optioneering exercise undertaken for this site includes 4 options:

- Option 1: Refurbishment, new cores and new Renown House structure, 92% retained substructure, 88% retained superstructure; 11.207sqm GIA
- Option 2: Refurbishment, new cores, new Renown House structure and extensions, 92% retained substructure, 75% retained superstructure; 13,467sqm GIA
- Option 3: Refurbishment, consolidation with new central core, new Renown House structure and extensions, 92% retained substructure, 77% retained superstructure; 13,467sqm GIA
- Option 4: Redevelopment of Bury House, refurbishment of Holland House, new Renown House structure and extensions, 64% retained substructure, 39% retained superstructure; 40,558sqm GIA

1208. The results of the optioneering with regard to circular economy demonstrate that options 1 – 3 retain very high percentages of the existing buildings' fabric, The three buildings currently serve as office buildings and require a number of essential interventions to ensure their continued use, to include upgrades to energy efficiency, circulation (and equality measures), fabric, end of trip facilities and building services. However, the upgrades in the retained buildings would not result in sufficient improvement of the quality of internal spaces which would limit the commercial viability of the schemes. Options 3 and 4 would offer the opportunity for the new core to share services and provide current access requirements to the heritage advantage of the listed Holland House which can be upgraded with limited physical interventions. Option 4, despite of the redevelopment of Bury House, has been designed to retain the majority of substructure and a substantial amount of existing superstructure.

1209. The explored options are considered to comply with the GLA's Circular Economy Statement guidance requiring a robust exploration of circular economy options for the site. Although the Bury House redevelopment option 4 would result in the highest quantity of demolition waste of the assessed options due to its largest size, it would deliver holistic environmental benefits combining heritage, amenity and wellbeing, urban greening, climate resilience and activation of the local area that are required to future proof the City as a highly sustainable location. This option therefore has been further developed for the application scheme.

1210. The evaluation of the carbon intensity of the options is discussed in the Whole life-cycle carbon emissions section of this report.

The application proposal:

1211. The submitted Circular Economy Statement for the planning application scheme describes the strategic approach to incorporating circularity principles and actions into the proposed new development, in accordance with the GLA Circular Economy Guidance.

1212. A pre-redevelopment audit has been carried out, demonstrating that pre-demolition audit has been carried out to identify opportunities of retention, recovery, reuse and recycling. The proposed scheme includes retention of 64% (by mass) of the site's substructure and 39% of the existing superstructure (Holland House: 64%, Renown and Bury House: 0%). The best reuse opportunities exist for items such as raised access flooring, timber, carpet tiles, metal elements and stone cladding. The demolition material with the highest quantity is concrete which can be recycled through crushing and use as aggregate, for example in the proposed concrete frame of the proposed lower floors.

1213. The strategy includes measures to support reuse and recycling of existing materials within the new built scheme as well as durable materials and construction and sustainable procurement, to include the following principles that will be further developed in the detailed design:

- Evaluation of existing steelwork within the building to be demolished for reuse
- Assessment of opportunities to reuse existing materials, such as the existing retaining walls of the single storey basement to minimise new piling, and the crushed concrete from the existing building utilised in the piling mat and as hardcore
- Use of low carbon materials and products with high recycled contents
- Incorporation of modular products to aid the construction process and the opportunities for disassembly and early re-use

- Design for adaptability and flexibility: opportunity of adaptive reuse of the tower to use as a future hotel, due to the smaller ratio between core and façade lengths
- Design for disassembly of building elements:
    - Glass panels designed to allow ease of replacement and disassembly at end of life
    - Design of building maintenance units to have access to all faces to allow unitised façade disassembly and replacement
    - All plant is accessible and with plant replacement hatches to disassemble all building services at end of life
- Design for longevity:
    - Structure designed for at least a 100-year life span (standard 50- or 60-year lifespan)
    - Incorporation of extreme weather impact assessment including flooding
    - Adherence to relevant industry standard sustainability schemes (e.g. BCSA Sustainability Charter), to ensure robust components
    - Façade design to ensure longest possible life span, to include terracotta cladding.

1214. An update to the Circular Economy Statement resulting from the detailed design stage and a post-completion update in line with the GLA guidance on Circular Economy Assessments to confirm that high aspirations can be achieved are required by condition.

Operational energy strategy and carbon emissions

1215. The Energy Statement accompanying the planning application aligns with a variable assessment approach for new build and major refurbishments in line with the GLA Energy Assessment Guidance. The statement demonstrates that the proposed development has been designed to achieve an overall 28.6% reduction in regulated carbon emissions compared with a Building Regulations Part L 2021 compliant building.

1216. The risk of overheating would be reduced through optimising the glazed to solid ratio, in the new build areas achieving 49% glazing, while the refurbished areas would have 32% of glazing. The small footprint of the tower results in relatively shallow floorplates, with the majority of the work desk areas within 10m of the external façade. This provides the opportunity for a mixed mode ventilation strategy. Passive natural ventilation is achieved through vertical ventilation panels to each side of the office windows, reducing the need for mechanical systems by an estimated 50% of the year.

1217. Further energy efficiency measures, such as heat recovery from mechanical ventilation and low energy lighting would be incorporated, achieving a 12.3% carbon reduction over the Part L 2021 baseline overall, an 8.4% carbon reduction for the new build and 27.6% carbon reduction for the refurbishment.

1218. There is currently no available district heating network close enough to the site, and the opportunity to connect into a future district heating network would be incorporated into the basement of the proposed development.

1219. In relation renewable energy technologies, a PV array of 51.3 sqm would be installed on various roof levels and including in conjunction with bio solar roofs. It is recommended that a condition be imposed requiring submission and approval of details. The PVs and air source heat pumps would provide low carbon and renewable energy, reducing the operational carbon emissions overall by over 16% compared to a Building Regulations 2021 compliant building. For the new build, this would be over 15% and for the refurbishment over 20% carbon emission savings.

1220. The air source heat pumps would be located in a central energy centre at roof level of the tower. The mechanical systems for the building have been decentralized with all the air handling plant being located at soffit level of each floor. The facade design includes permeable terracotta spandrel panels to enable drawing or extracting air through the façade. This approach significantly reduces the need for large, centralised plant and makes the floor plates extremely adaptable for fit out and use, reducing over supply, waste and unnecessary carbon emissions.

1221. The submitted energy statement demonstrates that the proposed tower would achieve a 23.7% reduction and the refurbished Holland House and altered Renown House a 48.2% reduction of operational carbon emissions. The site wide and new build carbon reduction does not meet the GLA's 35 % target, and the GLA acknowledges that the 35% carbon reduction target relative to Part L 2021 will be initially challenging for non-domestic buildings. However, the proposed level of operational carbon savings constitutes an improvement on average performances of commercial City developments at planning stage recently assessed. As the energy statement demonstrates that the Mayor's net zero carbon target cannot be met on site, an offset payment will be made by the applicants as set out in the planning obligations section of this report.

Energy Use Intensity (EUI)

1222. The adopted GLA energy assessment guidance (2022) requires developments to calculate the EUI, a measure of total energy consumed in a building annually including both regulated and unregulated energy, as well as the space heating

demand. For offices, the GLA requires applicants to target an ambitious EUI of 55 kWh/m2(GIA)/year and a space heating demand of 15 kWh/m2(GIA)/year. The estimated EUI from the offices of the proposed development is 97.1 kWh/m2/year and for the space heating demand 3.3 kWh/m2/year, the latter being particularly low as the building would be cooling-led due to the internal gains from occupancy, small power, lighting and solar gain.

1223. These figures are estimates at this stage as the operational energy performance – including unregulated energy use - of the building is dependent on the level of occupancy and operation of the building.

1224. A S106 clause will be included requiring reconfirmation of this energy strategy approach at completion stage and carbon offsetting contribution to account for any shortfall against London Plan targets, for the completed building. There will also be a requirement to monitor and report the post construction energy performance to ensure that actual operational performance is in line with GLA's zero carbon target in the London Plan.

BREEAM

1225. The proposed development has been pre-assessed under BREEAM New Construction v6 - shell & core (office); shell & core (retail). All uses target an "excellent" rating, 84.15% for the offices, and 77.75% for retail, both with aspiration to achieve "outstanding" ratings through detailed design. The pre-assessments are on track to achieve a high number of credits in the City of London's priority categories of Energy, Water, Pollution, Materials and Waste.

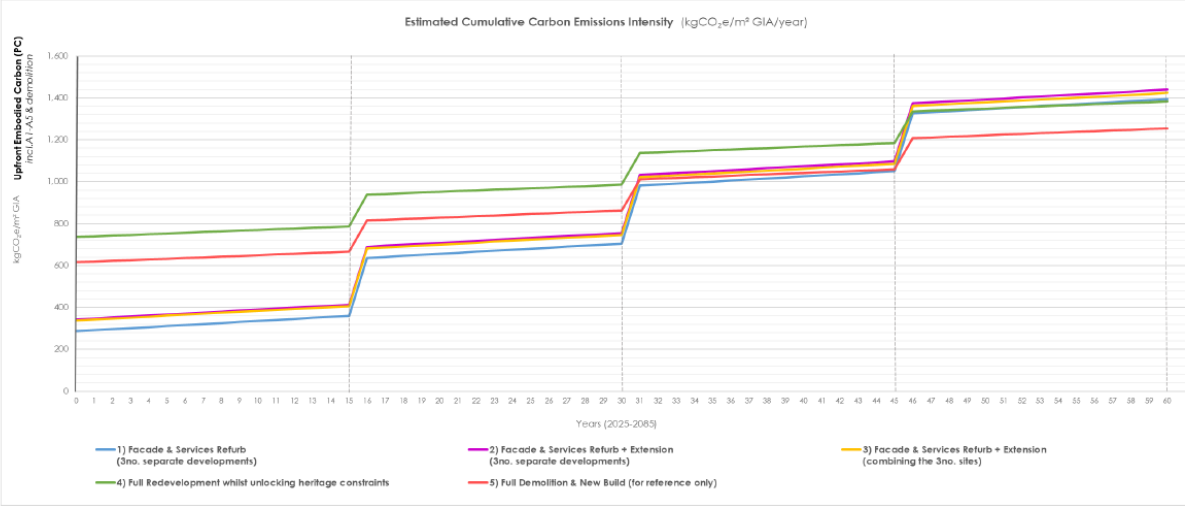
1226. The BREEAM pre-assessment results comply with Local Plan policy CS15 and emerging City Plan 2040 policy DE1. Post construction BREEAM assessments are required by condition.

NABERS UK

1227. This certification scheme rates the energy efficiency of a commercial building from 1 to 6 stars over a period of 12 months of operation. The proposals target a 5 star (out of 6 possible) rating.

Whole life-cycle carbon emissions

1228. London Plan Policy SI 2E (Minimising greenhouse gas emissions) requires applicants for development proposals referable to the Mayor (and encouraging the same for all major development proposals) to submit a Whole Life-Cycle Carbon assessment against each life-cycle module, relating to the product sourcing stage, construction stage, the building in use stage and the end-of-life stage. The



emerging City Plan 2040 policy DE1 requires the submission of Whole Life-Cycle Carbon assessments for all major applications. The assessment captures a building's operational carbon emissions from both regulated and unregulated energy use, as well as its embodied carbon emissions, and it takes into account potential carbon emissions benefits from the reuse or recycling of components after the end of the building's life. The assessment is therefore closely related to the Circular Economy assessment that sets out the contribution of the reuse and recycling of existing building materials on site and of such potentials of the proposed building materials, as well as the longevity, flexibility, and adaptability of the proposed design on the Whole Life-Cycle Carbon emissions of the building. The Whole Life-Cycle Carbon assessment is therefore an important tool to achieve the Mayor's net-carbon city target.

Carbon options

1229. 4 options have been assessed with regard to their carbon impacts, environmental and wider planning benefits and constraints:

- Option 1: Refurbishment, new cores and new Renown House structure, 92% retained substructure, 88% retained superstructure; 11.207sqm GIA
- Option 2: Refurbishment, new cores, new Renown House structure and extensions, 92% retained substructure, 75% retained superstructure; 13,467sqm GIA
- Option 3: Refurbishment, consolidation with new central core, new Renown House structure and extensions, 92% retained substructure, 77% retained superstructure; 13,467sqm GIA
- Option 4: Redevelopment of Bury House, refurbishment of Holland House, new Renown House structure and extensions, 64% retained substructure, 39% retained superstructure; 40,558sqm GIA

1230. The following graph and table present the whole life-cycle carbon results from the 4 options.

Graph: Whole life-cycle carbon emissions per square over 60 years

	 Option 1 Facade & Services Refurb (3x separate developments)	 Option 2 Facade & Services Refurb + Extension (3x separate developments)	 Option 3 Facade & Services Refurb + Extension (combining the 3x sites)	 Option 4 Full Redevelopment whilst unlocking heritage constraints
Option Reference	1	2	3	4
Project reference period	60	60	60	60
Gross Internal area (GIA) m²	11,207	13,467	13,467	40,558
Net Internal area (NIA) m²	7,845	9,427	9,427	25,278
Change in NIA (compared to existing) m²	0	1,594	1,594	17,445
Substructure % retained by mass	92%	92%	92%	64%
Superstructure % retained by mass	88%	75%	77%	39%
Total WLCA (incl. B6 & pre-demo) ($kgCO_2e/m^2$ GIA, B7 not included)	1,395	1,440	1,424	1,383
Upfront Embodied Carbon (A1-A5) ($kgCO_2e/m^2$ GIA)	278	332	329	726
In-Use Embodied Carbon (B-C) excl. B6 & B7 ($kgCO_2e/m^2$ GIA)	815	815	815	444
Operational Carbon for building lifetime (B6) ($kgCO_2e/m^2$ GIA)	293	282	271	203
Total WLCA (incl. B6 and pre-demo) (tCO_2e, B7 not included)	15,629	19,387	19,177	56,095
Total existing building demolition (tCO_2e)	88	140	130	402
Upfront Embodied carbon (A1-A5) (tCO_2e)	3,120	4,474	4,426	29,450
In-use embodied carbon (B-C) (tCO_2e)	9,134	10,976	10,976	18,008
Operational Carbon for building life time (B6) (tCO_2e)	3,287	3,798	3,646	8,235

Table: Whole life-cycle carbon results for the options

1231. The options can be analysed in terms of their carbon emissions, opportunities and constraints throughout the GLA's reference period of a 60 year life-cycle as follows:

1232. Option 1 would have the lowest absolute carbon emissions due to the limited new building elements, however this option would have slightly higher whole life-cycle carbon impacts per square meter compared to the Bury House redevelopment option 4, due to operational inefficiencies of the retained buildings. Options 2 and 3 would have slightly higher upfront carbon emissions, total and per square meter compared to option 1, due to proposed extensions and alterations, however the operational carbon emissions of options 2 and 3 would be lower compared to option 1 due to the extensions being able to deliver improved plant spaces. However, option 4 would achieve the greatest efficiencies in the fabric and the MEP strategy with a saving of up to 1/3 of operational carbon compared to the other options.

1233. Due to the almost fourfold floorspace uplift of option 4 compared to the existing buildings and approx. three times of the floorspace compared to options 2 and 3, the absolute carbon emissions of option 4 are more than double compared to the other options. However, the whole life-cycle carbon emissions per square meter of option 4 would be the lowest out of the 4 options. A lower new build option might be able to deliver the same sustainability benefits as option 4 with less embodied carbon impacts, however, the scheme in its proposed form would unlock a number of planning benefits that planning officers consider to be a suitable approach to future proof the City as a sustainable location in London, as set out elsewhere in the report. With regard to sustainability, these benefits include:

- reducing the level of harmful interventions and negative heritage impacts through Bury House hosting up-to-date circulation spaces, end of trip facilities and building services both for Holland House and Renown House
- retaining substantial percentages of the existing structures
- improving social sustainability through the activation and diversification the local area and integration of the site into the context through incorporation of community facilities, retail and public realm improvements
- integrating urban greening and climate resilience measures to intrinsically address local flooding (and the need for SuDS), overheating and urban heat island effects and saving water resources.

1234. Option 4 therefore has been selected as to be developed for the application scheme.

1235. The optioneering approach set out in this section and in the Circular Economy section complies with the recommended approach in the GLA's guidance on whole life-cycle carbon emissions and with the more detailed methodology set out in the City of London's Carbon Options Guidance to establish and evaluate the carbon impact of development options.

1236. Although the emerging City Plan 2040 does not yet carry substantial weight, the retrofit first approach set out in policy DE1 Sustainable Design indicates a direction of travel by requiring carbon optioneering to be used as a tool to explore retaining and retrofitting existing buildings in order to establish the most sustainable and suitable approach for a site. The policy addresses the NPPF 2023 stating in paragraph 157 that the planning system should support the transition to a low carbon future and that it should help to, amongst others, encourage the reuse of existing resources, including the conversion of existing buildings. These policies are reflected in the City of London's extensive process of carbon optioneering that has been carried out as described above to underpin the development of the application scheme including maximising retention of existing structure.

The application proposal:

1237. The submitted whole life-cycle carbon assessment sets out the strategic approach to reduce operational and embodied carbon emissions and calculates the predicted performance that compares to current industry benchmarks as set out in the table in this section. The tall building structure and design present particular challenges to the need to reduce whole life-cycle carbon emissions, and the consideration of design options has determined the design to include:

- exploring foundation options to minimise the concrete and steel material quantity
- rationalising the structural grid to be as efficient as possible, minimising the quantity of material within the build structure and ensuring that the material composition of the superstructure is as low carbon as possible – a steel structure with precast concrete floor slabs was selected
- façade embodied carbon assessment resulting in a lower carbon profile ceramic option within a curtain walling system
- replacement of only the thermal components of the retained facades using 50% of reused raised access floor systems.

1238. The whole life-cycle carbon assessment, to include all life-cycle stages with the exception of the operational carbon emissions, demonstrates that the development can achieve a result close to the GLA's Standard Benchmark. The measures listed above contribute to achieving upfront carbon emissions that improve on the GLA standard benchmark, and to all embodied carbon emissions reaching close to the GLA standard benchmark, despite the challenges of a tall building structure.

1239. Further opportunities to reduce embodied carbon emissions will be considered during detailed design stages and include:

- maximising the Design for Manufacture and Assembly (DFMA)

- the selection of low carbon aluminium products, such as optimising recycled contents for concrete and steel
- sourcing steelwork from electric arc furnace rather than blast furnace produced steel
- an aluminium framed curtain wall system - aluminium can be easily disassembled, reused and recycled
- maximising reused raised access floor systems.

1240. The table below shows baseline whole life-cycle carbon emissions per square meter for the whole site in relation to the GLA benchmarks for offices at planning application stage (including other uses – the GLA guidance advises to select the most relevant building use in providing data):

Scope	Proposed Redevelopment	Benchmark	GLA Benchmark
RICS components	kgCO2/m2	kgCO2/m2	
A1-A5	837	< 950	GLA Standard
		< 600	GLA Aspirational
A–C (excluding B6-B7)	1,447	< 1400	GLA Standard
		< 970	GLA Aspirational
B6+B7	804		
A-C (including B6-B7)	2,251		

1241. The proposed whole site development would result in overall whole life-cycle carbon emissions of 92,937,977 kgCO2 being emitted over a 60-year period. Of this figure, the operational carbon emissions would account for 33,182,958 kgCO2 (35.7% of the building's whole life-cycle carbon), and the embodied carbon emissions for 59,755,019 kgCO2, (64.3% of the building's whole life-cycle carbon).

1242. A detailed whole life-cycle carbon assessment and a confirmation of the post-construction results are required by conditions.

1243. The whole life-cycle carbon emissions have been set out and calculated in accordance with the GLA's Whole life-cycle carbon assessment guidance, as confirmed by the independent 3rd party review. The submitted circular economy strategy, operational and embodied carbon strategy demonstrate the opportunities of the proposal and proposed actions to reduce carbon emissions and therefore comply with the London Plan policy SI 2E, Minimising greenhouse gas emissions, and with the Local Plan Core Strategic policy CS15 Sustainable

Development and Climate Change and the emerging City Plan 2040 policy DE1 Sustainable Design. By committing to an exemplar reduction of whole life-cycle carbon emissions through the submitted strategic approach that is required to be confirmed at detailed design stage, the development would contribute to the transition to a low carbon future in accordance with NPPF (2023) paragraphs 157 and 159.

Urban Greening

1244. London Plan Policy G5 (Urban Greening) sets out the requirement for major developments to contribute to the greening of London through urban greening as part of the design and site. An Urban Greening Factor of 0.3 is recommended for non-residential developments. Draft City Plan (2040) Policy OS2 (City Greening) mirrors these requirements and requires the highest levels of greening in line with good design and site context.

1245. The proposed development would incorporate 274m² of green roofs, 83m² of standard trees in connected pits with a soil volume at least two-thirds projected canopy of the mature tree, 206m² of flower-rich perennial planting, 424m² of standard trees in pits with a soil volume less than two-thirds projected canopy of the mature tree, 158.5m² of green wall, and a 2.5m water feature.

1246. The projected UGF of the whole site is equal to 0.32, which meets the policy requirement.

1247. Policy CS19 of the Local Plan 2015 seeks to protect the amenity value of trees retaining and planting more trees wherever practicable and policy DM19.2 states that developments should promote biodiversity and contribute to urban greening. Local Plan paragraph 3.19.17 states that “Where existing green infrastructure is disturbed, removed or damaged as a result of development, it must be replaced with good quality urban greening. There should be no net loss of green infrastructure. Existing trees should be replaced with trees of an equivalent size and quality.” The emerging City Plan 2040 seeks to increase the number of trees and their overall canopy cover through a number of measures including “Other than in exceptional circumstances, only permitting the removal of existing trees which are dead, dying or dangerous. Where trees are removed requiring their replacement with trees that can attain an equivalent value.”

1248. There are no existing trees on the site to be lost. New trees are proposed in planters at ground floor level in the public realm area, as well as on the upper level terraces of the development. All new greening at the site represents a net-gain.

1249. It is recommended that further details of urban greening measures, and the landscaping and planting strategies are to be secured by condition. Subject to compliance with these conditions the proposal would be policy compliant with regards to Urban Greening.

Climate Resilience

1250. NPPF Paragraph 159 requires new development to avoid increased vulnerability to the range of impacts arising from climate change. Policy DM15.5 Climate change resilience and adaptation of the Local Plan 2015 and Policy DE1 of the draft Local Plan 20240 require climate change adaptation measures to be incorporated into development and for developers to demonstrate how they will improve environmental performance and mitigate and adapt to climate change.

1251. Application submission documents relating to climate change resilience and adaptation have been reviewed, including:

- Climate Change Resilience Sustainability Statement (CCRSS) (Hoare Lea, August 2024)
- Sustainability Statement (Hoare Lea, October 23)
- Design and Access Statement (Stiff+Trevillion, January 2024)
- Flood Risk Assessment and Drainage Strategy (Thorton Tomasetti, January 2024)
- Outdoor Thermal Comfort Assessment (GIA Chartered Surveyors, October 2023)
- Preliminary Ecological Appraisal and Biodiversity Net Gain Report (Hilson Moran, September 2023)
- Health Impact Assessment (Quod, January 2024)

Overheating and the urban heat island effect

1252. An outdoor thermal comfort assessment was conducted by GIA using high resolution Computational Fluid Dynamics (CFD). The assessment found:

- All ground level conditions were suitable for intended use, or no worse than the baseline conditions
- The proposed development is having a beneficial impact on existing benches to the north of 30 St Mary's Axe
- Conditions for all existing off-site terraces are suitable for the intended use
- Conditions for all proposed terraces are suitable for the intended use.

1253. Section 8.3 within the CCRSS (Climate Change Resilience Sustainability Statement) (Rev.4 - Hoare Lee, August 2024) covers the risk of heat stress and assesses the following hazards:

- Increase in temperature may result in a risk of overheating and reduction in building user health and comfort levels within their internal environment (High Risk)
- Increased in temperature may result in reduction in building user comfort within the external environment (Moderate Risk)
- Increased temperatures will have a direct impact of the urban heat island effect (Moderate Risk)
- High levels of sun exposure may cause UV damage to building fabric and reduction in material durability and robustness (Moderate Risk)
- Increased risk of dust and damage results in increased repairs and maintenance (Moderate Risk)
- Building degrading, subsidence and reduced robustness due to dry and hot conditions (Moderate / Low Risk)

1254. Increased risk of damage to building materials (Moderate Risk)

1255. To manage the above risks, the CCRSS states that the following design features and techniques will be included:

- Mechanical ventilation installed with heat recovery mechanisms and plant located away from pollution sources
- Facade and building services have been designed with a fan coil cooling solution
- Dynamic thermal modelling using TM49 DSYs has been conducted to demonstrate the Proposed Development is not at risk of overheating against the criteria of CIBSE TM52 and justify the inclusion of active cooling –
- An external (outdoor) thermal comfort assessment has been completed (using high resolution Computational Fluid Dynamics - CFD) to evaluate external thermal comfort conditions based on the design proposals. The assessment concluded that:
    - All ground level conditions were suitable for intended use, or no worse than the baseline conditions.
    - The Proposed Development is having a beneficial impact on existing benches to the north of 30 St Mary’s Axe.
    - Conditions for all existing off-site terraces are suitable for the intended use.
    - Conditions for all proposed terraces are suitable for the intended use

- Air source heat pumps will be located at roof level, minimising the amount of heat being rejected to the external environment at low level, where heat absorbing surfaces are present
- Building maintenance strategy will be implemented to check and treat materials for UV damage
- Materials on exposed areas will be designed and installed to weather effectively
- Structural foundations and frame have been designed to accommodate a range of soil stiffness values
- All heat stress hazards residual risks have been assessed as Low.

1256. The Climate Change resilience officer has confirmed the proposal to be policy compliant with regards to overheating and the urban heat island effect, and the proposal is therefore considered to be acceptable in this regard.

Flooding

1257. The application site is located within Flood Zone 1 and is therefore identified as being an area at low risk of fluvial and tidal flooding.

1258. Section 8.1 of the CCRSS includes the risk assessment for flooding and includes the following hazards:
- Rising sea levels could increase the risk of flooding to the building and the surrounding area (High risk)
- Increased duration of prolonged rainfall could cause an increased risk of surface water flooding (Very High risk)
- Increased risk of flooding causing significant damage to the development and requirements for weather proofing (Moderate risk)

1259. The CCRSS states that the proposed development is in Flood Zone 1 and has been assessed to be at low risk of flooding from all sources. The proposed drainage system will be sized to attenuate storms up to the 1 in 100 year event plus a 40% allowance for climate change, comprising a blue roof and two attenuation tanks. Flows will be restricted to 5 l/s, which provides an 83% reduction on the equivalent brownfield rate during the 2 year storm event. Based on the above, the CCRSS assesses the residual risk for flooding to the proposed development to be Moderate/low

1260. The Climate Change resilience officer has confirmed the proposed development is policy compliant with regard to flooding and the proposal is therefore considered to be acceptable in this regard.

Water stress

1261. Section 8.2 of the CCRSS includes the risk assessment for water stress and includes the following hazards:

- Increased risk of drought (Moderate risk)
- Increased duration of prolonged rainfall could cause impacts on structural stability within the building (Moderate risk)
- Risk of material degradation due to extended exposure of building materials to increased moisture levels (Moderate/ low risk)
- Increased risk of extended duration of water stress and high water costs (Moderate risk)

1262. In terms of risk management, the CCRSS states that the following design features and techniques will be incorporated to adapt and mitigate for the above risks:

- Project will prioritise native, locally sourced plants for the public realm landscape strategy
- Landscape strategy supported by ecologists and landscape architect's recommendations such as appropriate species which are resilient to periods of water scarcity
- Roof drainage will be used for irrigation of green walls and roofing
- SuDS in the form of blue roofs and tanks will attenuate rainfall
- Site is not at risk from groundwater flooding
- Lowest level basement slab will be designed for Grade 3 waterproofing which will protect against future risk
- Internal linings proposed in retained basements
- Efficient water fittings installed to reduce water consumption

1263. All water stress hazards' residual risks have been assessed as Low. The FRA & DS states that "roofwater recycling has been discounted on the basis that the roof area is small compared to the number of potential users and disproportionate investment required to distribute a small water resource over a large number of occupants."

1264. The climate change resilience officer has confirmed the proposal is policy compliant with regard to water stress and the proposal is therefore considered to be acceptable.

Biodiversity Net Gain, pests and diseases

1265. Section 8.4 of the CCRSS assesses the risk to natural capital and includes risk of loss of biodiversity and high quality green space (Moderate Risk). This risk will be managed through:

- Introducing increased vegetation on site, in green roofing, terrace planting and public realm planting
- Habitat infrastructure such as bird and insect boxes to be installed
- Project will prioritise native, locally sourced plants for the landscape strategy

1266. The CCRSS classes the residual risk as Low.

1267. Section 8.5 of the CCRSS assesses the risk of pests and diseases and assesses the following hazards:
- Increased temperatures mean new warm-climate pests migrate to the UK and spread new diseases to humans (Moderate Risk)
- Increased temperatures mean new warm-climate pests migrate to the UK and spread new diseases to plants (Moderate Risk)

1268. The CCRSS states this risk will be managed through:
- Implementation of a pest management plan or implementation of an accredited Pest Management program
- Regular monitoring and maintenance of ventilation systems
- Consideration of new warm-climate pests will be factored into final species selection for planting

1269. The CCRSS assesses the residual risk to be Moderate /Low.

1270. A Preliminary Ecological Appraisal (PEA) has been produced by Bowes & Wyer. The survey deemed the site to be of low ecological value with limited opportunities to support nesting birds. The proposed development incorporates multiple biodiversity enhancements measures which will result in an Urban Greening Factor (UGF) exceeding 0.3. Ecological enhancements will be delivered through the inclusion of green roof habitats, terraced landscaping, a green wall and planting at the public realm level. Habitat infrastructure such as bird and insect boxes will also be installed.

1271. The proposed development will achieve 300% net gain, in the form of “area based habitat” establishes a total ecological value of the final development site of 0.30 habitat units. This is comprised of 0.1 units Intensive Green Roof, 0.14 Urban trees, 0.02 Green Wall, 0.04 Ground level planters, 0.02 sustainable drainage system.

1272. The proposals would achieve a UGF of 0.32 and this is through greening at ground level and the upper level terraces. The ground level public realm planting would be within standard tree pits and planters, as well as the vertical climbing green wall. Further green roofs trees and planters are proposed on each of the

terraces at 7th, 8th, 9th, 22nd, 23rd, 36th and 37th levels, as well as at the inaccessible RF1 and RF3 levels.

1273. A range of acceptable native species are proposed and with the correct management could provide high level biodiversity value. Further details of the proposed landscaping with regard to species and management is recommended to be secured by condition. The final details of the UGF are also recommended to be secured by condition.

1274. A series of conditions are recommended to secure the implementation and management of the proposed biodiversity net gain measures.

1275. A Health Impact Assessment was prepared by Quod which found the proposed development has a positive impact on health overall. This assessed in more detail in the 'Health Impact assessment' section below, and is considered to be acceptable.

Food, Trade, Infrastructure

1276. The proposed development would make a positive contribution to the City of London, with the potential to mitigate some of the wider impacts of climate change.

1277. The proposed development would include facilities that are directly beneficial to the local economy in the form of trade, such as the retail, cultural/community spaces. The proposed facilities would enable occupiers to use active transport including cycling and reducing the dependence on transport infrastructure.

1278. The Sustainability Statement writes that the project aims to deliver a 'WELL' certified building thereby incorporating industry best practice on health and wellbeing. Measures encouraging physical exercise such as the provision of cycle spaces will incentivise active commuting. The positive health impacts taken from the Quod Health Impact Assessment can also be applied to positive improvements to trade and infrastructure.

Climate Change Resilience Summary

1279. The proposed development is compliant with Local Plan Policy DM 15.5 (Climate change resilience), Draft City Plan 2040 Strategic Policy S15 (Climate Resilience and Flood Risk) and associated City Plan 2040 Policies CR1 and CR2.

Conclusion on Sustainability

1280. The City of London Climate Action Strategy supports the delivery of a net zero, climate resilient City. The agreed actions most relevant to the planning process

relate to the development of a renewable energy strategy in the Square Mile, to the consideration of embedding carbon analysis, circular economy principles and climate resilience measures into development proposals and to the promotion of the importance of green spaces and urban greening as natural carbon sinks, and their contribution to biodiversity and overall wellbeing. The Local Plan and emerging City Plan 2040 policies require redevelopment to demonstrate highest feasible and viable sustainability standards in the design, construction, operation and end of life phases of development as well as minimising waste, incorporating climate change adaption measures, urban greening and promoting biodiversity and minimising waste.

1281. The proposed development would optimise the quantity of floorspace for offices and a mix of community and retail uses along with a range of amenity and urban greening measures, thus contributing to future proofing the City of London against a range of environmental, social and economic sustainability challenges.

1282. Compared to the assessed retrofit options with limited extension potential, a redevelopment option could result in the lowest whole life-cycle carbon emissions per square meter, with benefits relating to avoiding harmful interventions into historic fabric, improving social sustainability through the activation and diversification of the local area and integrating urban greening and climate resilience measures. A lower new build option might be able to deliver the same sustainability benefits with less absolute carbon impacts - the highest due to the proposed size - however, the scheme in its proposed form would unlock a number of planning benefits that planning officers consider to be a suitable approach to future proof the City as a sustainable location in London.

1283. The energy strategy has been optimised for the site and a BREEAM “excellent” rating is targeted, aspiring to an “outstanding” rating through detailed design. Circular economy measures have been incorporated, such as by retaining 64% of the existing substructures (by mass) and 39% of the existing superstructure, as well as designing for longevity, adaptability and low maintenance. The proposal cannot meet the London Plan target of 35% operational carbon emission savings due to the particular stringency of the Part L 2021 baseline relating to non-residential buildings, as acknowledged by the GLA. However, the proposal demonstrates that on-site carbon emission savings have been maximised and offset payments will be made to mitigate the shortfall to reach the net zero carbon target. The proposed development therefore is considered to be in overall compliance with London Plan policy SI 2, SI 7, Local Plan policy CS15 and DM17.2, as well as emerging City Plan 2040 policy DE1. The building design responds well to climate change resilience by reducing solar gain, saving water resources and significant opportunities for urban greening and biodiversity and complies with London Plan policies G5 SI 4, SI 5 and SI 13, Local Plan policies

DM18.1, DM18.2, CS19, DM19.2, and emerging City Plan 2040 policies S14, OS2, OS3, OS4, S15, CR1, CR3 and CR4.

Security

1284. London Plan Policy D11 (Safety, security and resilience to emergency) states that development should include measures to design out crime that – in proportion to the risk – defer terrorism, assist in the detection of terrorist activity and help mitigate its effects. These measures should be considered at the start of the design process to ensure they are inclusive and aesthetically integrated into the development and wider area.

1285. Local Plan Policy CS3 (Security and Safety) seeks to ensure that the City is secure from crime, disorder and terrorism.

1286. Local Plan Policy DM3.2 (Security measures in new developments and around existing buildings) seeks to ensure that security is considered from an early stage of design development in connection with the City of London Police, with features integrated into the site boundary. Policy DM3.3 (Crowded places) requires major development proposals to integrate counter-terrorism measures including Hostile Vehicle Mitigation. Policy DM3.5 sets out expectations for Management Plans in relation to nighttime uses.

1287. The submission sets out the security proposals to protect the building and its users. The City Police have been consulted on the submission and have provided a number of comments and advice to the applicant. This includes ensuring there is sufficient access controls into different areas of the buildings and at different times, sufficient natural and formal surveillance and sufficient safety and management of accessible terraces.

1288. The applicant has confirmed they will engage with the Police during the next design phase of the project, to ensure their comments and recommendations are taken into account.

1289. A security Risk Assessment and Concept Security Strategy have been produced, and these served as the baseline for design and follows a best practice methodology aligned to the NPSA guidance. This demonstrates a clear commitment to ensuring security as a priority in the development of the proposals detailed design.

1290. It is recommended to secure full details of security measures by condition and within the various management plans which would be secured in the Section 106, which would be assessed in consultation with the City Police Design out Crime

and Counter Terrorism teams. The proposal, subject to conditions and S106 obligations is considered to be in accordance with London Plan Policy D11, Local Plan 2015 policies DM3.2, DM3.3 and DM3.5.

Suicide Prevention

1291. Policy DM3.2 'Security measures in new development and around existing buildings' aims to ensure that appropriate measures are included in new developments by requiring measures to be integrated with those of adjacent buildings in the public realm. Policy DE4 'Terraces and Elevated Public Space' of the draft Local Plan 2040 advises that appropriate safety measures should be included in high rise buildings to prevent people from jumping or falling. The City of London Corporation has also approved a guidance note "Preventing Suicide from High Rise Buildings and Structures" (2022) which advises developments to ensure the risk of suicide is minimized through appropriate design features. These features could include planting near edges of balconies and terraces, as well as erecting balustrades. The guidance explains that a risk assessment should be carried out to identify building features which could be used for suicide, notably any point located 10 metres above ground level. The guidance explains that strategically placed thorny or prickly plants (hostile planting) can delay and deter an individual trying to gain access to a dangerous location. The type of plant, its appearance and practical deterrence capability across all seasons should be considered within any assessment. The site arrangements should also consider what steps will be taken if the plants die or wither, so as to remove or significantly reduce the deterrent effect.

1292. The guidance explains that current legislation specifies appropriate heights and design for balustrades on balconies. Building regulation K2 states the following:

> K2 –(A) Any stairs, ramps, floors and balconies and any roof to which people have access, and
>
> (B) any lightwell, basement area or similar sunken area connected to a building, shall be provided with barriers where it is necessary to protect people in or about a building from falling.

1293. The guidance within the rest of the Approved Document K and the British Standard has a minimum height of 1.1m. The Regulation states that people need to be protected, and the designer should do a risk assessment and design the edge barrier accordingly, but with a minimum 1.1m height. Barriers and edge protection need to be appropriately designed and should take into consideration British Standard BS6180: Barriers in and around buildings.

1294. Designers need to consider the suicide risk of a building and design edge protection to an appropriate height. If it is considered that there is a significant risk of people attempting suicide, barrier heights should be higher. UK Health Security Agency (UKHSA) main design recommendations for fencing on high rise buildings and structures advised a barrier height of at least 2.5m high, no toe or foot holes, and an inwardly curving top is recommended as it is difficult to climb from the inside. The barrier should be easier to scale off from the outside in case an individual wishes to climb back to safety. Developers must, as a minimum, comply with building regulations standards, and where feasible and practical, consider providing a barrier in line with UKHSA guidance. Where a barrier is installed, consideration should be given to its ongoing maintenance. Appropriate servicing, testing and maintenance arrangements must be provided to confirm its ongoing effectiveness. This should include consideration of the material (potential failure mechanisms, installation by approved contractor), the potential for wind loading (fences must be resistant to weather), the weight load and anti-climbing requirements. Consideration should be given to any object placed against a wall or edge at a high level that can used as a step by vulnerable individual.

1295. In order to further protect from the risk of suicide, the suicide prevention advisor has recommended that for the lower level terraces, the balustrade be at least 1.6m in height, and for the upper levels that the barrier is at least 2.8m. It is also recommended that roll bars are used at the top of these. They have also recommended security measures, including CCTV, motion activated lighting, and security staff training on suicide prevention.

1296. The proposal includes a publicly accessible terrace at level 9, where the urban farm is proposed to be located. This terrace has a large planted buffer to the edge, and furthermore, the level 8 terrace is below this which would likely discourage any suicide attempts.

1297. Privately accessible tenant terraces are proposed at 4th, 5th, 6th, 7th, 8th, 9th, 22nd, 36th and 40th level. The staggered nature of the lower level terraces would discourage suicide attempts. Furthermore the balustrades would be 1.8m in height, and it is suggested by the City Suicide prevention advisor that they be fitted with rolling bars to the to make them harder to climb. The 22nd, 26th and 40th level balustrades would be 2.8m and also fitted with roll bars to make them harder to climb. Final details of suicide prevention measures, including balustrade heights are recommended to be secured by condition.

1298. Subject to the recommended condition, the proposals would comply with Policy DM3.2 of the Local Plan 2015 and Policy DE4 of the draft City Plan 2040.

Health Impact Assessment

1299. Policy HL9 of the draft City Plan 2040 requires major development to submit a Healthy City Plan Checklist to assess potential health impacts resulting from proposed developments.

1300. Policy GG3D of the London Plan states that *"to improve Londoners' health and reduce health inequalities, those involved in planning and development must: assess the potential impacts of development proposals and* Development *Plans on the mental and physical health and wellbeing of communities, in order to mitigate any potential negative impacts, maximise potential positive impacts, and help to reduce health inequalities, for example through the use of Health Impact Assessments".*

1301. The application is accompanied by a Health Impact Assessment (HIA) (Quod, January 2024) assessing whether effects identified in other relevant technical assessments submitted as part of the application would result in health impacts.

1302. The HIA has been based on the London Healthy Urban Development Unit (HUDU) Planning for Health Guidance (2019) to develop a comprehensive assessment outlining how the proposed development could impact on health.

1303. The HIA concludes that the development overall has a positive impact on health. Positive impacts include:

- New jobs associated with the uplift in office floorspace and affordable co-working space supporting access to local employment
- Provision of flexible community/education/cultural space meeting an identified need in the area;
- 'City Cycles' – a new social enterprise in the retail space on site supporting unemployment adults into employment through training and work experience of bike mechanics, as well as meeting a need for bike servicing in the area;
- A car-free building minimising vehicles travelling to the Site alongside extensive provision of bike parking to support active travel (and improved pedestrian permeability, as set out above);
- Provision of new open space at James' Court and external building terraces providing much needed amenity provision;
- Heneage Arcade providing a new north-south through route improving connectivity and permeability, as well as enhancing the attractiveness of the physical environment;
- Inclusivity and accessibility as placemaking principles;
- Building and landscape design considering sustainability and climate change, with ASHPs and a 'fabric first' approach significantly reducing the carbon footprint, and extensive urban greening measuring enhancing biodiversity;

- The building and landscape design also provides an enhanced environment for workers and site users (along with the wider public) through high quality design aspiring towards
- BREEAM 'Outstanding' and WELL 'Platinum' rating, an attractive public realm, greening measures and supporting active travel measures.

1304. The HIA proposes recommendations with the aim of ensuring the potential benefits of the proposed development are maximised and potential adverse effects are avoided, for example by:

- Implementation of a Travel Plan to maximise uptake of active travel options secured by a suitably worded planning condition / planning obligations;
- Implementation of a Delivery and Service Plan (DSP) to ensure sustainable modes and operation of freight secured by a suitably worded planning condition / planning obligation;
- Implementation of a Construction Environmental Management Plan (CEMP) to minimise construction impacts including dust, noise and vibration secured by a suitably worded planning condition
- Implementation of a Construction Logistics Plan (CLP) (included within the CEMP) to minimise the environmental and road traffic related impacts of the demolition and construction works secured by a suitably worded planning condition;
- Suitably worded planning obligation(s) to secure terms of use for the Sui Generis community/education/cultural floorspace;
- Suitably worded planning obligation(s) to secure local employment and training initiatives (a local training skills and jobs brokerage contribution, and strategy);
- An Air Quality and Dust Management Plan (AQDMP) to minimise impact of dust at the construction stage secured via a suitably worded planning condition; and
- The requirement for Operational Noise Management Plans to minimise noise at the operational phase / commercial uses secured via a suitably worded planning condition.

1305. Potential impacts identified would be mitigated so far as possible by the requirements of relevant conditions and obligations within the S106 agreement.

1306. Overall, it is considered that the development seeks to improve the health and address inequalities, the residual impact would be acceptable and the proposals would comply with London Plan Policy GG3 and draft City Plan 2040 Policy HL9.

Fire Statement

1307. A Fire Statement has been submitted outlining the fire safety strategy for the building.

1308. The City District Surveyor's office has reviewed the submitted statement and has confirmed that this in accordance with Policies D5 and D12 of the London Plan. The Fire Statement is therefore acceptable for the planning stage and would be secured by condition.

Assessment of Public Benefits and paragraph 208 NPPF balancing exercise

1309. Under s66 (1) of the Planning (Listed Buildings and Conservation Areas) Act 1990, in considering whether to grant planning permission for development which affects a listed building or its setting the Corporation shall have special regard to the desirability of preserving the building/s or its/their settings or any features of special architectural or historic interest which they possess.

1310. When considering the impact of a proposal on the significance of designated heritage assets, decision makers are required to give great weight to their conservation (and the more important the asset, the greater the weight should be), and to be satisfied that any harm is clearly and convincingly justified (NPPF paragraphs 205 and 206).

1311. The proposal would cause a low level of less than substantial harm to the significance of Holland House through the infilling of the upper levels of the atrium.

1312. The proposal would trigger paragraph 208 of the NPPF, which states '*where a development proposal will lead to less than substantial harm to the significance of a designated heritage asset, this harm should be weighed against the public benefits of the proposal including, where appropriate, securing its optimum viable use'*.

1313. Within the statutory process and under NPPF policy the decision-maker must adopt a sensible approach to assessing likely harm to the significance of a listed building and weighing that harm against the benefits. The decision maker does not have go about balancing harm against benefits in a particular way.

1314. The National Planning Practice Guidance states that "*public benefits…could be anything that delivers economic, social or environmental objectives as described in the National Planning Policy Framework. Public benefits should flow from the proposed development. They should be of a nature or scale to be of benefit to the public at large and should not just be a private benefit. However, benefits do not*

always have to be visible or accessible to the public in order to the genuine public benefits".

1315. The key social, environmental and economic public benefits of the proposal are considered to be as follows:

Economic Benefits:

1316. Securing a strategic mixed-use development within the City Cluster, that would provide land uses which support the diversification, vitality and growth of the Cluster as a 24/7 world class business destination, securing a significant contribution to the City of London economic base which is of UK-wide importance, including the provision of 34,584 sq.m (GIA) of Grade A office floorspace and circa 2,470 FTE jobs, and increased spending in the locality boosting local businesses and a post-covid resurgence. This is a benefit which should be afforded substantial weight.

1317. The provision of 1,170sqm of affordable workspace available at 50% of market rent for qualifying occupiers or zero rent for charities would fulfil the City's vision to providing inclusive workspace. This would be an inclusive offer which will attract smaller and more diverse businesses including SMEs to the City Cluster.

1318. Increase in a diverse retail provision on the site, enhancing the retail offer in the Cluster and wider City, supporting and diversifying its primary business function whilst enhancing a place which would be more interesting and vibrant with active street frontages. Heneage Arcade, would be aligned with retail units and spaces which are designed to be utilised as vitrines for a rolling programme of displays including artworks, local community information, reference to the important history of the site and products of local artisans. These spaces could also be utilised as small workshop and retail units for emerging local businesses and craft. The intention would be to help foster and support emerging local talent and provide space to create, make, display and sell their creations. Occupiers on site and in the locale would benefit from the increase in footfall and the high-quality amenities provided by the proposed development as well as provide amenity space for the wellbeing of workers, residents and visitors.

1319. The proposed multi-functional bookable spaces would provide flexible educational/ cultural/ community/ sports/ multi-faith space creating a compelling and inclusive public offer in the cluster in line with the Destination City agenda.

1320. The overall quality of the development, improved public realm and proposals offer would attract visitors, increase tourism, support and improve worker productivity.

1321. Collectively, but primarily the Grade A office floorspace and employment provision, given their nature and extent, the aforementioned benefits, are attributed substantial weight.

Environmental benefits:

1322. The proposed building would result in a significant aesthetic enhancement to the Creechurch locality. The proposed building would, at ground floor level, present a sophisticated, dark blue faience elevations of a triple order to the surrounding townscape, complementing the existing warehouse buildings of brick with terracotta detailing which characterise the Creechurch locality. Through the use of high-quality faience materials and detailing inspired by its immediate neighbours, the proposed building would be an appropriate and sympathetic neighbour in architectural terms. In wider pan-City and pan-London vistas, the proposed building would be distinguished as the first wholly faience-clad tower in the City Cluster, forming an exciting new architectural counterpoint to its glazed predecessors, and distinguishing and enhancing the City Cluster with a sophisticated new form of architectural expression. It would constitute an innovative design which would promote sustainability and help raise the standard of design in the area. This is a benefit that would attract moderate weight.

1323. The proposal would result in a low level of enhancement to Holland House through the works to its primary facades and the re-presentation of its heritage lobbies. The proposal would result in a low level of enhancement to the Creechurch Conservation Area through the reinstatement of the lost southern leg of the historic Heneage Lane through the creation of the Heneage Arcade. Together these would attract moderate weight.

1324. Provision of high-quality public realm at ground floor and optimising pedestrian movement by maximising permeability, providing access to external and internal pedestrian routes which are inclusive, comfortable and attractive thereby enhancing the City's characteristic network of accessible buildings, streets, courts and alleys. This includes;

- A north-south route through the building is proposed, which would re-introduce a historic connection between Heneage Lane and Bury Street.
- James' Court, which incorporates improvements to this public open space.
- Within the public realm it is proposed to incorporate temporary and permanent art installation program to showcase work of local artists'. (secured by a S106 obligation).

1325. Extended public realm improvements are also proposed outside the red line boundary at Bury Street and Creechurch Lane. These improvements would be secured via a section 278 agreement.

1326. Securing a development that is environmentally responsible in that it would seek to promote active travel, urban greening, target BREEAM ‘outstanding’, reduce carbon emissions, and reduce waste and use of resources through the adoption of circular economy principles. The proposed building is a fossil-fuel free, all electric building with zero combustion on site. This is a benefit that would attract moderate weight.

1327. The abovementioned benefits should be afforded moderate weight.

Social Benefits:

1328. The provision of a dedicated community/cultural/ educational/ multi-faith/ sports space within the lower ground, ground and first floors of the three buildings. This space is specifically designed for local groups, including schools and other education uses, charities and cultural/art groups. The spaces would be available to pre-book, free of charge for community based groups and non-profit organisations, schools and other local groups, for 81 hours a week, of which over 67 hours free of charge. These multi-functional bookable spaces would attract a wide range activities, including student visits for learning, educational, creative and skills workshops, rehearsals, performances, conferences, charity events, sports tournaments and faith events. As part of this offer, the applicant has committed to a minimum of 8 hours a week for the use of this space as an outreach, training and skills centre. It therefore offers the potential to make a significant contribution towards training and skills opportunities in the City. The community space is intended to provide a gateway for the population of the more economically deprived areas around the City fringe to access opportunities to inspire, connect and educate themselves and deliver genuine public benefits to the wider community. The space has the potential to serve a rich, diverse community from all backgrounds in a socially and economically inclusive manner.

1329. The public offer would also include an Urban Farm at the ninth floor of Holland House to be used as a rooftop classroom and the provision of a climbing wall, offering a new sport facility and attraction in the City Cluster.

1330. Heneage Arcade would create a new pedestrian route, with flexible retail/café uses, incorporating public art.

1331. The dedicated cycle repair space at lower ground floor level would support the provision of new skills in the area, providing training and jobs for young adults and concurrently providing a service in the area to support the local community.

1332. The proposal would contribute towards affordable housing by making a contribution in leu of £1,482,723.00.

1333. The above social benefits are collectively afforded substantial weight.

Conclusion

1334. When applying the policy in paragraph 208 of the NPPF, the above-mentioned public benefits are to be weighed against the less than substantial harm to the significance of designated heritage assets which has been identified in this report, namely the harm to the significance of Holland House through the roofing over and partial infilling of its atrium.

1335. It is the view of officers that ascribing weight to the public benefits as set out above, including delivering accommodation for City type businesses thereby contributing to economic growth, and other social and environmental benefits, and giving great weight to the conservation of designated heritage assets and therefore to the less than substantial harm to their significance and considerable importance and weight to the desirability of preserving the listed building and its setting, the public benefits of the proposal outweigh the harm to significance of heritage assets as identified in this report.

1336. On that basis there is clear and convincing justification for the harm, and the presumption against granting planning permission is rebutted, the outcome of the paragraph 208 NPPF heritage balance falls in favour of the proposal, and policy D9C(1)(d) in the London Plan is also complied with.

Planning Obligations and Community Infrastructure Levy

CIL and Planning Obligations

1337. The proposed development would require planning obligations to be secured in a Section 106 agreement to mitigate the impact of the development to make it acceptable in planning terms. Contributions would be used to improve the City's environment and facilities. The proposal would also result in payment of the Community Infrastructure Levy (CIL) to help fund the provision of infrastructure in the City of London.

1338. These contributions would be in accordance with Supplementary Planning Documents (SPDs) adopted by the Mayor of London and the City.

1339. On the 1st of April 2019 the Mayoral CIL 2 (MCIL2) superseded the Mayor of London's CIL and associated section 106 planning obligations charging schedule. Therefore, the Mayor will be collecting funding for Crossrail 1 and Crossrail 2

under the provisions of the Community Infrastructure Levy regulations 2010 (as amended).

1340. CIL contributions and City of London Planning obligations are set out below.

MCIL2

Liability in accordance with the Mayor of London's policies	Contribution (excl. indexation)	Forwarded to the Mayor	City's charge for administration and monitoring
MCIL2 payable	£4,980,808.88	£4,781,576.53	£199,232.36

City CIL and S106 Planning Obligations

Liability in accordance with the City of London's policies	Contribution (excl. indexation)	Available for allocation	Retained for administration and monitoring
City CIL	£2,246,550.00	£2,134,222.50	£112,327.50
City Planning Obligations			
Affordable Housing	£1,497,700.00	£1,482,723.00	£14,977.00
Local, Training, Skills and Job Brokerage	£898,620.00	£889,633.80	£8,986.20
Carbon Reduction Shortfall (*as designed*) *Not indexed*	£219,450.00	£219,450.00	£0
Section 278 (Initial Evaluation and Design Fee but any excess costs will also be secured) *Not indexed*	£100,000	£100,000	£0
Security Measures Contribution (Eastern City Cluster)	£299,540.00	£296,544.60	£2,995.40
S106 Monitoring Charge	£5,750.00	£0	£5,750.00
Total liability in accordance with the City of London's policies	**£5,267,610.00**	**£5,122,573.90**	**£145,036.10**

1341. City's Planning Obligations

- The obligations set out below are required in accordance with the City's Planning Obligations SPD 2021. They are necessary to make the application acceptable in planning terms, directly related to the development and fairly and reasonably related in scale and kind to the development and meet the tests in the CIL Regulations and government policy.
- Cycle Improvement Contribution (TfL) (£100,000.00)
- Highway Reparation and Highway Obligations
- Local Procurement Strategy

- Local Training, Skills and Job Brokerage Strategy (Demolition & Construction)
- Delivery and Servicing Management Plan (including Consolidation and provision of accessible parking space)
- Active Travel Plan
- Carbon Offsetting Document Submissions
- 'Be Seen' Energy Performance Monitoring
- Provision of the Cultural, Education, Sports and Community Spaces and an Implementation Strategy
- Provision of the Mixed Affordable and Free Workspace and the submission of a Management Plan
- Provision of Public Art and the submission of a Management Plan
- Provision of the Climbing Wall and the submission of a Management Plan
- Provision of the Cycle Repair Workshop and Practical Skills Space and submission of a Management Plan
- Provision of the Creechurch Hall and Holland House and submission of a Management Plan
- Utility Connection Details
- Television Interference Survey
- Wind Audit
- Solar Glare Assessment
- Construction Monitoring Costs (£53,820 for the First Year and £46,460 for Subsequent Years)
- A10 Contribution (*TfL*)
- Changing Places Management Plan
- Provision of the Public Route at Heneage's Arcade, Public Access to St James' Court and provision of the Management Plan
- Section 278 agreement

1342. I request that I be given delegated authority to continue to negotiate and agree the terms of the proposed obligations and enter into the S278 agreement.

1343. The scope of the s278 agreement may include, but is not limited to:

Creechurch Lane

- Reconstruction and widening of the adjacent footways to the application site, as per the City's approved materials
- Resurfacing and raising of the carriageways adjacent to the planning application site
- Removal of redundant street furniture
- Improvements to highways drainage

- Provision of road markings and associated traffic orders, relocation of parking bays (if required)
- Provision of planters or alternative infrastructure, with the dual-use of acting as rest stops and appropriate access arrangements
- Provision of greenery

Bury Street

- Reconstruction and widening of the adjacent footways to the application site, as per the City's approved materials
- Resurfacing and raising of the carriageways adjacent to the planning application site
- Removal of redundant street furniture
- Removal of redundant vehicle crossing
- Improvements to highways drainage
- Provision of road markings and associated traffic orders, relocation of parking bays (if required)
- Provision of planters or alternative infrastructure, with the dual-use of acting as rest stops and appropriate access arrangements
- Provision of greenery

Mitre Street Junction with Creechurch Lane

- Reconstruction and widening of the footway, as per the City's approved materials
- Resurfacing and raising of the carriageway

Heanage Lane

- Reconstruction and widening of the adjacent footways to the application site, as per the City's approved materials
- Reconstruction and raising of the carriageway, as per the City's approved materials
- Improvements to highways, footway and drainage
- Provision of greenery

And any other associated works necessary to deliver the above scope of Works

Monitoring and Administrative Costs

1344. A 10-year repayment period would be required whereby any unallocated sums would be returned to the developer 10 years after practical completion of the development. Some funds may be set aside for future maintenance purposes.

1345. The applicant will pay the City of London's legal costs and the City Planning Officer's administration costs incurred in the negotiation, execution and monitoring of the legal agreement and strategies.

Impact on the Foundation of the Synagogue and Ground Movement

1346. Representation have been received raising concerns about the impact the proposed development would have and potential damage it would cause to the Bevis Marks Synagogue's Foundations.

1347. The applicant has submitted a Structural Report and Basement Impact Assessment. The report has assessed the impact from basement excavation to the nearby receptors, including Bevis Marks Synagogue, Holland House, Renown House, Valiant House and 33 Creechurch Lane. With regards to the Bevis Marks Synagogue negligible ground movement is predicted and this is to be classed as Category 0 'negligible', the lowest possible category.

1348. The report also stated that throughout the development of the design, any risks identified will be brought to the attention of the design team and client in various reports and on the drawings. The risk assessment will continue to be developed in future design stages giving details of how risks will be eliminated or reduced. Ground movement would be continually monitored throughout the demolition and construction process. With regards to monitoring, the report states that frequent monitoring of neighbouring properties to be carried out during excavation, to validate ground movement predictions against reality.

1349. The submitted assessment was previously reviewed by District Surveyor, who advised that due to the fact that the Synagogue is located some distance from the proposed development, there would be no material impact to its foundations. Notwithstanding, a condition is recommended for the submission of a demolition and construction methodology (including monitoring of ground movement) to be prepared by a heritage accredited structural engineer to be submitted and approved to address these concerns.

The Public Sector Equality Duty (section 149 of the Equality Act 2010)

1350. The City, as a public authority must, in exercise of its functions, have due regard to the need to:

- Eliminate discrimination, harassment, victimisation and any other conduct that is prohibited under this Act;
- Advance equality of opportunity between persons who share a relevant protected characteristic and persons should do not share it;
- Foster good relations between persons who share a relevant protected characteristic and persons who do not share it.

1351. Section 149(3) of the 2010 Act provides that having due regard to the need to advance equality of opportunity between persons who share a relevant protected characteristic and persons who do not share it involves having due regard, in particular, to the need to:
- Remove or minimise disadvantages suffered by persons who share a relevant protected characteristic that are connected to that characteristic;
- Take steps to meet the needs of persons who share a relevant protected characteristic that are different from the needs of persons who do not share it;
- Encourage persons who share a relevant protected characteristic to participate in public life or in any other activity in which participation by such persons is disproportionately low.

1352. The characteristics protected by the Equality Act are age, disability, gender reassignment, pregnancy and maternity, race, religion or beliefs, sex and sexual orientation. Public authorities also need to have due regard to the need to eliminate unlawful discrimination against someone because of their marriage or civil partnership status.

1353. The application is supported by an Equality Statement, which considers the potential equality impacts related to the proposal. The CoL, as the planning authority, have the duty to consider potential equality impacts. The purpose of the Equality Statement (EqS) was to provide information for the planning authority to carry out its role. To ensure that the methodology and data used in the Equality Statement, ensure that all relevant matters have been taken into consideration, and the conclusions and recommendations suggested in the EqS are robust, a third party has been instructed to review this document.

1354. In terms of the methodology used to assess any potential equality impacts, the following has been adopted in the EqS.
- A differentiation between disproportionate and differential impacts relevant to equality upon persons who share a relevant protected characteristic compared to persons who do not share it. These impacts are assessed qualitatively. Therefore, to assess any such impacts, a decision maker should balance a range of positive and negative impacts of different types.

    - Disproportionate: there may be a disproportionate equality impact where people with a particular protected characteristic make up a greater proportion of those affected than in the wider population.
    - Differential: there may be a differential equality impact where people with a protected characteristic are affected differentially to the general population as a result of vulnerabilities or restrictions they face because of that protected characteristic.
- The EqS assessment of potential equality impacts is focused on the following, during both the construction and end use where relevant:
    - Noise
    - Air quality
    - Transport impacts
    - Daylight and sunlight
    - Access to community facilities
    - Employment and skills
- These aspects have then been grouped into four key considerations of potential equality related impacts:
    - Amenity disruption during construction
    - Community uses and accessible design
    - Employment creation
    - Impacts upon places of worship
- These aspects have then been considered in relation to their potential impact on protected characteristics. Consideration was then given to any action that needs to be taken to mitigate any adverse impacts or to promote equality of opportunity.

1355. To prepare the EqS the consultant has confirmed that they used the CoL Public Sector Equality Duty toolkit. The toolkit suggests a number of questions/considerations to identify potential impacts on protected characteristic. These question were adopted and amended appropriately in the EqS to be relevant to the current scheme.

1356. Overall, the third party reviewer considers that the policy context and methodology are deemed appropriate for the assessment of equality impacts relating to the proposed development. The suggested mitigation measures to address the impacts are also considered appropriate.

1357. A range of datasets and sources have been used including Census 2021, Annual Population Survey 2022, ONS Live Births 2021 and Index of Multiple Deprivation 2019.

1358. In summary, in terms of demographics, the City has a significantly higher workday population compared to its residential population. There is a limitation in

EqS identifying all protected characteristics for the working population. With regard to residents, the City's resident population is generally comprised of younger working age with proportionately fewer children living here. However, it is noted that the Aldgate School and City Child and Family Centre are in close proximity to the Site. In terms of sex, there are disproportionately more men living and working in the City compared to women. The population living in the City is less racially diverse compared to London's average in terms of ethnicity. However, there are a higher proportion of residents not born in the UK, with a higher proportion of residents born in Europe and the Americas and Caribbean. In terms of religion and belief of residents there are no disproportionately high representations of any particular religion or faith compared to London's average. However, the site is in close proximity to a number of places of worship, including a number of churches and a Synagogue in very close proximity to the site. When it comes to deprivation, no area within the City falls within the top 20% most deprived areas within England. However, an area to the north and east of the site within the City is within the 30% most deprived (the area around Aldgate). Within this area, deprivation relating to income, employment and barriers to housing and services is more severe. No disproportional representation of the population has been identified in the City in terms of disabilities. On the basis of the above, the protected characterises that have been identified for potential disproportionate impacts included age, sex, sexual orientation (high number of population identified as of another sexual orientation than heterosexual), race, religion and belief.

1359. Consideration has also been given to the key community infrastructure within a 500 metres radius from the site. There is a high number of places of worship, including churches and two Synagogues (the Bevis Marks Synagogue in close proximity to the application site and Sandys Row Synagogue, which is outside the boundaries of the City of London) and also some educational facilities in close proximity to the site.

1360. Overall, demographics of the area have been described in a succinct way. The third party reviewer considers that the baseline context chapter is sufficient for outlining the context of the area in relation to the protected characteristics. Additional detail and more recent data could be included in this section. However, the inclusion of this is unlikely to change the conclusion of which protected characteristics should be considered for potential disproportionate impacts. The findings of the baseline analysis and disproportionate impacts are considered appropriate given the supplementary information provided in response to the Clarification Questions.

1361. To consider the equality impacts of the development of individuals or groups with protected characteristics the EqS sets out a series of questions. The assessment follows the methodology set out in the earlier sections of the report, addressing the relevant questions drawn from the City of London's Toolkit.

1362. In considering disproportionate impacts, as identified based on the baseline findings and the sensitivities of protected characteristics within the local area, the submitted EqS suggests that any such impacts would be mitigated via measures secured through conditions and the S106 agreement. Other measures are also included in the submitted Construction Environmental Management Plan, the Design and Access Statement and the Transport Assessment.

1363. In considering the differential impacts, the impacts of the development itself should be considered opposed to the nature of the surrounding population. Four different impacts have been identified in the EqS and these relate to the following:

- Amenity disruption during construction – There are people with some protected characteristics, such as age, disability, pregnancy and maternity, that may be more affected during demolition and construction due to the potential lengthier time spend at home.
- Community uses and accessible design – there are people with some protected characteristics, such as age, religion or belief, pregnancy and maternity and disability, that may differentially benefit from access to community space and improvements in accessibility, and likewise differentially suffer from lack of access to community space and poor accessibility.
- Employment creation - The EqS considers that there would a positive impact in terms of employment creation, albeit benefit people with different protected characteristics in ways that are difficult to predict as they depend on the actions of future employers. Whilst it is accepted that the increase in employment would be a benefit for the City as one of the world's leading international financial and business centres, the benefit to groups with protected characteristics is not clear to officers.
- Impact on places of worship – there are a number of places of worship in the vicinity of the site. Impacts of the proposed development may have differential impacts on the protected characteristic of religion or belief due to how these spaces are used for religious ceremonies. It should be noted that during the process of the application additional information has been submitted by the applicant to address matters related to impact of the development on places of worship and in particular the Bevis Marks Synagogue.

1364. With respect to the equality impacts during construction, it is expected that all properties in close proximity to the site would have the potential to disproportionately affect people with some particular protected characteristics, for example older or younger people, women during pregnancy, people with disabilities that are more likely to spent longer time at home. Disproportionate impacts will potentially also experience the congregation of the Bevis Marks Synagogue, in relation to the protected characteristic of religion and belief, due to

the proximity to the site. Any footway closure during demolition/construction would also potentially differentially affect people with mobility challenges.

1365. Overall, any equality impacts on amenity during demolition/construction would be temporary and will be able to be mitigated as far as possible though management plans and other mitigation measures, which will be secured by conditions and S106 obligations.

1366. With regard to community engagement, the applicant has complied with the advice as set out in the Statement of Community Involvement for pre-application engagement. The pre-application engagement that the applicant has carried out is extensively described in the 'Statement of Community Involvement' section of the report. Engagement has included targeted outreach to define the uses of the proposed space within Holland House. The Equality Statement outlines the groups and relevant points raised during this process. The Local Planning Authority has carried out its duty for consultation and publicity of the application in accordance with The DMPO 2015, The Town and Country Planning (Consultation) (England) Direction 2024, The TCPA 1990, The EIA regulations 2017, The Mayor of London Order 2008 and the Act and Regulations for Listed Building and Conservation Areas 1990.

1367. Through engagement with education providers, community cultural, arts and faith-based groups, spaces within the Holland House, Renown House and the proposed tower element have been dedicated for community uses, namely a total of 1, 411 sqm of floor space. Consideration has been given to the accessibility of all those uses, as well as the commercial floorspace.

1368. The development would also provide affordable co-working space for the local community/businesses/charities (1,176 sqm GIA). This will be provided in the restored Holland House and will include 60 desks alongside meeting rooms, and will be 50% of market rent for qualifying occupiers and zero rent for charities secured for the lifetime of the development.

1369. Following negotiations with the applicant, a blue badge parking bay will be provided on site, to address the equality impacts of people with limited mobility. The provision and effective management of this parking bay will be secured by condition and S106 obligation respectively.

1370. Recumbent cycle spaces are proposed alongside accessible showers and toilets within the basement, accessed via a recumbent cycles accessible lift.

1371. It is the view of officers that the proposed development would reduce barriers to access for disabled people through the provision of an enhanced and step-free community/ cultural/ faith/ educational/ amenity space and public realm. It is also

the view of officers that the provision of accessible office floorspace including affordable workspace, and publicly accessible community/cultural/ faith/ educational space would advance equality of opportunity.

1372. The EqS addresses the equality impacts on places of worship focusing on the impacts that may affect religious activities. It is stated that the Bevis Marks Synagogue may be affected by the proposed development in a number of ways, including townscape and visual impact, noise, daylight and sunlight and overshadowing. It is noted that considerations that relate to the significance of the Synagogue from a heritage perspective and its importance as a Grade I listed building do not form part of the scope of the EqS. Officers concur that although material planning considerations, any such impacts are not relevant to equality impacts and are addressed separately in the relevant heritage section of the report. Further concerns regarding the impact of the development on the visibility of the night sky and in particular the moon have been submitted by the Synagogue's representatives. A Lunar Transit Study has been prepared by the applicant and reviewed by a third party on the CoL's instructions to respond to those concerns. The aforementioned equality impacts are addressed in turn below.

1373. The proposed development will alter the visual backdrop to the Synagogue from its courtyard, which is considered essential part to the visitor experience. However, it is considered that the townscape, heritage and visual impacts would not be significant (minor effect neutral in nature). These impacts are further assessed in the relevant heritage section the report. These impacts, although material planning considerations, are not considered impacting in the religious activities of the Synagogue and therefore, are not considered resulting in a disproportionate or differential equality impact. The impact on the visibility of the night sky is assessed below.

1374. The differential impacts on religion and belief due to noise impacts, by reason of the proximity of the site to the Synagogue are discussed above. The Noise and Vibration Assessment concludes that the impact during demolition and construction will be negligible (not significant). Nonetheless, the Construction Environmental Management Plan will require the contractor to have close regard to the religious calendar to limit disruption during religious events. At operation stage, an Operational Noise Management Plan would be developed to manage the end uses. The details of both plans will be secured by condition.

1375. An extensive assessment of the daylight, sunlight and overshadowing impacts to the Synagogue and its courtyard are addressed in the relevant section of the report. Consideration of daylight levels within the Synagogue is sensitive due to the context of the reliance primarily on candlelight during religious ceremonies where the congregation need to be able to read from the Torah. There are 29

windows serving three rooms in the Synagogue, the central area, the gallery and the exhibition/visitor centre. The gallery is used by Jewish women for prayer and worship (the 'Ladies Gallery'). Concerns have also been raised around the equality impact that the development would have to older people using the Synagogue as a place of worship, due to their need of additional light to read text of the same size as younger people. Therefore, any significant impact could have a disproportionate impact on the protected characteristics of sex, age and religion or belief. The finding of the assessment of the daylight shows a minor adverse (not significant) effect in the existing vs proposed scenario, which is increased to minor to moderate (significant) effect in the case of the existing vs cumulative (including the proposed development) scenario. It should be also noted that due to the low height of the Synagogue in comparison to its existing surrounding buildings, it already receives relatively low levels of light. Although the southern section of the gallery would experience some reductions due to the proposed development, these would be localised on the southwest section of the gallery, and the Synagogue also receives light from several other windows to all elevations. Furthermore, as discussed in the relevant daylight and sunlight section of the report, the applicant has submitted a qualitive assessment, namely the Radiance Assessment, that shows that the daylight impacts would be almost imperceptible between the consented schemes and the consented schemes with the proposed development. Effects on sunlight were found to be negligible.

1376. Although due regard is given to the equality duty of the Corporation with respect to this place of worship, it is the view of officers, taking into consideration all material factors into consideration, that daylight impact would not be such that to cause an adverse effect on the ability to manifest religion in worship in the Bevis Marks Synagogue. In the Advice on the Equalities Statement dated 18th November 2024 (submitted as part of the representations made by the S&P Sephardi Community) it is said that the Equalities Statement fails to address the potential daylight and sunlight impact on the ability to continue to carry out circumcisions at the synagogue. The impact on the ability to carry out circumcisions is considered earlier in this report. The conclusion reached is that the proposal's impact on light levels would not diminish the ability of the Synagogue to function or prevent any of the activities within, including circumcision, to be undertaken. The CoL have taken positive steps to advance equality of opportunity by undertaking a detailed assessment of the impacts of the proposal on the use of the synagogue and on other places of worship. It is considered that the impacts of the development would be limited and would not adversely affect the Synagogue as a place of worship and it would not result in a disproportionate impact on the protected characteristics of sex, age and religion or belief.

1377. It has been highlighted that the since the courtyard was formed in 1699 it has hosted generations of religious events and it is therefore, considered important for the congregation. It is noted that the courtyard has recently undergone a number

of alterations, including the introduction of a ramp, a security booth and ticketing booth in association with the exhibition centre. These structures have reduced the usable area of the courtyard.

1378. The baseline analysis in the overshadowing assessment indicates that the courtyard currently experiences low levels of sunlight given the dense urban environment and nearby high rise buildings. At the equinox (21 March and 21 September) the courtyard receives virtual no direct sunlight. On the basis of the BRE guidance the development would result in negligible effects at all scenarios. The applicant has assessed the impacts of the development on the courtyard beyond the BRE requirements. In April to August, there is greater access to sunlight currently with the northern corner of the courtyard receiving up to three hours of direct sunlight. This position is reduced when considering consented development in the surrounding area. With the proposed development the sunlight availability in the courtyard is very similar to that in the consented position. For the other half of the year (September until March) are as low as in the baseline scenario. In respect of average sunlight availability in the proposed development scenario (including cumulative schemes), which is based on a 'clear sky' assumption, the results show a reduction in the average sunlight availability within the courtyard of 16 minutes to 19 minutes when compared to the consented scenario. Overall, it is considered that the impact of the proposed development to the sunlight received in the courtyard is limited and it would not restrict the use of the space for religious purposes.

1379. One of the concerns raised by the Synagogue's representatives was the loss of views of the moon in the night sky above Bevis marks Synagogue. In particular Rabbi Shalom Morris states that, "*Each month, Jews gather outside after dark to recite kiddush levana, as the moon's waxing crescent appears in the night sky. This proposed tower will obstruct our visibility of this phenomenon, making it impossible to recite this prayer. This is a direct obstruction to our freedom of worship as we have enjoyed it in this place since 1701*". In the Advice on the Equalities Statement dated 18th November 2024 (submitted as part of the representations made by the S&P Sephardi Community) it is said that the Equalities Statement is silent on the importance of the night sky view to the weekly observance of Shabbat, the daily obligation to recite the Shema Yisrael and the monthly blessing on the appearance of the new moon. It is understood that this is an important element for Jews to manifest their religion from the Bevis Marks Synagogue and in particular its courtyard.

1380. In the letter received by the Sephardi Community and the Rabbi of the Bevis Marks Synagogue, dated 14 November 2024, further details about the Kiddush prayer, the uniqueness about reciting the prayer at the Bevis Marks Synagogue and the how the ritual has been recorded and altered in Europe have been submitted. It is stated that "*The prayer is recited whilst standing outside, under an*

open sky, and requires sight of the moon. If the moon is blocked by either buildings or clouds, the prayer cannot be recited. However, if the moon is visible *through a cloud, one can still recite the prayer… Kiddush Levana takes about fifteen minutes to recite. It is typically recited following the evening service at a synagogue".* It is also stated that at Bevis Marks Synagogue in particular "*Kiddush Levana is ideally said from day seven of the lunar cycle until the middle of the month…When climactic conditions are difficult, it is permitted to recite even from day 3*". With regard to the payer, it is noted that "*For European Jews, cloud cover, a common concern, was seen as a bad omen, whilst a clear night was considered a positive sign, as the prayer for renewal could then be recited. Finally, proximity in the northern hemisphere has made the recital of 'Kiddush Levana' notoriously difficult in locations like England during July and August with it short summer nights and associated lower arc of the moon*".

1381. Since the receipt of the abovementioned objections, the applicant has commissioned a Lunar Transit Study to assess the impact that the development would have on the visibility of the moon in the night sky. Subsequent information including an additional analysis from a new viewpoint has been submitted following a site visit to the Synagogue and discussions with the Rabbi of the Synagogue and the Corporation's officers and appointed independent reviewer. The Lunar Transit Study and subsequent additional information have been reviewed by a third party consultant on behalf of the City.

1382. The methodology used in the study submitted by GIA takes into consideration the lunar path, describing minor and major lunistice as seen from a specific location across a full 18.6-year lunar cycle. This approach has been considered relevant and appropriate by the independent reviewer. The moon phases and positions (daytime and nighttime) reported in the GIA material have been checked against published data and appear to be accurate.

1383. It is understood from the submitted study, the review, discussion with the Synagogue's Rabbi and the details included in recently submitted letter by the Sephardi community, that in order for Kiddush Levana to be recited the moon would have to be visible, including through any cloud cover and not covered by clouds. For that reason, the submitted study has taken into consideration the probability of cloudiness in London to estimate the likelihood of the moon to be visible. As this information has been applied using date on a monthly than daily basis, the independent reviewer has advised this would not be able to capture daily variations. It has therefore been advised that this information is treated with caution. The Rabbi has also raised concerns in the use of cloud cover for the assessment of the lunar visibility. For the assessment below the impacts are assessed discounting cloud cover.

1384. Three scenarios have been tested for the study including

- the baseline, which contains the current context without consented or proposed developments;
- future baseline, which contains the current context and currently consented developments; and
- cumulative, which contains the future baseline scenario with the proposed development.

1385. The future baseline scenario includes, most relevantly, the consented and implemented scheme at 100 Leadenhall Street. The implementation of this scheme means that the permission is extant and this is why the proposal has been measured against it in the 'future baseline' scenario. It is relevant to note that the transit of the moon was not assessed or considered (nor raised as a theme of objection) in relation to that scheme, which was originally granted permission in 2019 and implemented in early 2024.

1386. Two observer points, at the entrance of the Synagogue courtyard, have been tested. One of them was originally included in the submitted study and one was thereafter assessed, following consultation with the Synagogue's Rabbi. Observer point P is 0.53m higher than location N. The applicant has confirmed that this height variation has been taken into consideration and that the 3D modelling reflects the accurate terrain of the courtyard.

1387. The assessment, following request from the Corporation's appointed independent reviewer, provides charts for 15-day periods between the new moon and full moon for each month in 2024 and 2034, with clear sky conditions, while also considering only the 12-day periods of the waxing moon when it is understood that Kiddush Levana prayer is recited. These have been tested for both observer points. It has been confirmed that the data used by the applicant for the moon phases and positions are accurate. The site measurement results taken for the Corporation's appointed independent reviewer confirm that the cylindrical projections reported in the GIA material correctly reflect the actual geometry of the existing buildings as seen from the two observer locations.

1388. Based on the results produced taking into account the lunar bracelet visibility throughout the 18.6-year lunar cycle, only for the 12-day periods of the waxing moon when the Kiddush Levana prayer can be recited (discounting cloud cover), the visibility of the moon when comparing the existing and cumulative scenario will be reduced by 2.5% and 2.1% in the major and minor lunistice respectively from point P (indicated by the Rabbi) and between 2.2% and 2.1% respectively from point N (initially included in the submitted study). The absolute reductions between the future baseline and cumulative scenario, effectively those resulting from the proposed development, are between 1.8% and 1.3% in the major and minor lunistices from both points.

1389. In relative terms, in the existing vs cumulative scenario, the opportunity to view the moon within a full moon cycle (not accounting for cloud cover probability) from observer location P, would be reduced by between 49% (at a major lunistice) and 52% (at a minor lunistice), or by 51% on average throughout a full lunar cycle. The same opportunity to view the moon from observer location N would be reduced by between 41% (at a major lunistice) and 51% (at a minor lunistice), or by 46% on average throughout a full lunar cycle. The relative reductions in the future baseline vs cumulative scenario would be 42% for observer location P and 33% for observer location N, on average throughout a full lunar cycle. It is important to recognise that large relative percentage alterations, regardless of the very low absolute losses, are as a result of the existing low levels of visibility of the moon.

1390. When accounting for cloud cover probability the relative loss of moon visibility would not change significantly. Overall, there would be less than a 1% difference in results on average across all assessment scenarios considered for both observer locations, compared to the previous stage of assessment which did not account for cloud cover probability.

1391. At existing baseline scenario, the results show that the moon is visible for 9 months and 63 days each year from viewpoint P, indicated by the Rabbi, at a major lunistice year and 61 at a minor lunistice year. Under both the future baseline and cumulative scenarios, the moon would be visible for 8 months and 50 days each year on both major and minor lunistice years. When considering the impact of the proposed development against the future baseline scenario, the moon would be visible for 8 months in each year and the number of days would be reduced by two (from 52 to 50 days) in the case of the major lunistise year and by one (from 51 to 50 days) in a minor lunistice year. In terms of hours there will be a reduction of approximately 41 hours (from 82hrs 30min to 41hrs 45min) in a major lunistice year and approximately 46 hours (from 86hrs 30min to 39hrs 45min) in a minor lunistice year. This is clear in the following tables prepared by the CoL's appointed consultant.

Table 5 – Number of days and hours when the moon would be visible from observer location P on nights with clear sky conditions during 12-day periods of waxing moon throughout 2024 (a major lunistice year). Based on the charts reported in Appendix 2 of the final GIA addendum.

Period	Existing baseline scenario		Future baseline scenario		Cumulative scenario	
	Days	Hours	Days	Hours	Days	Hours
14 Jan – 25 Jan	11	20hrs 15min	10	16hrs 45min	10	9hrs 45min
12 Feb – 24 Feb	11	18hrs 45min	11	15hrs 15min	10	8hrs 30min
13 Mar – 25 Mar	11	19hrs 30min	10	16hrs 45min	9	8hrs 15min
11 Apr – 23 Apr	8	12hrs 45min	6	10hrs 15min	6	4hrs 30min
11 May – 23 May	4	3hrs	2	2hrs	2	30min
9 Jun – 22 Jun	2	30min	-	-	-	-
8 Jul – 21 Jul	-	-	-	-	-	-
7 Aug – 19 Aug	-	-	-	-	-	-
6 Sep – 18 Sep	-	-	-	-	-	-
5 Oct – 17 Oct	4	4hrs 30min	3	3hrs 30min	3	1hrs 15min
4 Nov – 15 Nov	4	7hrs 30min	3	6hrs 30min	3	3hrs
4 Dec – 15 Dec	8	14hrs 15min	7	11hrs 30min	7	6hrs
Total 2024	**63**	**101hrs**	**52**	**82hrs 30min**	**50**	**41hrs 45min**

The periods considered in the results do not include the first 72 hours following each new moon.
The number of hours is rounded to the nearest quarter of an hour.

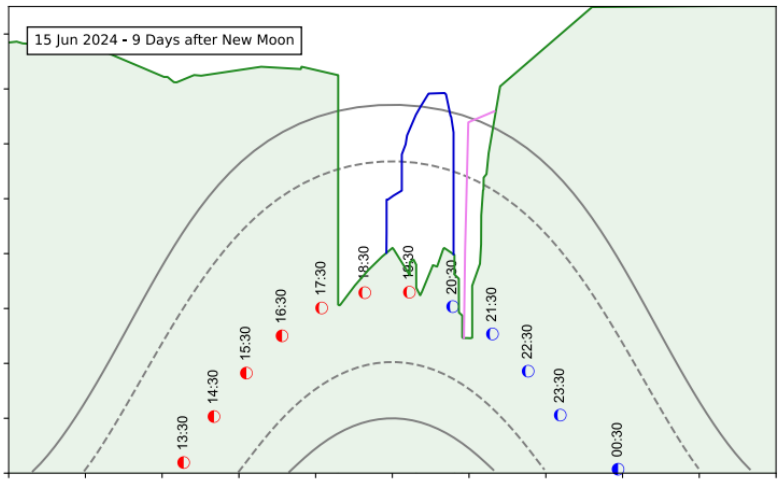


Table 6 – Number of days and hours when the moon would be visible from observer location P on nights with clear sky conditions during 12-day periods of waxing moon throughout 2034 (a minor lunistice year). Based on the charts reported in Appendix 2 of the final GIA addendum.

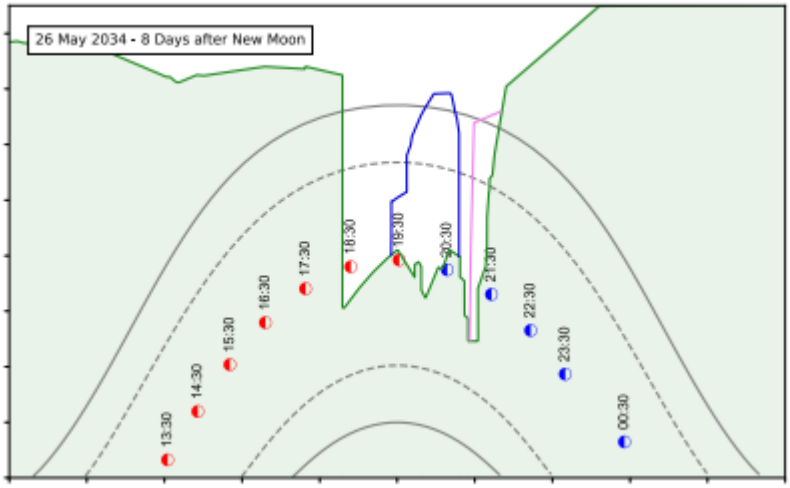
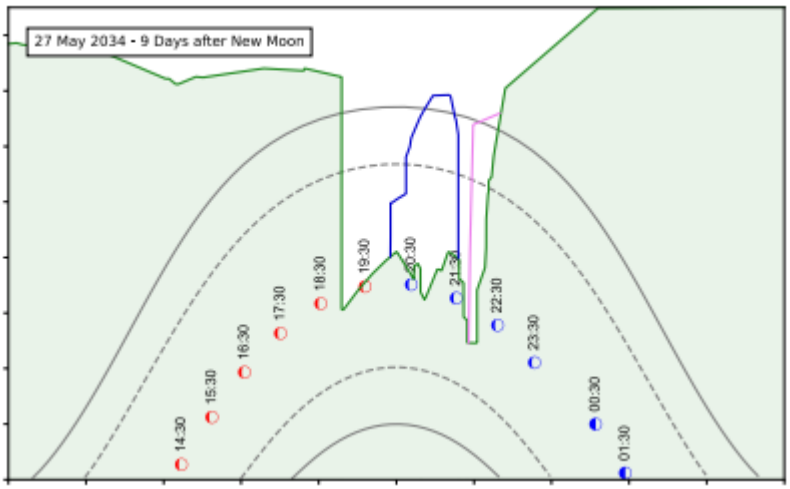


Period	Existing baseline scenario		Future baseline scenario		Cumulative scenario	
	Days	Hours	Days	Hours	Days	Hours
23 Jan – 3 Feb	11	21hrs 45min	10	18hrs 30min	10	8hrs 45min
21 Feb – 5 Mar	11	20hrs 15min	10	17hrs 30min	9	7hrs 45min
23 Mar – 3 Apr	10	17hrs 30min	9	14hrs 15min	9	6hrs 45min
21 Apr – 3 May	7	9hrs 45min	5	8hrs	5	3hrs
21 May – 2 Jun	2	45min	-	-	-	-
19 Jun – 1 Jul	-	-	-	-	-	-
18 Jul – 31 Jul	-	-	-	-	-	-
17 Aug – 29 Aug	-	-	-	-	-	-
15 Sep – 28 Sep	1	1hr	1	1hr	1	1hr
15 Oct – 27 Oct	5	6hrs 45min	4	5hrs 30min	4	2hrs 30min
14 Nov – 25 Nov	5	8hrs 15min	4	7hrs 15min	4	3hrs 30min
13 Dec – 25 Dec	9	17hrs	8	14hrs 30min	8	6hrs 30min
Total 2034	**61**	**103hrs**	**51**	**86hrs 30min**	**50**	**39hrs 45min**



The periods considered in the results do not include the first 72 hours following each new moon.
The number of hours is rounded to the nearest quarter of an hour.

1392. In the two assessed scenarios, namely a major lunistice in 2024 and a minor lunistice in 2034, under existing conditions the moon would be visible for 9 months, as stated above. This would be reduced to 8 months in the future baseline and cumulative scenarios, due to another consented and implemented development (100 Leadenhall) than the proposed development. The moon is currently visible in June during a major lunistice year and in May during a minor lunistice year. In the

future and cumulative scenarios, the visibility of the moon during those two months would be lost. As shown on the graphs below, submitted as part of the Lunar Transit Study and also independently reviewed, it is clear that this loss would be primarily due to the building marked in pink (100 Leadenhall) rather than the building marked in blue (proposed development).

1393. In light of the above assessment, it is concluded that currently, in the existing condition, there is a reduced overall opportunity to view the moon from the Synagogue courtyard due to obstructing effects from the existing surrounding buildings.

1330. Although the development would result in high relative losses of the visibility of the moon, the absolute reductions would be limited. Based on the analysis, the third-party reviewer considers that the loss of the visibility would be significant. However, it is noted that the moon would still be able to be viewed from the Synagogue's courtyard in the same number of months (8 months in each year) and almost the same number of days (50 instead of 52 in each year) when considering the impacts of the development against the future baseline. It is therefore, considered that the prayer would still be able to be recited in those same months, which are one month less than the existing baseline scenario. As explained above this reduction in the months that the moon is visible arises not from the proposed development, but from the consented and implemented scheme at 100 Leadenhall Street); and that the moon's transit was not raised as an issue for that implemented scheme.

1331. This impact of the proposed development, in percentage and hour reduction terms, is acknowledged. It would reduce the amount of time on each occasion when the moon is visible for the purposes of the Kiddush Levana prayer, but not the number of months of such occasions when considered against the future baseline; officers conclude that the presence of the proposal would still allow the prayer to be recited. Furthermore, it must be acknowledged that there are already three months of the year in the existing condition when the moon is not visible at all. Nevertheless, this impact on the amount of time available to recite the prayer weighs against the grant of planning permission and this is a matter to which officers give significant weight. In the planning balance and conclusions below, it is assessed whether the benefits of the proposed development are able to outweigh this impact.

1332. The Sephardi community has also advised in their letter regarding the Centrality of Sky View at Bevis Marks to Religious Services and Heritage that the sky view in the courtyard at Bevis Marks serves important ritual purpose as the sky view is central to Jewish practice. One which occurs weekly is the Sabbath, which is determined ended when the average person can see three medium sized stars in the sky. Although it is advised that the congregation tend to rely on the clock when it is cloudy, the view of the three medium sized stars in the sky is still conscious inspection regarding the sabbath times. These timings are central to other aspects of rituals and worship, such as Shema Yisrael which is an obligation every evening must be done only after three medium sized stars are seen in the sky.

1333. The submitted objection states that the Jewish Sabbath concludes at the appearance of three stars which first appear in the darkening eastern sky. Similarly, it is understood that Shema Yisrael is recited when the first three medium sized stars appear in the darkening eastern sky. The proposed development would be sited to the southwest of the Bevis Marks Synagogue and therefore, the proposed tower element would not reduce the visibility of the eastern sky that is necessary to recite those prayers and therefore, officers consider that it would not prevent these important rituals being undertaken and the Bevis Marks Synagogue and its courtyard to be used as a place of worship.

1334. There are also a number of other places of worship in close proximity of the site, including a number of churches. The one closest to the site is St Katharine's Cree Church 50m to the south of the application site. The environmental impacts on this Katharine's Cree Church have been considered and are not significant. It is therefore considered that the proposed development would not have an adverse effect on the ability to manifest religion in worship in the church and as such, there would be no adverse impact on those who share the protected characteristic.

1335. The EqS sets out a number of actions to mitigate potential impacts arising from the proposed development. Officers consider that any potential impacts from the development relating to demolition, construction and operation of the development would be able to the addressed via the imposition of appropriately worded conditions and S106 obligations.

1336. The applicant has indicated the intention to continue engaging with the Bevis Marks Synagogue and various community stakeholders. It is noted that the Equality Act also carries ongoing responsibilities for the owner which will continue once the development is complete. As part of considering the design of the building and the physical environment, property management teams for each buildings and public spaces will need to have suitable management policies and procedures to ensure the obligations of the Act are met once the buildings are in operation. This would include the proposed community/cultural/educational/multi-faith/sports/amenity spaces and affordable workspace which currently do not have any end user finalised. In formulating this offer, the landowner should continue to engage with a full range of key stakeholders so that it is relevant and accessible to all. As referred to in other sections of this report, where necessary, details will be secured by condition and/or planning obligations.

Human Rights Act 1998

1337. It is unlawful for the City, as a public authority, to act in a way which is compatible with a Convention right (being the rights set out in the European Convention on Human Rights ("ECHR)).

1338. Insofar at the grant of planning permission will result in interference with right to private and family life (Article 8 of the ECHR) including by causing harm to the amenity of those living in nearby residential properties, it is the view of officers that such interference is necessary in order to secure the benefits of the scheme and therefore necessary in the interests of the economic well-being of the country and proportionate. It is not considered that the proposal would result in an unacceptable impact on the existing use of nearby sensitive receptors. As such, the extent of harm is not considered to be unacceptable and does not cause the proposals to conflict with Local Plan Policy DM10.7 and Policy DE7 of the Draft City Plan 2040. It is considered that the public benefits of the scheme, including the provision of additional office floorspace within the proposed development, meeting Local Plan ambitions for further office floorspace within the City Cluster area and contributing to the City's primary business and professional services function, together with all other benefits that would arise from the provision of affordable workspace and community and cultural spaces for the public to enhance the role of the City as destination, outweighs the Minor to Major Adverse impacts on nearby residential properties and Places of Worship and that such impact is necessary in the interest of the economic well-being of the country and is proportionate.

1339. Insofar as the grant of planning permission will result in interference with property rights (Article 1 Protocol 1) including any interference arising through impact on daylight and sunlight or other impact on adjoining properties, it is the view of officers that such interference is in the public interest and proportionate.

1340. Insofar as the grant of planning permission will result in interference with freedom of thought, conscience and religion (Article 9 of the ECHR), including the ability of people to attend or wishing to attend the Bevis Marks Synagogue to manifest their religion or belief in worship, teaching, practice and observance, it is the view of officers that the Minor Adverse effect on daylight identified within the Synagogue by the proposed development will not impact upon the ability people to attend or wishing to attend Bevis Marks Synagogue to manifest their religion or belief in worship, teaching, practice and observance.

Conclusion and Overall Planning Balance

1341. The proposal has been assessed in accordance with the relevant statutory duties and having regard to the Development Plan and other relevant policies and guidance, SPDs and SPGs and relevant advice including the NPPF, the draft Local Plan and considering all other material considerations. The determination must be made in accordance with the development plan unless material considerations indicate otherwise.

1342. The application relates to site located on the northeast corner of Bury Street, northwest of Creechurch Lane and it comprises three buildings, namely Holland House, Renown House and Bury House. The site is located within the recently designated Creechurch Conservation Area and Holland House is a Grade II* listed building.

1343. The current proposal follows the refusal of an application at 31 Bury Street, proposing the demolition of the building at 31 Bury Street and the construction of a 48 storey tower building under the terms of application 20/00848/FULEIA. The application currently under consideration incorporates a tower at 31 Bury Street, which has been reduced in height by 19 metres and has been set back at the top eight floors to reduce the massing towards the termination point of the tower.

1344. The proposal is for the demolition of Bury House and erection of a new building comprising of 4 basement levels, ground plus 43 storeys; partial demolition of Holland House and Renown House; restoration of existing and erection of four storey extension resulting in ground plus 8 storeys at Holland House and three storey extension resulting in ground plus 5 storeys at Renown House and interconnection of the three buildings. The buildings would be used for the following purposes office (Class E(g)(i)), including affordable workspace, flexible retail/café (Class E(a)/E(b)), and flexible community/education/cultural/amenity (Class F2(b)/ F1(a)- (e)/ E(f)/ Sui Generis) uses. The development also includes the provision of a new covered pedestrian route, cycle parking and facilities, public toilet, landscaping and highway improvements and the provision of a single servicing access point onto Heneage Lane.

1345. Objections have been received from statutory consultees including Historic England, the Greater London Authority, the 20th Century Society, the Victorian Society, the Georgian Group, Historic Royal Palaces, the CAAC, SAVE Britain's Heritage, the London Borough of Tower Hamlets, as well as several objections from third parties, including those from the Jewish community, relating to the scale, massing and design of the development and its perceived impact on designated heritage assets, including the Tower of London World Heritage Site, the Bevis Marks Synagogue and the Creechurch Conservation Area and concerns around the perceived ability of

the Synagogue's congregation to use the Synagogue and its courtyard as a place of worship due to the daylight, and overshadowing impacts and by reason of the reduced visibility of the night sky and the moon. This report has considered these impacts in detail.

1346. The site is within the Central Activities Zone and highly sustainable with excellent access to transport infrastructure and able to support active travel and maintain pedestrian comfort for a high number of future employees. The application site is situated within the City Cluster. The Cluster contains the greatest density of businesses and jobs in the City and both the Local Plan 2015 and emerging City Plan 2040 recognise that the Cluster can accommodate significant growth in office floorspace and is a location for tall buildings. The site is within the City's growth modelling and would deliver over 1.5% of the required commercial space to meet projected economic and employment growth demand until 2040. This quantity of floorspace would contribute to maintaining the City's position as the world's leading international financial and business centre.

1347. The scheme would provide 34,584 sq.m (GIA) of office floorspace (Use Class E(g)(i)), which would be sustainable Grade A office floorspace suitable for circa 2,470 FTE City workers. The proposed office floorplates would range between 350 and 580sqm for businesses of 50-60 people supporting smaller, start-up businesses, providing office tenants with their own private entrance and dedicated floor space. An area of 1,170sqm would be provided as affordable workspace available at 50% of market rent for qualifying occupiers or zero rent for charities, fulfilling the City's vision to providing inclusive workspace.

1348. The proposals would optimise the use of land, delivering high quality office space, and a multi-layered series of accessible spaces. It would enhance convenience, comfort and attractiveness in a manner which optimises active travel and builds on the City's modal hierarchy and Transport Strategy and delivers high quality public realm. The proposals would constitute Good Growth by design and be in accordance with all Local Plan Policies relating to design, including, DM3.3, CS7, CS10, CS14, CS16, DM16.1, DM10.1, DM10.4, DM10.8, CS19 and DM19.1, emerging City Plan 2040 policies S10, AT1, S8, DE2, DE3, DE4, S21, OS1, S14, London Plan D3, D4, D8, T1, T2, T4 and G4, and the policies contained in the NPPF and guidance in the National Design Guide, contextualised by London Plan Good Growth objectives GG1-3,5 and 6.

1349. Officers consider the site to be acceptable for a tall building, supporting the consolidation of the City Cluster. While there is conflict with Local Plan policy CS7 (3) and CS14 (2) and London Plan D9 B (3), because the site is

located in a conservation area and therefore considered inappropriate for a tall building, officers nevertheless find that the qualitative impacts of the proposal would be acceptable and that it would accord with London Plan Policy D9 A, C and D, Local Plan Policy CS7 (1,2, 4-7), draft City Plan S12 (1,2, 4-10) S21 (1,3-8). Most relevantly, the proposal would not cause harm to the significance, character or appearance of the Creechurch Conservation Area in which it is situated. As such, officers consider the site appropriate for a tall building, notwithstanding some limited further conflict with emerging City Plan 2040 S21 (5) due to an impact on the significance of the grade II* listed Holland House which forms part of the application site.

1350. The proposal would be a sophisticated new addition to the City Cluster, massed in tapering stages to form an endpiece at the eastern edge, and clad in pale blue faience elevations to do so elegantly and differentiate it from the more glazed towers at the centre. It would enliven the locality of the City at its feet by reinstate the lost leg of Heneage Lane with a new route and retail arcade and reimagining the existing open space between Bury House and Holland House; both these existing buildings on the application site and the new spaces between them (and the wider locality) would be made more accessible, inclusive, inviting, and animated by the scheme. The creation of the proposed new public spaces and improvements to the existing public spaces are considered by officers to be a benefit of the scheme. The proposal would comply with the relevant design policies set out above.

1351. The proposal would not harm the attributes or components of the Outstanding Universal Value, significance, authenticity and integrity of the Tower of London World Heritage Site, in accordance with Local Plan Policy CS12 (5), CS13 (3) Emerging City Plan Policy S11 (5), HE1, HE3 London Plan Policy HC2 associated guidance in the World Heritage Site Management Plan, Local Setting Study and LVMF SPG and CoL Protected Views SPD.

1352. The proposals would preserve the characteristics and composition of all relevant strategic views and would comply with Local Plan Policy CS13 and emerging City Plan 2040 Policy S13 London Plan Policy HC4, and associated guidance in the LVMF SPG and Protected Views SPD. The development would preserve the experiences from public high-level viewing platforms including from Monument, St Paul's Cathedral Stone Gallery and Golden Gallery and existing and emerging elevated public spaces which are also important to the character of the City of London.

1353. The proposal would result in a low level of harm to the grade II* listed Holland House. As such, it would fail to preserve the significance/special interest or setting of this designated heritage asset and conflict with Local

Plan policies, CS12 (1 and 2), DM12.1 (1), Draft City Plan S 11 (2) and London Plan HC1 (C) and the objective set out in Section 66 of the Planning (Listed Buildings and Conservation Areas) Act 1990 and relevant NPPF policies. The proposals would otherwise comply with Local Plan CS14, CS 12 (2-5), CS13 and DM12.1 (2-5) DM12.5 Draft City Plan 2040 S11 (1,3-5) S 13, HE1 and London Plan HC 1 (D), HC2, HC3 and HC4. Most germanely, they would preserve the setting and significance of Bevis Marks Synagogue and the special interest, character and appearance of the Creechurch Conservation Area.

1354. Giving considerable importance and weight to the desirability of preserving the significance of listed buildings, this harm would be outweighed by the heritage and public benefits of the scheme. The heritage benefits, set out in more detail in the Heritage section below, include a low level of enhancement to the grade II* Holland House and a low level of enhancement to the Creechurch Conservation Area. The public benefits include the delivery of growth in a highly sustainable location, the opening up of Holland House, and in particular its heritage lobbies, to a much broader demographic, and the provision of a highly compelling mix of educational/ cultural/ community/ sports/ multi-faith spaces across the lower levels of the proposal. The proposals would provide high quality amenities that would promote the wellbeing of workers, residents and visitors whilst also driving footfall and increasing spending in the locality.

1355. The proposals comply with the required initial steps of archaeology investigation Local Plan DM 12.4 Draft City Plan 2040 HE2 13, Policies HE1 and London Plan HC1 subject to archaeology conditions.

1356. Through engagement with educational, sporting and arts providers and organisations, charities, multi-faith groups, livery companies and other local key stakeholders, the development would deliver a significant community/cultural offer though the provision of flexible educational/ cultural/ community/ sports/ multi-faith/ amenity space within the lower ground, ground and first floors of the three buildings.

1357. These multi-functional bookable spaces would attract a wide range activities, including student visits for learning, educational, creative and skills workshops, rehearsals, performances, conferences, charity events, sports tournaments and faith events. The spaces would be available to pre-book, free of charge for community based groups and non-profit organisations, schools and other local groups, for 81 hours a week, of which over 67 hours free of charge. The public offer would also include an Urban Farm at the ninth floor of Holland House to be used as a rooftop classroom and the provision of a climbing wall, offering a new sport facility and attraction in the City

Cluster. Heneage Arcade would create a new pedestrian route, with flexible retail/café uses, incorporating public art. The dedicated cycle repair space at lower ground floor level would support the provision of new skills in the area, providing training and jobs for young adults and concurrently providing a service in the area to support the local community. The provision of a changing place, public toilet and water fountain, will be secured by condition.

1358. In transportation terms, the scheme would support active travel and maintain pedestrian comfort for a high number of future employees. The proposal would align with aspirations set out in the City's Transport Strategy. Policy compliant levels of cycle parking (582 long stay and 85 short stay) and associated end of trip facilities, including showers and lockers are proposed, which would encourage active travel to the site. The proposals for the enhanced public highways, can satisfactorily accommodate the additional pedestrian trips on the transport network. Demolition and construction methodologies would be secured via condition and proposals agreed between the Highways Authority and the appointed contractor, in accordance with construction regulations and logistic guidance. The three buildings are proposed to be serviced by a single point onto Heneage Lane. 66 daily trips are forecasted following consolidation of deliveries by 50%. This would need to be set out in a delivery and servicing management plan. It is considered at this stage that the proposed servicing arrangement would be acceptable. The scheme is in compliance with Local Plan Policy 16.3 and London Plan policy T5.

1359. Carbon optioneering has been carried out to establish carbon impacts, opportunities and constraints for environmental sustainability to inform the development proposals. The whole life-cycle carbon emissions per square meter of selected option would be the lowest out of the 4 options tested. The proposed development would optimise the quantity of floorspace for offices and a mix of community and retail uses along with a range of amenity and urban greening measures, thus contributing to future proofing the City of London against a range of environmental, social and economic sustainability challenges.

1360. Compared to retrofit options with limited extension potential, the proposed development would result in the lowest whole life-cycle carbon emissions per square meter, with benefits relating to avoiding further interventions into historic fabric, improving social sustainability through the activation and diversification of the local area and integrating urban greening and climate resilience measures. The energy strategy has been optimised for the site and a BREEAM "excellent" rating is targeted, aspiring to an "outstanding" rating through detailed design. Circular economy measures have been incorporated, such as by retaining approximately 35% of the

existing structures, as well as designing for longevity, adaptability and low maintenance. Although the proposal cannot meet the London Plan target of 35% operational carbon emission savings due to the particular stringency of the Part L 2021 baseline relating to non-residential buildings, as acknowledged by the GLA, it would (taking account of the mitigation measures proposed) comply with London Plan policies SI 2, SI 7, Local Plan policies CS15 and DM17.2, as well as emerging City Plan 2040 policy DE1. The building design responds well to climate change resilience by reducing solar gain, saving water resources and significant opportunities for urban greening and biodiversity and complies with London Plan policies G5 SI 4, SI 5 and SI 13, Local Plan policies DM18.1, DM18.2, CS19, DM19.2, and emerging City Plan 2040 policies S14, OS2, OS3, OS4, S15, CR1, CR3 and CR4.

1361. In terms of the environmental impacts of the proposed development, the daylight, sunlight, overshadowing, overbearing overlooking, noise, contamination, wind, thermal comfort, air quality, solar glare and light spillage impacts have been assessed. Microclimate, thermal comfort, ground conditions, air quality, contamination, solar glare and light spillage and noise generated by the development are acceptable subject to mitigation, conditions and planning obligations where relevant. In terms of thermal comfort beneficial impacts are expected on the existing benches to the north of 30 St Mary Axe.

1362. A number of objections have been received from Bevis Marks Synagogue and members and the wider Sephardi community, inter alia, relating to the impact of the development to the historical and religious significance and the setting of Bevis Marks Synagogue, the loss of daylight and sunlight to the Synagogue, overshadowing of its courtyard and the ability to view the sky and the moon in order to observe religious practices.

1363. As discussed above and in length in the main body of the report, it is considered that the proposed development would preserve the special architectural and historic interest and heritage significance of the synagogue and its setting.

1364. In terms of the daylight and sunlight impacts into the Synagogue, officers are extremely cognisant of the matters raised by the Jewish community and have analysed these in considerable detail. However, it is considered that the impacts would be limited, localised and minimally noticeable at ground floor level and slightly more noticeable at the southwest area to the mezzanine level. The VSC effects caused by the proposed development are minor adverse, the BRE guidelines for NLS and sunlight are met and therefore, overall, the daylight and sunlight effects are not considered significant, in EIA

terms. The effects of cumulative scenarios have been assessed including consented and unconsented schemes. Although minor to moderate adverse effects are identified in the cumulative vs existing baseline scenario, the additional effects would be due to other consented schemes. It is also noted that BRE guidelines for daylight distribution and sunlight are again met in the cumulative scenario.

1365. As such, it therefore follows that there is a very limited impact on the visual appreciation of the historic interior and on the visual appreciation of interior features of key religious significance such as the Bimah and the Ark. Consequently, on the basis of the detailed evidence provided, officers come to the view that the visual appreciation of the religious ceremonies and associated activities including the reading of religious text would not be diminished to a significant or perceptible degree. From this it can be concluded that, based on the quantifiable daylight impact results, the effects of the proposal on daylight to the interior of the Synagogue would not be great enough to compromise the religious use or activities therein.

1366. Since the submission of the application, a daylight and sunlight empirical report has been submitted on behalf of the S&P Sephardi community and the Bevis Marks Synagogue Rabbi. Overall, based on the results of the submitted data it is accepted that the Synagogue currently experiences low levels of light, which accords with the results of the Daylight, Sunlight and Overshading Assessment submitted by the Applicant. Officers, based on the findings and conclusions of the reviewer, consider that the although the Bevis Marks Synagogue daylight report is not based on a published or generally used method, if carried out appropriately with adequate equipment and controlled methodology it can give an understanding of the current and proposed light levels. However, it is considered that the submitted daylight report, is not complete or entirely accurate, due to the lack of necessary information and other limitations, as discussed above, and therefore, it can be attributed limited weight. It is considered more appropriate that officers give substantial weight to the findings of the Daylight, Sunlight and Overshadowing Assessment submitted by the Applicant and reviewed by the Corporation's appointed daylight consultant, as this follows the BRE guidelines as referred to in Local Plan policy DM10.7, and paragraph 3.10.41 of the reasoned justification to that policy. The BRE guidelines are also referred to in draft City Plan 20240 policy DE7.

1367. At present no area of the courtyard receives two hours of sunlight on 21 March and therefore, although no area would be able to receive sunlight on the 21 March following the erection of the proposed development, the BRE guidelines are met. The Sun Exposure analysis and shadow diagrams, submitted with the application, show a reduction in the average sunlight

availability within the courtyard of 16 minutes to 19 minutes when comparing the proposed development (including the consented schemes) with the consented scenario. It is therefore considered that the proposed development alone would not materially change the sunlight on the Bevis Marks Synagogue courtyard. As a result, it is not considered that the development would result in overshadowing in the Synagogue's courtyard that would affect the setting of the listed building or its associated amenities and it would not preclude from continuing to be used for religious events and as part of the visitor experience visiting the Synagogue's exhibition centre.

1368. To respond to the concerns raised regarding the ability to recite the Kiddush Levana prayer, the applicant has submitted a Lunar Transit Study, assessing the impact the development would have on the visibility of the moon in the night sky. This study was independently reviewed. Following discussions with the Synagogue's Rabbi, the visibility of the sky from two observer points at the entrance of the Synagogue courtyard were assessed. Based on the results produced taking into account a full moon cycle, only for the 12-day periods of the waxing moon when the Kiddush Levana prayer can be recited (discounting cloud cover), the visibility of the moon when comparing the existing and cumulative scenario will be reduced by 2.5% and 2.1% in the major and minor lunistice respectively from point P (indicated by the Rabbi) and between 2.2% and 2.1% respectively from point N (initially included in the submitted study). The absolute reductions between the future baseline and cumulative scenario, effectively those resulting from the proposed development, are between 1.8% and 1.3% in the major and minor lunistices from both points. When considering the months and days that the moon would be able to be visible, taking into account the development alone (cumulative vs future baseline) it is noted that there would be no further reduction in the months that the moon would be able to be visible (the moon would still be able to be viewed 8 months of the year) and minor reductions in the number of days (50 days instead of 52 or 51 days every year, in case of a major and minor lunistice year respectively). In terms of hours there will be a reductions exceeding 40 hours in each year.

1369. It is therefore concluded that currently there is a reduced overall opportunity to view the moon from the Synagogue courtyard due to obstructing effects from the existing surrounding buildings. The proposal would result in varying reductions of the number of hours available to see the moon on each relevant occasion, though in theory there would always be enough visibility to recite the prayer, and there would not be a reduction in the number of occasions (i.e. months) per year against the future baseline. Although the impact of the development in terms of relative losses is acknowledged, the prayer would still be able to be recited in those same months each year as the future baseline scenario. Whilst the development

would have some impact on the ability to recite the Kiddush Levana Prayer due to the reduced hours that the moon would be able to be visible, it would not have a material impact on the ability to carry out of other religious practices including circumcision, the observance of Shabbat, and daily obligations. It is the view of officers that such an adverse impact is small, and should, taking account of the duties imposed by section 149 of the Equality Act 2010, therefore be attributed limited weight. In any event such adverse impact would be outweighed by the many public benefits of the scheme as set out in this report.

1370. In terms of daylight impacts on other receptors, the proposed development would result in no significant adverse effect on the majority of the properties assessed with the exception of 2 and 10-16 Creechurch Lane and 18-20 Creechurch Lane which would experience moderate adverse effects. However, the absolute alterations in most instances are either very limitedly or not likely to be noticeable and as such, the daylight and sunlight to these properties is not considered to be reduced to unacceptable levels.

1371. In this case, the proposals are considered to comply with a number of policies in particular those which encourage office development in the City. It is the view of officers that, as a matter of planning judgement, the proposals will make a significant contribution to advancing the strategic and business objectives of the City and comply with relevant design, culture, environmental and public realm related policies.

1372. Any potential impacts during construction would be controlled as far as possible by the implementation of Schemes of protective works for demolition and construction and a Construction Logistics Plan and good site practices embodied therein. It is recognised that there are inevitable, albeit temporary consequences of development in a tight-knit urban environment. Post construction, compliance with planning conditions and S106 obligations would minimise any adverse impacts.

1373. Virtually no major development proposal is in complete compliance with all policies and in arriving at a decision it is necessary to assess all the policies and proposals in the plan and to come to a view as to whether in the light of the whole plan the proposal does or does not accord with it.

1374. It is the view of officers that it is a matter of planning judgement, and in particular as the effect of the proposal will be to advance Local Plan Strategic Objective 1, and as policy CS1 is complied with and as policies relating to office floor space delivery, City Cluster and public realm would be complied with that notwithstanding the conflict with CS12 (Historic Environment) , DM12.1 (Managing Change affecting all heritage assets and spaces), draft

City Plan Policies 2040 S11 (Historic Environment), S12 (3) (Tall Buildings), and London Plan HC1 (Heritage Conservation and Growth), the proposals comply with the development plan when considered as a whole.

1375. Other than the significant effect that the proposal will have to advance Local Plan Strategic Objective 1 to maintain the City's position as the world's leading international financial and business centre by providing 34,584 sq.m (GIA) of sustainable Grade A office floorspace, there are other benefits that would weight in favour of the proposed development when assessed against the local and national planning policies, as set out below:

- Securing a strategic high-quality mixed-use development within the City Cluster, that would provide land uses which support the diversification, vitality and growth of the Cluster which contributes to the Destination City objectives;
- The provision of generous and unique multi-functional community, cultural, educational, sports, multi-faith, amenity space that is intended to reach out to the wider community and provide a gateway into the City to access opportunities to inspire, connect, create and educate themselves and deliver genuine public benefits to the wider community;
- Provision of affordable workspace available at 50% of market rent for qualifying occupiers or zero rent for charities that meets the City's vision to providing inclusive workspace;
- Increase in a diverse retail provision on the site, enhancing the retail offer in the Cluster and wider City, supporting and diversifying its primary business function and growing number of working population and number of visitors, whilst enhancing a place which would be more interesting and vibrant with active street frontages;
- Provision of a rooftop urban farm and climbing wall offering a nurturing environment for learners to explore and encouraging health and wellbeing by new sport and recreational facilities;
- Provision of high-quality public realm at ground floor and optimising pedestrian movement by maximising permeability, providing access to external and internal pedestrian routes which are inclusive, comfortable and attractive thereby enhancing the City's characteristic network of accessible buildings, streets, courts and alleys;
- Securing a development that is environmentally responsible in that it would seek to promote active travel, provide biodiversity and urban greening, target BREEAM 'Excellent' and reduce waste;
- The proposed building would result in a significant aesthetic enhancement to the Creechurch locality, through the use of high-quality faience materials and detailing inspired by its immediate neighbours, the proposed building would be an appropriate and sympathetic neighbour in architectural terms. It would result in modest

enhancement to the exteriors of Holland House. In wider pan-City and pan-London vistas, the proposed building would be distinguished as the first wholly faience-clad tower in the City Cluster, forming an exciting new architectural counterpoint to its glazed predecessors, and distinguishing and enhancing the City Cluster with a sophisticated new form of architectural expression. It would constitute an innovative design which would promote sustainability and help raise the standard of design in the area.

- Provision of meaningful public art along Heneage Arcade and to educate public about heritage.

1376. The scheme would provide benefits through CIL improvements to the public realm, housing and other local facilities and measures. That payment of CIL is a local finance consideration which weighs in favour of the scheme. In addition to general planning obligations there would be site specific measures secured by condition and in the S.106 agreement.

1377. Paragraph 10 of the NPPF sets out that there is presumption in favour of sustainable development. For decision taking that means approving development proposals that accord with an up-to-date development plan without delay.

1378. As discussed above, the paragraph 208 NPPF heritage balance (and the balance referred to at London Plan policy D9C(d)) is to be struck in favour of the scheme as the public benefits outweigh the less that substantial harm.

1379. It is the view of Officers that as the proposal complies with the Development Plan when considered as a whole and as other material considerations also weigh in favour of the scheme, planning permission should be granted as set out in the recommendation and the schedules attached.

Appendix A

REASONED CONCLUSIONS ON SIGNIFICANT EFFECTS

Reasoned Conclusions

Following examination of the environmental information a reasoned conclusion on the significant effects of the proposed development on the environment has been reached and is set out in this report.

As required by regulation 26 of the Environmental Impact Assessment (EIA) Regulations the City is required to examine the environmental information and reach a reasoned conclusion on the significant effects of the proposed development on the environment. The environmental information has been examined and a reasoned conclusion has been reached as set out in the officers' report, and in particular, as summarised in the assessment and conclusions sections of that report. The conclusions have been integrated into the decision as to whether planning permission should be granted.

Monitoring Measures

If planning permission were granted, it is considered that monitoring measures should be imposed to secure compliance with Construction Environmental Management Plan, the cap on servicing trips and other elements of the Delivery and Servicing Management Plan, a Service Lift Vehicle Maintenance Strategy, a Travel Plan. Mitigation measures should be secured including wind mitigation to the Level 7 of the proposed development. These as well as other measures to ensure the scheme is acceptable, would be secured and monitored through the S106 agreement, recommended conditions and the S278 agreement. Any remedial action necessary can be taken by enforcing those agreements or conditions. The duration of the monitoring will depend upon the particular provision in the relevant agreement or in conditions.

Appendix B

London Plan Policies

- Policy CG1 Building Strong and Inclusive Communities
- Policy GG2 Making the best use of land
- Policy CG3 Creating a Healthy City
- Policy GG5 Growing a good economy
- Policy CG6 Increasing efficiency and resilience
- Policy SD4 The Central Activities Zone (CAZ)
- Policy SD5 Offices, and other strategic functions and residential development in the CAZ
- Policy D1 London's form, character and capacity for growth
- Policy D2 Infrastructure requirements for sustainable densities
- Policy D3 Optimising site capacity through the design-led approach
- Policy D4 Delivering Good Design
- Policy D5 Inclusive Design
- Policy D8 Public realm
- Policy D9 Tall buildings
- Policy D10 Basement Development
- Policy D11 Safety, security and resilience to emergency
- Policy D12 Fire Safety
- Policy D14 Noise
- Policy S6 Public toilets
- Policy E1 Offices
- Policy E2 Providing suitable business space
- Policy E3 Affordable Workspaces
- Policy E9 Retail, markets and hot food takeaways
- Policy E10 Visitor infrastructure
- Policy HC1 Heritage conservation and growth
- Policy HC2 World Heritage Sites
- Policy HC3 Strategic and Local Views
- Policy HC4 London View Management Framework
- Policy HC5 Supporting London's culture and creative industries
- Policy HC6 Supporting the night-time economy

Relevant Local Plan Policies

CS1 Provide additional offices

To ensure the City of London provides additional office development of the highest quality to meet demand from long term employment growth and strengthen the beneficial cluster of activities found in and near the City that contribute to London's role as the world's leading international financial and business centre.

CS2 Utilities infrastructure

To co-ordinate and facilitate infrastructure planning and delivery to ensure that the functioning and growth of the City's business, resident, student and visitor communities is not limited by provision of utilities and telecommunications infrastructure.

CS3 Security and Safety

To ensure that the City is secure from crime, disorder and terrorism, has safety systems of transport and is designed and managed to satisfactorily accommodate large numbers of people, thereby increasing public and corporate confidence in the City's role as the world's leading international financial and business centre.

CS4 Planning contributions

To manage the impact of development, seeking appropriate developer contributions.

CS7 Eastern Cluster

To ensure that the Eastern Cluster can accommodate a significant growth in office floorspace and employment, while balancing the accommodation of tall buildings, transport, public realm and security and spread the benefits to the surrounding areas of the City, by:

1. Increasing the provision of sustainable, energy-efficient, attractive, high quality office floorspace in a range of accommodation types, that meet the varied needs of office occupiers and achieve modernisation of office stock.
2. Promoting the Eastern Cluster as a location for inward investment, providing assistance to potential developers, investors and occupiers.
3. Delivering tall buildings on appropriate sites that enhance the overall appearance of the cluster on the skyline, and the relationship with the space around them at ground level, while adhering to the principles of sustainable design, conservation of heritage assets and their settings and taking account of their effect on the wider London skyline and protected views.
4. Ensuring the safety of businesses, workers, residents and visitors, promoting natural surveillance of buildings, open spaces and streets and protecting against crime and terrorism.
5. Enhancing streets, spaces, and the public realm for pedestrians, providing new open and public spaces where feasible, increasing connectivity with surrounding areas and improving access to facilities and services, particularly in the Cheapside and Aldgate areas and towards the City Fringe.
6. Ensuring the provision of high quality utilities (including CCHP where feasible) and communications infrastructure, encouraging early engagement and joint working between developers and utility providers and maximising the space under the streets, particularly through the use of pipe subways.
7. Delivering improvements to public transport to cope with the demands of the growing numbers of workers and visitors, implementing street and traffic management measures and ensuring that improvements do not compromise the quality of the environment.

CS10 Design

To promote a high standard and sustainable design of buildings, streets and spaces, having regard to their surroundings and the character of the City and creating an inclusive and attractive environment.

CS11 Visitor, arts and culture

To maintain and enhance the City's contribution to London's world-class cultural status and to enable the City's communities to access a range of arts, heritage

and cultural experiences, in accordance with the City Corporation's Destination Strategy.

CS12 Historic environment

To conserve or enhance the significance of the City's heritage assets and their settings, and provide an attractive environment for the City's communities and visitors.

CS13 Protected views

To protect and enhance significant City and London views of important buildings, townscape and skylines, making a substantial contribution to protecting the overall heritage of the City's landmarks.

CS14 Tall Buildings

To allow tall buildings of world class architecture and sustainable and accessible design in suitable locations and to ensure that they take full account of the character of their surroundings, enhance the skyline and provide a high quality public realm at ground level, by:

1. Permitting tall buildings on suitable sites within the City's Eastern Cluster.
2. Refusing planning permission for tall buildings within inappropriate areas, comprising: conservation areas; the St. Paul's Heights area; St. Paul's protected vista viewing corridors; and Monument views and setting, as defined on the Policies Map.
3. Elsewhere in the City, permitting proposals for tall buildings only on those sites which are considered suitable having regard to: the potential effect on the City skyline; the character and amenity of their surroundings, including the relationship with existing tall buildings; the significance of heritage assets and their settings; and the effect on historic skyline features.
4. Ensuring that tall building proposals do not adversely affect the operation of London's airports

CS15 Sustainable development and climate change

To enable City businesses and residents to make sustainable choices in their daily activities creating a more sustainable City, adapted to the changing climate.

CS16 Public transport, streets and walkways

To build on the City's strategic central London position and good transport infrastructure to further improve the sustainability and efficiency of travel in, to, from and through the City.

CS17 Waste

To support City businesses, residents and visitors in making sustainable choices regarding the minimisation, transport and management of their waste, capitalising on the City's riverside location for sustainable waste transfer and eliminating reliance on landfill for municipal solid waste (MSW).

CS18 Flood risk

To ensure that the City remains at low risk from all types of flooding.

CS19 Open Spaces and Recreation

To encourage healthy lifestyles for all the City's communities through improved access to open space and facilities, increasing the amount and quality of open spaces and green infrastructure, while enhancing biodiversity.

CS20 Retailing

To improve the quantity and quality of retailing and the retail environment, promoting the development of the five Principal Shopping Centres and the linkages between them.

CS21 Housing

To protect existing housing and amenity and provide additional housing in the City, concentrated in or near identified residential areas, as shown in Figure X, to meet the City's needs, securing suitable, accessible and affordable housing and supported housing.

CS22 Social infrastructure and opportunity

To maximise opportunities for the City's residential and working communities to access suitable health, social and educational facilities and opportunities, while fostering cohesive communities and healthy lifestyles.

DM1.3 Small and medium business units

To promote small and medium sized businesses in the City by encouraging:

a) new accommodation suitable for small and medium sized businesses or occupiers;
b) office designs which are flexible and adaptable to allow for sub-division to create small and medium sized business units;
c) continued use of existing small and medium sized units which meet occupier needs.

DM1.5 Mixed uses in commercial areas

To encourage a mix of commercial uses within office developments which contribute to the City's economy and character and provide support services for its businesses, workers and residents.

DM2.1 Infrastructure provision

1) Developers will be required to demonstrate, in conjunction with utility providers, that there will be adequate utility infrastructure capacity, both on and off the site, to serve the development during construction and operation. Development should not lead to capacity or reliability problems in the surrounding area. Capacity projections must take account of climate change impacts which may influence future infrastructure demand.
2) Utility infrastructure and connections must be designed into and integrated with the development wherever possible. As a minimum, developers should identify and plan for:
a) electricity supply to serve the construction phase and the intended use for the site, and identify, in conjunction with electricity providers, Temporary Building Supply(TBS) for the construction phase and the estimated load capacity of the building and the substations and routes for supply;
b) reasonable gas and water supply considering the need to conserve natural resources;
c) heating and cooling demand and the viability of its provision via decentralised energy (DE) networks. Designs must incorporate access to existing DE networks where feasible and viable;

d) telecommunications network demand, including wired and wireless infrastructure, planning for dual entry provision, where possible, through communal entry chambers and flexibility to address future technological improvements;
e) separate surface water and foul drainage requirements within the proposed building or site, including provision of Sustainable Drainage Systems (SuDS), rainwater harvesting and grey-water recycling, minimising discharge to the combined sewer network.

3) In planning for utility infrastructure developers and utility providers must provide entry and connection points within the development which relate to the City's established utility infrastructure networks, utilising pipe subway routes wherever feasible. Sharing of routes with other nearby developments and the provision of new pipe subway facilities adjacent to buildings will be encouraged.

4) Infrastructure provision must be completed prior to occupation of the development. Where potential capacity problems are identified and no improvements are programmed by the utility company, the City Corporation will require the developer to facilitate appropriate improvements, which may require the provision of space within new developments for on-site infrastructure or off-site infrastructure upgrades.

Policy DM 3.1 Self-containment in mixed use developments

Where feasible, proposals for mixed use developments must provide independent primary and secondary access points, ensuring that the proposed uses are separate and self-contained.

DM3.2 Security measures

To ensure that security measures are included in new developments, applied to existing buildings and their curtilage, by requiring:

a) building-related security measures, including those related to the servicing of the building, to be located within the development's boundaries;
b) measures to be integrated with those of adjacent buildings and the public realm;
c) that security is considered at the concept design or early developed design phases of all development proposals to avoid the need to retro-fit measures that impact on the public realm;
d) developers to seek recommendations from the City of London Police Architectural Liaison Officer at the design stage. New development should meet Secured by Design principles;

e) the provision of service management plans for all large development, demonstrating that vehicles seeking access to the building can do so without waiting on the public highway;
f) an assessment of the environmental impact of security measures, particularly addressing visual impact and impact on pedestrian flows.

DM3.3 Crowded places

On all major developments, applicants will be required to satisfy principles and standards that address the issues of crowded places and counter-terrorism, by:

a) conducting a full risk assessment;
b) keeping access points to the development to a minimum;
c) ensuring that public realm and pedestrian permeability associated with a building or site is not adversely impacted, and that design considers the application of Hostile Vehicle Mitigation measures at an early stage;
d) ensuring early consultation with the City of London Police on risk mitigation measures;
e) providing necessary measures that relate to the appropriate level of crowding in a site, place or wider area.

DM3.4 Traffic management

To require developers to reach agreement with the City Corporation and TfL on the design and implementation of traffic management and highways security measures, including addressing the management of service vehicles, by:

a) consulting the City Corporation on all matters relating to servicing;
b) restricting motor vehicle access, where required;
c) implementing public realm enhancement and pedestrianisation schemes, where appropriate;
d) using traffic calming, where feasible, to limit the opportunity for hostile vehicle approach.

DM3.5 Night-time entertainment

1) Proposals for new night-time entertainment and related uses and the extension of existing premises will only be permitted where it can be demonstrated that, either individually or cumulatively, there is no unacceptable impact on:

a) the amenity of residents and other noise-sensitive uses;

b) environmental amenity, taking account of the potential for noise, disturbance and odours arising from the operation of the premises, customers arriving at and leaving the premises and the servicing of the premises.

2) Applicants will be required to submit Management Statements detailing how these issues will be addressed during the operation of the premises.

DM10.1 New development

To require all developments, including alterations and extensions to existing buildings, to be of a high standard of design and to avoid harm to the townscape and public realm, by ensuring that:

a) the bulk and massing of schemes are appropriate in relation to their surroundings and have due regard to the general scale, height, building lines, character, historic interest and significance, urban grain and materials of the locality and relate well to the character of streets, squares, lanes, alleys and passageways;
b) all development is of a high standard of design and architectural detail with elevations that have an appropriate depth and quality of modelling;
c) appropriate, high quality and durable materials are used;
d) the design and materials avoid unacceptable wind impacts at street level or intrusive solar glare impacts on the surrounding townscape and public realm;
e) development has attractive and visually interesting street level elevations, providing active frontages wherever possible to maintain or enhance the vitality of the City's streets;
f) the design of the roof is visually integrated into the overall design of the building when seen from both street level views and higher level viewpoints;
g) plant and building services equipment are fully screened from view and integrated in to the design of the building. Installations that would adversely affect the character, appearance or amenities of the buildings or area will be resisted;
h) servicing entrances are designed to minimise their effects on the appearance of the building and street scene and are fully integrated into the building's design;
i) there is provision of appropriate hard and soft landscaping, including appropriate boundary treatments;

j) the external illumination of buildings is carefully designed to ensure visual sensitivity, minimal energy use and light pollution, and the discreet integration of light fittings into the building design;
k) there is provision of amenity space, where appropriate;
l) there is the highest standard of accessible and inclusive design

DM10.2 Design of green roofs and walls

1) To encourage the installation of green roofs on all appropriate developments. On each building the maximum practicable coverage of green roof should be achieved. Extensive green roofs are preferred and their design should aim to maximise the roof's environmental benefits, including biodiversity, run-off attenuation and building insulation.

2) To encourage the installation of green walls in appropriate locations, and to ensure that they are satisfactorily maintained.

DM10.3 Roof gardens and terraces

1) To encourage high quality roof gardens and terraces where they do not:
a) immediately overlook residential premises;
b) adversely affect rooflines or roof profiles;
c) result in the loss of historic or locally distinctive roof forms, features or coverings;
d) impact on identified views.
2) Public access will be sought where feasible in new development.

DM10.4 Environmental enhancement

The City Corporation will work in partnership with developers, Transport for London and other organisations to design and implement schemes for the enhancement of highways, the public realm and other spaces. Enhancement schemes should be of a high standard of design, sustainability, surface treatment and landscaping, having regard to:
a) the predominant use of the space, surrounding buildings and adjacent spaces;
b) connections between spaces and the provision of pleasant walking routes;
c) the use of natural materials, avoiding an excessive range and harmonising with the surroundings of the scheme and materials used throughout the City;
d) the inclusion of trees and soft landscaping and the promotion of biodiversity, where feasible linking up existing green spaces and routes to provide green corridors;

e) the City's heritage, retaining and identifying features that contribute positively to the character and appearance of the City;
f) sustainable drainage, where feasible, co-ordinating the design with adjacent buildings in order to implement rainwater recycling;
g) the need to provide accessible and inclusive design, ensuring that streets and walkways remain uncluttered;
h) the need for pedestrian priority and enhanced permeability, minimising the conflict between pedestrians and cyclists;
i) the need to resist the loss of routes and spaces that enhance the City's function, character and historic interest;
j) the use of high quality street furniture to enhance and delineate the public realm;
k) lighting which should be sensitively co-ordinated with the design of the scheme.

Policy DM 10.5 Shopfronts

To ensure that shopfronts are of a high standard of design and appearance and to resist inappropriate designs and alterations. Proposals for shopfronts should:
• respect the quality and architectural contribution of any existing shopfront;
• respect the relationship between the shopfront, the building and its context;
• use high quality and sympathetic materials;
• include signage only in appropriate locations and in proportion to the shopfront;
• consider the impact of the installation of louvres, plant and access to refuse storage;
• incorporate awnings and canopies only in locations where they would not harm the appearance of the shopfront or obstruct architectural features;
• not include openable shopfronts or large serving openings where they would have a harmful impact on the appearance of the building and/or amenity;
• resist external shutters and consider other measures required for security;
• consider the internal treatment of shop windows (displays and opaque windows) and the contribution to passive surveillance;
• be designed to allow access by users, for example, incorporating level entrances and adequate door widths.

Policy DM 10.6 Advertisements

1. To encourage a high standard of design and a restrained amount of advertising in keeping with the character of the City.
2. To resist excessive or obtrusive advertising, inappropriate illuminated signs and the display of advertisements above ground floor level.

DM10.7 Daylight and sunlight

1) To resist development which would reduce noticeably the daylight and sunlight available to nearby dwellings and open spaces to unacceptable levels, taking account of the Building Research Establishment's guidelines.

2) The design of new developments should allow for the lighting needs of intended occupiers and provide acceptable levels of daylight and sunlight.

DM10.8 Access and inclusive design

To achieve an environment that meets the highest standards of accessibility and inclusive design in all developments (both new and refurbished), open spaces and streets, ensuring that the City of London is:

a) inclusive and safe for of all who wish to use it, regardless of disability, age, gender, ethnicity, faith or economic circumstance;

b) convenient and welcoming with no disabling barriers, ensuring that everyone can experience independence without undue effort, separation or special treatment;

c) responsive to the needs of all users who visit, work or live in the City, whilst recognising that one solution might not work for all.

DM11.2 Public Art

To enhance the City's public realm and distinctive identity by:

a) protecting existing works of art and other objects of cultural significance and encouraging the provision of additional works in appropriate locations;

b) ensuring that financial provision is made for the future maintenance of new public art;

c) requiring the appropriate reinstatement or re-siting of art works and other objects of cultural significance when buildings are redeveloped.

DM12.1 Change affecting heritage assets

1. To sustain and enhance heritage assets, their settings and significance.
2. Development proposals, including proposals for telecommunications infrastructure, that have an effect upon heritage assets, including their settings, should be accompanied by supporting information to assess and evaluate the significance of heritage assets and the degree of impact caused by the development.
3. The loss of routes and spaces that contribute to the character and historic interest of the City will be resisted.
4. Development will be required to respect the significance, character, scale and amenities of surrounding heritage assets and spaces and their settings.
5. Proposals for sustainable development, including the incorporation of climate change adaptation measures, must be sensitive to heritage assets.

DM12.3 Listed buildings

1. To resist the demolition of listed buildings.

2. To grant consent for the alteration or change of use of a listed building only where this would not detract from its special architectural or historic interest, character and significance or its setting.

DM12.4 Ancient monuments and archaeology

1. To require planning applications which involve excavation or ground works on sites of archaeological potential to be accompanied by an archaeological assessment and evaluation of the site, including the impact of the proposed development.
2. To preserve, protect, safeguard and enhance archaeological monuments, remains and their settings in development, and to seek a public display and interpretation, where appropriate.
3. To require proper investigation and recording of archaeological remains as an integral part of a development programme, and publication and archiving of results to advance understanding.

DM15.1 Sustainability requirements

1. Sustainability Statements must be submitted with all planning applications in order to ensure that sustainability is integrated into designs for all development.
2. For major development (including new development and refurbishment) the Sustainability Statement should include as a minimum:

a) BREEAM or Code for Sustainable Homes pre-assessment;
b) an energy statement in line with London Plan requirements;
c) demonstration of climate change resilience measures.

3. BREEAM or Code for Sustainable Homes assessments should demonstrate sustainability in aspects which are of particular significance in the City's high density urban environment. Developers should aim to achieve the maximum possible credits to address the City's priorities.
4. Innovative sustainability solutions will be encouraged to ensure that the City's buildings remain at the forefront of sustainable building design. Details should be included in the Sustainability Statement.
5. Planning conditions will be used to ensure that Local Plan assessment targets are met.

DM15.2 Energy and CO2 emissions

1. Development design must take account of location, building orientation, internal layouts and landscaping to reduce likely energy consumption.

2. For all major development energy assessments must be submitted with the application demonstrating:

a) energy efficiency - showing the maximum improvement over current Building Regulations to achieve the required Fabric Energy Efficiency Standards;

b) carbon compliance levels required to meet national targets for zero carbon development using low and zero carbon technologies, where feasible;

c) where on-site carbon emission reduction is unviable, offsetting of residual CO2 emissions through "allowable solutions" for the lifetime of the building to achieve national targets for zero-carbon homes and non-domestic buildings. Achievement of zero carbon buildings in advance of national target dates will be encouraged;

d) anticipated residual power loads and routes for supply.

DM15.3 Low and zero carbon technologies

1. For development with a peak heat demand of 100 kilowatts or more developers should investigate the feasibility and viability of connecting to existing decentralised energy networks. This should include investigation of the potential for extensions of existing heating and cooling networks to serve the development and development of new networks where existing networks are not available. Connection routes should be designed into the development where feasible and connection infrastructure should be incorporated wherever it is viable.
2. Where connection to offsite decentralised energy networks is not feasible, installation of on-site CCHP and the potential to create new localised decentralised energy infrastructure through the export of excess heat must be considered.
3. Where connection is not feasible or viable, all development with a peak heat demand of 100 kilowatts or more should be designed to enable connection to potential future decentralised energy networks.
4. Other low and zero carbon technologies must be evaluated. Non combustion based technologies should be prioritised in order to avoid adverse impacts on air quality.

DM15.4 Offsetting carbon emissions

1. All feasible and viable on-site or near-site options for carbon emission reduction must be applied before consideration of offsetting. Any remaining carbon emissions calculated for the lifetime of the building that cannot be mitigated onsite will need to be offset using "allowable solutions".

2. Where carbon targets cannot be met on-site the City Corporation will require carbon abatement elsewhere or a financial contribution, negotiated through a S106 planning obligation to be made to an approved carbon offsetting scheme.
3. Offsetting may also be applied to other resources including water resources and rainwater run-off to meet sustainability targets off-site where on-site compliance is not feasible.

DM15.5 Climate change resilience

1. Developers will be required to demonstrate through Sustainability Statements that all major developments are resilient to the predicted climate conditions during the building's lifetime.
2. Building designs should minimise any contribution to the urban heat island effect caused by heat retention and waste heat expulsion in the built environment.

DM15.6 Air quality

1. Developers will be required to consider the impact of their proposals on air quality and, where appropriate, provide an Air Quality Impact Assessment.
2. Development that would result in deterioration of the City's nitrogen dioxide or PM10 pollution levels will be resisted.
3. Major developments will be required to maximise credits for the pollution section of the BREEAM or Code for Sustainable Homes assessment relating to on-site emissions of oxides of nitrogen (NOx).
4. Developers will be encouraged to install non-combustion low and zero carbon energy technology. A detailed air quality impact assessment will be required for combustion based low and zero carbon technologies, such as CHP plant and biomass or biofuel boilers, and necessary mitigation must be approved by the City Corporation.
5. Construction and deconstruction and the transport of construction materials and waste must be carried out in such a way as to minimise air quality impacts.
6. Air intake points should be located away from existing and potential pollution sources (e.g. busy roads and combustion flues). All combustion flues should terminate above the roof height of the tallest building in the development in order to ensure maximum dispersion of pollutants.

DM15.7 Noise and light pollution

1. Developers will be required to consider the impact of their developments on the noise environment and where appropriate provide a noise assessment. The layout, orientation, design and use of buildings should ensure that operational

noise does not adversely affect neighbours, particularly noise-sensitive land uses such as housing, hospitals, schools and quiet open spaces.

2. Any potential noise conflict between existing activities and new development should be minimised. Where the avoidance of noise conflicts is impractical, mitigation measures such as noise attenuation and restrictions on operating hours will be implemented through appropriate planning conditions.
3. Noise and vibration from deconstruction and construction activities must be minimised and mitigation measures put in place to limit noise disturbance in the vicinity of the development.
4. Developers will be required to demonstrate that there will be no increase in background noise levels associated with new plant and equipment.
5. Internal and external lighting should be designed to reduce energy consumption, avoid spillage of light beyond where it is needed and protect the amenity of light-sensitive uses such as housing, hospitals and areas of importance for nature conservation

DM15.8 Contaminated land and water quality

Where development involves ground works or the creation of open spaces, developers will be expected to carry out a detailed site investigation to establish whether the site is contaminated and to determine the potential for pollution of the water environment or harm to human health and non-human receptors. Suitable mitigation must be identified to remediate any contaminated land and prevent potential adverse impacts of the development on human and non-human receptors, land or water quality.

DM16.1 Transport impacts of development

1. Development proposals that are likely to have effects on transport must be accompanied by an assessment of the transport implications during both construction and operation, in particular addressing impacts on:

a) road dangers;
b) pedestrian environment and movement;
c) cycling infrastructure provision;
d) public transport;
e) the street network.

2. Transport Assessments and Travel Plans should be used to demonstrate adherence to the City Corporation's transportation standards.

DM16.3 Cycle parking

1. On-site cycle parking must be provided in accordance with the local standards set out in Table 16.2 or, for other land uses, with the standards of the London Plan. Applicants will be encouraged to exceed the standards set out in Table 16.2.
2. On-street cycle parking in suitable locations will be encouraged to meet the needs of cyclists.

DM16.4 Encouraging active travel

1. Ancillary facilities must be provided within new and refurbished buildings to support active transport modes such as walking, cycling and running. All commercial development should make sufficient provision for showers, changing areas and lockers/storage to cater for employees wishing to engage in active travel.
2. Where facilities are to be shared with a number of activities they should be conveniently located to serve all proposed activities.

DM16.5 Parking and servicing standards

1. Developments in the City should be car-free except for designated Blue Badge spaces. Where other car parking is exceptionally provided it must not exceed London Plan's standards.
2. Designated parking must be provided for Blue Badge holders within developments in conformity with London Plan requirements and must be marked out and reserved at all times for their use. Disabled parking spaces must be at least 2.4m wide and at least 4.8m long and with reserved areas at least 1.2m wide, marked out between the parking spaces and at the rear of the parking spaces.
3. Except for dwelling houses (use class C3), whenever any car parking spaces (other than designated Blue Badge parking) are provided, motor cycle parking must be provided at a ratio of 10 motor cycle parking spaces per 1 car parking space. At least 50% of motor cycle parking spaces must be at least 2.3m long and at least 0.9m wide and all motor cycle parking spaces must be at least 2.0m long and at least 0.8m wide.
4. On site servicing areas should be provided to allow all goods and refuse collection vehicles likely to service the development at the same time to be conveniently loaded and unloaded. Such servicing areas should provide sufficient space or facilities for all vehicles to enter and exit the site in a forward gear. Headroom of at least 5m where skips are to be lifted and 4.75m for all other vehicle circulation areas should be provided.
5. Coach parking facilities for hotels (use class C1) will not be permitted.
6. All off-street car parking spaces and servicing areas must be equipped with the facility to conveniently recharge electric vehicles.

7. Taxi ranks are encouraged at key locations, such as stations, hotels and shopping centres. The provision of taxi ranks should be designed to occupy the minimum practicable space, using a combined entry and exit point to avoid obstruction to other transport modes.

Policy DM 16.6 Public car parks

No new public car parks will be permitted in the City, including the temporary use of vacant sites. The redevelopment of existing public car parks for alternative land uses will be encouraged where it is demonstrated that they are no longer required.

DM17.1 Provision for waste

1. Waste facilities must be integrated into the design of buildings, wherever feasible, and allow for the separate storage and collection of recyclable materials, including compostable material.

2. On-site waste management, through techniques such as recyclate sorting or energy recovery, which minimises the need for waste transfer, should be incorporated wherever possible.

DM17.2 Designing out construction waste

New development should be designed to minimise the impact of deconstruction and construction waste on the environment through:

a) reuse of existing structures;
b) building design which minimises wastage and makes use of recycled materials;
c) recycling of deconstruction waste for reuse on site where feasible;
d) transport of waste and construction materials by rail or river wherever practicable;
e) application of current best practice with regard to air quality, dust, hazardous waste, waste handling and waste management

CS18 Minimise flood risk

To ensure that the City remains at low risk from all types of flooding.

DM18.1 Development in Flood Risk Area

1. Where development is proposed within the City Flood Risk Area evidence must be presented to demonstrate that:

a) the site is suitable for the intended use (see table 18.1), in accordance with Environment Agency and Lead Local Flood Authority advice;

b) the benefits of the development outweigh the flood risk to future occupants;

c) the development will be safe for occupants and visitors and will not compromise the safety of other premises or increase the risk of flooding elsewhere.

2. Development proposals, including change of use, must be accompanied by a site-specific flood risk assessment for:

a) all sites within the City Flood Risk Area as shown on the Policies Map; and

b) all major development elsewhere in the City.

3. Site specific flood risk assessments must address the risk of flooding from all sources and take account of the City of London Strategic Flood Risk Assessment. Necessary mitigation measures must be designed into and integrated with the development and may be required to provide protection from flooding for properties beyond the site boundaries, where feasible and viable.

4. Where development is within the City Flood Risk Area, the most vulnerable uses must be located in those parts of the development which are at least risk. Safe access and egress routes must be identified.

5. For minor development outside the City Flood Risk Area, an appropriate flood risk statement may be included in the Design and Access Statement.

6. Flood resistant and resilient designs which reduce the impact of flooding and enable efficient recovery and business continuity will be encouraged.

DM18.2 Sustainable drainage systems

1. The design of the surface water drainage system should be integrated into the design of proposed buildings or landscaping, where feasible and practical, and should follow the SuDS management train (Fig T) and London Plan drainage hierarchy.

2. SuDS designs must take account of the City's archaeological heritage, complex underground utilities, transport infrastructure and other underground structures, incorporating suitable SuDS elements for the City's high density urban situation.

3. SuDS should be designed, where possible, to maximise contributions to water resource efficiency, biodiversity enhancement and the provision of multifunctional open spaces.

Policy DM 18.3 Flood protection and climate change resilience

1. Development must protect the integrity and effectiveness of structures intended to minimise flood risk and, where appropriate, enhance their effectiveness.
2. Wherever practicable, development should contribute to an overall reduction in flood risk within and beyond the site boundaries, incorporating flood alleviation measures for the public realm, where feasible.

DM19.1 Additional open space

1. Major commercial and residential developments should provide new and enhanced open space where possible. Where on-site provision is not feasible, new or enhanced open space should be provided near the site, or elsewhere in the City.
2. New open space should:

a) be publicly accessible where feasible; this may be achieved through a legal agreement;
b) provide a high quality environment;
c) incorporate soft landscaping and Sustainable Drainage Systems, where practicable;
d) have regard to biodiversity and the creation of green corridors;
e) have regard to acoustic design to minimise noise and create tranquil spaces.

3. The use of vacant development sites to provide open space for a temporary period will be encouraged where feasible and appropriate.

DM19.2 Biodiversity and urban greening

Developments should promote biodiversity and contribute to urban greening by incorporating:

a) green roofs and walls, soft landscaping and trees;
b) features for wildlife, such as nesting boxes and beehives;
c) a planting mix which encourages biodiversity;
d) planting which will be resilient to a range of climate conditions;
e) maintenance of habitats within Sites of Importance for Nature Conservation.

Policy DM 20.4 Retail unit sizes

1. Proposals for new retail uses should provide a variety of unit sizes compatible with the character of the area in which they are situated.
2. Major retail units (over 1,000m2) will be encouraged in PSCs and, where appropriate, in the Retail Links in accordance with the sequential test.

DM21.3 Residential environment

1. The amenity of existing residents within identified residential areas will be protected by:

a) resisting other uses which would cause undue noise disturbance, fumes and smells and vehicle or pedestrian movements likely to cause disturbance;

b) requiring new development near existing dwellings to demonstrate adequate mitigation measures to address detrimental impact.

2. Noise-generating uses should be sited away from residential uses, where possible. Where residential and other uses are located within the same development or area, adequate noise mitigation measures must be provided and, where required, planning conditions will be imposed to protect residential amenity.

3. All development proposals should be designed to avoid overlooking and seek to protect the privacy, day lighting and sun lighting levels to adjacent residential accommodation.

4. All new residential development proposals must demonstrate how potential adverse noise impacts on and between dwellings will be mitigated by housing layout, design and materials.

5. The cumulative impact of individual developments on the amenity of existing residents will be considered

Policy DM 22.2 Provision of public toilets

A widespread distribution of public toilets which meet public demand will be provided by:

• requiring the provision of a range of public toilet facilities in major retail and leisure developments, particularly near visitor attractions, public open spaces and major transport interchanges. This includes the provision of pop-up toilets in suitable areas with concentrations of night-time activity;

• supporting an increase in the membership of the Community Toilet Scheme;

• resisting the loss of existing public toilets unless adequate provision is available nearby and requiring the provision of replacement facilities;

• taking the opportunity to renew existing toilets which are within areas subject to major redevelopment schemes and seeking the incorporation of additional toilets in proposed developments where they are needed to meet increased demand.

Appendix C

Methodologies for Assessing Daylight, Sunlight and Overshadowing

Existing Buildings

Daylight to Existing Buildings

The BRE guidelines (2022) present the following methodologies for measuring the impact of development on the daylight and sunlight received by nearby existing dwellings and any existing non-domestic buildings where the occupants have a reasonable expectation of natural light (such as schools, hotels and hostels):

1**. Daylight to windows: Vertical Sky Component (VSC):** a measure of the amount of sky visible from a centre point of a window (irrespective of the size of the window). The VSC test is the main test used to assess the impact of a development on neighbouring properties. A window that achieves 27% or more is considered to provide good levels of light, but if with the proposed development in place the figure is both less than 27% and reduced by 20% or more from the existing level (0.8 times the existing value), the loss would be noticeable.

2. **Daylight Distribution: No Sky Line (NSL):** The distribution of daylight within a room is measured by the no sky line, which separates the areas of the room (usually measured in sq. ft) at a working height (usually 0.85m) that do and do not have a direct view of the sky. The BRE guidelines states that if with the 492 proposed development in place the level of daylight distribution in a room is reduced by 20% or more from the existing level (0.8 times the existing value), the loss would be noticeable. The BRE advises that this measurement should be used to assess daylight within living rooms, dining rooms and kitchens; bedrooms should also be analysed although they are considered less important.

The BRE guidelines recommends compliance with both the VSC and daylight distribution (NSL) assessment criteria.

Sunlight to Existing Buidlidings

Sunlight to windows: Annual Probable Sunlight Hours (APSH): Sunlight levels are calculated for all main living rooms in dwellings if they have a window facing within 90 degrees of due south. Kitchens and bedrooms are considered less important although

care should be taken not to block too much sun. The BRE explains that sunlight availability may be adversely affected if the centre of the window:

• Receives less than 25% of annual probable sunlight hours (APSH), or less than 5% APSH between 21 September and 21 March; and
• Receives less than 0.8 times its former sunlight hours (as result of a proposed development) during either period; and
• Has a reduction in sunlight hours received over the whole year greater than 4% of annual probable sunlight hours.

To clarify, all three of the above criteria need to be met for there to be a noticeable reduction in the sunlight that can be received (at the centre of the window that has been assessed).

The BRE guidelines advises that if the available sunlight hours are both less than 25% ASPH annually and 5% APSH in winter and less than 0.8 times their former value, either over the whole year or just in the winter months (21 September to 21 March) then the occupants of the existing building would notice the loss of sunlight; if the overall/absolute annual loss of sunlight is greater than 4% of APSH, the room may appear colder and less pleasant.

Interpreting Assessment Data

In undertaking assessments, a judgement is made as to the level of impact on affected windows and rooms. Where there is proportionately a less than 20% change (in VSC, NSL or APSH) the effect is judged as to not be noticeable. Between 20-30% it is judged to be minor adverse, 30-40% moderate adverse and over 40% major adverse. All these figures will be impacted by factors such as existing levels of daylight and sunlight and on-site conditions. The judgements that arise from these percentages are drawn from approaches to environmental impact assessment, which are referenced in Appendix H of the BRE guidelines and have become part of an industry standard utilised by Daylight and Sunlight consultants. It is for the Local Planning Authority to decide whether any losses would result in a reduction in amenity which is or is not acceptable.

It should be noted that where there are existing low levels of daylight in the baseline figures, any change in the measured levels has been generally described in two ways to give a more complete picture. These are:

• Proportionate Percentage change (10% reduced to 8% = 20% reduction); and
• Actual / Absolute change (10% reduced to 8% = 2% change).

Open Spaces

Overshadowing

Sunlight to open spaces: Sunlight Hours on the Ground (SHOG): The BRE guidelines recommends that the availability of sunlight should be checked for open spaces including residential gardens and public amenity spaces, stating that, for a garden or amenity area to appear adequately sunlit throughout the year, no more than half (50%) of the area should be prevented by buildings from receiving two hours of sunlight on the 21 March.

For existing open spaces, if as a result of a proposed development an existing garden or amenity area does not meet the guidance, or the area which can receive the sun 494 is less than 0.8 times its former value (i.e. more than 20 % reduction) then the loss of sunlight is likely to be noticeable.

Assessing the Cumulative Impact of Development Proposals

Paragraph 3.10.41 of the Local Plan and paragraph 6.1.59 of the draft City Plan state that “when considering proposed changes to existing lighting levels, the City Corporation will take account of the cumulative effect of development proposals”. The impact of a proposed development on the daylight and sunlight received by neighbouring properties and open spaces is assessed against the light levels in the existing scenario. When assessing the cumulative impact of development proposals, the impact of the proposed development would be assessed alongside any other nearby developments with either full planning permission, a resolution to grant consent, those development proposals that have been submitted but not yet determined and / or potential future applications that due to be submitted (none of which have been completed). In undertaking an assessment of the cumulative impact of such development proposals it can be determined the extent to which the impact of each development proposals can be attributed. It should be noted that previous completed developments are considered to form part of the existing baseline against which the development proposals would be assessed.

SCHEUDULE

Application: 24/00021/FULEIA

Bury House 1 - 4, 31 - 34 Bury Street London EC3A 5AR

Demolition of Bury House and erection of a new building comprising of 4 basement levels, ground plus 43 storeys (178.7m AOD); partial demolition of Holland House and Renown House; restoration of existing and erection of four storey extension resulting in ground plus 8 storeys at Holland House (48.05m AOD) and three storey extension resulting in ground plus 5 storeys at Renown House (36.49m AOD); interconnection of the three buildings; use of the buildings for office (Class E(g)), flexible retail/café (Class E(a)/E(b)), and flexible community/education/ cultural/amenity (Class F2(b)/ F1(a)- (e)/ E(f)/ Sui Generis) uses; and provision of a new covered pedestrian route, cycle parking and facilities, landscaping and highway improvements, servicing and plant and all other ancillary and other associated works.

The application is accompanied by an Environmental Statement. Members of the public may obtain copies of the Environmental Statement at a charge from Trium at olivia.allchorn@triumenv.co.uk.

CONDITIONS

Time Limit for Commencement	
1	**Time Limit** The development hereby permitted shall be begun before the expiration of three years from the date of this permission. REASON: To ensure compliance with the terms of Section 91 of the Town and Country Planning Act 1990.
Environmental Health	
2	**Scheme of Protective Works - demolition** There shall be no demolition on the site until a scheme for protecting nearby residents and commercial occupiers from noise, dust and other environmental effects has been submitted to and approved in writing by the Local Planning Authority. The scheme shall be based on the Department of Markets and Consumer Protection's Code of

	Practice for Deconstruction and Construction Sites and arrangements for liaison and monitoring (including any agreed monitoring contribution) set out therein. A staged scheme of protective works may be submitted in respect of individual stages of the demolition process but no works in any individual stage shall be commenced until the related scheme of protective works has been submitted to and approved in writing by the Local Planning Authority. The demolition shall not be carried out other than in accordance with the approved scheme (including payment of any agreed monitoring contribution). REASON: In the interest of public safety and to protect the amenities of nearby residents and commercial occupiers in accordance with the following policies of the Local Plan: DM15.6, DM15.7, DM21.3. These details are required prior to any work commencing in order that the impact on amenities is minimised from the time that development starts.
3	**Scheme of Protective Works - construction** There shall be no construction on the site until a scheme for protecting nearby residents and commercial occupiers from noise, dust and other environmental effects during construction has been submitted to and approved in writing by the Local Planning Authority. The scheme shall be based on the Department of Markets and Consumer Protection's Code of Practice for Deconstruction and Construction Sites and arrangements for liaison and monitoring (including any agreed monitoring contribution) set out therein. A staged scheme of protective works may be submitted in respect of individual stages of the construction process but no works in any individual stage shall be commenced until the related scheme of protective works has been submitted to and approved in writing by the Local Planning Authority. The development shall not be carried out other than in accordance with the approved scheme (including payment of any agreed monitoring contribution). REASON: In the interest of public safety and to protect the amenities of nearby residents and commercial occupiers in accordance with the following policies of the Local Plan: DM15.6, DM15.7, DM21.3. These details are required prior to any work commencing in order that the impact on amenities is minimised from the time that development starts.
4	**Noise, dust and vibration monitoring equipment** Throughout the duration of the demolition and construction works the site shall be fitted with live noise, dust and vibration monitoring equipment. The numbers and locations of monitoring equipment shall be agreed with the City of London Pollution Control Team prior to installation. The City of London Pollution Control Team shall be provided with live access to all monitoring data throughout the works.

	REASON: To safeguard the amenity of the adjoining premises and the area generally in accordance with the following policies of the Local Plan: DM15.7, DM21.3.
5	**Acoustic Report** Before any works thereby affected are begun, a scheme in the form of an acoustic report compiled by a qualified specialist shall be submitted to and approved in writing by the Local Planning Authority specifying the materials and constructional methods to be used to demonstrate that noise levels from the proposed Rehearsal & event space/Sports facilities area shall not exceed the existing background level (lowest LA90(15min)) at 1m from the nearest noise sensitive receptor. The development pursuant to this permission shall be carried out in accordance with the approved scheme and maintained thereafter. REASON: To safeguard the amenity of the adjoining premises and the area generally in accordance with the following policies of the Local Plan: DM15.7, DM21.3.
6	**Opening Hours Terraces and Balconies** The office terraces and public terrace (Urban Farm) hereby permitted shall not be used or accessed between the hours of 22:00 on one day and 08:00 on the following day and not at any time on Sundays or Bank Holidays, other than in the case of emergency. REASON: To safeguard the amenity of the adjoining premises and the area generally in accordance with the following policies of the Local Plan: DM15.7, DM21.3.
7	**Amplified Music** No amplified or other music shall be played on the roof terraces. REASON: To safeguard the amenity of the adjoining premises and the area generally in accordance with the following policies of the Local Plan: DM15.7, DM21.3.
8	**Plant Noise** (a) The level of noise emitted from any new plant shall be lower than the existing background level by at least 10 dBA. Noise levels shall be determined at one metre from the window of the most affected noise sensitive premises. The background noise level shall be expressed as the lowest LA90 (10 minutes) during which plant is or may be in operation. Noise sensitive premises includes office accommodation. (b) Following installation but before the new plant comes into operation measurements of noise from the new plant must be taken and a report demonstrating that the plant as installed meets the design requirements shall be submitted to and approved in writing by the Local Planning Authority. Noise levels

	should be measured adjacent to the plant where possible and the levels at the receptor extrapolated from the measured data. (c) All constituent parts of the new plant shall be maintained and replaced in whole or in part as often is required to ensure compliance with the noise levels approved by the Local Planning Authority. REASON: To protect the amenities of neighbouring residential/commercial occupiers in accordance with the following policies of the Local Plan: DM15.7, DM21.3.
9	**Sound Insulation office/non-office** The proposed office development sharing a party element with non-office premises shall be designed and constructed to provide resistance to the transmission of sound. The sound insulation shall be sufficient to ensure that NR40 is not exceeded in the proposed office premises due to noise from the neighbouring non-office premises and shall be permanently maintained thereafter. A test shall be carried out after completion but prior to occupation to show the criterion above has been met and the results shall submitted to and approved in writing by the Local Planning Authority. REASON: To protect the amenities of occupiers of the building in accordance with the following policy of the Local Plan: DM15.7.
10	**Fume extract arrangement** Before any works thereby affected are begun, a scheme shall be submitted to and approved in writing by the Local Planning Authority which specifies the fume extract arrangements, materials and construction methods to be used to avoid noise and/or odour penetration to the upper floors from the proposed café use. Flues must terminate at roof level or an agreed high level location which will not give rise to nuisance to other occupiers of the building or adjacent buildings. The details approved must be implemented before the commercial kitchen use takes place. REASON: In order to protect residential/commercial amenities in the building in accordance with the following policies of the Local Plan: DM15.6, DM15.7, DM21.3.
11	**Mounting of plant** Before any mechanical plant is used on the premises it shall be mounted in a way which will minimise transmission of structure borne sound or vibration to any other part of the building in accordance with a scheme to be submitted to and approved in writing by the Local Planning Authority.

	REASON: In order to protect the amenities of commercial occupiers in the building in accordance following policy of the Local Plan: DM15.7.
12	**Contamination** No work except demolition to basement slab level shall take place until an investigation and risk assessment has been undertaken to establish if the site is contaminated and to determine the potential for pollution in accordance with the requirements of DEFRA and the Environment Agency's 'Model Procedures for the Management of Land Contamination, CLR 11'. Where remediation is necessary a detailed remediation scheme to bring the site to a condition suitable for the intended use by removing unacceptable risks to human health, buildings and other property and to the natural and historical environment must be submitted to and approved in writing by the Local Planning Authority. Unless otherwise agreed in writing by the Local Planning Authority the remediation scheme must ensure that the site will not qualify as contaminated land under Part 2A of the Environmental Protection Act 1990 in relation to the intended use of the land after remediation. Following completion of measures identified in the approved remediation scheme a verification report must be submitted to and approved in writing of the Local Planning Authority. REASON: To ensure that risks from land contamination to the future users of the land and neighbouring land are minimised, together with those to controlled waters, property and ecological systems, and to ensure that the development can be carried out safely without unacceptable risks to workers, neighbours and other offsite receptors in accordance with the Local Plan DM15.8. These details are required prior to commencement in order that any changes to satisfy this condition are incorporated into the development before the design is too advanced to make changes.
13	**Contamination** Within five working days of any site contamination being found when carrying out the development hereby approved the contamination must be reported in writing to the Local Planning Authority and an investigation and risk assessment must be undertaken in accordance with the requirements of DEFRA and the Environment Agency's 'Model Procedures for the Management of Land Contamination, CLR 11'. Where remediation is necessary a detailed remediation scheme to bring the site to a condition suitable for the intended use must be submitted to and approved in writing by the Local Planning Authority. Unless otherwise agreed in writing by the Local Planning Authority the remediation scheme must ensure that the site will not qualify

	as contaminated land under Part 2A of the Environmental Protection Act 1990 in relation to the intended use of the land after remediation. Following completion of measures identified in the approved remediation scheme a verification report must be submitted to and approved in writing of the Local Planning Authority. REASON: To ensure that risks from land contamination to the future users of the land and neighbouring land are minimised, together with those to controlled waters, property and ecological systems, and to ensure that the development can be carried out safely without unacceptable risks to workers, neighbours and other offsite receptors in accordance with the Local Plan DM15.8. These details are required prior to commencement in order that any changes to satisfy this condition are incorporated into the development before the design is too advanced to make changes.
14	**Sewer Vents** Before any piling or construction of basements is commenced a scheme for the provision of sewer vents within the building shall be submitted to and approved in writing by the local planning authority. Unless otherwise agreed in writing by the local planning authority the agreed scheme for the provision of sewer vents shall be implemented and brought into operation before the development is occupied and shall be so maintained for the life of the building. REASON: To vent sewerage odour from (or substantially from) the development hereby permitted and mitigate any adverse air pollution or environmental conditions in order to protect the amenity of the area in accordance with the following policy of the Local Plan: DM10.1. These details are required prior to piling or construction work commencing in order that any changes to satisfy this condition are incorporated into the development before the design is too advanced to make changes.
SUDS/Water	
15	**SuDS** Before any construction works hereby permitted are begun the following details shall be submitted to and approved in writing by the Local Planning Authority in conjunction with the Lead Local Flood Authority and all development pursuant to this permission shall be carried out in accordance with the approved details: (a) Fully detailed design and layout drawings for the proposed SuDS components including but not limited to: attenuation systems, rainwater pipework, flow control devices, design for system exceedance, design for ongoing maintenance; surface water flow rates shall be restricted to no greater than 5 l/s. Provision should be made for an attenuation volume capacity capable of achieving this, which should be no less than 123 m3 ;

	(b) Full details of measures to be taken to prevent flooding (of the site or caused by the site) during the course of the construction works. (c) Evidence that Thames Water have been consulted and consider the proposed discharge rate to be satisfactory. REASON: To improve sustainability, reduce flood risk and reduce water runoff rates in accordance with the following policy of the Local Plan: DM18.1, DM18.2 and DM18.3.
16	**SuDS Maintenance** Before the shell and core is complete the following details shall be submitted to and approved in writing by the Local Planning Authority in conjunction with the Lead Local Flood Authority and all development pursuant to this permission shall be carried out in accordance with the approved details: (a) A Lifetime Maintenance Plan for the SuDS system to include: - A full description of how the system would work, it's aims and objectives and the flow control arrangements; - A Maintenance Inspection Checklist/Log; - A Maintenance Schedule of Work itemising the tasks to be undertaken, such as the frequency required and the costs incurred to maintain the system. REASON: To improve sustainability, reduce flood risk and reduce water runoff rates in accordance with the following policy of the Local Plan: DM18.1, DM18.2 and DM18.3.
17	**Thames Water** No development shall be occupied until confirmation has been provided that either: - all water network upgrades required to accommodate the additional demand to serve the development have been completed; or - a development and infrastructure phasing plan has been agreed with Thames Water to allow development to be occupied. Where a development and infrastructure phasing plan is agreed no occupation shall take place other than in accordance with the agreed development and infrastructure phasing plan. Reason: The development may lead to low / no water pressures and network reinforcement works are anticipated to be necessary to ensure that sufficient capacity is made available to accommodate additional demand anticipated from the new development. Any necessary reinforcement works will be necessary in order to avoid low / no water pressure issues.

18	**Thames Water – Piling Method Statement** No piling shall take place until a piling method statement (detailing the depth and type of piling to be undertaken and the methodology by which such piling will be carried out, including measures to prevent and minimise the potential for damage to subsurface sewerage infrastructure, and the programme for the works) has been submitted to and approved in writing by the local planning authority in consultation with Thames Water. Any piling must be undertaken in accordance with the terms of the approved piling method statement. Reason: The proposed works will be in close proximity to underground water utility infrastructure. Piling has the potential to impact on local underground water utility infrastructure.
Archaeology	
19	**Stage 1 Written Scheme of Investigation** No demolition or development shall take place until a stage 1 written scheme of investigation (WSI) has been submitted to and approved by the local planning authority in writing. For land that is included within the WSI, no demolition or development shall take place other than in accordance with the agreed WSI, and the programme and methodology of site evaluation and the nomination of a competent person(s) or organisation to undertake the agreed works. If heritage assets of archaeological interest are identified by stage 1 then for those parts of the site which have archaeological interest a stage 2 WSI shall be submitted to and approved by the local planning authority in writing. For land that is included within the stage 2 WSI, no demolition/development shall take place other than in accordance with the agreed stage 2 WSI which shall include: A. The statement of significance and research objectives, the programme and methodology of site investigation and recording and the nomination of a competent person(s) or organisation to undertake the agreed works B. Where appropriate, details of a programme for delivering related positive public benefits C. The programme for post-investigation assessment and subsequent analysis, publication & dissemination and deposition of resulting material. This part of the condition shall not be discharged until these elements have been fulfilled in accordance with the programme set out in the stage 2 WSI.

	REASON: To ensure the preservation of archaeological remains following archaeological investigation in accordance with the following policy of the Local Plan: DM12.4.
20	**Written Scheme of Investigation Preparation** Written schemes of investigation will need to be prepared and implemented by a suitably professionally accredited archaeological practice in accordance with Historic England's Guidelines for Archaeological Projects in Greater London. This condition is exempt from deemed discharge under schedule 6 of the Town and Country Planning (Development Management Procedure) (England) Order 2015. REASON: To ensure the preservation of archaeological remains following archaeological investigation in accordance with the following policy of the Local Plan: DM12.4.
21	**Public Engagement** No development shall commence until details of an appropriate programme of public engagement including a timetable have been submitted and approved in writing by the local planning authority. The development shall be carried out in accordance with the approved programme. REASON: To ensure the preservation of archaeological remains following archaeological investigation in accordance with the following policy of the Local Plan: DM12.4.
22	**Foundation design** No development shall take place until details of the foundation design and construction method to protect archaeological remains have been submitted to and approved in writing by the Local Planning Authority. The development shall be carried out in accordance with the approved details. REASON: To ensure the preservation of archaeological remains following archaeological investigation in accordance with the following policy of the Local Plan: DM12.4.
Aviation	
23	**City Airport – Building Obstacle Lighting Condition** Details of obstacle lights shall be submitted to and approved in writing by the Local Planning Authority. The obstacle lights must be in accordance with the requirements of regulation CS ADR-DSN Chapter Q ‘Visual Aids for Denoting Obstacles’ and will be

	installed and illuminated prior to the decommissioning of any temporary obstacle lighting associated with the construction of the development. Reason: Aviation obstacle lights are required on the development to avoid endangering the safe movement of aircraft and the operation of London City Airport.
Sustainability	
24	**Circular Economy** (a) Prior to demolition of the development: full details of the pre-demolition audit in accordance with section 4.6 of the GLA's adopted Circular Economy Statement guidance shall be submitted to and approved in writing by the Local Planning Authority, that demonstrates that the development is designed to meet the relevant targets set out in the GLA Circular Economy Statement Guidance. In addition, the audit shall include a strategy to recycle the various concrete elements from deconstruction on site following in depth surveys of the structure and quality. The development shall be carried out in accordance with the approved details and operated & managed in accordance with the approved details throughout the lifecycle of the development. (b) Prior to the commencement of the development (excluding demolition), after RIBA Stage 4, an update to the approved detailed Circular Economy Statement to reaffirm the proposed strategy, to include a site waste management plan, shall be submitted to and approved in writing the Local Planning Authority, that demonstrates that the Statement has been prepared in accordance with the GLA Circular Economy Guidance and that the development is designed to meet the relevant targets set out in the GLA Circular Economy Guidance. The end-of-life strategy of the statement should include the approach to storing detailed building information relating to the structure and materials of the new building. The development shall be carried out in accordance with the approved details and operated & managed in accordance with the approved details throughout the lifecycle of the development. REASON: To ensure that the Local Planning Authority may be satisfied with the detail of the proposed development so that it reduces the demand for redevelopment, encourages re-use and reduces waste in accordance with the following policies in the Development Plans and draft Development Plans: London Plan; D3, SI 7, SI 8 - Local Plan; CS 17, DM 17.2 ; S16, CEW 1.
25	**Post-construction Circular Economy** No later than 3 months after completion of the building, a post-construction Circular Economy Statement and material passport details shall be submitted to and approved in writing by the local planning authority to demonstrate that the targets and actual outcomes achieved are in compliance with or exceed the 501 proposed targets stated

	in the approved Circular Economy Statement for the development. The statement shall also be submitted to the GLA at: circulareconomystatements@london.gov.uk. REASON: To ensure that circular economy principles have been applied and Circular Economy targets and commitments have been achieved to demonstrate compliance with Policy SI 7 of the London Plan.
26	**Whole life-cycle carbon emissions** Prior to the commencement of the development, excluding demolition, after RIBA stage 4, an update to the approved detailed Whole Life-Cycle Carbon assessment shall be submitted to and approved in writing by the Local Planning Authority, demonstrating that the whole life-cycle carbon emissions of the development are on track to achieve at least the GLA's Standard Benchmark (as current at the time of submission) set out in the GLA's Whole Life-Cycle Assessment Guidance. The assessment should include details of measures to reduce carbon emissions throughout the whole life-cycle of the development and provide calculations in line with the Mayor of London's guidance on whole life-cycle carbon assessments, and the development shall be carried out in accordance with the approved details and operated and managed in accordance with the approved assessment for the life-cycle of the development. REASON: To ensure that the Local Planning Authority may be satisfied with the detail of the proposed development so that it maximises the reduction of carbon emissions of the development throughout the whole life-cycle of the development in accordance with the following policies in the Development Plan and draft Development Plans: London Plan: D3, SI 2, SI 7 - Local Plan: CS 17, DM 15.2.
27	**Post-construction whole life-cycle carbon emissions** Once the as-built design has been completed (upon commencement of RIBA Stage 6 the post-construction Whole Life-Cycle Carbon (WLC) Assessment (to be completed in accordance with and in line with the criteria set out in in the GLA's WLC Assessment Guidance) shall be submitted to the Local Planning Authority. The post-construction assessment should provide an update of the information submitted at planning submission stage (RIBA Stage 2/3), including the whole life-cycle carbon emission figures for all life-cycle modules based on the actual materials, products and systems used. The assessment should be submitted along with any supporting evidence as per the guidance and should be received three months post as-built design completion, unless otherwise agreed. The assessment shall also be submitted to the GLA at: ZeroCarbonPlanning@london.gov.uk

	REASON: To ensure whole life-cycle carbon emissions are calculated and reduced and to demonstrate compliance with Policy SI 2 of the London Plan.
28	**Façade System** Prior to the commencement of the development, excluding demolition, details of the façade system confirming the detailed design in relation to reducing the embodied carbon impact and waste across all life-cycle stages that would result from the proposed facade type, materials, construction method and replacement cycles, is required to be submitted to and approved in writing by the Local Planning Authority. The development shall be carried out in accordance with the approved drawings. REASON: To demonstrate that embodied carbon emissions have been minimised and that the development is sustainable in accordance with the e Local Plan policies: CS15, DM15.1, DM15.2 and Draft City Plan 2040 policies DE1 and CE1.
29	**District Heating Network connection** The development shall be designed to enable connection into a district heating network if this becomes available during the lifetime of the development. This is to include a strategy with relevant plan drawings for: equipment, allocation of plant space and a protected route for connection in and out of the site. REASON: To minimise carbon emissions by enabling the building to be connected to a district heating and cooling network if one becomes available during the life of the building in accordance with the following policies of the Local Plan: DM15.1, DM15.2, DM15.3, DM15.3, DM15.4.
33	**Climate change resilience measures – completion details** Within 6 months of completion details of climate change resilience measures must be submitted to the Local Planning Authority demonstrating the measures that have been incorporated to ensure that the development is resilient to the predicted weather patterns during the lifetime of the building. This should include details of the climate risks that the site faces (flood, heat stress, water stress, natural capital, pests and diseases) and the climate resilience solutions that have been implemented. REASON: To comply with Local Plan Policy DM 15.5 Climate change resilience and adaptation.
31	**BREEAM** A post construction BREEAM assessment for each use demonstrating that a target rating of at least 'Excellent' has been achieved (or such other target rating as the local

	planning authority may agree provided that it is satisfied all reasonable endeavours have been used to achieve an 'Excellent' rating) shall be submitted as soon as practicable after practical completion. REASON: To demonstrate that carbon emissions have been minimised and that the development is sustainable in accordance with the following policy of the Local Plan: CS15, DM15.1, DM15.2.
32	**Updated Biodiversity Net Gain** Prior to the commencement of development excluding demolition, an updated Biodiversity Net Gain Assessment should be submitted to and approved to the Local Planning Authority to reflect any changes to landscaping proposals at detailed stage. REASON: To comply with Local Plan Policy DM 19.2 Biodiversity and urban greening. These details are required prior to construction work commencing in order to establish the updated figure from the time that construction start.
33	**Ecological Management Plan** Prior the commencement of the development, excluding demolition, an Ecological Management Plan shall be submitted and approved by the Local Planning Authority to provide details on the proposed ecological enhancement actions in relation to habitat creations and management. This shall include the following: • details of ecological landscaping, along with associated management and monitoring • detailed locations/specifications of boxes for swift/house sparrow/bats shall be provided • details of habitat created for solitary bees • details of habitat created for stag beetles (or robust justification for its exclusion) shall be provided • Build up, specifies mix and layout of green roofs (wildflower turf and sedum roof types should be avoided where possible). The measures as set out in the plan shall be carried out and so maintained. REASON: To comply with Local Plan Policy DM 19.2 Biodiversity and urban greening and Draft City Plan 2040 policy OS3 Biodiversity. This is required to be prior to commencement of development in order to ensure that the ecological sites are not disturbed prior to development
34	**Post Construction UGF and BNG** Within 6 months of completion details of the measures to meet the approved Urban Greening Factor and the Biodiversity Net Gain scores, to include plant and habitat

	species and scaled drawings identifying the measures and maintenance plans, shall be submitted to the Local Planning Authority. Landscaping and biodiversity measures shall be maintained to ensure the approved standard is preserved for the lifetime of the development. REASON: To comply with Local Plan Policy DM 19.2 Biodiversity and urban greening.
Design/Public Realm including Lighting	
35	**Faience façade details** Before the works thereby affected are begun, sample panels of agreed sections of the faience facades shall be built, agreed on-site and approved in writing by the Local Planning Authority and all development pursuant to this permission shall be carried out in accordance with the approved details. REASON: To ensure that the Local Planning Authority may be satisfied with the detail of the proposed development and to ensure a satisfactory external appearance in accordance with the following policies of the Local Plan: DM3.2, DM10.1, DM10.5, DM12.2.
36	**Design and materials – Tower and Renown House** Before any works thereby affected are begun the following details shall be submitted to and approved in writing by the Local Planning Authority and all development pursuant to this permission shall be carried out in accordance with the approved details: (a) particulars and samples of the materials to be used on all external faces of the building including external ground and upper level surfaces; (b) details of the proposed new facade(s) including typical details of the fenestration and entrances; (c) details of a typical bay of the upper floors of the development (including the tower bays and the roof extensions to Renown House); (d) details of the ground floor triple order and cornice; (e) details of the internal elevations of the Heneage Arcade including the entrances, shopfronts, soffits, walls, lighting, paving, water fountain and any infrastructure required to deliver programmed and varied uses; (f) details of the entrances at Ground, Mezzanine and Level 1 including details of external and internal level ground to first floor including: all elevations: entrances: fenestration; internal circulation and fit out; planters; fixed seating; fixed lighting; signage; and any infrastructure required to deliver the Sui Generis use; (g) details of the proposed programme of public art throughout the external surfaces and faces of the building;

	(h) details of the urban greening proposed throughout the external surfaces and faces of the building; (i) details of the proposed external lighting scheme proposed throughout the external surfaces and faces of the development; (j) details of James Court, including elevations, climbing wall, art wall planters, seating, lighting, wind mitigation measures, drainage, irrigation and any infrastructure required to deliver programming and varied uses; (l) details of junctions with adjoining buildings; (m) details of the integration of window cleaning equipment, building maintenance equipment and the garaging thereof, plant, flues, fire escapes and other excrescences at roof level (n) details of the integration of cleaning equipment, cradles and the garaging thereof; (o) details of plant and ductwork to serve the Class E use(s); - (p) details of ventilation and air-conditioning for the Class E use(s); (q) details of all ground level surfaces including materials to be used; (r) details of external surfaces within the site boundary including hard and soft landscaping (s) details of the works to the entrances and facades of Renown House including but not limited to details of the proposed fenestration, the creation of new, level entrances and any requisite works or cleaning and repairs, and particulars and samples thereof; REASON: To ensure that the Local Planning Authority may be satisfied with the detail of the proposed development and to ensure a satisfactory external appearance in accordance with the following policies of the Local Plan: DM3.2, DM10.1, DM10.5, DM12.2.
37	**Holland House and Bevis Marks Synagogue - Demolition and Construction Methodology and Structural Assessment** Prior to the commencement of development a Demolition and Construction Methodology and Structural Assessment (prepared by a Heritage Accredited Structural Engineer), assessing implications of the demolition and construction phase, as well as any medium and long-term structural and non-structural implications for the listed buildings Holland House (Grade II*) and Bevis Marks Synagogue (Grade I), including a detailed methodology and specification of works which seek to mitigate any damage, shall be submitted and approved in writing by the Local Planning Authority and those relevant works carried out in accordance with the approved details. REASON: In order to safeguard the structure and the special architectural or historic interest of the listed buildings at Holland House and Bevis Marks Synagogue in accordance with the following policies of the Local Plan: CS12, DM12.1.

38	**Holland House – site meeting** Before work begins a site meeting shall be held between the local planning authority and the persons responsible for undertaking the works to ensure that the Conditions attached to the Listed Building Consent are understood and can be complied with in full. Notification of the date and time of a meeting shall be made in writing to the Local Planning Authority. REASON: In order to safeguard the structure and the special architectural or historic interest of the listed buildings at Holland House in accordance with the following policies of the Local Plan: CS12 and DM12.1.
39	**Holland House - qualified professional specialising in conservation work** Before work begins it shall be agreed in writing with the Local Planning Authority the appropriately qualified professional specialising in conservation work who will supervise the hereby approved works of alteration or demolition. Any proposed changes to the agreed supervision arrangements shall be subject to the prior written agreement of the Local Planning Authority. REASON: In order to safeguard the structure and the special architectural or historic interest of the listed buildings at Holland House in accordance with the following policies of the Local Plan: CS12 and DM12.1
40	**Holland House - Details** Before work begins the following shall be approved in writing by the Local Planning Authority. The work shall be carried out in full in accordance with approved details including: 1. Façade repairs and alterations a. Particulars and samples of materials to be used on all external faces of the building including external ground and upper level surfaces b. A method statement for cleaning and repair c. A schedule of works and specification, including details of the quantity and repair of the faience tiles salvaged from the building d. Details of the reopening of the Bury Street entrance and other alterations 2. Repair works to the steel structure a. A condition survey of the existing historic structure b. A method statement for repair works c. A schedule of works and specification 3. Window Replacements a. Particulars and samples of the proposed windows b. A method statement for construction and installation c. A schedule of works and specification 4. Tenants entrance (west elevation) a. Particulars and samples of all materials and features b. A method statement for construction and installation 5. East Elevation (external wall)

	a. A condition survey of the historic fabric behind modern Portland stone b. Particulars and samples of proposed materials c. A method statement for construction and installation d. A schedule of works and specification 6. East Elevation (party wall with Bury House) a. Details of the interconnections between the listed building and the proposed tower floor levels, including alignment and connection of floor slabs and the new lift core 7. Internal works a. Details of works to the Heritage Lobbies including but not limited to any requisite repairs and particulars and samples of the materials thereof; b. Details of the works to the Atrium including but not limited to the junctions of the new floor slabs with the existing elevations, requisite repairs and particulars and samples of the materials thereof, and its presentation c. Details of works to the first floor Heritage Interiors, including but not limited to any repairs, minor alterations and works of re-presentation 8. South Elevation (party wall with Renown House) a. Details of the proposed extension of the floor slabs of the listed building behind, and their junctions with, the retained elevations of Renown House b. Details of the treatment of the retained sections of party wall between Renown House and Holland House 9. Rooftop additions a. Particulars and samples of materials to be used on all external faces of the building b. A method statement for demolition of existing upper level floors and construction of new structure and facades c. A schedule of works and specification, including details of the quantity and repair of the faience tiles salvaged from the building d. External Lighting and landscaping at roof level 10. Details of junctions with adjoining buildings; 11. Details of the integration of window cleaning equipment, building maintenance equipment and the garaging thereof, plant, flues, fire escapes and other excrescences at roof level; 12. Details of ventilation and air-conditioning; 13. Details of external surfaces within the site boundary including hard and soft landscaping; REASON: In order to safeguard the structure and the special architectural or historic interest of the listed buildings at Holland House in accordance with the following policies of the Local Plan: CS12 and DM12.1.
41	**Holland House – tilework replacement or repairs** Prior to practical completion, details of any other repairs and replacement tilework to the elevations resulting from further investigations shall be submitted to and

	approved in writing by the Local Planning Authority and all works pursuant to this consent shall be carried out in accordance with the approved details. REASON: To ensure the protection of the special architectural or historic interest of the building in accordance with the following policy of the Local Plan: DM12.3.
42	**Holland House – precautions to secure features during building work** Before work begins, details shall be approved in writing by the Local Planning Authority to ensure that precautions are taken to secure and protect the interior and exterior features during the building work. The agreed measures shall be carried out in full. No such features shall be disturbed or removed temporarily or permanently except as indicated on the approved drawings or without the prior approval in writing of the Local Planning Authority. REASON: To ensure the protection of the special architectural or historic interest of the building in accordance with the following policy of the Local Plan: DM12.3.
43	**Holland House - new works and finishes to match the existing** All new works and finishes and works of making good to the retained fabric shall match the existing adjacent work with regard to the methods used and to materials, colour, texture and profile unless shown otherwise on the drawings or other documentation hereby approved or required by any condition(s) attached to this consent. REASON: To ensure the protection of the special architectural or historic interest of the building in accordance with the following policy of the Local Plan: DM12.3.
44	**Suicide Prevention** Before any works thereby affected are begun, details of all balustrades and other measures deemed necessary for the external terrace areas and other raised areas along with the associated risk assessment shall be submitted to and approved in writing by the Local Planning Authority and retained for the life of the building. REASON: To ensure that the Local Planning Authority may be satisfied with the detail of the proposed development and to ensure a satisfactory external appearance in accordance with the following policies of the Local Plan:, CS3, DM3.2 DM10.1 and DM12.2.
45	**Security** Before any works thereby affected are begun, details of security measures to be utilised within the development, having been developed in consultation with City Police, including but not limited to natural surveillance, CCTV, lighting, secure lines, entrances and secure access control, compartmentalisation of different areas of the building, anti-scaling and safety measures, shall be submitted to and approved in

	writing by the Local Planning Authority. The approved measures shall be in place prior to occupation and remain in situ for the lifetime of the development. REASON: To ensure safety and security in accordance with Local Plan policies CS3 and DM3.2.
46	**Public art strategy** Before any works thereby affected are begun the following details shall be submitted to and approved in writing by the Local Planning Authority and all development pursuant to this permission shall be carried out in accordance with the approved details: Details of a new public art strategy within the public realm or on buildings where appropriate and which is of artistic merit, is deliverable and can be maintained shall be submitted to and approved in writing by the Local Planning Authority. The public art installations shall be carried out as approved and so maintained for the life time of the development. REASON: In the interest of visual amenity and to maintain the historic and cultural interest of the site in accordance with the following policy of the Local Plan: DM11.2
47	**Urban Greening** Before any works hereby affected are begun, details of a holistic urban greening strategy including hard landscaping, materials and an appropriate maintenance regime for a. planters, trees and other amenity planting, biodiverse habitats and of a rainwater harvesting system to support high quality urban greening; b. the incorporation of green roofs into roof surfaces; and c. the landscaping of the public realm Shall be submitted to and approved in writing by the Local Planning Authority and all development pursuant to this permission shall be carried out in accordance with the approved details and maintained as approved for the life of the development unless otherwise approved by the local planning authority. REASON: To assist the environmental sustainability of the development and provide a habitat that will encourage biodiversity in accordance with the following policies of the Local Plan: DM18.2, DM19.2.
48	**Street lighting**

	Before any works thereby affected are begun, details of the provision to be made in the building's design to enable the discreet installation of street lighting on the development, including details of the location of light fittings, cable runs and other necessary apparatus, shall be submitted to and approved in writing by the Local Planning Authority, and the development shall be carried out in accordance with the approved details. REASON: To ensure provision for street lighting is discreetly integrated into the design of the building in accordance with the following policy of the City of London Local Plan: DMI0.1.
49	**Lighting including aviation** Prior to the commencement of the relevant works, a final Lighting Strategy and a Technical Lighting Design shall be submitted to and approved in writing by the Local Planning Authority, which should include details of: - lighting layout/s; - details of all functional and decorative luminaires (including associated accessories, bracketry and related infrastructure); - a lighting control methodology; - proposed operational timings and associated design and management measures to reduce the impact on the local environment and residential amenity including light pollution, light spill, and potential harm to local ecologies; - all external, semi-external and public-facing parts of the building and of any internal lighting in so far that it creates visual or actual physical impact on the lit context to show how the facade and/or the lighting has been designed to help reduce glare, excessive visual brightness, and light trespass; - details for impact on the public realm, including typical illuminance levels, uniformity, colour appearance and colour rendering. - details of aviation lights including locations All works and management measures pursuant to this consent shall be carried out and maintained in accordance with the approved details and lighting strategy. REASON: To ensure that the Local Planning Authority may be satisfied with the detail of the proposed development and the measures for environmental impacts, and to ensure a satisfactory external appearance in accordance with the following policies of the Local Plan: DM10.1, 15.7, CS15.
50	**Landscaping** All landscaping, including the ground floor and external terraces, shall be treated in accordance with a landscaping scheme, including details of:

	a. Irrigation; b. Provision for harvesting rainwater run-off from road to supplement irrigation; c. Spot heights for ground levels around planting pit; d. Soil; e. Planting pit size and construction; f. Tree guards; and g. Species and selection of trees including details of its age, growing habit, girth of trunk, how many times transplanted and root development. To be submitted to and approved in writing by the Local Planning Authority before any landscaping works are commenced. All hard and soft landscaping works shall be carried out in accordance with the approved details not later than the end of the first planting season following completion of the development and prior to occupation. Trees and shrubs which die or are removed, uprooted or destroyed or become in the opinion of the Local Planning Authority seriously damaged or defective within the lifetime of the development shall be replaced with trees and shrubs of the same size and species to those originally approved, or such alternatives as may be agreed in writing by the Local Planning Authority. REASON: In the interests of visual amenity in accordance with the following policies of the Local Plan: DM10.1, DM19.2.
51	**Greening/ landscaping/ public realm** Before any works thereby affected are begun the following details, relating to all unbuilt surfaces, including terraces/balconies and public realm, shall be submitted to and approved in writing by the Local Planning Authority and all development pursuant to this permission shall be carried out in accordance with the approved details: a) Details of all soft landscaping, including the position, size and types of all planting and details of their respective planting beds; b) Details of all proposed trees including details of their age, growing habit, girth of trunk, root development, clear stem heights; and details of tree pits/trenches and growing medium; c) Details of all SUDS infrastructure, including details on the provision for harvesting rainwater run-off from surfaces to supplement irrigation; d) Details of the method of irrigation and nutrient delivery systems; e) Details of all urban furniture, including planters; seating; refuse bins; biodiversity habitat structures; f) Details of all hard landscaping materials, including paving details and samples, in accordance with the City Public Realm Technical Manual; g) Details of landscape lighting; h) A management and maintenance Plan (including ecological management) for all proposed landscaping; and i) Details of permanent wayfinding features and other installations.

	All unbuilt and built surfaces, including the ground floor and roof levels landscaping, shall be treated in accordance with a landscaping scheme, including details of: i) Irrigation; ii) Provision for harvesting rainwater run-off from road to supplement irrigation; iii) Spot heights for ground levels around planting pit; iv) Soil; v) Planting pit size and construction; vi) Tree guards; and vii) Species and selection of trees including details of its age, growing habit, girth of trunk, how many times transplanted and root development viii) the green roofs, hedges, trees and other amenity planting, biodiverse habitats and of a rainwater harvesting system to support high quality urban greening; ix) the incorporation of blue roofs into roof surfaces; x) the landscaping of the public realm; All hard and soft landscaping works shall be carried out in accordance with the approved details not later than the end of the first planting season following completion of the development and prior to occupation. Trees and shrubs which die or are removed, uprooted or destroyed or become in the opinion of the Local Planning Authority seriously damaged or defective within the lifetime of the development shall be replaced with trees and shrubs of the same size and species to those originally approved, or such alternatives as may be agreed in writing by the Local Planning Authority. REASON: To ensure that the Local Planning Authority may be satisfied with the detail of the proposed development and to ensure a satisfactory external appearance in accordance with the following policies of the Local Plan: CS3, DM3.2, CS10, DM10.1, DM10.4, DM12.2 and DM19.2 and emerging policies DE2, DE6 and HE1 of the Emerging City Plan 2040.
52	**Green wall(s)** Details of the position and size of the green walls(s), the type of planting and the contribution of the green wall(s) to biodiversity shall be submitted to and approved in writing by the local planning authority before any works thereby affected are begun. The development shall be carried out in accordance with those approved details and maintained as approved for the life of the development unless otherwise approved by the local planning authority. REASON: To assist the environmental sustainability of the development and provide a habitat that will encourage biodiversity in accordance with the following policies of the Local Plan: DM18.2, DM19.2.
53	**Green wall(s) maintenance** Details of the construction, planting irrigation and maintenance regime for the proposed green wall(s)/roof(s) shall be submitted to and approved in writing by the

	local planning authority before any works to install such green wall(s)/roof(s) are begun. The development shall be carried out in accordance with those approved details and maintained as approved for the life of the development unless otherwise approved by the local planning authority. REASON: To assist the environmental sustainability of the development and provide a habitat that will encourage biodiversity in accordance with the following policies of the Local Plan: DM18.2, DM19.2
Accessibility	
54	**Inclusive Signage and wayfinding** Prior to commencement of the development excluding demolition, an inclusive signage and wayfinding strategy, highlighting and signposting destinations, accessible routes and facilities, cycle parking, flexible uses, including cultural, community, educational, sports, multi-faith and any other relevant uses shall be submitted to and approved in writing by the Local Planning Authority. REASON: To support inclusion, public access, legibility and wayfinding in accordance with the following policies of the Local Plan: CS10, DM10.1, DM10.4, DM10.8, CS11, DM16.2 and DM16.4.
55	**Public toilets** Before any construction works hereby permitted are begun details, including drawings at a scale of no less than 1:20, shall be submitted to and approved in writing by the local planning authority of: a. Changing Place, wheelchair accessible and ambulant accessible toilet and baby changing facilities at ground floor level within the building hereby approved; and b. associated signage The approved facilities shall be made available to the general public at all times of the operation of the building and be free of charge for the lifetime of the development. The signage informing the general public of the public toilet facilities onsite, shall be installed concurrently with the first operation of the building and be retained as such for the lifetime of the development. REASON: To ensure the provision of public toilet facilities to meet the needs of the public in accordance with Policy DM22.2 of the Local Plan.
56	**Inclusion and accessibility**

	Before any works thereby affected are begun the following details shall be submitted to and approved in writing by the Local Planning Authority and all development pursuant to this permission shall be carried out in accordance with the approved details: a) All surface materials including details of slip resistance, contrast, colour, texture and acoustic properties, as appropriate b) Details of wider aisle gates at all controlled points of entry c) Details of planting and maintenance for areas of landscape including how unwelcome touch and scent can be avoided d) Glare analysis for cladding materials e) An inclusive entrances strategy with details of controlled entry systems, entrance doors, thresholds, mat materials, contrast and manifestations with drawings at a scale of no less than 1:20 (as relevant) f) Details and specification for all lifting devices including doors, widths, control panels, floor surfaces, means of operation and internal car dimensions g) Review of potential provision of Mobility Scooter charging with associated fire-protection measures h) Provision of quiet rooms for rest and recovery where appropriate i) Details of all shopfronts including plans and elevations at a scale of no less than 1:20 to ensure that doors are of sufficient width and have suitable door furniture and surface contrast j) Details of inclusive gym facilities REASON: To ensure the development proposals provides a fully accessible and inclusive facility in accordance with Policy DM10.8 and Policy D5 of the London Plan
57	**Inclusive Access Management Plan** Before any works thereby affected are begun the following Inclusive Access Management Plan shall be submitted to and approved in writing by the Local Planning Authority and all development pursuant to this permission shall be carried out in accordance with the approved which shall provide specific details on how the development will be constructed, operated and managed to ensure that the highest possible standard of accessibility is provided. This management plan shall include accessibility details for: 1) Website information including photos and an easy read version with information on: a) Travel distances from key points of arrival and rest points b) Location of dropped kerbs c) A protocol for users of the accessible parking bay for disabled users of the development. This should include, but not be limited to: i) Dimensions of the bay and protected zones

	ii) Protocol for reserving the bay iii) Protocol for guided entry into the space iv) Protocol for requesting departure from the space v) Any time limits on occupancy of the space d) Facilities available on site including dimensions and photos for (as appropriate): i) Step-free entrance points and entrances and lift access ii) controlled entry points (showing wider gates) iii) accessible toilets including access to keys for operation including at ground floor and iv) Changing Places toilets provision including but not exclusively at ground floor and for the other publicly accessible areas v) Baby changing facilities including at ground floor and for the other publicly accessible areas vi) 'universal', female and male toilet provision at ground floor and for the other publicly accessible areas vii) facilities for assistance animals viii)equipment loan ix) assistive listening system and other assistive technology x) rest and recovery facilities xi) room for reflection/quiet room xii) community, cultural, sports, educational, multi-faith space xiii)plant species 2) Inclusive community, cultural, sports, educational, multi-faith provision with reference to relevant guidance including opportunities for inclusive procurement, interpretation, co-curation, mentoring and volunteering. 3) Inclusive Entrances Strategy 4) Cleaning and maintenance schedule for lifts to ensure that the lifts are kept clean, in good working order, and available at all times, with lift users kept separate from the refuse store 5) inclusive emergency escape plan including relevant training and frequency as well as the protocol for the preparation of Personal Emergency Exit Plans (PEEPs) The agreed scheme shall be implemented before the development hereby permitted is brought into use and retained as such for the lifetime of the development. REASON: To ensure the development proposals provides a fully accessible and inclusive facility in accordance with Policy DM10.8 and Policy D5 of the London Plan
Highways and Transportation	
58	**Refuse/ Recycling Storage and collection** Refuse and recycling, storage and collection facilities shall:

	(a) be provided within the curtilage of the site to serve each part of the development in accordance with details, which must be submitted to and approved in writing by the Local Planning Authority prior to work commencing; and (b) thereafter be maintained as approved throughout the life of the building. REASON: To ensure the satisfactory servicing of the building in accordance with the following policy of the Local Plan: DM 17.1, DM 16.5. These details are required prior to commencement in order that any changes to satisfy this condition are incorporated into the development before the design is too advanced to make changes.
59	**Restricting numbers of deliveries/servicing** There shall be no more than 33 delivery and servicing motorized vehicle daily trips in total over any 24-hour period (accounting for a consolidation rate of at least 50%). REASON: To ensure that the development does not have an adverse impact on the free flow of traffic in surrounding streets in accordance with the following policy of the Local Plan: CS16, DM16.1.
60	**Restricting Hours of deliveries and servicing** No deliveries and servicing trips to the premises shall be carried out between the hours of 7:00 to 9:00, 12:00 to 14:00, 16:00-18:00 and the hours of 23:00 on one day and 07:00 on the following day, from Monday to Sunday, including Bank Holidays. Servicing includes the loading and unloading of goods from vehicles and putting rubbish outside the building. REASON: To avoid obstruction of the surrounding streets and to safeguard the amenity of the occupiers of adjacent premises, in accordance with the following policies of the Local Plan: CS16, DM15.7, DM16.2, DM 16.1, DM21.3.
61	**Site Condition Survey** Prior to the commencement of works including demolition, a site condition survey of the adjacent highways and other land at the perimeter of the site shall be carried out and detailed report of the findings must be submitted to and approved in writing by the local planning authority. Proposed threshold levels at finished floor levels (highways boundary) and levels at basement in relation to existing Ordnance Datum levels of the adjoining streets and open spaces, must be submitted and agreed with the Highways Authority. The development shall be carried out in accordance with the approved levels unless otherwise agreed in writing by the local planning authority.

	REASON: To ensure continuity between the level of existing streets and the finished floor levels in the proposed building and to ensure a satisfactory treatment at ground level in accordance with the following policies of the Local Plan: DM10.8, DM16.2, 16.1 These details are required prior to commencement in order that a record is made of the conditions prior to changes caused by the development and that any changes to satisfy this condition are incorporated into the development before the design is too advanced to make changes.
62	**Demolition and Construction Management Plan** Details of facilities and methods to accommodate and manage all freight vehicle movements to and from the site during the demolition and construction of the building(s) hereby approved shall be submitted to and approved by the Local Planning Authority in writing prior to the commencement of work. The details shall be completed in accordance with the latest guidance, and shall specifically address the safety of vulnerable road users through compliance with the Construction Logistics and Community Safety (CLOCS) Standard. The Plan must demonstrate how Work Related Road Risk is to be managed. No demolition or construction shall be carried out other than in accordance with the approved details and methods. The Demolition and Construction Management Plan to include: • Detailed information will be required relating to how potential conflicts / complaints with adjacent stakeholders would be recorded, reported, and dealt with. • Details specific to the demolition phase should be captured within the overarching CLP document; this will ensure that a Principal Contractor is appointed early and prior to any demolition commencing. • Construction vehicle routes to and from the site to be approved with CoL Highways • Various highways licences would need to be obtained from the CoL prior to works commencing on site (e.g. temporary parking bay suspensions, scaffolding licence, hoarding licence, crane licence etc). • construction vehicle movements to be scheduled and must avoid peak hours. Records to be kept of timings of such deliveries and presented to the LPA upon request. • encouraging the use of cargo bike deliveries throughout the construction process. • Details on how pedestrian and cyclist safety will be maintained, including any proposed alternative routes (if necessary), and any Banksman arrangements. • A commitment to the use of FORS Silver vehicles (or above) throughout construction will be required. • The site should be registered with the Considerate Constructors Scheme. We will also expect the proposed works to be undertaken in

	accordance with the best practice guidelines in TfL's Standard for Construction Logistics and Cyclist Safety (CLOCS) scheme: http://www.clocs.org.uk/standard-for-clocs/. REASON: To ensure that demolition and construction works do not have an adverse impact on public safety and the transport network in accordance with London Plan Policy 6.14 and the following policies of the Local Plan: DM15.6, DM16.1. These details are required prior to demolition and construction work commencing in order that the impact on the transport network is minimised from the time that demolition and construction starts.
63	**Blue Badge Car Parking** One car parking space suitable for use by people with disabilities shall be provided on the premises in accordance with details shown in the plan No's 23747508-STR-HGN-ZZ-SK-D-PL401, 23747508-STR-HGN-ZZ-SK-D-PL402 and 23747508-STR-HGN-ZZ-SK-D-PL403 and shall be maintained throughout the life of the development and be readily available for use by disabled occupiers and visitors without charge to the individual end users of the parking. REASON: To ensure provision of suitable parking for people with disabilities in accordance with the following policy of the Local Plan: DM16.5.
64	**Electric Vehicle** Minimum of one electric charging point must be provided within the delivery and servicing area and retained for the life of the building. REASON: To further improve the sustainability and efficiency of travel in, to, from and through the City in accordance with the following policy of the Local Plan: CS16.
65	**Cycle Parking Facilities** Permanently installed pedal cycle racks shall be provided and maintained on the site throughout the life of the buildings sufficient to accommodate a minimum of 582 long stay spaces and 85 short stay spaces. All doors on the access to the parking area shall be automated, push button or pressure pad operated. The cycle parking provided on the site must remain ancillary to the use of the buildings and must be available at all times throughout the life of the buildings for the sole use of the occupiers thereof and their visitors without charge to the individual end users of the parking. REASON: To ensure provision is made for cycle parking and that the Local Planning Authority may be satisfied that the scheme provides a sustainable transport strategy

	and does not have an adverse impact on the transport network in accordance with the following policy of the Local Plan: DM16.1, DM 16.3.
66	**Accessible cycle parking** A minimum of 5% of the long stay cycle spaces shall be accessible for larger cycles, including adapted cycles for disabled people. REASON: To ensure that satisfactory provision is made for people with disabilities in accordance with Local Plan policy DMI0.8, London Plan policy TS cycling, emerging City Plan policy 6.3.24
67	**Changing Facilities and Showers** A minimum of 59 showers and 667 lockers shall be provided adjacent to the bicycle parking areas and changing facilities and maintained throughout the life of the building for the use of occupiers of the building in accordance with the approved plans. REASON: To make travel by bicycle more convenient in order to encourage greater use of bicycles by commuters in accordance with the following policy of the Local Plan: DM16.3
68	**HVM** The development shall incorporate such measures as are necessary within the site to resist structural damage arising from an attack with a road vehicle or road vehicle borne explosive device, details of which must be submitted to and approved in writing by the Local Planning Authority before any construction works hereby permitted are begun. REASON: To ensure that the premises are protected from road vehicle borne damage within the site in accordance with the following policy of the Local Plan: DM3.2. These details are required prior to construction work commencing in order that any changes to satisfy this condition are incorporated into the development before the design is too advanced to make changes.
69	**Unobstructed headroom on access ways** A clear unobstructed minimum headroom of 4.75m must be provided and maintained over the remaining areas and access ways. REASON: To ensure that satisfactory servicing facilities are provided and maintained in accordance with the following policy of the Local Plan: DM16.5.
70	**Ancillary loading and unloading areas**

	All loading and unloading areas at basement levels must remain ancillary to the use of the building and shall be available at all times for that purpose for the occupiers thereof and visitors thereto. REASON: To ensure that satisfactory servicing is maintained in accordance with the following policy of the Local Plan: DM16.5.
Air Quality	
71	**Generators** There shall be no installation of diesel generators to the building hereby approved. Reason**:** In accordance with the following policy of the Local Plan: DM15.6 and to maintain local air quality and ensure that exhaust does not contribute to local air pollution, particularly nitrogen dioxide and particulates PM10, in accordance with the City of London Air Quality Strategy 2019 and the London Plan Policies SI1 and SD4 D.
72	**Filtration** Prior to occupation evidence that an appropriate NOx and Particulate filtration system has been installed as part of the ventilation strategy, and a detailed mechanism to secure maintenance of this system should be submitted and approved in writing. Reason: To ensure that future occupants of the proposed development are not subject to elevated levels of air pollution that have been predicted in the local ambient atmosphere.
73	**NRMM** Prior to the commencement of the development, the developer/ construction contractor shall sign up to the Non-Road Mobile Machinery Register. The development shall be carried out in accordance with the Mayor of London Control of Dust and Emissions during Construction and Demolition SPG July 2014 (Or any subsequent iterations) to ensure appropriate plant is used and that the emissions standards detailed in the SPG are met. An inventory of all NRMM used on site shall be maintained and provided to the Local Planning Authority upon request to demonstrate compliance with the regulations. Reason**:** To reduce the emissions of construction and demolition in accordance with the Mayor of London Control of Dust and Emissions during Construction and Demolition SPG July 2014. Compliance is required to be prior to commencement due to the potential impact at the beginning of the construction.

Fire	
74	**Fire Safety** The development shall be carried out in accordance with the approved details within the Fire Strategy: Fire Strategy, prepared by Semper dated January 2024. REASON: To ensure that the development incorporates the necessary fire safety measures
Use Classes	
75	**Offices** The areas shown on the approved drawings as Offices (Use class E(g)(i)) and as set out in Condition 78 of this decision notice, shall be used for those purposes only and for no other purpose (including any other purpose in Class E) of the Schedule to the Town and Country Planning (Use Classes) Order 1987 (as amended by the Town and Country Planning (Use Classes)(Amendment)(England) Regulations 2020). REASON: To ensure that the development does not give rise to environmental impacts that are in excess of or different to those assessed in the Environmental Statement and that public benefits within the development are secured for the life of the development.
76	**Flexible space** The areas shown on the approved drawings as flexible community/education/ cultural/sports/amenity and as set out in Condition 78 of this decision notice, shall be used for those purposes within Use Classes Class F2(b), F1(a)- (f)/ E (d), E(f) only and for no other purposes of the Schedule to the Town and Country Planning (Use Classes) Order 1987 (as amended by the Town and Country Planning (Use Classes)(Amendment)(England) Regulations 2020). REASON: To ensure that the development does not give rise to environmental impacts that are in excess of or different to those assessed in the Environmental Statement and that public benefits within the development are secured for the life of the development.
77	**Terraces** The areas shown on the approved drawings above ground floor as offices including internal amenity space and external terraces at all floors other than floor nine terrace at Holland House (Urban Farm), shall be used for Class E office use only and for no other purpose and for no other purpose (including any other purpose in Class E) of the Schedule to the Town and Country Planning (Use Classes) Order 1987 (as

	amended by the Town and Country Planning (Use Classes)(Amendment)(England) Regulations 2020). REASON: To ensure that the development does not give rise to environmental impacts that are in excess of or different to those assessed in the Environmental Statement and that public benefits within the development are secured for the life of the development.
78	**Uses** The development shall provide (all figures GIA and excluding plant): - 34,584sq.m (GIA) of office floorspace (Use Class E(g)(i)), including 1,176sq affordable workspace; - 504sq.m (GIA) of retail/ food and beverage floor space (Use Class E(a)-(b)); - 1,411sq.m (GIA) flexible community/ education/ cultural/ sports/ amenity (Class F2(b), F1(a)- (f)/ E (d), E(f)) uses; and - 4,794sq.m (GIA) of ancillary basement uses, including plant space, cycle storage space, shower facilities and building management, fire command centre, security room, refuse and storage and servicing areas; REASON: To ensure the development is carried out in accordance with the approved plans.
Approved Plans	
79	Approved Plans The development shall not be carried out other than in accordance with the following approved drawings and particulars or as approved under conditions of this planning permission: - 4458-ST-EX-01-001 - 4458-ST-EX-01-002 - 4458-ST-DM-02-098 - 4458-ST-DM-02-099 - 4458-ST-DM-02-100 - 4458-ST-DM-02-101 - 4458-ST-DM-02-102 - 4458-ST-DM-02-103 - 4458-ST-DM-02-104 - 4458-ST-DM-02-105 - 4458-ST-DM-02-106 - 4458-ST-DM-02-107 - 4458-ST-DM-03-001

	- 4458-ST-DM-03-002 - 4458-ST-DM-03-003 - 4458-ST-DM-03-004 - 4458-ST-DM-03-005 - 4458-ST-DM-07-098 - 4458-ST-DM-07-099 - 4458-ST-DM-07-100 - 4458-ST-DM-07-101 - 4458-ST-DM-07-102 - 4458-ST-DM-07-103 - 4458-ST-DM-07-104 - 4458-ST-DM-07-105 - 4458-ST-DM-07-106 - 4458-ST-DM-07-107 - 4458-ST-DM-07-001 - 4458-ST-DM-07-002 - 4458-ST-DM-07-003 - 4458-ST-PR-01-001 - 4458-ST-PR-01-002 - 4458-ST-PR-02-096 - 4458-ST-PR-02-097 - 4458-ST-PR-02-098 - 4458-ST-PR-02-099 - 4458-ST-PR-02-100 - 4458-ST-PR-02-101 - 4458-ST-PR-02-102 - 4458-ST-PR-02-103 - 4458-ST-PR-02-104 - 4458-ST-PR-02-105 - 4458-ST-PR-02-106 - 4458-ST-PR-02-107 - 4458-ST-PR-02-108 - 4458-ST-PR-02-109 - 4458-ST-PR-02-110 - 4458-ST-PR-02-111 - 4458-ST-PR-02-121 - 4458-ST-PR-02-122 - 4458-ST-PR-02-123 - 4458-ST-PR-02-136 - 4458-ST-PR-02-137 - 4458-ST-PR-02-RF1 - 4458-ST-PR-02-RF2 - 4458-ST-PR-02-RF3 - 4458-ST-PR-02-RF4 - 4458-ST-PR-03-001 - 4458-ST-PR-03-002

	- 4458-ST-PR-03-003 - 4458-ST-PR-03-004 - 4458-ST-PR-03-005 A - 4458-ST-PR-03-006 A - 4458-ST-PR-03-007 A - 4458-ST-PR-03-010 A - 4458-ST-PR-03-011 A - 4458-ST-PR-04-103 - 4458-ST-PR-04-104 - 4458-ST-PR-04-105 - 4458-ST-PR-31-001 A - 4458-ST-PR-31-002 A REASON: To ensure that the development of this site is in compliance with details and particulars which have been approved by the Local Planning Authority.

Informatives

1. CAA Crane Notification

   Where a crane is 100m or higher, crane operators are advised to notify the CAA (arops@caa.co.uk) and Defence Geographic Centre (dvof@mod.gov.uk). Crane notification | Civil Aviation Authority (caa.co.uk)

   The following details should be provided before the crane is erected:

   • the crane's precise location

   • an accurate maximum height

   • start and completion dates

2. CAA Building Notification

   If any part of the development exceeds 91.4m AGL, upon grant of permission, City of London are required to notify the Civil Aviation Authority (CAA) as required under Annex 2 paras 30 – 32 of DfT/ODPM Circular 01/2003 ‘Safeguarding of Aerodromes & Military Explosives Storage Areas’.

3. Thames Water

The proposed development is located within 15m of Thames Waters underground assets, as such the development could cause the assets to fail if appropriate measures are not taken. Please read our guide ‘working near our assets’ to ensure your workings are in line with the necessary processes you need to follow if you’re considering working above or near our pipes or other structures. https://www.thameswater.co.uk/developers/larger-scale-developments/planning-yourdevelopment/working-near-our-pipes Should you require further information please contact Thames Water. Email: developer.services@thameswater.co.uk

4. NPPF

In dealing with this application the City has implemented the requirements of the National Planning Policy Framework to work with the applicant in a positive and proactive manner based on seeking solutions to problems arising in dealing with planning applications in the following ways:

detailed advice in the form of statutory policies in the Local Plan, Supplementary Planning documents, and other written guidance has been made available;

a full pre application advice service has been offered;

where appropriate the City has been available to provide guidance on how outstanding planning concerns may be addressed.

5. CIL

The Mayor of London has adopted a new charging schedule for Community Infrastructure Levy ("the Mayoral CIL charge or MCIL2") on 1st April 2019.

The Mayoral Community Levy 2 Levy is set at the following differential rates within the central activity zone:

Office 185GBP per sq.m

Retail 165GBP per sq.m

Hotel 140GBP per sq.m

All other uses 80GBP per sq.m

These rates are applied to "chargeable development" over 100sq.m (GIA) or developments where a new dwelling is created.

The City of London Community Infrastructure Levy is set at a rate of 75GBP per sq.m for offices, 150GBP per sq.m for Riverside Residential, 95GBP per sq.m for Rest of City Residential and 75GBP for all other uses.

The CIL will be recorded on the Register of Local Land Charges as a legal charge upon "chargeable development" when planning permission is granted. The Mayoral CIL will be passed to Transport for London to help fund Crossrail and Crossrail 2. The City CIL will be used to meet the infrastructure needs of the City.

Relevant persons, persons liable to pay and interested parties will be sent a "Liability Notice" that will provide full details of the charges and to whom they have been charged or apportioned. Where a liable party is not identified the owners of the land will be liable to pay the levy. Please submit to the City's Planning Obligations Officer an "Assumption of Liability" Notice (available from the Planning Portal website: www.planningportal.gov.uk/cil).

Prior to commencement of a "chargeable development" the developer is required to submit a "Notice of Commencement" to the City's Planning Obligations Officer. This Notice is available on the Planning Portal website. Failure to provide such information on the due date may incur both surcharges and penalty interest.

6. Roof Gardens

The developer should be aware that, in creating a roof terrace, and therefore access to the roof, users of the roof could be exposed to emissions of air pollutants from any chimneys that extract on the roof e.g. from gas boilers / generators / CHP. In order to minimise risk, as a rule of thumb, we would suggest a design that places a minimum of 3 metres from the point of efflux of any chimney serving combustion plant, to any person using the roof terrace. This distance should allow the gases to disperse adequately at that height, minimising the risk to health.

7. Compliance with the Clean Air Act 1993

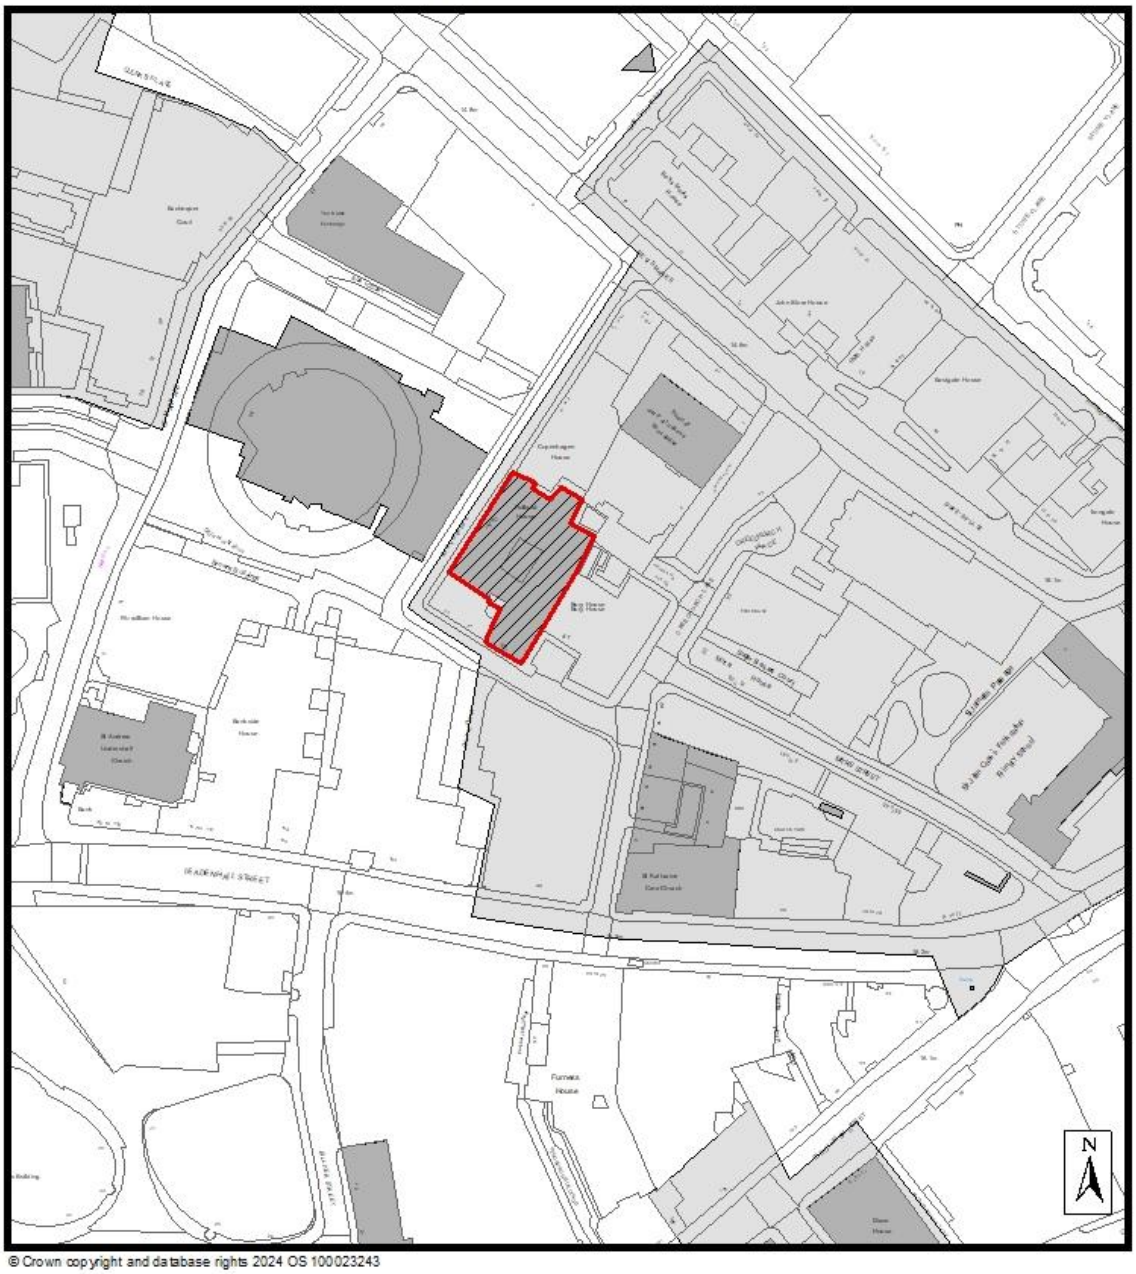
Any furnace burning liquid or gaseous matter at a rate of 366.4 kilowatts or more, and any furnace burning pulverised fuel or any solid matter at a rate of more than 45.4 kilograms or more an hour, requires chimney height approval. Use of such a furnace without chimney height approval is an offence. The calculated chimney height can conflict with requirements of planning control and further mitigation measures may need to be taken to allow installation of the plant.

8. Generators and combustion plant

Please be aware that backup/emergency generators may require permitting under the MCP directive and require a permit by the appropriate deadline. Further advice can be obtained from here: Medium combustion plant and specified generators: environmental permits - GOV.UK (www.gov.uk)

9. Design Team

The current design team or an equivalent team in quality and experience shall be retained for the construction and completion stage of the development to meet London Plan D4 (F) part 4.



Committee	Date:
Planning Application Sub-Committee	13 December 2024
Subject: Holland House, 1 - 4, 32 Bury Street, London, EC3A 5AW 24/00011/LBC: Restoration works to Holland House including removal and reinstatement of external faience together with the removal and replacement of existing concrete beam; partial demolition to facilitate interconnection with the neighbouring proposed new building and the construction of a four storey roof extension resulting in ground plus 8 storeys; together with internal alterations including truncation of the existing lightwell, reconfiguration of partitions, installation of a new staircase, servicing and all other ancillary and associated works.	**Public**
Ward: Aldgate	**For Decision**
Registered No: 24/00011/LBC	**Registered on: 11 March 2024**
Conservation Area: Creechurch Conservation Area	**Listed Building: Grade II***

Recommendation

(1) That the Planning and Development Director be authorised to issue a decision notice granting Listed Building Consent for the above proposal in accordance with the details set out in the attached schedule subject to authorisation or a direction to do so being received from Historic England pursuant to Section 14 of the Planning (Listed Buildings and Conservation Areas) Act 1990.

Draft Strategic Policy S11: Historic Environment

Draft Policy HE1: Managing Change to Historic Environment Development

Local Plan 2015 Policies

Relevant Local Plan Policies

CS12 Conserve or enhance heritage assets.

To conserve or enhance the significance of the City's heritage assets and their settings, and provide an attractive environment for the City's communities and visitors.

DM12.1 Change affecting heritage assets

1. To sustain and enhance heritage assets, their settings and significance.

2. Development proposals, including proposals for telecommunications infrastructure, that have an effect upon heritage assets, including their settings, should be accompanied by supporting information to assess and evaluate the significance of heritage assets and the degree of impact caused by the development.

3. The loss of routes and spaces that contribute to the character and historic interest of the City will be resisted.

4. Development will be required to respect the significance, character, scale and amenities of surrounding heritage assets and spaces and their settings.

5. Proposals for sustainable development, including the incorporation of climate change adaptation measures, must be sensitive to heritage assets.

DM12.3 Listed buildings

1. To resist the demolition of listed buildings.

2. To grant consent for the alteration or change of use of a listed building only where this would not detract from its special architectural or historic interest, character and significance or its setting.

SCHEUDULE

Application: 24/00011/FULEIA
Holland House 1 - 4, 32 Bury Street London EC3A 5AW
Restoration works to Holland House including removal and reinstatement of external faience together with the removal and replacement of existing concrete beam; partial demolition to facilitate interconnection with the neighbouring proposed new building and the construction of a four storey roof extension resulting in ground plus 8 storeys; together with internal alterations including truncation of the existing lightwell, reconfiguration of partitions, installation of a new staircase, servicing and all other ancillary and associated works.

CONDITIONS

1	**Holland House and Bevis Marks Synagogue - Demolition and Construction Methodology and Structural Assessment** Prior to the commencement of development a Demolition and Construction Methodology and Structural Assessment (prepared by a Heritage Accredited Structural Engineer), assessing implications of the demolition and construction phase, as well as any medium and long-term structural and non-structural implications for the listed buildings Holland House (Grade II*) and Bevis Marks Synagogue (Grade I), including a detailed methodology and specification of works which seek to mitigate any damage, shall be submitted and approved in writing by the Local Planning Authority and those relevant works carried out in accordance with the approved details. REASON: In order to safeguard the structure and the special architectural or historic interest of the listed buildings at Holland House and Bevis Marks Synagogue in accordance with the following policies of the Local Plan: CS12, DM12.1.
2	**Holland House – site meeting** Before work begins a site meeting shall be held between the local planning authority and the persons responsible for undertaking the works to ensure that the Conditions attached to the Listed Building Consent are understood and can be complied with in full. Notification of the date and time of a meeting shall be made in writing to the Local Planning Authority.

	REASON: In order to safeguard the structure and the special architectural or historic interest of the listed buildings at Holland House in accordance with the following policies of the Local Plan: CS12 and DM12.1.
3	**Holland House - qualified professional specialising in conservation work** Before work begins it shall be agreed in writing with the Local Planning Authority the appropriately qualified professional specialising in conservation work who will supervise the hereby approved works of alteration or demolition. Any proposed changes to the agreed supervision arrangements shall be subject to the prior written agreement of the Local Planning Authority. REASON: In order to safeguard the structure and the special architectural or historic interest of the listed buildings at Holland House in accordance with the following policies of the Local Plan: CS12 and DM12.1.
4	**Holland House - ….** Before work begins the following shall be approved in writing by the Local Planning Authority. The work shall be carried out in full in accordance with approved details including: 1. Façade repairs and alterations a. Particulars and samples of materials to be used on all external faces of the building including external ground and upper level surfaces b. A method statement for cleaning and repair c. A schedule of works and specification, including details of the quantity and repair of the faience tiles salvaged from the building d. Details of the reopening of the Bury Street entrance and other alterations 2. Repair works to the steel structure a. A condition survey of the existing historic structure b. A method statement for repair works c. A schedule of works and specification 3. Window Replacements a. Particulars and samples of the proposed windows b. A method statement for construction and installation c. A schedule of works and specification 4. Tenants entrance (west elevation) a. Particulars and samples of all materials and features b. A method statement for construction and installation 5. East Elevation (external wall) a. A condition survey of the historic fabric behind modern Portland stone b. Particulars and samples of proposed materials c. A method statement for construction and installation d. A schedule of works and specification 6. East Elevation (party wall with Bury House)

	a. Details of the interconnections between the listed building and the proposed tower floor levels, including alignment and connection of floor slabs and the new lift core 7. Internal works a. Details of works to the Heritage Lobbies including but not limited to any requisite repairs and particulars and samples of the materials thereof; b. Details of the works to the Atrium including but not limited to the junctions of the new floor slabs with the existing elevations, requisite repairs and particulars and samples of the materials thereof, and its presentation c. Details of works to the first floor Heritage Interiors, including but not limited to any repairs, minor alterations and works of re-presentation 8. South Elevation (party wall with Renown House) a. Details of the proposed extension of the floor slabs of the listed building behind, and their junctions with, the retained elevations of Renown House b. Details of the treatment of the retained sections of party wall between Renown House and Holland House 9. Rooftop additions a. Particulars and samples of materials to be used on all external faces of the building b. A method statement for demolition of existing upper level floors and construction of new structure and facades c. A schedule of works and specification, including details of the quantity and repair of the faience tiles salvaged from the building d. External Lighting and landscaping at roof level 10. Details of junctions with adjoining buildings; 11. Details of the integration of window cleaning equipment, building maintenance equipment and the garaging thereof, plant, flues, fire escapes and other excrescences at roof level; 12. Details of ventilation and air-conditioning; 13. Details of external surfaces within the site boundary including hard and soft landscaping; REASON: In order to safeguard the structure and the special architectural or historic interest of the listed buildings at Holland House in accordance with the following policies of the Local Plan: CS12 and DM12.1.
5	**Holland House – tilework replacement or repairs** Prior to practical completion, details of any other repairs and replacement tilework to the elevations resulting from further investigations shall be submitted to and approved in writing by the Local Planning Authority and all works pursuant to this consent shall be carried out in accordance with the approved details.

	REASON: To ensure the protection of the special architectural or historic interest of the building in accordance with the following policy of the Local Plan: DM12.3.
6	**Holland House – precautions to secure features during building work** Prior to practical completion, details of any other repairs and replacement tilework to the elevations resulting from further investigations shall be submitted to and approved in writing by the Local Planning Authority and all works pursuant to this consent shall be carried out in accordance with the approved details. REASON: To ensure the protection of the special architectural or historic interest of the building in accordance with the following policy of the Local Plan: DM12.3.
7	**Holland House - new works and finishes to match the existing** All new works and finishes and works of making good to the retained fabric shall match the existing adjacent work with regard to the methods used and to materials, colour, texture and profile unless shown otherwise on the drawings or other documentation hereby approved or required by any condition(s) attached to this consent. 28 November 2024

Dear Ms Tastsoglou,

Bury House, 1-4, 31-34 Bury Street, London EC3A 5AR: Follow-Up Objection on behalf of The S&P Sephardi Community

On behalf of our client, The S&P Sephardi Community, we write further to our previous letters dated 15 May 2024 and 15 November 2024, in relation to the planning application (ref. 24/00021/FULEIA) and the related Listed Building Consent application relating to the redevelopment of Bury House, 1-4, 31-34 Bury Street, EC3A 5AR.

This letter accompanies two further documents supporting our client's objection to the proposals:

- An assessment of the impact on the Synagogue of the proposed development in Heritage/Townscape terms, prepared by Donald Insall Associates (Appendix 1); and
- A paper by Rabbi Shalom Morris providing further contextual detail on Bevis Marks Synagogue and its setting (Appendix 2).

This letter briefly summarises these additional documents and reiterates our client's objection to the proposed development.

Heritage/Townscape Impact Assessment

Donald Insall Associates has been instructed by The S&P Sephardi Community to prepare a professional third-party assessment of the heritage impacts of the proposals, particularly the impact of the proposed development on the significance of Bevis Marks Synagogue. The report finds that, in summary, the proposals for the Bury Street tall building have a serious adverse impact on the setting and by implication on the special architectural and historic interest of the Grade I-listed Bevis Marks Synagogue.

Guidance on assessing heritage significance in the NPPF (2023) and PPG (2019) defines significance as 'the value of a heritage asset to this and future generations because of its heritage interest. Significance derives not only from a heritage asset's physical presence, but also from its setting'.

This report finds that the significance of the building relates to its architectural quality and its historic significance: it has outstanding historic interest as the oldest purpose-built and continuously-operational synagogue in the UK, and it has special architectural interest as an accomplished Georgian building, but also as a building where this historic use is manifest in the fabric, including its generous extent of fenestration, as well as its courtyard setting which frames the building and allows community and religious activities to take place.

The report concludes that the proposals for a tall building close to the site would cause a high level of harm to the significance of the Grade I-listed synagogue. This harm would result from overshadowing which would efface or seriously affect historic elements of the spatial quality of the architecture, namely the bathing of the interior in light from the south; harm the setting of the synagogue through dominating its important southern backdrop and preventing views to the sky and the moon; and finally, potentially jeopardise or at least diminish the use of the building by the community through reducing its ability to serve as a religious centre through reducing light to the interior and the ability to carry out certain services, including the Kiddush Levana which rely on views of the moon and, therefore, an open sky setting.

Setting Study

Rabbi Shalom Morris has prepared a study of the setting of Bevis Marks Synagogue, with reference to its specific cultural and religious context and Jewish sources. The report draws on sources including Jewish religious law and the communal records kept at the Metropolitan Archives, alongside discussion of the community over time and how it operates today. Reflecting on these sources, the report explains the wide-ranging harm that the proposed tower would cause to the significance of the Synagogue, in terms of harm to:

- The original architectural intent of the Synagogue's design;
- Religiously important sky views;
- Interior light levels necessary for prayer;
- The purposeful functioning of the architecturally significant windows;
- The amenity of the communally important courtyard;
- The meaning of the Synagogue's name; and
- The economic viability of the site.

Summary

The documents enclosed further support our client's position that the proposals would have a substantial and wholly unacceptable impact on the historic, Grade I Listed Bevis Marks Synagogue and the Creechurch Conservation Area within which it sits; and a less than substantial and unacceptable impact upon other heritage assets in the vicinity. The revised proposals do not overcome this heritage harm or come anywhere close to delivering sufficient public benefits to outweigh it.

We have previously set out the reasons for which the application should be refused; we repeat these here for emphasis. It remains clear the applications should be refused, for the following reasons (inter alia):

1. The impact upon the Synagogue (the first previous Reason for Refusal) has not been overcome; the new scheme would be little different from the previous one in its impact. There is now even stronger evidence of adverse impact, including a better articulated objection concerning the heritage/religious/cultural significance of the sky view, and the sensitivity of the Synagogue to changes in light levels.

2. The impact on the World Heritage Site (the second previous Reason for Refusal) has not been overcome; the modelling of the new scheme is a little different, but it still has more-or-less the same substantial impact on a very important view of the Tower of London.

3. The site is now in a Conservation Area, meaning that the scheme's heritage impact (especially on the Synagogue, which is in the same CA) should be given even more weight. City Plan Policy CS14 is very specific in saying that tall buildings proposed in Conservation Areas will be refused.

4. The claimed heritage benefits amount to nothing of substance: it is ridiculous to claim that a 43 storey tower will enhance the Conservation Area, and adding a 4 storey upward extension to Holland House represents harm to that heritage asset, not sensitive restoration.

5. The claimed other public benefits must be viewed with deep scepticism, and certainly don't amount to something to which "very great weight" should be attached. For example, the three storeys of "public access" appears to be nothing more than a meanwhile use.

6. Insofar as there could be some heritage/public benefit, no attempt has been made to demonstrate that the proposed development is the minimum necessary to achieve it. The applicants maintain they are not running an enabling development argument but, in fact, they are. They are arguing to be allowed to erect a building that is specifically contrary to development plan policy, on the basis that their claimed public benefits outweigh the policy presumption and other material considerations. The planning system should only ever accept such an argument if it is demonstrated that what is proposed is the minimum necessary to achieve the claimed benefits.

7. The building is believed to be substantially unviable, and the small size of the site is such that it is unlikely a tall building would ever be viable, let alone one that relies upon substantial expenditure upon public benefits for its justification. Planning permission should not as a matter of principle be granted for developments that are unlikely ever to be built (or unlikely to be built except with significant amendment of the proposal and/or the package of claimed benefits which accompanies it).

As planning officers of undoubted integrity, I trust you and your colleagues will recognise the above, and also that any attempt to justify recommending approval would be both improper and wide open to legal challenge.

Yours sincerely,

1.0 Introduction

1.1 Background

Donald Insall Associates were commissioned by the Spanish & Portuguese Jews Synagogue in November 2024 to review proposals on land near Bevis Marks synagogue, namely for the demolition of Bury House and the erection of a new tall office building on the site (24/00021/FULEIA) submitted to the City of London Corporation on 8 January 2024. The proposals are currently under consideration. The site incorporates the Grade II*-listed Holland House and includes proposals for a four storey extension for this listed building (24/00011/LBC). These applications follow a scheme to replace Bury House (20/00848/FULEIA) that was refused on 22 June 2022 on the grounds of its adverse impact on the setting of Bevis Marks Synagogue and on the setting of the Tower of London World Heritage Site.

The proposed building on Bury Street is situated c. 25 metres to the south of the Grade I-listed Bevis Marks Synagogue and sits within the Creechurch Conservation Area [plate 1]. These heritage assets are protected by the law and national and local policy.

This short report is a professional third-party assessment of the heritage impacts of the proposals, particular the impact of the proposed development on the significance of Bevis Marks Synagogue.

The submitted applications are as follows:

24/00021/FULEIA 8 January 2024 Under Consideration

Demolition of Bury House and erection of a new building comprising of 4 basement levels, ground plus 43 storeys (178.7m AOD); partial demolition of Holland House and Renown House; restoration of existing and erection of four storey extension resulting in ground plus 8 storeys at Holland House (48.05m AOD) and three storey extension resulting in ground plus 5 storeys at Renown House (36.49m AOD); interconnection of the three buildings; use of the buildings for office (Class E(g)), flexible retail/café (Class E(a)/E(b)), and flexible community/education/ cultural/amenity (Class F2(b)/ F1(a)- (e)/ E(f)/ Sui Generis) uses; and provision of a new covered pedestrian route, cycle parking and facilities, landscaping and highway improvements, servicing and plant and all other ancillary and other associated works.

RE-CONSULTATION due to the submission of additional information and revised drawings

Restoration works to Holland House including removal and reinstatement of external faience together with the removal and replacement of existing concrete beam; partial demolition to facilitate interconnection with the neighbouring proposed new building and the construction of a four storey roof extension resulting in ground plus 8 storeys; together with internal alterations including truncation of the existing lightwell, reconfiguration of partitions, installation of a new staircase, servicing and all other ancillary and associated works.

RE-CONSULTATION due to the submission of additional information and revised drawings

This report sets out: the history of Bevis Marks Synagogue (in Section 2), its significance (Section 3), provides an analysis of the Bury Street scheme proposals (Section 4) and outlines the impact of the Bury Street scheme on the significance of Bevis Marks Synagogue and the Creechurch Conservation Area (Section 5).

1.2 Summary of Findings

The report finds that, in summary, the proposals for the Bury Street tall building have a serious adverse impact on the setting and by implication on the special architectural and historic interest of the Grade I-listed Bevis Marks Synagogue.

Guidance on assessing heritage significance in the NPPF (2023) and PPG (2019) defines significance as '*the value of a heritage asset to this and future generations because of its heritage interest. Significance derives not only from a heritage asset's physical presence, but also from its setting*'[1]. This report finds that the significance of the building relates to its architectural quality and its historic significance: it has outstanding historic interest as the oldest purpose-built and continuously-operational synagogue in the UK, and it has special architectural interest as an accomplished Georgian building, but also as a building where this historic use is manifest in the fabric, including its generous extent of fenestration, as well as its courtyard setting which frames the building and allows community and religious activities to take place.

The proposals for a tall building close to the site would cause a high level of harm to the significance of the Grade I-listed synagogue. This harm would result from overshadowing which would efface or seriously affect historic elements of the spatial quality of the architecture, namely the bathing of the interior in light from the south; harm the immediate setting of the synagogue through dominating its important southern backdrop and preventing views to the sky and the moon; and finally, potentially jeopardise or at least diminish the use of the building by the community through reducing its ability to serve as a religious centre through reducing light to the interior and the ability to carry out certain services, including the Kiddush Levana which rely on views of the moon and, therefore, an open sky setting.

2.0 History of Bevis Marks Synagogue

Bevis Marks Synagogue was constructed in c. 1701 as the first purpose-built synagogue in London and followed the resettlement of Jewish communities in England in the late seventeenth century.

2.1 Re-admittance of Jews and Early Worship in Creechurch Lane

Jews were expelled from Britain in 1290 under an edict issued by Edward I. In the early seventeenth century, Jews from the Iberian peninsula (Spain and Portugal, known as 'Sephardi Jews') settled in the City having left Spain and Portugal in response to the Inquisition. Several came to England via Amsterdam, where they had also gone to escape persecution.[2] These were predominantly Jewish communities who had had to hide their religion in Spain, pretending to be Christian, and continued to do the same in England.[3] However, this community petitioned Oliver Cromwell –initially unsuccessfully –for official readmittance. A second petition, in c. 1656, appears to have received verbal assurance that 'they might meet privately for Jewish worship, acquire a burial-ground, trade as brokers on the Exchange, and enlarge their Community by bringing into England some more Sephardi (i.e. Spanish Jewish) merchants of good standing'.[4] It has been noted that this interview between Cromwell and the petitioners 'in effect, established the Jewish Community of England'.[5]

The Sephardi community first worshipped in a synagogue on Creechurch Lane, to the east of the present-day Bevis Marks Synagogue. This space was located in the upper floors of a pre-existing house and thus represented the ad hoc adaptation and alterations of a structure to the needs of the ever growing community.[6] In 1699, the Sephardi community acquired a 99-year lease of the present-day site of Bevis Marks Synagogue. The site was already occupied by a dense network of buildings fronting onto 'Berry Street', 'Beavis Lane' and Bevis Marks. These buildings backed onto a central courtyard with a central building accessed from alleys from the latter two streets, as can be seen in William Morgan's 1682 map [plate 2]. Under the terms of the lease, the community was permitted to demolish the existing buildings in order to construct a purpose-built synagogue along with, it appears, ancillary community buildings.

2.2 Construction of the Synagogue

The synagogue was constructed between 1699 and 1701 under the supervision of Joseph Avis, a 'Christian master builder'.[7] Little is known about Avis and his precise role in the design of the synagogue remains obscure.[8] Avis is known to have been a 'Cittizen and Merchant Taylor of London' and worked on the Wren city church St Bride's Fleet Street, St James's Piccadilly and the Merchant Taylors' hall.[9] At the synagogue, Avis collaborated with several other craftsmen who had also worked on Wren churches and likely other City projects, situating the project within the broader building tradition of late seventeenth-century London in which the boundaries between architect, builder and craftsmen were blurred.[10]

The construction of the synagogue took place against the background of the increasing prosperity of the Sephardi Jewish community in London. Their ability to construct a purpose-built synagogue indicates the degree of social and economic security they had achieved by the late seventeenth century, giving them the funds and ability to commission a place of worship. The synagogue was built by a prosperous and growing community and within a society with fewer restrictions on Jewish worship following their readmittance to England. The choice of a builder within the establishment of British craftsmen connected to the Wren churches and broader rebuilding of the post-fire City and use of a fashionable, up-to-date architectural style demonstrates the ambition of their patronage. All of these factors mean, therefore, that Bevis Marks Synagogue can be taken in some ways as an ideal synagogue: one which was purpose-built with sufficient funds and one which could therefore respond to established Jewish law, religious practices and traditions, whilst also following current architectural practices in England.

2.3 Design of the Synagogue

While it is not within the scope of this study to delve extensively into the precedents of the architecture, much has been made of the stylistic affinities between Bevis Marks Synagogue and the Sephardi synagogue in Amsterdam, the *Esnoga*, which the Bevis Marks congregation was a daughter of and with which the early leaders of the community had close familial ties.[11] This synagogue has a comparable brick-faced exterior and equally substantial fenestration to illuminate the body of the synagogue which itself is set into a tightly built up townscape. The two synagogues also have similar internal arrangements, namely being accessed through a 'small panelled porch' that opens straight onto the prayer hall.[12] Equally, the synagogue has clear architectural affinities with the new city churches of Christopher Wren. However, it is also significant how the building responds to ideas about worship laid out in Jewish texts that would have guided those responsible for constructing the synagogue. This is dealt with extensively in Rabbi Morris' Objection Letter on Significance and

---

7 The building contract for the site was signed on 12 February 1699, the foundation stone laid on 21 August 1700 and the Synagogue consecrated on 30 September 1701. Kadish, *The* Synagogues, 6-7. The attribution of the synagogue is discussed at length in the synagogue's CMP.

Rabbi Joseph Dweck's letter appended to the HGH report (15 May 2024), both available on the planning portal. For the purposes of our analysis three elements are most important and will be discussed in detail below:

1. The setting in a private courtyard, which provided
    a. An extension of the internal Synagogue space, where religious worship could happen such as prayers on the appearance of the new moon (Kiddush Levana) which require a view of the night sky
    b. A private space that acted as a buffer between the sacred space of the synagogue and the secular outer world, an effect which was augmented through the entry into the courtyard through a narrow arched passage which opened into a wider courtyard
2. The domination of the synagogue over surrounding buildings, which accorded with Jewish tradition that enshrined that the synagogue ought to be the tallest/most prominent building in a city
3. The provision of generous natural light to the interior and views to the outside world from the interior, which responded to the requirement in the Talmud that 'a person should pray only in a house with windows' (Berakhot 34b), a requirement that had both spiritual and functional objectives.

As originally constructed, the synagogue was situated in the centre of a courtyard and seems to have been originally –or at least from an early date –surrounded by low buildings that were used for other functions of the community such as almshouses, orphanages and schools. The earliest surviving plan of these community structures is from the late-nineteenth century [plate 3]. The plan shows the synagogue at the heart of a wider complex of physically and organisationally interlinked structures that supported the Sephardi community in different ways. The arrangement of the synagogue at the heart of a courtyard is first shown on John Rocque's 1746 Map, which shows the rectangular 'Jews Synagogue' accessed through a narrow alley from Bevis Marks which widened into a generous U-shaped courtyard that surrounded the synagogue to the north, west and south [plate 4]. This linked to a subsidiary space to the south which was accessed from Heneage Lane.

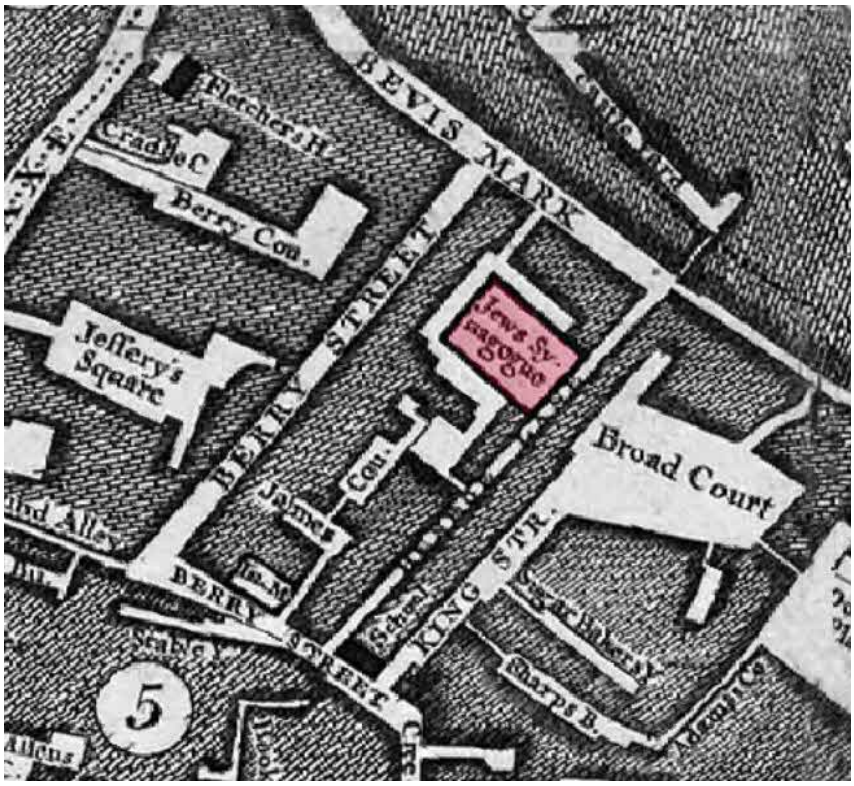

Plate 3 *Plan of Synagogue, Vestry Schools and Other Property Situated in Bevis Marks and Heneage Lane, City, E.C., belonging to the Congregation of Spanish & Portuguese Jews, 1876 (Bevis Marks Synagogue)*

Plate 4 *Rocque Map of London Westminster and Southwark, 1746. Note the presence of the U-shaped courtyard around the Synagogue (Layers of London)*

The courtyard appears to have always been considered a central space of the synagogue with early references to it being paved in free stone and a stone mason recorded as having paved the courtyard.[13] The explicit reference to the treatment of the courtyard in early documentation makes clear that this was conceived as part of the commission for the synagogue itself and was intended to be closely linked to the synagogue's architectural impact and religious function. Moreover, it has been noted that in typical synagogue architecture, a vestibule separates the street from the prayer hall. In the Sephardic tradition, however, the vestibule did not develop as part of the building typology, in part following the model of the Esnoga, the Sephardi synagogue in Amsterdam.[14] In these buildings 'the lack of vestibule' is compensated for 'by the existence of a courtyard'; hence, the courtyard was seen as an extension of the building itself.[15] While it has been suggested that the location of the synagogue within the courtyard was because of restrictions placed on the construction of synagogues on high streets, its position clearly had significance for the liturgical function of the building itself.[16]

This arrangement –of the synagogue in a courtyard surrounded by community buildings –was maintained throughout the eighteenth and nineteenth centuries and is shown on the Goad map of 1887. This shows how the synagogue related to neighbouring buildings and highlights that, despite the presence of larger warehouses to the synagogue's west, many of the surrounding structures were still low-rise [plate 5].

Plate 5 *Goad Map, 1887. Note that several surrounding buildings were still in use by the Sephardic Community and that most buildings were still of a modest scale (Layers of London)*

13 Ibid., 6.

14 Ibid., 10-12.

15 Ibid.

16 Ibid., 5.

The exterior of the synagogue is shown in a contemporary print which shows the synagogue rising above the surrounding buildings [plate 6]. The view in the print shows the building from the northeast, the angle that the visitor or worshipper first perceives when entering the private courtyard through the arched entrance on the public street, Bevis Marks. From this angle, the building clearly was intended to dominate over its surrounding structures.

The form of the building itself was informed by the religious needs of the community. It was dominated on the interior and exterior by large multi-pane windows. On the north and south elevations, there were smaller windows that lit the ground floor and larger round headed windows at the level of the internal gallery. Windows on the eastern side were elevated above the Arc and on the western side, above the entrance porch. Early images emphasise that the space was configured to be flooded with light, which served both spiritual purposes and functional purposes as it provided light for people to read prayers. These images include an early nineteenth-century print which shows the play of light and shadow across the floor [plate 7], an 1884 watercolour that shows the even lighting achieved due to the generous windows on all sides [plate 8] and a late nineteenth-century print which literally renders the beams of light emanating from above through the southern windows, casting light onto the Arc and seats which would house the congregation during services [plate 9]. The images make clear, as is still the case in the synagogue today, that the space was dominated by these large, clear windows. Besides the light from the windows, the interior was historically lit by seven chandeliers. These chandeliers are, today, fairly inaccessible and take an hour to light and an hour to extinguish by hand. It could be presumed that they were predominantly used at night and that the interior was light enough for worship during the day without the aid of artificial light.

Not only was the provision of light important, views of the outside world were also important in Jewish worship. As is outlined in Rabbi Morris' report on the setting of the synagogue, also available on the planning portal, views of the outside were significant because of the importance of knowing the time of day, traditionally understood through views of the sun and night sky, to instigating Jewish prayer. In particular, the appearance of stars in the night sky traditionally was used to demarcate the end of the Sabbath, whilst the passage of the sun in the daytime was used to indicate times for prayer and worship. The large and multiple windows in the synagogue, then, both permitted views to the outside world that permitted the demarcation of the passage of time and thus the call to prayer as well as serving a functional purpose of lighting the interior.

While elements of the fabric of the interior and exterior have been renewed –namely the pane glass and the paving to the courtyard –the overall configuration of the building envelope and much of the courtyard have remained the same, reflecting the enduring use by the same community of Sephardi Jews who built the synagogue over 300 years ago.[17]

17 The Synagogue's Conservation Management Plan discusses alterations in detail.

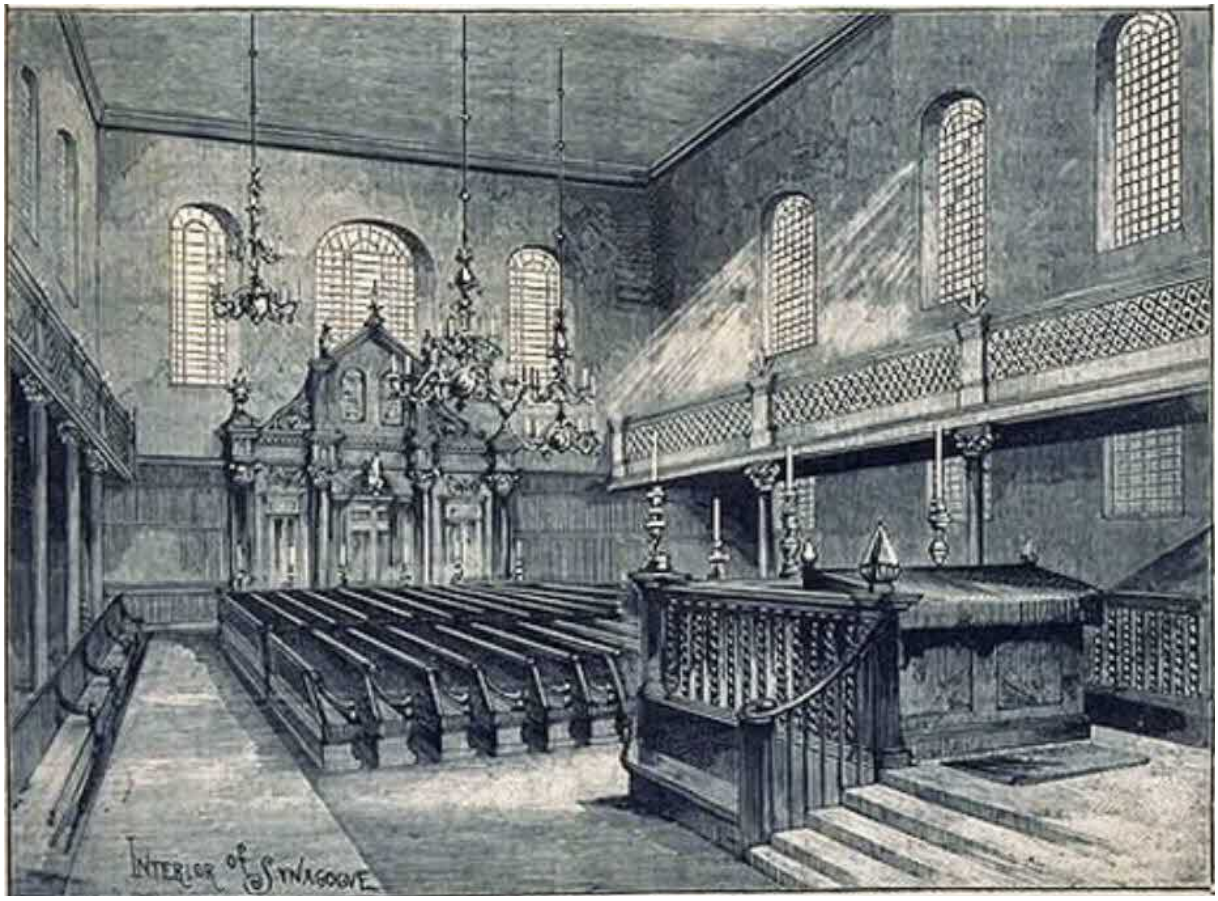

Plate 9 *Print of the interior of Bevis Marks Synagogue in 1891, with emphasis placed on light streaming in through the southern windows (Bevis Marks Synagogue)*

2.4 Later Changes to the Synagogue's Setting

The wider setting of the synagogue has evolved, firstly in the late nineteenth century when it itself was threatened by demolition in 1886.[18] This ultimately led to the demolition of some of the surrounding buildings and their replacement with new structures, such as the houses and offices that flank the synagogue on its eastern side and open onto Heneage Lane. Comparison of the OS Town Plan from 1896 [plate 10] and that from 1916 [plate 11] shows the infilling of the open space to the rear of some of the buildings to the west of the synagogue thus creating a solid wall to the south of the synagogue as well as broader redevelopment in the area such as the replacement of small blocks on Bury Street with the larger Holland House.

The setting has continued to evolve through piecemeal redevelopment of neighbouring plots over the course of the twentieth and twenty first centuries. Except for the Victorian buildings that flank the synagogue on the eastern side, the courtyard is now entirely surrounded by relatively modern buildings. However, these buildings remain of a fairly modest scale, despite being taller than the synagogue. This means that they still permit views to the sky and do not feel overbearing. It is notable that the buildings that form the southern side of the courtyard seem to have been intentionally designed to respond to the height of the synagogue [plate 12]. While both are taller than the synagogue, they have clearly delineated lower storeys and mansard roofs. The cornice line of the lower storeys is similar to the height of the synagogue, especially when seen from an oblique angle, and the mansard roofs are sloped away from the synagogue, thereby allowing the synagogue to still feel as if it is the dominant building in the courtyard. To the immediate south of the synagogue, the courtyard was infilled in the twentieth century with a glazed structure which has since been replaced with a single-storey visitors' centre and museum for the synagogue, due to be completed in 2025.

In the wider settings, there are tall buildings to the south constructed in recent years which are visible from the courtyard. These include 40 Leadenhall and 52-54 Lime Street. Because they are further from the site than the proposed Bury Street tall building, their impact on its setting is more limited and there is still sky seen between them and a sense of distance maintained between these buildings and the courtyard. There are also modern tall buildings to the east and west of the synagogue.

So, in summary, the synagogue represents a purpose-built religious building that articulated the aspirations of the burgeoning Sephardi Jewish community in the late seventeenth and early eighteenth centuries and which can be understood as an ideal synagogue structure due to its correlation to statute in Jewish texts. The form of the synagogue and courtyard were fundamentally related to its use as a synagogue in the period of its construction and in the subsequent centuries to the present day, and its open courtyard with sky views forms an intrinsic part of the significance of the synagogue, both spatially and functionally.

18 Barnett and Levy, *The Bevis Marks Synagogue*, 9.

3.0 Assessment of Significance of Bevis Marks Synagogue and its Setting

3.1 Policy Context

The purpose of this section is to provide an assessment of significance of Bevis Marks Synagogue in order to evaluate the impact of the proposals for a new tall building on Bury Street on that significance in section 5.

This assessment responds to the requirement of the National Planning Policy Framework to 'recognise that heritage assets are an irreplaceable resource and conserve them in a manner appropriate to their significance'. The NPPF defines significance as:

> '*The value of a heritage asset to this and future generations because of its heritage interest. That interest may be archaeological (potential to yield evidence about the past), architectural, artistic or historic. Significance derives not only from a heritage asset's physical presence, but also from its setting*'.

The National Planning Practice Guidance (NPPG) was published on 23 July 2019 to support the National Planning Policy Framework (NPPF) and the planning system. It includes particular guidance on matters relating to protecting the historic environment in the section: Conserving and Enhancing the Historic Environment. It provides relevant guidance as to how to assess the significance and setting of a heritage asset. On significance the PPG says:

Paragraph 6: What is "significance"?

'*Significance*' *in terms of heritage-related planning policy is defined in the Glossary of the National Planning Policy Framework as the value of a heritage asset to this and future generations because of its heritage interest. Significance derives not only from a heritage asset's physical presence, but also from its setting.*

The National Planning Policy Framework definition further states that in the planning context heritage interest may be archaeological, architectural, artistic or historic. This can be interpreted as follows:

- ***archaeological interest****: As defined in the Glossary to the National Planning Policy Framework, there will be archaeological interest in a heritage asset if it holds, or potentially holds, evidence of past human activity worthy of expert investigation at some point.*
- ***architectural and artistic interest****: These are interests in the design and general aesthetics of a place. They can arise from conscious design or fortuitously from the way the heritage asset has evolved. More specifically, architectural interest is an interest in the art or science of the design, construction, craftsmanship and decoration of buildings and structures of all types. Artistic interest is an interest in other human creative skill, like sculpture.*

- ***historic interest****: An interest in past lives and events (including pre-historic). Heritage assets can illustrate or be associated with them. Heritage assets with historic interest not only provide a material record of our nation's history, but can also provide meaning for communities derived from their collective experience of a place and can symbolise wider values such as faith and cultural identity.*

In legislation and designation criteria, the terms 'special architectural or historic interest' of a listed building and the 'national importance' of a scheduled monument are used to describe all or part of what, in planning terms, is referred to as the identified heritage asset's significance.

And on setting:

Paragraph 13: What is the setting of a heritage asset and how should it be taken into account?

The setting of a heritage asset is defined in the Glossary of the National Planning Policy Framework.

All heritage assets have a setting, irrespective of the form in which they survive and whether they are designated or not. The setting of a heritage asset and the asset's curtilage may not have the same extent.

The extent and importance of setting is often expressed by reference to the visual relationship between the asset and the proposed development and associated visual/physical considerations. Although views of or from an asset will play an important part in the assessment of impacts on setting, the way in which we experience an asset in its setting is also influenced by other environmental factors such as noise, dust, smell and vibration from other land uses in the vicinity, and by our understanding of the historic relationship between places. For example, buildings that are in close proximity but are not visible from each other may have a historic or aesthetic connection that amplifies the experience of the significance of each.

The contribution that setting makes to the significance of the heritage asset does not depend on there being public rights of way or an ability to otherwise access or experience that setting. The contribution may vary over time.

3.2 Assessment of Significance of Bevis Marks Synagogue

Bevis Marks Synagogue is a Grade I-listed building located within the Creechurch Conservation Area. It was constructed between 1699 and 1701 as the first purpose-built synagogue of the Sephardi Jewish community in England and has been in continuous use as a synagogue by the community since. The building is rectangular and constructed of brick, with generous multi-paned windows on all four sides, informed by the church architecture of Sir Christopher Wren and the architecture of the Sephardi *Esnoga* in Amsterdam which had strong links to the London Sephardi community in the seventeenth century. It is situated within a courtyard accessed from Bevis Marks and its rear elevation fronts onto Heneage Lane.

As a Grade I-listed building, Bevis Marks Synagogue has been recognised to have an **exceptional**[19] **degree of architectural and historical interest and significance**. Its historical interest lies in its status as the oldest purpose-built synagogue in Britain in continuous use. The building's historical and architectural interests are closely intertwined. As discussed in section 2, there are three elements of the synagogue that were likely informed by the functional and liturgical needs of the congregation, when first constructed, namely:

- its setting within a private, open courtyard with sky views which formed a spatial and functional extension to the interior of the synagogue,
- the domination of the synagogue over its surroundings,
- and the provision of ample natural light to the interior which had liturgical and functional importance.

These needs dictated the form that the building took and its situation in a generous courtyard. Internally, the provision of large multi-paned clear plate glass windows, opening onto the courtyard and unobstructed by surrounding buildings, defined the spatial quality of interior, making it feel like a light, open space connected to the outside world. These elements related closely to the historical uses of the building.

The building survives largely intact both internally and externally, with these key features still well-represented, if somewhat obscured by encroaching development. Whilst there have been alterations, such as the introduction of some artificial light in the 1920s, likely in part to alleviate the task of lighting and extinguishing the chandeliers which takes several hours, the configuration of the structure has remained legible. As such, the original function of the building is manifest in its fabric and form and this allows us to understand how the space was used historically. Hence, architectural and historic significance of the building is **exceptional** as it illustrates how Sephardi Jewish communities have worshipped in Britain for the past 300 years in a building of high quality.

Moreover, the building remains in use by the community for whom it was constructed and this continuing use by the Spanish and Portuguese Sephardi Jewish community forms an inherent part of its significance. Historic England, the government's statutory advisor for heritage matters, provides guidance on how such elements of significance should be assessed in *Conservation Principles* (2008). It describes 'communal

19 Definitions of statutory listing grades are provided here: https://assets.publishing.service.gov.uk/media/5beef3c9e5274a2b0b4267e0/Revised_Principles_of_Selection_2018.pdf

value' as a tool for assessing significance, which includes social value ('associated with places that people perceive as a source of identity, distinctiveness, social interaction and coherence') and spiritual value which is defined as:

> *59. Spiritual value attached to places can emanate from the beliefs and teachings of an organised religion, or reflect past or present-day perceptions of the spirit of place. It includes the sense of inspiration and wonder that can arise from personal contact with places long revered, or newly revealed.*
> *60. Spiritual value is often associated with places sanctified by longstanding veneration or worship, or wild places with few obvious signs of modern life. Their value is generally dependent on the perceived survival of historic fabric or character of the place, and can be extremely sensitive to modest changes to that character, particularly to the activities that happen there.*

In the case of Bevis Marks Synagogue, these criteria are central to understanding the significance of the building. The building's exceptional special interest and significance resides primarily in its status as the UK's oldest synagogue, the UK's first purpose-built synagogue and its continuing use as a synagogue for the same community who built it, those for whom it has social, communal and spiritual value. The contribution of the **use** of the building to its significance, then, is of **exceptional** importance. The enduring relationship between the fabric of the building and the functioning of the community is essential to its significance.

The building's **setting**, in particular, its courtyard, but also its wider setting visible from the building and the courtyard, make a **very strong contribution** to its significance and speak to the building's historic function, architectural interest and present-day use. The courtyard outside the building has been its setting since it was constructed and it seems evident that it was specifically conceived to have functional and liturgical purposes. The building's setting in this enclosed courtyard maintains the historic setting of the building and therefore contributes strongly to its **historic and architectural interest.** The courtyard afforded the synagogue a high degree of privacy, which was important to its historic use.

Not only is the courtyard the space from which the synagogue is meant to be seen, it also was conceived to ensure the provision of light into the interior of the synagogue and to form an external extension of the building in which services could take place. These services and the provision of light were predicated on the relationship to the broader setting. This is recognised to be an element of setting protected by the law, as explained in NPPG (2019), which states that '*the way in which we experience an asset in its setting is also influenced by other environmental factors such as noise, dust, smell and vibration from other land uses in the vicinity, and by our understanding of the historic relationship between places.*' Environmental factors can be taken to include light and landscape, which includes the sky, and, in the case of the synagogue, these are factors that contribute strongly to the building's significance. The relationship between the building and its surrounding environment, namely retained sky views which have liturgical and functional importance, are an important part of its significance. That these were recognised by the original community who used the synagogue is perhaps made evident by the synagogue's name, 'the Gate of Heaven', which could be taken symbolically to gesture towards the relationship between the building

and the sky above The importance of this sky view for the practising community today is paramount, because the courtyard is a space of arrival, prayer and community gatherings. While the synagogue's setting has been negatively impacted by the construction of towers to its south and west, it still retains a sense of open-ness, in large part because these towers are set back from the site and do not dominate its setting.

The synagogue's setting, then, is defined by both its physical relationship to its historic courtyard and immediate surrounding low-rise buildings, but also by its relationship to its broader environment which includes elements of the natural environment experienced by the viewer and worshipper on site, including the sky views and natural light.

It should be noted that the draft City of London Local Plan 2040, currently under inspection, has attempted to define the 'immediate setting' of Bevis Marks synagogue in a policy map (figure 27). The synagogue's 'immediate setting' is referenced in Strategic Policy S21: City Cluster and Policy HE1:Managing Change in the Historic Environment. The Plan identifies solely the blocks immediately abutting the synagogue's courtyard as the 'immediate setting' of the building (thereby excluding Bury House and the sites of other towers to the south of the Synagogue). This assessment has already been challenged by Historic England as well as the synagogue and it is important to note that the wider setting, not just the buildings abutting a listed building, is considered part of the setting of a building as assessed in policy.[20]

In summary, the building is of **exceptional national significance**, significance which is derived from **architectural and historical interest, communal value** and **the building's setting.**

20 Historic England's comments on the 'immediate setting' proposal contained in HE1 and S21 are in LD8 Consultation Statement Appendix 9 (https://www.cityoflondon.gov.uk/assets/Services-Environment/LD8-Appendix-9-City-Plan-2040-Regulation-19-Consultation-Responses.xlsx).

4.0 Bury Street Proposals

The proposals contained within application 24/00021/FULEIA cover the site of Bury House, Holland House and Renown House, located between Bury Street to the west, Bury Street to the south, Creechurch Lane to the east and Valiant House to the north. The proposals, designed by Stiff + Trevillion, seek to demolish Bury House, a post-war office building, and replace it with a new tall building which would consist of 4 basement levels, ground floor and 43 storeys. It is proposed that the new tall building which would have facades comprised of rows of rectangular windows and be clad in terracotta tiles between the PPC glazed windows. The site of the new tall buildings is about 25 metres to the south of Bevis Marks Synagogue.

The proposals also seek to make alterations to Holland House and Renown House which involve partial demolition and the construction of extensions. For the Grade II*-listed Holland House, which is also subject to a listed building consent application (24/00011/LBC), it is proposed to *inter alia* add a four-storey extension. This restoration includes the 'removal and reinstatement of external faience', reopening a historic entrance on Bury and, in part, also refers to internal demolition which is proposed of features identified as later alterations, as well as the removal of other modern interventions. Demolition to facilitate interconnection between the three buildings is also proposed as well as other internal alterations. A three-storey extension is proposed for Renown House which is an unlisted historic building.

The project's Design and Access Statement summarises the benefits proposed by this scheme. These include: the provision of a floor of affordable workspace in Holland House, the creation of routes including the extension of Heneage Lane, creation of further active frontage, and new public space, and heritage benefits which entail the repair and restoration of Holland House and the unlisted Renown House. The DAS additionally highlights the sustainability, biodiversity, delivery and transportation, SME and economic provisions of the project.

5.0 Impact of the Bury Street proposals on the significance of Bevis Marks Synagogue, its setting and the Creechurch Conservation Area

5.1 Impact of the Proposals on the Significance of Bevis Marks Synagogue

The proposed scheme for the construction of a 43-storey tall building on Bury Street would have an adverse impact on the significance, including setting, of the Bevis Marks Synagogue.

Several grounds for heritage objections to the scheme have been raised by Historic England and other statutory bodies and other objectors. The report produced by Alex Forshaw and appended to HGH's objection letter outlines the impact of the scheme on the setting and significance of various designated and non-designated heritage assets, including, notably the Grade II*-listed Holland House to which proposed extensions would cause harm. We concur that the proposals for a 4-storey extension to Holland House would create harm to its significance because of the considerable extent of the proposed roof extension set above the building's fine street frontage.

This report deals primarily with the impact on the setting of Bevis Marks Synagogue and how this impact would affect the significance of Bevis Marks Synagogue.

As identified in section 3, the synagogue's significance lies in its exceptional historic and architectural special interest as the first purpose-built synagogue in Britain and one which is largely still intact and thus reflects the historic worship practices of the Congregation, in its continued use by the community and in its setting which was central to the functional and liturgical uses of the building historically and in the present day. As we identified in section 3, in accordance with the NPPG, the setting of the synagogue is not formed solely by the buildings immediately abutting its courtyard, but rather encompasses a wider environment which includes the light conditions and views to the sky and the moon, currently present on the site. The HTVIA provided by the applicant incorrectly identifies the setting as limited to the courtyard, writing that *'the contribution that setting makes to the heritage significance of Bevis Marks Synagogue is very localized, and the wider setting, beyond Heneage Lane and the courtyard, where the Site lies, does not contribute to this significance.'* This assessment does not take into account all available information about how the setting relates to the building's use and significance.

Indeed, the assessment of the setting provided in the refusal of the previous application for a tall building on the site –which was not substantially different to the current proposal –acknowledged that the building's setting is wider than the immediate courtyard. The refusal letter states:

1. *The development would adversely affect the setting of the Grade I listed Bevis Marks Synagogue and its setting and amenities by reason of the overbearing and overshadowing impact of the development on the courtyard of the Synagogue*.

In the case of this application, the proposed benefits did not outweigh the public benefits of the proposals and thus ran contract to Local Plan and London Plan policies. So, it has been previously acknowledged that the setting contributes to the significance of the building, as we have also found in this report.

The proposed scheme would impact on the historic and architectural significance of the synagogue, its setting and its use, principally through overshadowing. The new tall building would:

1. Impact the setting of the synagogue which was historically characterised as open to the sky, a characteristic which has survived, albeit in slightly lesser form due to some new, taller buildings in the vicinity, to the present day. The openness to the sky is important to the courtyard as it communicates that it was intended to be a space of worship, particularly in relation to the moon (and would therefore be harmed by the tall building blocking views of the moon), and a space for communal gatherings which would be compromised by the additional overlooking and the overbearing character of a very tall building in close proximity;
2. Provide a new backdrop to the synagogue and harm its architectural interest, as tall building would be very close and out of scale to the buildings fronting the courtyard and the synagogue itself, as the synagogue was intended to be dominant in its setting, responding to Jewish religious law;
3. Impact the provision of natural light and views to the sky from inside the synagogue which may compromise the continued use of the synagogue by its community and would reduce the building's functionality by reducing the usable space.

These amount, cumulatively, to serious harm to the heritage asset's significance.

National legislation and policy impose duties upon local planning authorities to consider the impacts of proposals upon listed buildings and conservation areas.

The Planning (Listed Buildings and Conservation Areas) Act 1990 is the legislative basis for decision making on applications that relate to the historic environment. Section 66 of the Act imposes a statutory duty upon local planning authorities to consider the impact of proposals upon listed buildings and their settings. It states that:

> *In considering whether to grant permission for development which affects a listed building or its setting, the local planning authority, or as the case may be the Secretary of State shall have special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses.*

The National Planning Policy Framework (NPPF) (December 2023) sets out the Government's planning policies for England and how these are expected to be applied. The NPPF requires that, with regards to the significance of a heritage asset:

> *201. Local planning authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affecting the setting of a heritage asset) taking account of the available evidence and any necessary expertise. They should take this into account when considering the impact of a proposal on a heritage asset, to avoid or minimise any conflict between the heritage asset's conservation and any aspect of the proposal.*

Local planning authorities are required to take into account '*the desirability of sustaining and enhancing the significance of heritage assets and putting them to viable uses consistent with their conservation*' (paragraph 203) in determining applications. Should a proposal cause harm to the significance of a designated heritage asset, the Local Planning Authority is required to give '*great weight*' to '*the asset's conservation (and the more important the asset, the greater the weight should be)*' (paragraph 205). The NPPF continues to note that harm to a designated heritage asset must be justified:

> '*Any harm to, or loss of, the significance of a designated heritage asset (from its alteration or destruction, or from development within its setting), should require clear and convincing justification.*' (paragraph 206).

So, national legislation and policy requires that decision makers consider the impact of proposals on the significance of surrounding heritage assets; it is evident that the impact of the Bury Street proposals on the Grade I-listed Bevis Marks Synagogue's architectural and historic significance through the impacts on its setting, therefore, must be considered fully by the City of London Corporation and inform the determination of the application.

There is genuine concern amongst the community that uses Bevis Marks Synagogue that the harm to the setting and interior of the synagogue that would be caused by the approval of this tall building could lead to the synagogue no longer being a suitable and functional space of worship, as certain rituals could not be performed, such as the prayer said to the waxing moon, and as parts of the interior would be plunged into darkness, making difficult or even preventing their use by the Congregation. Were the Congregation to leave the synagogue, this would impact greatly the significance of the structure, which, as we have discussed above, is closely tied to its status as the oldest purpose-built synagogue in the UK and its continued use by the Sephardi community. In turn, the long term conservation of the building would be put at risk. These are impacts to the listed building that the City Corporation should also take into consideration when determining this application.

As discussed above, legislation and national policy requires that Local Planning Authorities take into consideration the impact of proposals on the significance and setting of heritage assets. Local and Neighbourhood Plans are the means through which Local Planning Authorities articulate how they will apply national policy to local situations and refine the requirements put in place by central government. Section 38(6) of the Planning and Compulsory Purchase Act 2004 requires planning applications to be determined in accordance with the development plan, unless material considerations indicate otherwise. The London Plan (March 2021) and City of London Local Plan (January 2015) have policies which are relevant to the issues at hand.

The London Plan's Policy HC1 Heritage conservation and growth requires that

> '*(C) Development proposals affecting heritage assets, and their settings, should conserve their significance, by being sympathetic to the assets' significance and appreciation within their surroundings. The cumulative impacts of incremental change from development on heritage assets and their settings should also be actively managed. Development proposals should avoid harm and identify enhancement opportunities by integrating heritage considerations early on in the design process'.*

Also relevant to the proposals is the London Plan's Policy D9 Tall buildings which states that

> '*(d) proposals [for tall buildings] should take account of, and avoid harm to, the significance of London's heritage assets and their settings. Proposals resulting in harm will require clear and convincing justification, demonstrating that alternatives have been explored and that there are clear public benefits that outweigh that harm. The buildings should positively contribute to the character of the area.*

The City of London's Plan (January 2015) similarly protects the setting and significance of heritage assets.
Core Strategy Policy CS12: Historic Environment states the need

> '*to conserve or enhance the significance of the City's heritage assets and their settings and provide an attractive environment for the City's communities and visitors, by:*
>
> 1. *Safeguarding the City's listed buildings and their settings, while allowing appropriate adaptation and new uses [..]'*

Policy DM 12.1 relates to the need to manage change affecting all heritage assets and spaces and states the desire

1. *To sustain and enhance heritage assets, their settings and significance.*
2. *Development proposals [..] that have an effect upon heritage assets, including their settings, should be accompanied by supporting information to assess and evaluate the significance of heritage assets and the degree of impact caused by the development [..].*
3. *[..]*
4. *Development will be required to respect the significance, character, scale and amenities of surrounding heritage assets and spaces and their settings.'*

It is essential, then, that the decision makers, in line with national and local policies, evaluate the impact that the proposals for the tall building on Bury Street would have on the setting and, in turn, the significance of Bevis Marks Synagogue.

Based on our analysis, we believe that these proposals would cause serious harm to the Grade I listed heritage asset, and therefore, require that the harm be outweighed by the public benefits put forward by the scheme. The public benefits of the scheme, however, in our view fall short of outweighing the serious harm to the synagogue.

Following the NPPF, 'great weight' must be given to the conservation of the Grade I listed building. These proposals would fail to do so. Instead, they would adversely impact the setting and its contribution to the significance of the synagogue, and cause harm the architectural and historical interest of the building, and thus the proposals, as they stand, threaten the building's conservation.

5.2 Impact of the Proposals on the Creechurch Conservation Area

The proposed development would also impact the character and appearance of the Creechurch Conservation Area which was designated in 2024. The Conservation Area Character Summary and Management Strategy is currently under preparation by the City Corporation.[21]

The area is characterised by predominantly mid-rise buildings and is dominated by historic buildings and street patterns; the Creechurch Conservation Area Proposal identifies, in particular, the late nineteenth century warehouses on Creechurch Lane and Mitre Street, the Edwardian Aldgate School, the three religious buildings (most importantly Bevis Marks Synagogue) and several open spaces as defining the area's character and appearance, which is also notable for its association with the history of Jewish communities in Britain.

The legislation and policy discussed above also have requirements for the decision makers when dealing with development within conservation areas.

Section 72(I) of the Planning (Listed Buildings and Conservation Areas) Act 1990 states that:

> *[..] with respect to any buildings or other land in a conservation area, special attention shall be paid to the desirability of preserving or enhancing the character or appearance of a conservation area.*

A Conservation Area constitutes a designated heritage asset in its own right and therefore the policies discussed above in the NPPF are also relevant here and the Local Planning Authority must give '*great weight*' to '*the asset's conservation*'.

However, the NPPF does also state in paragraph 213 that:

> *Not all elements of a Conservation Area or World Heritage Site will necessarily contribute to its significance. Loss of a building (or other element) which makes a positive contribution to the significance of the Conservation Area or World Heritage Site should be treated either as substantial harm under paragraph 207 or less than substantial harm under paragraph 208, as appropriate, taking into account the relative significance of the element affected and its contribution to the significance of the Conservation Area or World Heritage Site as a whole.*

Hence the loss of Bury House, which does not contribute to the Conservation Area, is not in itself problematic. However, the impact of the replacement building is.

---

21 Creechurch Conservation Area - City of London

The City of London Local Plan (January 2015) states in Policy DM 12.2 Development in conservation areas that *'1. Development in conservation areas will only be permitted if it preserves and enhances the character or appearance of the conservation area.'*

In Core Strategic Policy CS14: Tall Buildings the conditions in which a tall building will be acceptable or unacceptable are stated:

> '*To allow tall buildings of world class architecture and sustainable and accessible design in suitable locations and to ensure that they take full account of the character of their surroundings, enhancing the skyline and provide a high quality public realm at ground level, by:*
>
> 1. *Permitting tall buildings on suitable sites within the City's Eastern Cluster.*
> 2. *Refusing planning permission for tall buildings within inappropriate areas, comprising: conservation areas; the St. Paul's Heights area; St. Paul's protected vista viewing corridors; and monument views and setting, as defined on the Policies Map.*
> 3. *Elsewhere in the City, planning proposals for tall buildings only on those sites which are considered suitable having regard to: the potential effect on the City skyline; the character and amenity of their surroundings, including the relationship with existing tall buildings; the significance of the heritage assets and their settings; and the effect on historic skyline features.*'

While the site of Bury House is located within the City's Eastern Cluster, the site is clearly not a 'suitable' one due to its proximity to Bevis Marks Synagogue and the impact of the proposals on its setting and significance. Moreover, the policy explicitly states that planning permission will be refused in conservation areas making this a doubly inappropriate site for the construction of a tall building.

The draft City Plan 2040 is being prepared for examination by the Planning Inspector on behalf of the Secretary of State. The Draft Plan's Strategic Policy S12: Tall Buildings removes the presumption of refusal for tall buildings in Conservation Areas, though there remains the requirement that *'8. Tall buildings must have regard to: [..] c. the significance of heritage assets and their immediate and wider settings.'* This policy remains in draft and has attracted significant objection from inter alia Historic England. Therefore, the current Plan's policy against tall buildings in conservation areas must be followed, which would require this application to be refused. However, even if one applied the draft policy to which little weight can be attached at present, it seems evident that the proposed building does not have due regard to the significance of the Grade I listed Bevis Marks Synagogue.

5.3 Conclusion

In summary, we find the proposals for the construction of a 43-storey tall building to replace Bury House cause serious harm to the exceptional special interest of the Grade I-listed Bevis Marks Synagogue. The NPPF requires that 'great weight' is given by decision makers to the conservation of the Grade I listed building, and that schemes that would cause harm to such a structure could only be granted consent in the situation in which clear and convincing justification has been provided, and where public benefits outweigh such harm. In the case of the impact on the synagogue, the heritage harm is serious, and would affect both the immediate and long term functioning of the synagogue, and may compromise the future use of the building which is an important part of its significance. The proposals do not show evidence of having given great weight to the conservation of the significance of Bevis Marks, nor do they appear justified, or outweighed by public benefits, and therefore do not apparently accord with the heritage policies set down in the NPPF, nor those in the local plan which in its current iteration does not allow for tall buildings in conservation areas. These concerns are also set out in Historic England's response to the current application, and mirrored in many objections to the scheme.

It is our professional view that the proposals fall short of the national and local policy requirements for designated heritage assets.

BEVIS MARKS EC3 1. 5002 (South Side) Synagogue (Formerly listed as Synagogue of Spanish and Portuguese Jews, No 4 Heneage Lane)

TQ 3381 SW 11/363 4.1.50.
I
2. 1701. Plain, rectangular building of red brick with modest dressings of Portland stone. 2 tiers of windows, segmentally arched below and round-arched above, with semi-elliptical heads to larger, central openings in east and west elevations. Simple cornice and parapet. West doorway with segmental pediment on consoles and lamp on decorative iron bracket. Plain interior with gallery supported on Doric columns to 3 sides. Ceiling altered apparently in C19. Fittings remarkably complete and little altered from original arrangement, some being older than present building. They include wainscot, benches, railings, very finely carved echal or reredos, and 7 large brass chandeliers. This was the 2nd synagogue erected in England after the resettlement of 1656 and in its little altered state is of exceptional historic interest.

Chapter 1 - Introduction: Harm and Significance

One of the the most important elements of the significance of Bevis Marks Synagogue is the interplay between the historic building, its setting, and the community who have always worshiped there. However, the setting of the synagogue, its architectural purity, and the ability of its community to continue to use it for worship are at risk due to tall development to its south, notably at 31 Bury St.

As the original custodians of Bevis Marks Synagogue, we hope this paper will sufficiently explain elements of the synagogue's significance that are at risk due to developments that infringe on its remaining southern sky-view. It is our contention that this space must be protected at all costs to ensure the continuing significance, including functioning, of Bevis Marks Synagogue. In this sense, this is an existential matter both for the synagogue's future wellbeing, and for the Jewish community's continuing presence in the City of London, a place they have called home since the Resettlement of Anglo-Jewry began in 1656.

A. Significant Harm to Bevis Marks Synagogue

Grade-1 Listed Bevis Marks Synagogue is the UK's most historically-important synagogue. This is rooted in the synagogue's history, architecture, communal value, and religious traditions.

These elements of its significance, however, are at grave risk due to a planning application to construct of 43-story tower at the site of 31 Bury St, just to the synagogue's south.

The proposed tower will cause harm to the synagogue's:

1. Original architectural intent, which is its physical prominence over its setting. This prominence is important architecturally, historically, and religiously.
2. Religiously important sky views.
3. Interior light levels necessary for prayer.
4. The purposeful functioning of the synagogue's architecturally significant windows.
5. The amenity of the communally important courtyard.
6. The meaning of the synagogue's name.
7. The economic viability of the site.

These harms will be explained to in detail in the pages that follow. As Bevis Marks Synagogue is a site of such national and international significance, it is wholly unacceptable to cause this extent of harm to it. It breaches local and national planing policies, and inflicts particular harm to the country's Jewish community who relate to the synagogue much as the Church of England does to St Pauls' Cathedral.

B. The Synagogue's Unparalleled Significance

Bevis Marks Synagogue is the most historically significant synagogue in the United Kingdom. It was the first purpose-built synagogue constructed in England after Jews were readmitted to the country by Oliver Cromwell in 1656. Even until today, it is the only non-Christian house of worship in the City of London, and it existence represents both the City's and the country's history of religious tolerance.

The construction of Bevis Marks Synagogue began in 1699 in the years following the Great Fire of London. It was built in the style of Sir Christopher Wren and blends both Jewish and English architectural motifs. The synagogue was completed in 1701, before St Paul's Cathedral, making it one of the country's most-important houses of worship. It is a Grade-1 Listed building.

Bevis Marks Synagogue is also one of the most important synagogues in the world. Bevis Marks Synagogue is the world's only synagogue to have maintained regular worship dating back to its opening in 1701. Its congregation is comprised of descendants of families who have worship there throughout its centuries of existence. Bevis Marks Synagogue therefore is world Jewry's last remaining unbroken link to the pre-modern era.

This continuity has also allowed the synagogue's congregation to maintain its unique religious heritage and traditions, one of the last vestiges of Spanish & Portuguese Jewry. Furthermore, it's ritual is a blend of ancient Iberian Jewish traditions and English culture, making its intangible heritage of extreme significance to both Judaism and Britain.

C. This Report

A thorough understanding of a heritage-asset's significance is essential for planning authorities to make decisions that might harm said asset. Each heritage site's significance is unique to its particular history, location, function, etc. There are various contributing factors that include heritage, cultural understanding, function, and viability.

This becomes even more crucial when considering potential harm to a listed building, particularly one which is Grade-1 Listed. In such instances substantial harm should be wholly unacceptable, and where less than substantial harm would be caused, it must be outweighed by public benefits of equal significance. These are high bars to overcome.

Of particular concern is 31 Bury St, where a 43-storey tower is proposed. This site sits just twenty-five meters to the synagogue's south. In Historic England's objection letter to this scheme, they consider the harm that would result to the synagogue on account of its: 'intangible associations with its surroundings', 'patterns of use', and 'intentional intervisibility with other historic and natural features'.

This concern has already been confirmed by the City of London's Planning Committee in their decision in 2022 to refuse permission to a scheme on the same site of similar scale. This position is reinforced by the planning inspectors determination to refuse the Tulip proposal (to the synagogue's west) on account of the harm it would cause to the setting of the synagogue.

It is our understanding that Historic England offered to conduct a study in cooperation with the City of London to explore the contributors to the synagogue's significance, but that this offered was not accepted. The following work therefore documents the significant harm that overshadowing from 31 Bury St would cause to the synagogue's significance. This is rooted in an understanding of the unique history, religious meaning, architecture, and use of the site.

This work considers sources that may be unfamiliar to planing officers due to their unfamiliarity with Jewish texts, and records associated with Bevis Marks Synagogue. It is our hope that officers will see this as an opportunity to become better acquainted with wider range of materials than they've previously encountered, and as such will find themselves better acquainted with the significance of Bevis Marks Synagogue, and therefore why infringement to its remaining sky-view is wholly unacceptable in planning terms.

Chapter 2: Important Sources

In order to understand the significance of Bevis Marks Synagogue, it is essential to be familiar with both Jewish religious traditions and sources, as well as the collections of Bevis Marks Synagogue. On account of barriers associated with cultural understanding, language, and accessibility, many of these materials will be largely inaccessible to to those outside of the Jewish community, and indeed outside of the Bevis Marks Synagogue community. The following paragraphs therefore set out a brief introduction to them.

A. Religious Law

The primary text of Jewish law is the Hebrew Bible, though more specifically the Pentateuch (Five Books of Moses). This is often referred to as the Written Law. This distinguished it from what is otherwise called the Oral Law, which are Jewish religious traditions found in later Jewish works, in particular in the massive work called the Talmud (Babylonia, 6th century). The Talmud includes interpretations of the Biblical word, as well as additional rabbinical traditions, that together comprise the form that Judaism takes in its post-Biblical era.

In medieval times, additional Jewish communities took root outside of the Middle East, in particular in Spain and in France. These became known as Sephardi and Ashkenazi, respectively, and while largely the same, each community evolved in somewhat different ways religiously and culturally. For Sephardi Jews, the primary religiously legal work that outlines and directs their traditions is the *Shulhan Arukh* (R Yosef Karo, 16th century).

Beyond these sources, more localised traditions evolved following the Spanish Inquisition, particularly amongst those Sephardi Jews who remained in the West (the Atlantic), and those who settled in the former Ottoman Empire. The Western Sephardi Jews were known for their acculturation and rational Judaism, and those in the east for their religious mysticism.

The Western Sephardi Jews are otherwise known as the Spanish & Portuguese Jews, and are those who re-established London's Jewish community in 1656. They then opened Bevis Marks Synagogue in 1701, England's first purpose-built synagogue since Jews were expelled in 1290 by King Edward I.

B. Communal Records

The community at Bevis Marks Synagogue kept detailed records of their activities. As the only Jewish community, the 'synagogue' oversaw all of the the needs of its community. Their records therefore include minutes from all of this various activities which includes education, health, charity, and worship. These records are housed in the Metropolitan Archives and can be accessed with permission from the Spanish & Portuguese Jewish community.

The archives at large (kept in several other locations) also include historic photographs, prints and paintings, as well as religious objects produced by skilled craftsman, including Huguenot silver and fabric makers, and other archival materials.

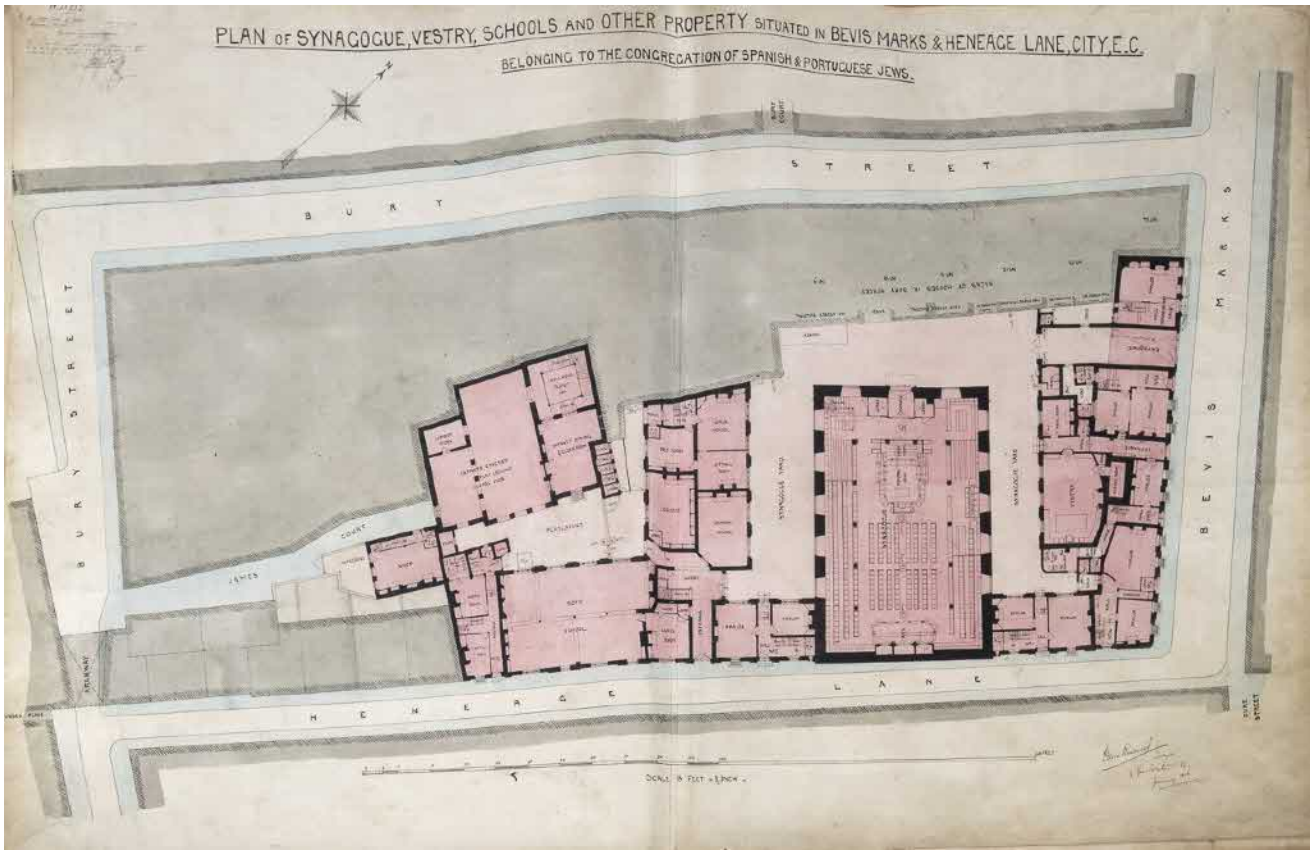
Recordings of the synagogue's musical traditions have also been made and are freely available on its website. This is an incredibly important element in the community's intangible heritage, which is preserved and maintained at Bevis Marks Synagogue.

Of course, the most important element of the collection, is Bevis Marks Synagogue itself, which, together with its setting, remains largely as it was when it was opened in 1701.

Taken together, the collection makes up one of the most intact and important community Judaica collections in the world. The collections are vast. Those who study them are always discovering new materials and insights into the history, functioning and nature of this important community.

However, what makes the collection most remarkable is the living nature of it. That is to say, the interplay between the tangible and intangible heritage in a living historic community, that has remained active in its synagogue, in the City of London, for over three centuries. If any one element of this interplay is lost, then the collection in its entirety decreases in its value and significance.

Chapter 3: Brief Introduction to the Bevis Marks Synagogue and Community:



As stated abouve, one of the the most important elements of significance to Bevis Marks Synagogue is the interplay between the historic building, its setting, and the community who has always worshiped there.The setting of the synagogue, its architectural purity, and the ability of its community to continue to use it for worship are therefore key to understanding the synagogue's significance. This sections lays out a brief history of the synagogue itself and its community.

A. The Synagogue Site

Bevis Marks Synagogue was built by Spanish & Portuguese Jews, who first settled in London in the 1650s. The community was fleeing persecution in Spain and Portuguese due to the Inquisitions that had been established there in the preceding centuries. In London they found safety and the freedom to worship openly. They first worshiped in makeshift conditions in a converted synagogue in Creechurch lane, opened in 1657. As the community grew, they sought to construct a purpose-built synagogue on Bevis Marks. To this end they initially leased the land called Plough Yard, and later in the 1700s successfully purchased it outright.

Bevis Marks Synagogue was built from 1699-1701. It is the oldest synagogue in the UK, the only non-Christian house of worship in the City of London, and likely the only synagogue in Europe, or the world, in regular use dating back to its opening in the early eighteenth century. The synagogue was constructed by master builder Joseph Avis, likely according to the design of a Mr. Ransy produced in the years before the synagogue was built.

The synagogue was situated prominently in a courtyard and surrounded by a series of low-rise communal buildings, including schools, housing, offices, ritual baths, and a kosher shop. Through these, the community maintained numerous charitable organisations, including alms houses, medical facilities, and burial facilities on Mile End Road. The community continues to maintain many of these institutions, though their locations have moved across London. Some of the site was redeveloped in the late nineteenth century, though the contours of the site remain largely the same as they were in 1701, with the synagogue dominating its setting.

B. The Community Over Time

Over the centuries many important English Jews have attended Bevis Marks Synagogue, including Prime Minister Benjamin Disraeli, Philanthropist Sir Moses Montefiore, and national boxing champion Daniel Mendoza. Members of the community fought for Britain in the World Wars, including the first Jew to be awarded the Victoria Cross, Frank de Pass. Over sixty members of the community lost their lives fighting for Britain and their names appear on the synagogue's outer wall next to its main doorway. Bevis Marks Synagogue is widely considered the 'Cathedral Synagogue' of British Jewry, akin to St Paul's Cathedral for the Church of England.

The synagogue continues to function as regular place of Jewish worship, in line with its original traditions, and is populated with descendants of those who worshipped there when the synagogue was first opened in 1701. This community is augmented by other Jews living in Central London, City workers, students and visitors to London. The synagogue is also used for weddings, Bar and Bat Mitzvahs, Livery instillation services, national Jewish commemorations, major guest speakers, and other similar events.

Over the past number of years the synagogue has been constructing a new visitor centre with support from the NLHF. Due to this disruption the synagogue has been forced to scale back some of its services that were in place pre-covid. It continues to be open for some weekday services, and for all Sabbaths and Festivals. It is the intent of the community to resume full services with the opening of it centre in May 2025. The visitor centre hopes to welcome over 25k visitors each year, with weekday mornings dedicated to school groups from across the country and local area coming to learn about Judaism.

Chapter 4: Massing and Scale: The Synagogue's Setting

It is clear from a variety of sources that Bevis Marks Synagogue was constructed to dominate its setting. For those coming to it, the scale of the synagogue would have dominated amongst its surrounding. The following section sets out an understanding of the synagogue in relation to the area around it, and why further massing, particularly set behind it from the viewpoint of the courtyard entry area, would undermine this historic and religious setting.

This perspective was confirmed by the last planning decision in 2022 that ruled that a tall building at 31 Bury St was inappropriate on account of its overbearing nature on the Bevis Marks Synagogue. This goes beyond the notion of the juxtaposition of new and old, but particularly the experience of Bevis Marks Synagogue as viewed from within the synagogue courtyard.

Indeed, the Tulip inspection confirmed this notion by stating that every additional visible tall building further erodes the historic character of the courtyard setting. This is surely the case, when considering a tall building that would constitute the backdrop to the 1701 synagogue, and as such its massing would cause a grievous harm to the synagogue's protected setting which is necessary for understanding its historic, architectural and religious value. As such it would cause significant harm to its significance.

A. Historic Setting: Secluded Courtyard

Bevis Marks Synagogue is set in a courtyard. According to historians from the past century, this was for the purpose of secluding it from view on account of persistent anti-Jewish sentiment that had remained despite the Jewish community having already been established in the City of London for over four decades. According to some, there may have even been a regulation that required the synagogue be hidden from view off the main street.

More recently, some have suggested that placing the synagogue in a courtyard may have been reflective of the synagogue's prominence, as a way of giving it breathing room and removing it from the clatter and mess of the thoroughfare. Indeed, originally the synagogue courtyard was likely closed off with a solid wooden door, though since the nineteenth century this was been an iron gate permitting glimpses of the synagogue inside.

Whilst public buildings surround the courtyard, they are largely out of view as one enters the courtyard, thus maintaining this historic sense of seclusion. This historic experience can only be maintained by keeping the synagogue's backdrop clear of any overbearing intrusion, a context that would be lost should 31 Bury St be granted approval. There is an important difference between a secluded and an oppressive setting.

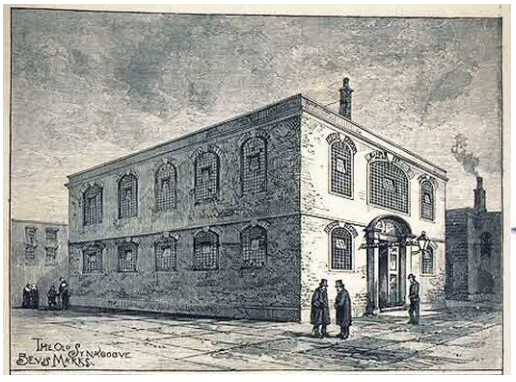
B. Religious Intent

According to Jewish religious tradition, a synagogue is meant to be the tallest building in an area. This is codified in Shulhan Arukh chapter 150 (OH). The chapter heading is 'The Building of a Synagogue and that it Should be Tall'. Below you can see the regulations requiring that the synagogue maintains this prominent position, even to the point of restricting heights of buildings constructed afterwards.

150:2 - The synagogue must be built at the height of the city, and it should be raised until it is taller than the usable parts of all other buildings,

150: 3 - If someone built/raised his house higher than the synagogue, some say that we force him to lower it.

The objective of these rulings are to ensure that the synagogue, and what it represents remains prominent amongst those coming to worship. Erosion to this sense of scale, erodes both the religious values that the synagogue's physical prominence represents, and its historic setting.



While no renderings have been found of the road Bevis Marks, a drawing from 1890 shows that at least in relation to the buildings next to the synagogue, the synagogue rose in view above them. At the very least, this sense of prominence would have been felt from within the courtyard setting, with no other buildings in view rising around it. It is this sense of scale, that must be preserved to maintain this important religious sense of prominence of Bevis Marks Synagogue mandated by Jewish tradition.

C. Architectural Intent

Beyond this, the synagogue's prominence on the urban landscape, at least from within the courtyard itself, was architecturally part of the original intent of its construction. The plan for Bevis Marks Synagogue was being crafted already in the 1690s. This took place following the Glorious Revolution when William of Orange came to the throne of England in 1688. The led to an increase in migration from the Netherlands and the Sephardi community located there. Amsterdam's Portuguese Jews had themselves completed construction of a new synagogue just a few years before in 1675.

The Amsterdam synagogue largely followed the model constructed by Rabbi Jacob Judah Leon. Leon was more widely known as Templo on account of a plan he drew of Solomon's Temple. It caused a stir and was even exhibited to King Charles II of England.The model placed the ancient Temple in a courtyard surrounded by ancillary buildings, with the Temple sitting prominently in the middle. This model was followed in the Amsterdam synagogue, as the contemporary synagogue in Jewish thought is considered a miniature of of the ancient Temple.

Bevis Marks Synagogue, constructed shortly afterwards, largely followed this paradigm, setting the synagogue in a courtyard, with prominence in relation to the buildings in view all around it. This prominence was not achieved in the manner of church spires, but through the massing of the synagogue itself in contrast to the buildings in view around it. This prominence is only maintained by ensuring its scale continues to dominated its surroundings, by carefully managing visible growth around it.

Chapter 5: The Sky View in the Synagogue's Setting

The protection of the synagogue's clear sky-view backdrop helps ensure the synagogue retains its historically important prominence as experienced from within the synagogue courtyard. The framing of the synagogue with the sky is what ensures this. However, beyond this, the sky view itself is intrinsic to the understanding of the synagogue and its use.

A. The Synagogue Name

The synagogue is commonly known as Bevis Marks on account of its location on this street. However, the synagogue's actual name is *Sha'ar Hashamayim*. This is Hebrew for 'The Gate of Heaven/Sky'. The origin of this term for a synagogue is in Genesis and the dream of Jacob and the ladder, where he views angels ascending and descending. Upon waking, Jacob exclaimed, 'How awesome is this place! This is none other than the house of God, and this is the gate of heaven' (Gen 28:17). According to Jewish tradition this location was Temple Mount in Jerusalem, hence the connection between House of God and Gate of Heaven.

In Hebrew the word *Shamayim* means both heaven and sky (as in the first verse in Genesis). This is rooted in a religious perspective that relates to heaven as it does to sky, hence the common looking upward to the sky when referring to God or heaven. As such, the sky backdrop is essential to understand the very essence of the synagogue congregation 'The Gate of Heaven/Sky' with its name etched in Hebrew above the synagogue gate and door.

The erosion of this sky view, in such a central location, set immediately behind the synagogue, that would result from 31 Bury St, should therefore be considered a significant harm to the synagogue's significance, and as such should be avoided.

B. *The Synagogue Emblem*

Beginning in the seventeenth century London's Sephardi community annually presented the Lord Mayor with a silver gift. While the exact design of this gift evolved over time, it always included the depiction of a Biblical scene, that of a sentry standing outside the Biblical Tabernacle/Meeting Tent, set in nature. The scene includes clouds and a tree..

The emblem was the official seal of the congregation, and was used on synagogue stamps, and on other communal objects. In these smaller objects the scene was reduced in size, making the original version important for understanding its full meaning.

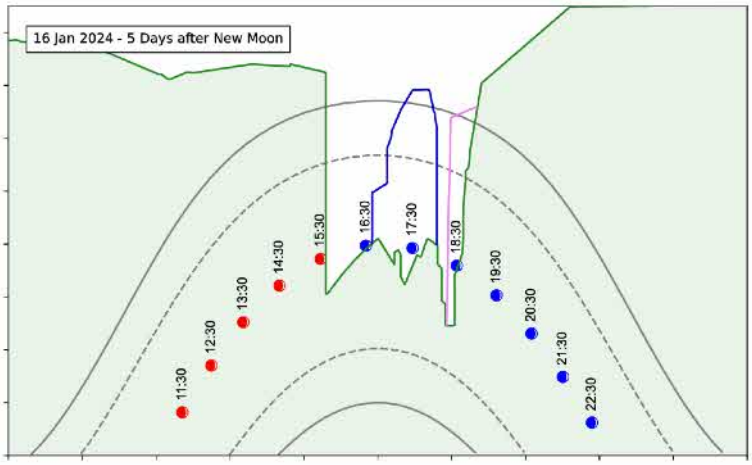
The Tabernacle traveled with the Israelites as they encamped in the desert for forty years between their exodus from Egypt and eventual arrival in the Holy Land. It continued to serve as the central place of worship until ancient Israel constructed their permeant Temple in Jerusalem. As stated above, the modern-day synagogue is considered a miniature version of these earlier national temples.

That the community chose to illustrate the ancient Tabernacle with a demonstrable sky-setting, and then adopt it as their community's emblem, reinforces the degree to which the sky view is an intrinsic element of the synagogue's significance. Indeed, in the community emblem, the Hebrew name of the congregation 'Gate of Heaven/Sky' is written around it.

C. Religious Worship

The Sky view is also integral to Jewish religious worship. Each month members of the Jewish community go outside during the waxing moon. Upon viewing the moon in the night sky, a prayer is recited (*Kiddush Levana*). It is a prayer for renewal that relates to the moon's renewal during this phase of the moonscape.The prayer is typically said after the evening service, outside of the synagogue, as is both common today and as is depicted in historic drawings of the ritual from the time when the synagogue was constructed.

The synagogue has produced an extensive study of this ritual in the community's history and the negative impact that would be caused by tall buildings to the synagogue's south. These conclusions largely match those of BRE's independent review of GIA's report. However, in brief we will restate several points here.



The prayer can only be recited on certain days of the month, and should 31 Bury St be permitted, it would obstruct these views entirely during several months of the year, and significantly reduce them in the remaining months. As such it would cause significant harm to the worship of this ancient Jewish community.

D. Religious Meaning

The use of the synagogue for Jewish worship is intrinsic to its significance. Part of that ritual requires views of the sky, and therefore any obstruction of this view must be considered a significant harm to the synagogue's significance.

Beyond this, views of the sky are important religiously and culturally in Judaism. Traditionally Jews observe the appearance of stars in in the night sky to determine the conclusion of the Sabbath, and the position of the sun in the daytime sky to determine the times for prayer.

Construction of a large tower to the synagogue's south would largely block-out these culturally important views, as the celestial bodies cross the sky along the southern horizon.

1695 Amsterdam Haggadah

Chapter 6: Courtyard Viability: At Risk

The courtyard at Bevis Marks Synagogue plays an important role in both the community's religious and communal activities, and for the synagogue's new heritage centre and cafe. The community at Bevis Marks Synagogue make regular use of the synagogue's courtyard for celebrations and gatherings. Furthermore, the courtyard will function as an important feature on the synagogue's new NLHF supported Heritage Centre, as both a key point for interpretation, and as a setting for its cafe.

The amenity of this space is therefore of utmost importance for the continued vitality and economic viability of this historic community. While it is difficult to quantify amenity, clearly the courtyard is a more enjoyable space with open sky, and without imposing and oppressive buildings overbearing and overshadowing the site. The degradation of the site that would be caused by the proposed tower is therefore both wholly inappropriate, and against planning policy that protects the viability of heritage assets. This negative impact should therefore be avoided.

A. Communal Use and Value

The courtyard at Bevis Marks Synagogue serves several different functions beyond just an access point for the synagogue and as the key location for appreciating the synagogue in its historic settings. The courtyard is also where the community gathers on regular occasion throughout the year.

The courtyard is often used by the worshiping community as a place to hold outdoor receptions following services, whether on a regular Sabbath, or on occasions when the congregation is celebrating a Bar or Bat Mitzvah. The community also utilises the courtyard for the celebration of Succot, Tabernacles, which is celebrated by enjoying food in the outdoor *succah,* hut. Beyond this, the courtyard is also used for Jewish after-work gatherings such as BBQs and other social events.

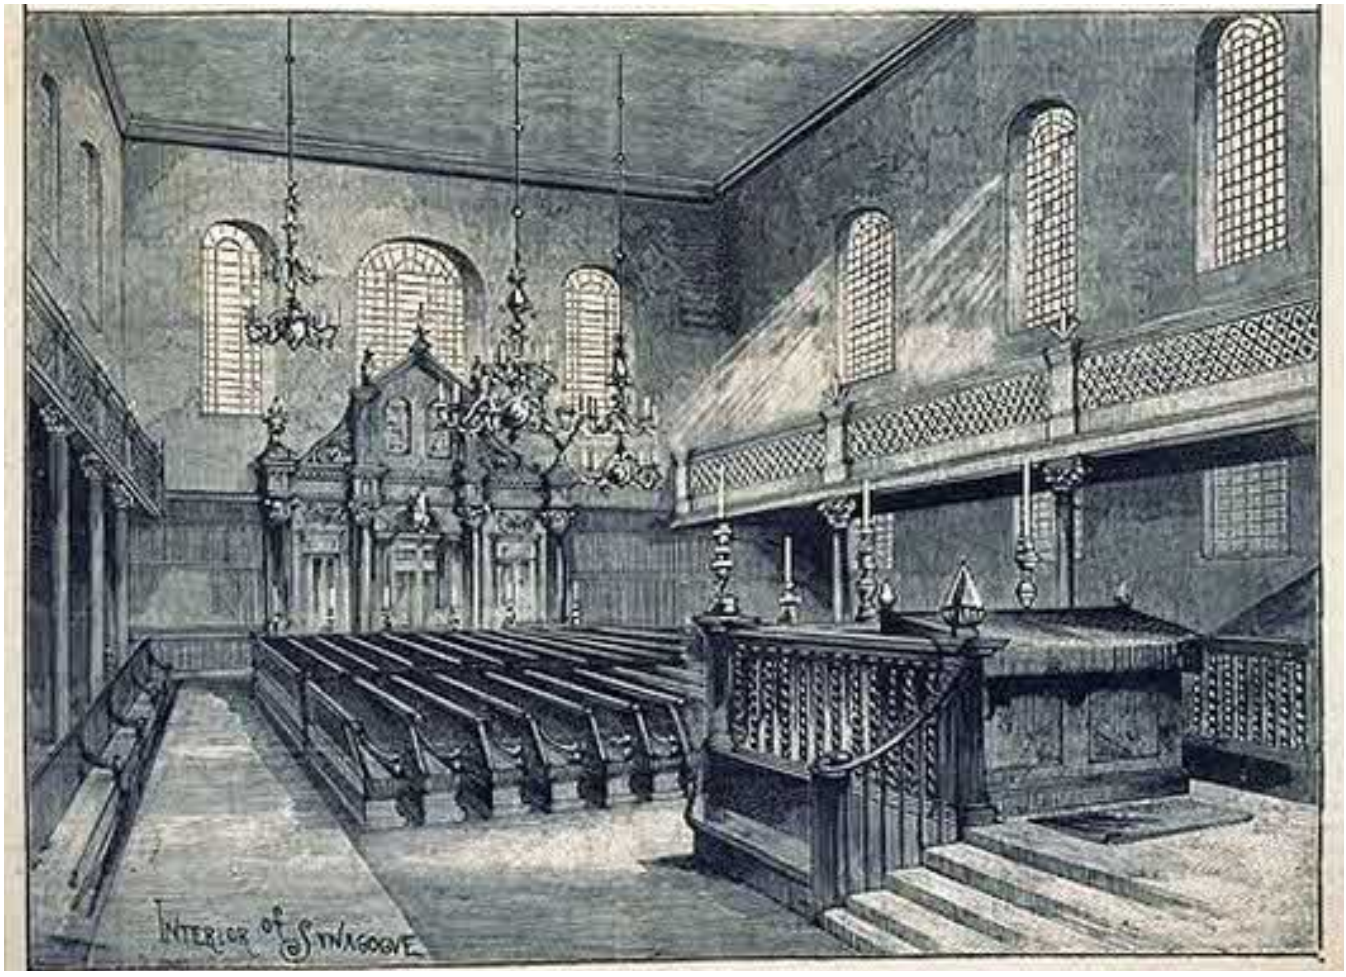
Additionally, the courtyard is utilised as part of wedding celebrations, which are held regularly at the synagogue throughout the year. In this space people take their first photographs as a married couple, attendees cheer as a couple makes their way out of the synagogue and into the vehicle awaiting them in the courtyard, and some even hold their wedding reception in this space.

B. Economic Impact

A core element in the synagogue's future viability, is its ability to generate income through weddings rentals, heritage visitors and new cafe. This will allow the community to maintain its Listed Building status, which would be at risk without this additional support.

The importance of the courtyard for weddings has already been explained. Beyond this, the courtyard will serve as an important function in the community's new heritage centre. It is here that visitors will purchase their entry tickets and collect their audio guides. In the courtyard the site's interpretation will begin with an introduction to the synagogue and an explanation of its setting.

Finally, another key component of the heritage centre's success is its new cafe. This will include outdoor seating, which is expected to be an important feature in encouraging visitors to purchase food and drink and to extend their visit.



Chapter 7: Light, Windows, and the Synagogue's Architecture

While the majority of this study has focused on the exterior of the synagogue as it pertains to setting, setting within the framework of Bevis Marks Synagogue also pertains to its interior. This is because the synagogue was constructed with its relationship to its setting as central to a user's experience of the interior.

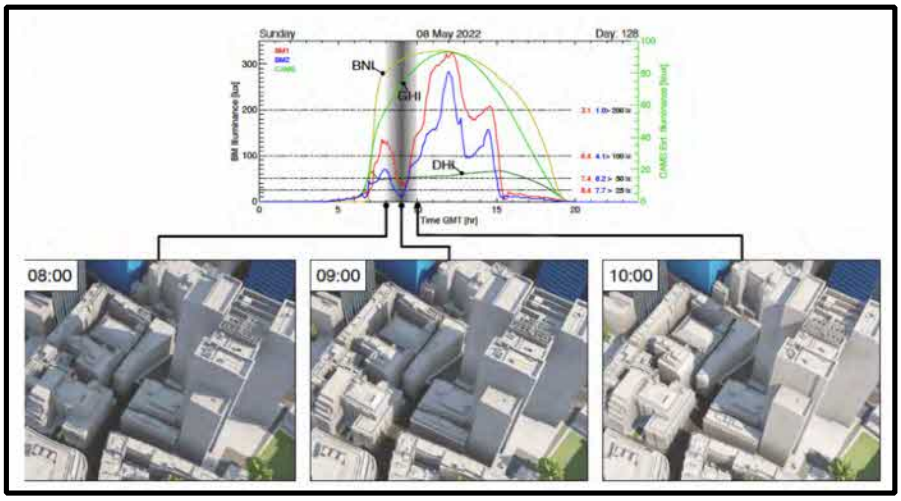
According to the Talmud, 'A person should pray only in a house with windows' (Berakhot 34b). Rabbi Yosef Karo in his work *Bet Yosef* quotes a number of explanations for this law. They include reasons that relate to the practical use of windows for light, as well as the religious significance of views to the outside during prayer through the windows.

For these reasons, further obstructing the synagogue's windows would cause a practical, architectural and religious harm to the synagogue, that relates to its very significance as a heritage and communal site of the greatest value. Most importantly, further reduction in synagogue's daylighting will render parts of the synagogue largely unusable for worship, the core function of the synagogue.

It is clear from historic drawing and paintings of the synagogue's interior that the synagogue was once bathed in light, as it was intended, both religiously and architecturally. Further reducing this feature should be considered a substantial harm to the synagogue's significance as the section below explains.

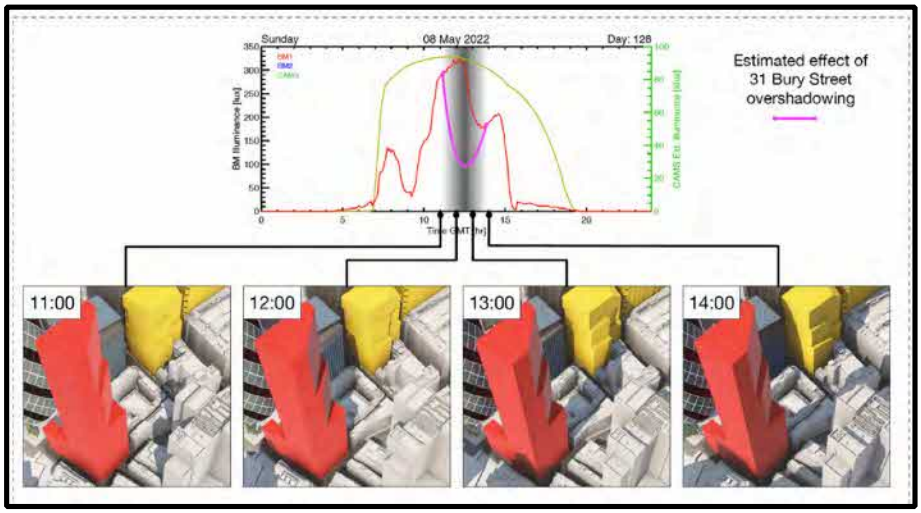
Bevis Marks Synagogue, 1890

A. Lighting Levels



Rabbi Jonah of Gerona (thirteenth-century, Catalonia) explains the reason for requiring windows in a synagogue is that one's (religious and devotional) intention is better when there is light. Indeed, the Shulhan Arukh rules that 'One who builds facing a window of a synagogue, it is not sufficient to leave 4 cubits space, because it (ie. the synagogue) needs a lot of light' (OH 150:4).

Of course, sufficient light is necessary even for the most basic uses of the synagogue, such as the ability to read the prayer book. The synagogue's lighting is reliant on diffused light. Without this, congregants are forced to huddle beneath the limited artificial lighting that was added by the synagogue's columns in the 1920s. This is the case during an after-dark service (aside for special occasions when the synagogue lights its chandeliers, which takes hours to do so, and days to replace). However, during the day, when the congregation's main services are conducted, it is possible to sit anywhere throughout the synagogue and still read the prayers.



The synagogue has taken interior light-measure readings over the past two years with surprising results. The readers demonstrate that at times interior light levels can reach several hundred lux of light during the morning/midday hours. However, the readers also show a significant drop in light levels in the morning, a phenomenon which is explained by the construction of a tall building (1 Creechurch) twenty-five meters to the synagogue's east less than a decade ago.

It is reasonable to predict a similar impact would be caused by the proposed 31 Bury st as it would be located to the synagogue's south, at a similar distance away, and which will be twice in height as the previously mentioned tower.

Should light levels be further reduced during the daytime, this would render large areas of the synagogue as unusable for worship, the core function of the synagogue. This would constitute a significant harm to the synagogue as it infringes on the synagogue's core significance as a working synagogue, the only one in the world in continual use dating back to 1701.

1 Creechurch Impact

13

31 Bury St Impact

B. Interior Sky Views and their Religious Value

According to the preeminent Talmudic commentary Rashi (Rabbi Shlomo Yitzhaki, France, 11th century) the purpose in requiring a synagogue to have windows is because it exposes the sky, reminding us of our subordination to Heaven. Direct views of the sky still remain from the synagogue gallery. However, these views would be largely lost should permission be granted to 31 Bury St.

Furthermore, the ability to perceive change in the time of day is also important for the language of Jewish prayer. Indeed, as Jews pray three times a day, in morning, afternoon and evening, the language of Jewish prayers reflect these times of day for meaning. These include optimism at new beginnings (morning), endurance (midday), and protection from danger (night).

The ability to perceive the changing times of day is therefore integral to the Jewish tradition and the original construction of the synagogue as its windows on all four sides enabled this. The construction of taller buildings immediately surrounding the synagogue have historically all been capped at their current heights, with sloped roofs, to help preserve these remaining views. If taller buildings are constructed beyond these, these benefits will be lost.

C. Architectural Heritage

The synagogue's windows are an important architectural feature of the building. Its prominent Wren style windows are common amongst important buildings of this era. Their clear-pane glass was considered an innovation, improving upon the wonky glass of medieval times. It is for this reason that earlier churches often had small windows, and employed stained-glass, as the relatively opaque windows of the time were of little other value.

Strikingly, with the innovations of the era, prominent buildings began to feature large clear windows, that both allowed light to enter, and enabled views through them. This had a noticeable impact on the experience of places of worship, changing them from foreboding places with dark interiors, to light-filled spaces.

However, the increase in massing of the synagogue's surrounding area has led to a degradation of the synagogue's interior lighting and views out. Aside for the religious implications of this change, this eroding condition is rendering the synagogue's windows as increasing pointless, undermining their architecture interest and utility. This is a harm to the very fabric of the synagogue, as the lack of use of the windows in their original manner constitutes a harm to the ability to 'read' the space and its architectural intent and significance.

Chapter 8: Conclusion

The above study has demonstrated the wide-ranging harm that the proposed tower at 31 Bury St would cause to the significance of Grade-1 Listed Bevis Marks Synagogue. On account of its massing to the synagogue's south it would undermine the architectural, cultural, and religious integrity of the site and its continued use as a functioning synagogue.

The proposed tower will cause harm to the synagogue's:

1. Original architectural intent, which is its physical prominence over its setting. This prominence is important architecturally, historically, and religiously.
2. Religiously important sky views.
3. Interior light levels necessary for prayer.
4. The purposeful functioning of the synagogue's architecturally significant windows.
5. The amenity of the communally important courtyard.
6. The meaning of the synagogue's name.
7. The economic viability of the site.

The harms are so far reaching, and relate to the core significance of the synagogue in both architectural, historical and communal terms, that it is difficult to classify these harms as anything but substantial.

For these reasons, it should be clear that a tall building on the site of 31 Bury St is completely inappropriate in planning terms and should be refused just as it was two years ago.

Anna Tastsoglou
Planning Team
Environment Department
City of London
PO Box 270
Guildhall
EC2P 2EJ

15 May 2024

Dear Ms Tastoglou,

Bury House, 1-4, 31-34 Bury Street, London EC3A 5AR: Objection on behalf of The S&P Sephardi Community

On behalf of our client, The S&P Sephardi Community, we are writing to formally object to the planning application (ref. 24/00021/FULEIA) and the related Listed Building Consent application relating to the redevelopment of Bury House, 1-4, 31-34 Bury Street, EC3A 5AR.

The proposals will have a substantial and wholly unacceptable impact on the historic, Grade I Listed Bevis Marks Synagogue and the Creechurch Conservation Area within which it sits; and an unacceptable impact upon other heritage assets in the vicinity. A previous application at this site (ref. 20/00848/FULEIA) was refused only two years ago on the basis of harm to Bevis Marks Synagogue and to the Tower of London World Heritage Site. Put simply, the revised proposals do not overcome this heritage harm or come anywhere close to delivering sufficient public benefits to outweigh it. On this basis and in accordance with planning policy, the applications should be refused.

Significance of Bevis Marks Synagogue

Bevis Marks Synagogue is a hugely significant building both within the City of London and on a national level, recognised by its Grade I Listed status. The building dates back to 1701 and is the oldest and most historically significant synagogue in the country, often referred to as the 'Cathedral' Synagogue due to its significance within the Jewish faith. It is widely recognised as being of outstanding communal, architectural, artistic, historic and archaeological significance. The Synagogue stands within a courtyard which functions as part of the Synagogue and is of great value to the community as a social and religious space, for gathering before and after services and for holding events.

From an artistic and architectural perspective, the Synagogue is an excellent example of a simple, non-Anglican, 17th Century place of worship. The carpentry in the interior is of a very high quality and many original features remain. It is a building of enormous and profound significance. It has been continuously in use for worship since its construction and its discreet location within a courtyard open to the sky symbolises the complex history of Jewish people in Britain. The religious experience of the building is fundamental to its overall significance, alongside its architectural and historic significance.

When considering the impacts of the proposals on Bevis Marks Synagogue, it is necessary to understand and appreciate specific Jewish historical, cultural and religious considerations, such as the spiritual significance of the sky view and of natural light within the Synagogue.

The sky view at Bevis Marks is central to a number of rituals. The Jewish Sabbath concludes at the appearance of three stars which first appear in the darkening eastern sky. The beginning of each new Jewish (lunar) month is marked by the appearance of the new moon, at which time a special prayer (*kiddush lebana*) is recited. Should the view of the eastern and southern sky be erased, a highly important dimension of the Synagogue would be lost too.

The spiritual significance of natural daylight within the Synagogue must also be understood. The reading of printed texts is intrinsic to Jewish worship and the Synagogue was originally designed to admit plentiful light for this purpose. The only artificial light sources are candles and limited electrical lighting which was installed decades ago before the building was listed. The Synagogue has already experienced a substantial reduction in natural light as a result of the construction of other buildings. Further deterioration of the natural light will have profound implications for the religious value of the Synagogue as a spiritual space and house of Jewish prayer.

A letter from Rabbi Joseph Dweck, the Senior Rabbi of the S&P Sephardi Community of the United Kingdom, is enclosed at Appendix 2 which further explains the significance of the sky view and natural light at Bevis Marks to religious services and heritage. It is within this context and recognising the unique and outstanding significance of this Grade I Listed Building that the proposed development at Bury Street must be considered.

The Proposed Development

The proposed development comprises the demolition of Bury House and construction of a 43-storey tower, the partial demolition of Holland House and Renown House and extensions to both buildings, for office, flexible retail/café and flexible community/education/cultural/amenity uses.

Although the applicants make much of the evolution of the proposal from the previous version, in essence it is little different. A reduction in height of 19m is of no consequence when the remaining height is 178.7m, and the two high-level setbacks similarly make little or no difference to the proposed building's impact.

Indeed, the new proposal is even more damaging than its failed predecessor. The site now sits within a Conservation Area, to which statutory protection applies. Furthermore, it involves substantial alteration and extension to the Grade 2* Listed Holland House, which is a very significant heritage asset in its own right.

Planning Policy Context

Planning policy at all levels seeks to protect designated heritage assets from harmful impacts of development. Section 66 of the Town and Country Planning Act 1990 (as amended) states that:

*"In considering whether to grant planning permission for development which affects a listed building or its setting, the local planning authority, or as the case may be, the Secretary of State shall have **special regard to the desirability of preserving the building or its setting** or any features of special architectural or historic interest which it possesses".*

Section 72 of the Act states that the local planning authority also has a duty to pay special attention to "*the desirability of **preserving or enhancing the character or appearance***" of a Conservation Area.

The Planning (Listed Buildings and Conservation Areas) Act 1990 is equally relevant. It states:

*"In the exercise, with respect to any buildings or other land in a conservation area, of any functions under or by virtue of any of the provisions mentioned in subsection (2), **special attention** shall be paid to the desirability of **preserving or enhancing the character or appearance** of that area."*

Paragraph 205 of the NPPF states that when considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset's conservation, with regard to the importance of the asset, irrespective of the level of harm. Paragraph 206 states that substantial harm to assets of the highest significance including Grade I listed buildings should be *"**wholly exceptional**"*.

Paragraph 207 of the NPPF states that:

*"Where a proposed development will lead to substantial harm to (or total loss of significance of) a designated heritage asset, local planning authorities should **refuse consent**, unless it can be demonstrated that the substantial harm or total loss is **necessary** to achieve **significant public benefits** that outweigh that harm or loss'.*

Policy HC1 (Heritage Conservation and Growth) of the London Plan states that:

*"Development proposals affecting heritage assets, and their settings, should **conserve their significance**, by being sympathetic to the assets' significance and appreciation within their surroundings. The **cumulative impacts of incremental change** from development on heritage assets and their settings should also be **actively managed**."*

National and regional policy is reflected in policies DM12.1-DM12.3 of the adopted Local Plan and policies HE1-HE3 of the emerging Local Plan. Policy CS14 of the adopted Local Plan clearly states that proposals for tall buildings within conservation areas should be refused; it seeks to:

*"allow tall buildings of world class architecture and sustainable and accessible design in **suitable locations** and to ensure that they **take full account of the character of their surroundings**, enhance the skyline and provide a high quality public realm at ground level, by:*

*[…] **Refusing planning permission for tall buildings within inappropriate areas, comprising: conservation areas;** the St. Paul's Heights area, St. Paul's protected vista viewing corridors; and Monument views and setting, as defined on the Policies Map."*

It is notable that since the refusal of the previous application at Bury Street, the Creechurch Conservation Area was formally designated in January 2024, which encompasses both the site at Bury Street and the Bevis Marks Synagogue. The designation of the Conservation Area and the boundary chosen sought to achieve[1]:

1. A 'core' of special architectural and historic interest;
2. Fuller recognition of the Jewish history of the locality; and
3. A coherent and logical boundary which appropriately reflects the extent of the special architectural and historic interest of the Creechurch locality.

The Corporation's original proposal to exclude the site of 31 Bury Street from the Conservation Area was withdrawn following overwhelming consultee support for the proposed Conservation Area but objection to this aspect.

Another relevant change since the refusal of the previous application at Bury Street is the progress of the emerging City Plan which is now the subject of a Regulation 19 consultation (between 18 April and 31 May 2024). Our client has previously raised concerns about elements of the draft Plan and will respond to the consultation separately. We will not go into detail on these matters in this response; however there are two particular matters of concern:

1. The 'immediate setting' of Bevis Marks Synagogue identified in the draft plan. There is no statutory or other authority for the concept of 'immediate' setting, so the existence of this policy is questionable. However, should a specific setting policy be included in the adopted plan, it should recognise the setting of the Synagogue in its entirety, and particularly the importance of the sky view, in a similar manner to how views to and from The Monument are recognised.
2. The plan proposes to drop a long-standing presumption against tall buildings in Conservation Areas (as set out in Policy CS14 of the adopted Plan).

Paragraph 48 of the NPPF states:

"Local planning authorities may give weight to relevant policies in emerging plans according to:

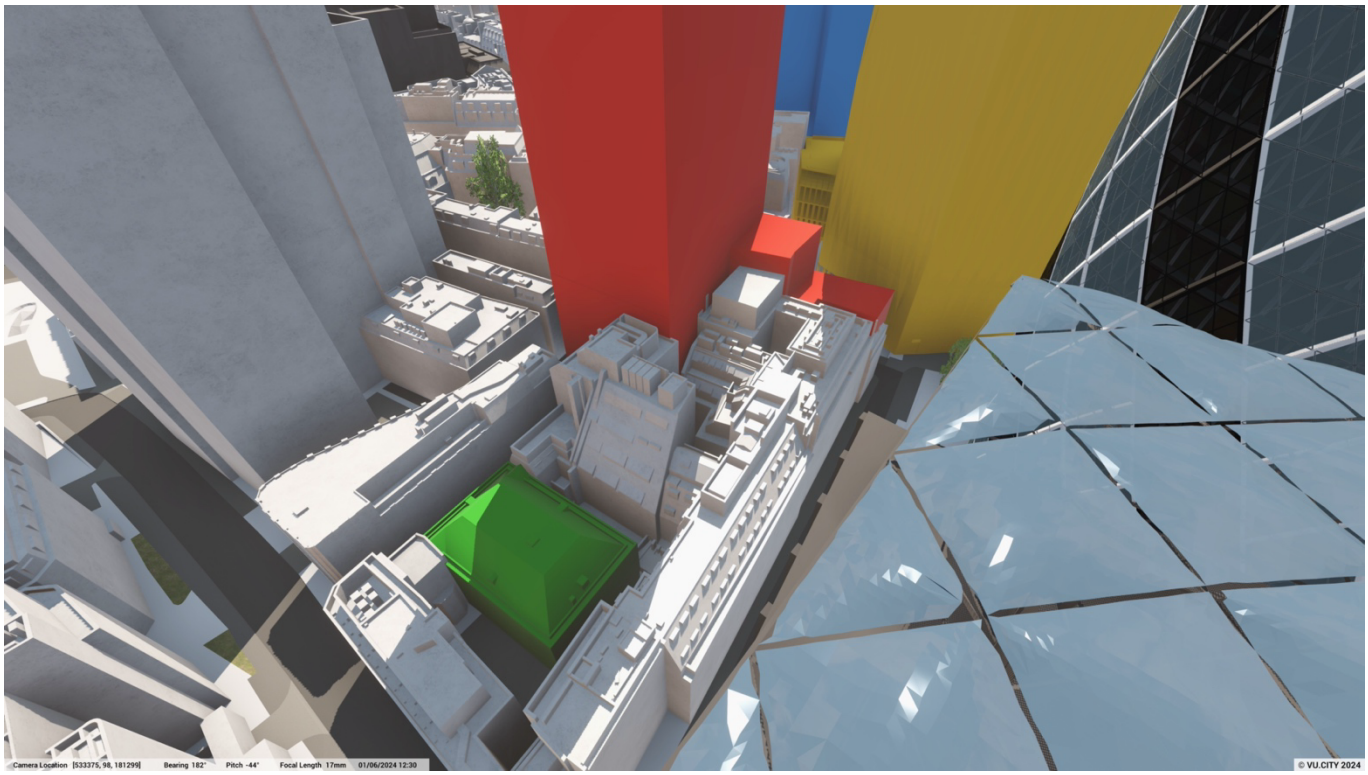
a) The stage of preparation of the emerging plan (the more advanced its preparation, the greater the weight that may be given);

b) The extent to which there are unresolved objections to relevant policies (the less significant the unresolved objections, the greater the weight that may be given) …"

In this case, very limited weight should be given to the policies in the emerging Local Plan, on the basis that it is at Regulation 19 stage and has not yet been submitted for examination, and that there are significant unresolved objections from our client and other stakeholders, relating to the fundamentally important matters set out above among other issues.

[1] CCA Proposal Presented to the Planning and Transportation Committee on 12th December 2024

Impact of the Proposals on Bevis Marks Synagogue



The application site is located only about 25m from Bevis Marks Synagogue at the closest point. This is shown graphically in the VuCity image reproduced as Figure 1 below.

The previous application at this site (ref. 20/00848/FULEIA) was refused on the basis of harm to the Bevis Marks Synagogue and the Tower of London. The first reason for refusal was:

"The development would adversely affect the setting of the Grade 1 listed Bevis Marks Synagogue and its setting and amenities by reason of the overbearing and overshadowing impact of the development on the courtyard of the Synagogue (which harms would not be outweighed by the public benefits of the proposal), […]

Our client does not consider that the amended proposals overcome this reason for refusal. The impact of the current proposals on the Synagogue is summarised below, specifically in terms of its setting and daylight, sunlight and overshadowing.

Figure 1: VuCity Image of the Proposals (in red) - Bevis Marks Synagogue indicated in green

Heritage Impact and Setting

A Heritage Assessment of the proposed development has been prepared by Alec Forshaw, who was the author of the option three proposal for the designation of Creechurch Conservation Area (the option which was eventually endorsed by the City of London) (Appendix 1). He has a deep understanding of the local context and significant experience; in addition, he was previously the Principal Conservation and Design Officer for the neighbouring London Borough of Islington and has written widely on historical and architectural matters.

The Heritage Assessment concludes that the proposals would result in harm as follows:

- **Substantial harm** to the significance of Bevis Marks Synagogue and its setting. The report concludes that "*By reason of its height and proximity the proposed tower will overwhelm the Synagogue. The visual and psychological impact on the courtyard would be catastrophic, equally severe as the previously refused scheme*". The assessment explains that the impact on the Synagogue and its courtyard is both tangible and intangible; and that the applicant has demonstrated a lack of understanding of the significance of the Synagogue and its courtyard.
- **Substantial harm** to the character and appearance of the Creechurch Conservation Area. The report states that: "*were the proposed development to be allowed it would render the designation of the Creechurch Conservation Area virtually meaningless and to have made the whole designation and consultation process a worthless exercise*".
- **A moderately high degree of less than substantial harm** to the setting of St Katherine Cree church.
- **A moderate degree of less than substantial harm** to the setting of Grade I Listed St Botolph's.
- **A high degree of less than substantial harm** to Holland House as a result of alterations to its fabric, plan form and integrity, and the impact on its setting as a result of the proposed tower.
- **A minor degree of less than substantial harm** to the setting of Aldgate School.
- **A moderately high degree of less than substantial harm** to the setting of 2-16 Creechurch Lane.
- A serious incursion into the backdrop of the Tower of London which will cause harm to its setting.
- **A moderately high degree of less than substantial harm** to the Port of London Authority Building.
- **A moderately low degree of less than substantial harm** to the setting of 38 St Mary Axe.
- **A moderate degree of less than substantial harm** to the setting of Lloyd's Avenue Conservation Area.
- **A high degree of less than substantial harm** to Renown House as a result of the demolition of key features of the building and the impact on its setting as a result of the proposed tower.
- **A moderately high degree of less than substantial harm** to the Rabbi's House and Vestry and 2 and 4 Heneage Lane.
- **A moderately high degree of less than substantial harm** to the setting of Cree House, 18-20 Creechurch Lane, Fibi House, 22-24 Creechurch Lane, Sugar Bakers' Court, 12-14 and 27-31 Mitre Street.

The Heritage Assessment also assesses the claimed heritage benefits of the proposed development. In summary regarding the proposed benefits:

- The proposed repairs and renovations to Holland House should be regarded as routine and not a benefit (and it will suffer a high degree of less than substantial harm from the proposed works);

- The proposed reinstatement of Heneage Lane is at a different angle from the original lane and it would be gated and closed at night; the claim that this is being restored is historically inaccurate and misleading;
- The proposed reinstatement of St James Court significantly reduces the size of the existing open courtyard which sits more accurately on the original site of James Court. This causes heritage harm rather than a benefit.

Overall, the proposed development is considered to cause substantial harm to the Creechurch Conservation Area and substantial harm to the Bevis Marks Synagogue, and several cases of less than substantial harm to a range of designated and undesignated heritage assets. Cumulatively, the degree of harm is serious and must be given very great weight. The public benefits claimed by the applicant go nowhere near to outweighing the harm, and this is discussed further below.

Daylight, Sunlight and Overshadowing

A Daylight Sunlight and Overshadowing Report has been prepared by GIA and submitted on behalf of the Applicant.

Daylight

The report acknowledges at paragraph 6.8 that *'the existing baseline daylight values within the Central Room and Gallery [in Bevis Marks Synagogue] are already very low'*.

GIA has carried out a VSC assessment to demonstrate the changes to daylight at Bevis Marks Synagogue as a result of the proposed development. It initially considers the 'consented baseline', assessing the future daylight levels with surrounding consented developments built out, but without the proposed development. The report explains that when surrounding consented developments are built, the Synagogue will experience a 19.1% reduction from the existing baseline in terms of daylight to the central room, and a 20% reduction to the gallery.

When the proposed development is taken into account, the Synagogue would experience a further 10.5% reduction from the consented baseline in the central room, and a further 10% from the consented baseline in the gallery.

The GIA report says that the proposals would have a lower quantitative impact on daylight at the Synagogue than other consented developments and implies that this is of no consequence, which is misleading and downgrades the cumulative impact. However:

a) The fact that the Synagogue is already going to experience loss of daylight is not an argument in favour of the Applicant; rather, it demonstrates the need to protect the precious remaining daylight and for the current proposals to come under even greater scrutiny. If a developer proposed a polluting factory close to an area of ecological importance, no one would rationally argue that its impact on the ecological area mattered less because the habitat was already vulnerable. The very opposite is the case.

b) No account is taken of the fact that the Synagogue is illuminated primarily by natural light and by candles, or that the reading of printed scripts is fundamental to worship. This is one of the most natural light-sensitive places in London.

c) The Synagogue is simply labelled as a "religious" building, disregarding the fact that it is also the centre of a thriving community.

Sunlight and Overshadowing

The GIA report also considers overshadowing to the Synagogue courtyard. It concludes that the sunlight availability is already very limited in the courtyard, compared to what would be expected in an unobstructed open space. This is a false comparison to make in a dense urban setting like the City. It claims that already consented schemes would result in a 30-minute loss of sunlight in the courtyard on average, reducing the maximum hours to only 1.5 hours in June. The proposed development would effect a further reduction of up to 19 minutes, which it considers to be a ‘marginal’ reduction.

This is a glib value judgement. The fact the courtyard receives any sun makes it a valuable asset for the community uses that take place there. Losing a further 20% would undermine the benefit and utilisation of the outdoor space for that purpose.

The loss of nearly a fifth of the sunlight within the courtyard cannot rationally be considered to be of little consequence in the context of an already very low level of sunlight. Furthermore, the courtyard is treated as though it is mere circulation space, and the Synagogue is labelled only as a "religious" building. No account is taken of the fact that the courtyard space is used intensively for rituals, and for family and community activities; or that it is the only space - and indeed the original planned space - from which this remarkable heritage asset can be viewed.

Night Sky

When considering the night sky visibility, a fisheye view has been shown from three viewpoints within the courtyard; in two of these the proposed development is visible and covers part of the sky view. However, the fisheye view is not comparable to the way in which the night sky is experienced by the human eye. A more accurate view is shown in the applicant’s TVIA (Figure 2 below). This shows how the proposed development would have a significant impact in blocking views of the sky from the courtyard.

None of the analysis addresses the critical religious and cultural significance of the sky view. Although very different in certain respects, there is a parallel to be drawn with Stonehenge, where the view of the sun on Midsummer's Day is essential to an understanding of the significance of this monument. Likewise, the iconic silhouette of the Taj Mahal against the sunset gives the viewer a feeling of spiritual uplift: they are no longer simply observing a fine building.

At Bevis Marks, the view of the passage of the moon across the night sky (as shown in Figure 3) is highly symbolic and intimately related to the traditions and rituals of the Synagogue, and is a most important aspect of the heritage value of the building.

Figure 2: Existing vs Proposed (cumulative) view from Bevis Marks Synagogue courtyard (Source: TVIA, The Townscape Consultancy)

Figure 3: Stills showing the passage of the moon across the sky as viewed from the courtyard

Overall, the GIA report is a typical attempt to employ technical analysis to distract the reader from the uncomfortable truth: that daylight and sunlight and the sky view are very important both to the functioning and the heritage significance of the Synagogue; that the Synagogue's daylight and sunlight is already substantially compromised; and that the proposed development would make the situation substantially worse.

Equalities

Section 149 of the Equality Act (2010) requires public authorities to have due regard to equality considerations when exercising their functions, including decision making on planning applications. An Equality Statement has been prepared by Quod and submitted on behalf of the applicant.

This Equality Statement considers the impact of the proposals on the Synagogue as a place of worship and acknowledges that the amenity of the Synagogue may be affected by the proposals, however it is said this "*would not preclude the use of these spaces for religious ceremonies*". There is no mitigation proposed.

It is considered by our client that the Equality Statement is inadequate in assessing the proposed impacts of the development on the operation of the Synagogue. A Protestant community could hold a Holy Communion service in a dark room or a disused factory. However, to do so would be strip the service of the many layers of ceremony and spectacle that make the difference between something that is a mere performance and something that carries cultural and spiritual significance. What is at stake here is the very qualities that make the Synagogue both a thriving centre of the Jewish community and the embodiment of a set of 300-year-old traditions. The author of the assessment does not demonstrate any understanding of these matters.

Not only does the Equality Statement demonstrate a lack of understanding of the impact of the proposals on the Synagogue. It implies that the impact of the proposals on the Synagogue is outweighed by other factors such as the increased provision of commercial floorspace. This may be relevant to the planning balance, but it has no place in an Equality Statement. The Statement is fundamentally flawed and certainly should not be relied upon by Officers to demonstrate their compliance with Section 149 of the Equality Act.

Planning Balance

The proposed development has been found to result in substantial harm to both Bevis Marks Synagogue and the Creechurch Conservation Area. Therefore, as per paragraph 207 of the NPPF, the application should be refused unless it can be demonstrated that the substantial harm or total loss is necessary to achieve significant public benefits that outweigh that harm.

Chapter 6 of the submitted Planning Statement sets out a series of economic, social and environmental benefits which are alleged to result from the proposed development.

The PPG[2] explains that "public benefits" should be of a nature or scale to be of benefit to the public at large and not just a private benefit.

A number of the benefits claimed by the applicant. It claims that the proposed development would make a meaningful contribution to strategic policy objectives of the Eastern (City) Cluster including delivery of additional office floorspace. However, this is spurious. Policy CS14 is clear that tall buildings should not be permitted in Conservation Areas, and the policy towards the Eastern (City) Cluster (Policy CS7) is clear that tall buildings will be restricted to appropriate sites, respecting the *"conservation of heritage assets and their settings and taking account of their effect on the wider London skyline and protected views"*.

[2] Paragraph: 020 Reference ID: 18a-020-20190723

Other claimed "benefits" include:

- Provision of affordable workspace.
- Aspiration to achieve a BREEAM ‘Outstanding’ rating.
- Delivery of 619 sqm of high-quality public realm.
- Urban Greening Factor of at least 0.31.
- Delivering a building that is 28.6% more efficient in terms of overall regulated operational carbon compared to the existing individual buildings.

These are not public benefits. They are simply normal policy requirements without which no large office building would be allowed anywhere in the City. Furthermore, an "aspiration" must be viewed with scepticism.

The financial "benefits" relating to S106 and CIL payments are not public benefits either: they are payments required to mitigate the impact of the development; they should be considered as neutral within the planning balance:

- CIL payments of over £10m.
- Comprehensive S106 package including contributions to affordable housing, security and skills training.

The following claimed heritage "benefits" would in fact cause heritage harm (see above):

- Reintroduction of the historic Heneage Lane. *This would be open only between 7am and 11pm, and not on the original alignment.*
- Re-establishment of St James’ Court, a new pocket park. *This would be smaller, and not on the original site.*
- Restoration of and sensitive extensions to Holland House. *Renovation is a routine responsibility and many of the proposed alterations would cause harm.*

Of the remaining claimed benefits, a number are not ‘true’ public benefits and should not be given weight in the planning balance:

- Public art in Heneage Arcade. *This is not ‘public’ but located in a privately owned arcade which is shut between the hours of 11pm to 7am.*
- Aspiration to achieve other voluntary ratings such as NABERS 5*, Active ‘platinum’, Wired ‘platinum’, and Well ‘Platinum’. *Mere "aspirations" should not be taken into account.*
- Dedicated cycle repair and wellness space at lower ground floor level; operation of a social enterprise which trains young unemployed adults to service office tenants’ bikes. *This cannot be said to be of a scale which would benefit the public at large, as required by the PPG. Only office tenants would be likely to benefit.*

We comment on other claimed "benefits" as follows:

- Employment opportunities during the construction (270 FTE jobs over 4.8 years) and operational phase (up to 2,470 jobs). The construction phase benefits are temporary and therefore should be afforded limited weight. *The operational jobs are capable of being achieved on many other, less sensitive, sites.*
- Replacement of obsolete office space with over 34,000sqm of new high quality office space, which will meet a specific local demand for smaller floorplates. *There is no convincing evidence that the existing building is incapable of re-use, and its demolition would in any event release embodied carbon, which is a disbenefit.*
- Delivery of a new high-quality tall building and wider transformative reimagination of an urban block. *There are many other less sensitive sites where a high quality tall building could be delivered. This urban block, which is part of a Conservation Area, does not need "transformative reimagination".*
- Significant spending of new employees on-site which would equate to between £5.8m and £7.6m annually (an increase of £4.8m to £6.7m over the existing site). *As with operational jobs, this expenditure is capable of being achieved through the redevelopment of many other, less sensitive, sites.*
- Provision of 1,176 sqm of 'community workspace' at 50% market rent for qualifying occupiers or zero rent for charities. *This is a potential public benefit, though it is unclear whether it would meet a specific need. It could also be delivered on another, less sensitive site.*
- Provision of 1,072 sqm of publicly accessible space over three floors at the 'Holland House Hub' which will be free to use for community, multi-faith, cultural and education groups. *This is a potential public benefit. It could also be delivered on another, less sensitive site.*
- Provision of 'Creechurch Hall' a 339 multi-functional auditorium space delivering a range of uses such as lectures, sports and performances, for use by office tenants as well as members of the public for free at defined times. *The use of Creechurch Hall by members of the public is a potential public benefit, though it is unclear whether it would meet a specific need and it is unclear when or how often the 'defined times' would be. It could also be delivered on another, less sensitive site.*
- Provision of small and flexible retail space at ground floor level to meet local worker, visitor and residential needs. *There is no shortage of such space within the City.*
- Off-site public realm enhancement along Bury Street. *There is no need for such enhancement within what is a Conservation Area.*
- Greater than 300% biodiversity net gain. *A sensitive re-use of the existing buildings could achieve a substantial increase in BNG.*

The Heritage Assessment at Appendix 1 identifies that the scheme will cause substantial heritage harm on two counts, to Bevis Marks Synagogue and the Creechurch Lane Conservation Area. In addition, it will cause less than substantial harm on a number of counts to a range of heritage assets. Substantial harm to even one heritage asset would require "wholly exceptional" justification under the NPPF; here, the cumulative harm is such that it is difficult to envisage the sort and scale of public benefits that would have to be generated.

The package of public benefits proposed by the applicants does not add up to anything like this level of justification. They are typical benefits which any major commercial scheme would be expected to deliver, and they are generally exaggerated. Furthermore, they are not unique to the site at Bury Street, and they could be delivered elsewhere within the City of London without causing substantial heritage harm.

The previous application at this site was correctly refused on the basis of heritage harm including to Bevis Marks Synagogue. The level of harm is now significantly greater because a new heritage asset - the Creechurch Conservation Area - has come into existence. The revised proposals do not begin to overcome the heritage harm or deliver sufficient public benefits to outweigh it. On this basis and in accordance with planning policy, the application should be refused.

We reserve the right to add to this objection or submit further supporting material in due course.

Yours sincerely,

Roger Hepher

Appendix 1 – Heritage Assessment Prepared by Alec Forshaw

HERITAGE ASSESSMENT V3 ON BEHALF OF THE SEPHARDI COMMUNITY BEVIS MARKS
WITH REGARDS TO PROPOSED DEVELOPMENT AT BURY HOUSE, 1-4 and 31-34 BURY STREET
PLANNING APPLICATION REF: 24/00021/FULEIA
LISTED BUILDING CONSENT REF: 24/00011/LBC

SCOPE OF THIS REPORT

1. This report, prepared on behalf of the Sephardi Community Bevis Marks focusses on the heritage impacts of the proposals within the local and immediate area, including the Tower of London. It does not consider the potential impacts on long-distance or riverside views of St Paul's Cathedral. These matters are left to Historic England and the Greater London Authority who have a particular remit and expertise in this field, and to other London boroughs such as Lambeth and Southwark whose own protected local views may potentially be affected.

DESCRIPTION OF PROPOSALS

2. Planning permission is sought for: "Demolition of Bury House and erection of a new building comprising of 4 basement levels, ground plus 43 storeys (178.7 metres AOD); partial demolition of Holland House and Renown House: restoration of existing and erection of four storey extension resulting in ground plus 8 storeys at Holland House (48.05 metres AOD) and three storey extension resulting in ground plus 5 storeys at Renown House (36.49 metres AOD); interconnection of the three buildings; use of the buildings for office, flexible retail/café, and flexible community/education/cultural/amenity uses; and provision of a new covered pedestrian route, cycle parking and facilities, landscaping and highway improvements, servicing and plant and all other ancillary and other associated works."
3. Listed Building Consent is sought for: "Restoration works to Holland House including removal and reinstatement of external faience together with the removal and replacement of existing concrete beam; partial demolition to facilitate interconnection with the neighbouring proposed new building and the construction of a four storey roof extension resulting in ground plus 8 storeys; together with internal alterations including truncation of the existing lightwell, reconfiguration of partitions, installation of a new staircase, servicing and all other ancillary and associated works."
4. Overall, the scheme provides 34,584 square metres of office which includes 1,176 square metres of 'community workspace'; 1,411 square metres of flexible community/education/cultural space which includes a 339 square metre auditorium; 504

square metres of retail space; 4,794 square metres of plant and service accommodation. The total floorspace is 41,293 square metres, compared with 11,339 square metres in the existing three buildings.

BACKGROUND TO THE CURRENT PROPOSALS

5. In October 2020 an application was submitted for the demolition and redevelopment of Bury House, 31 Bury Street, for a 49 storey office tower. Despite officer recommendation for approval this application was refused by the City Corporation in June 2022, on two grounds, namely harm to the setting and amenities of the Grade 1 listed Bevis Mark Synagogue by reason of the overbearing and overshadowing impact on the courtyard of the Synagogue, and harm to the setting of the Tower of London World Heritage Site, neither of which were outweighed by public benefits.

6. Since then, the current applicant has acquired the adjoining properties of Holland House, 1-4 and 32 Bury Street, and Renown House, 33-34 Bury Street which are now included in this new application. Holland House is a statutorily listed building, and the proposals now require both planning permission and listed building consent.

7. The whole of the site has been included in the new Creechurch Conservation Area, approved by the City Corporation in December 2023 which necessarily introduces additional policy and heritage considerations to the previous scheme.

POLICIES TO PROTECT THE HISTORIC ENVIRONMENT

8. The following statutes, policies and guidance are relevant:

Planning (Listed Buildings and Conservation Areas) Act 1990

Under Section 66 (1) the Local Planning Authority has a statutory duty in considering whether to grant planning permission for development which affects a listed building or its setting to have special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest that it possesses.

Under Section 72 (1) in considering whether to grant planning permission for development within a conservation area special attention shall be paid to the desirability of preserving or enhancing the character or appearance of that area.

Chapter 16 of National Planning Policy Framework 2023

National Planning Practice Guidance

The London Plan 2021

City of London Plan 2015

Draft New City Plan 2040 (emerging policies pre-Regulation 19)

Supplementary Planning Guidance SPDs

ASSESSMENT OF HERITAGE ASSETS AND THEIR SIGNIFICANCE

9. In order to evaluate the impact of potential development on heritage assets it is important to understand their heritage significance. The National Planning Policy Framework Annex 2 states that significance is the value of a heritage asset to this and future generations because of its heritage interest. The interest may be archaeological, architectural, artistic or historic. Significance derives not only from its physical presence but also from its setting. These criteria accord broadly with those set out in historic England's Conservation Principles, namely evidential, historical, aesthetic and communal.

1. DESIGNATED HERITAGE ASSETS

Creechurch Conservation Area

10. The Creechurch Conservation Area was designated by the City Corporation on 11th January 2024. The designation was subject to very widespread public consultation in 2023 which drew an unprecedented response both from the public as well as very many heritage bodies and sources of expertise.

11. Having initially proposed a very small area, which excluded 31 Bury Street, the City planning officer was persuaded that other options should be consulted upon. A larger area (Option 3) was adopted in line with the great majority of public opinion. It was concluded in the Creechurch Conservation Area Proposal Report December 2023 that this would achieve (1) A 'core' of special architectural and historic interest (2) Fuller recognition of the Jewish history of the locality (3) A coherent and logical boundary which appropriately reflects the extent of the special architectural and historic interest of the Creechurch locality

12. The Report also states that 31 Bury Street is "instrumental in defining the end of Heneage Lane, is physically attached to the Grade II* listed Holland House and makes a more coherent boundary at this point of the Conservation Area". The whole of the application site, including 31 Bury Street, lies within the new Conservation Area. A Management Plan is in the process of preparation but has not yet been subject to public consultation.

13. The City Planning officer's designation report in January 2024 noted the special architectural and historic interest of the area, "experienced through both character and appearance, in particular the strong and visible associations with the Roman and medieval City wall, Holy Trinity Priory and the rich Jewish history of the area exemplified by Bevis Marks Synagogue, the characterful group of historic warehouses that illustrate the area's later development, and the rich sense of diverse historic uses, and in particular faiths exemplified by the historic places of worship."

14. It is considered that the Creechurch Conservation Area has a **HIGH** level of significance in terms of the archaeological, architectural and historic criteria set out in paragraph 9 above. The communal/cultural/artistic significance of the area is **VERY HIGH** owing to the outstanding importance of the area to the establishment, development and on-going activities of the Jewish community.

Bevis Marks Synagogue

15. Listed Grade I the Bevis Marks Synagogue is of **VERY HIGH** significance. Built in 1699-1701 it is the oldest synagogue in the country and the only synagogue in Europe that has held regular services continuously for over 300 years. It represents tangible evidence for the historic and on-going relationship that the Jewish community has had with this part of the City. It is a unique centre for traditional Jewish worship and ceremony and draws a large congregation from across London and beyond. It also attracts visitors from all over the world, and current development of a museum and visitor will likely greatly increase their number.

16. The courtyard of the Synagogue is extremely important to its heritage significance, a matter that is under-appreciated by the applicant. This paved space not only provides the immediate setting for the Synagogue itself (built as was required in 1699 so as not to front directly onto a street) but it also serves as an important place of assembly, congregation and ritual. Open sky views from this secluded setting are extremely important to the character and appearance of the courtyard itself, as well as to the Synagogue Building. The sky view is not just a matter of physical setting but is also of great symbolic and ritualist importance, and a major part of the intangible cultural significance of the heritage asset. The current improvement and renovation work due to be completed shortly will further enhance the appearance and accessibility of the courtyard.

St Katharine Cree

17. Listed Grade I the church of St Katharine Cree predates the Great Fire of London, and is one of the 'anchor' heritage assets in the locality. It is of **VERY HIGH** architectural, historic and archaeological significance. Its tower is an important townscape feature and is silhouetted against clear sky in views from Leadenhall Street. Its setting is an important part of its significance.

St Botolph's Aldgate

18. Listed Grade I the church of St Botolph's Aldgate possesses **VERY HIGH** architectural and historic significance. The tower and spire rise prominently from the body of the church into open clear sky and have a landmark quality. It is noted as having

Skyline Presence in the City Corporation's Protected View SPD 2012. Its setting is therefore a very important part of its significance.

Holland House

19. Listed Grade II*, Holland House is of **VERY HIGH** architectural significance, identified as one of the 'standout buildings in the locality'. It also has **HIGH** historic significance owing to the circumstances of its construction. It does not possess any special cultural or communal significance.

Aldgate (formerly Sir John Cass) School

20. Listed Grade II* as a fine example of the 'Wrennaissance' style and for internal elements of outstanding interest, including 17th and 18th century fabric from other buildings, Aldgate School has **VERY HIGH** architectural, artistic and historic significance. Located on the site of the former Priory it has **HIGH** archaeological significance. Its setting is an important part of its significance. A sense of openness is retained in the playgrounds. The building is prominent within the locality and is the focus of a number of views from surrounding streets and open spaces.

2-16 Creechurch Lane

21. Listed Grade II, these fine five-storey former tea warehouses have **HIGH** architectural and historic significance, which 'gives a typical flavour of the locality'.

Tower of London

22. One of London's four UNESCO World Heritage Sites, the Tower of London is of **VERY HIGH** significance on all four heritage interest criteria. Its setting is also of **VERY HIGH** significance, particularly views from the south and east.

Port of London Building 10 Trinity Square

23. Listed Grade II* the prominent square stepped tower is identified as a City landmark and skyline feature in the Protected Views SPD.

38 St Mary Axe

24. Listed Grade II this well-proportioned stone-faced commercial building, designed by Sir Edwin Cooper in 1922, has **HIGH** architectural significance.

Lloyd's Avenue Conservation Area

25. The Lloyd's Avenue Conservation Area, designated in 1981 and enlarged in 2007, is focussed on the Edwardian street of Lloyd's Avenue, but also extends to include buildings on the north side of Fenchurch Street. Noted for its consistent scale, architectural style and materials it has **HIGH** architectural and historic significance. Elaborate stone dormers and turrets contribute to a dramatic roofscape on Fenchurch Street. The setting of the Conservation Area is also an important part of its significance with regards to views into and out of the Conservation Area.

2. NON-DESIGNATED HERITAGE ASSETS

Renown House 33-34 Bury Street

26. Recognised in the City Planning Officer's Creechurch Conservation Area designation report for its good quality carved stone detail, making an effective contrast with Holland House and forming a strong corner to the bend in the street, Renown House has **MODERATE** architectural and historic significance

Rabbi's House and Vestry, 2 and 4 Heneage Lane

27. Sitting either side of the east elevation onto Heneage Lane of the Grade I Synagogue the red-brick 19th century Rabbi's House and the Vestry are important to the ensemble of religious buildings and have **MODERATELY HIGH** architectural, historic and cultural significance.

Cree House 18-20 Creechurch Lane; Fibi House 22-24 Creechurch Lane; Sugar Bakers' Court; 12-14 and 27-31 Mitre Street

28. A coherent group of unlisted 19th and 20th century brick-built warehouse buildings of generally four storey scale which possess good architectural detailing and proportion, and make an important contribution to the local townscape. They have **MODERATELY HIGH** architectural and historic significance.

IMPACT OF THE PROPOSAL ON HERITAGE ASSETS

Creechurch Conservation Area

29. The proposed scale of development will have a very harmful impact on the character and appearance of the Conservation Area. The planning officer's designation report notes that the existing 31 Bury Street forms the corner with Creechurch Lane and is important in

framing Heneage Lane. Similarly, the height, mass and scale of other post-war buildings in the Conservation Area, such as 33 Creechurch Lane, 5-10 Bury Street, 32-40 Mitre Street, 10-16 Bevis Marks, 71-77, 78-79 and 80 Leadenhall Street and Cunard House are considered to be sympathetic to their context. All these buildings, despite having no particular architectural merit, are noted for maintaining the historic building line and the prevailing scale of street blocks. The existing 31 Bury Street does exactly that.

30. The only existing tall building within the Conservation Area, One Creechurch Place, is included because of its historic association with the site of the Great Synagogue, although the building itself does not contribute positively to the character and appearance of the area. The Planning Officer's report does refer to the 2017 consent (which has been granted a Certificate of Lawful Development) to redevelop 24 Bevis Marks with a 19 storey office building, but it should be noted that this is immediately next to the much taller 70 St Mary Axe, and so immediately in its shadow. The proposed tower at 31 Bury Street has a very different context, next to Holland House, Cunard House and the warehouses in Creechurch lane.

31. The designation report notes that Bury Street forms an obvious division between the more historic granular scale to the east and the much larger and more modern scale of the City Cluster. There is no case whatsoever for allowing a tall building on the north side of Bury Street. The height scale and mass of the proposed tower will overwhelm the Conservation Area, from almost every possible direction. Views 46 and 58 of the applicant's HTVIA illustrates the impact that will be had on Creechurch Lane, Mitre Street, Heneage Lane, Bevis Marks and Bury Street. While it might be argued that some individual views cause less than substantial harm in their own right, the continuum of views down so many streets from within and into the Conservation Area from outside will result in a cumulative impact that causes **substantial harm** to the character and appearance of the Conservation Area. Indeed, were the proposed development to be allowed it would render the designation of the Creechurch Conservation Area virtually meaningless and to have made the whole designation and consultation process a worthless exercise. As a precedent it would potentially undermine the ability to preserve and enhance any of the City's conservation areas, and indeed have implications nationwide.

Bevis Marks Synagogue

32. By reason of its height and proximity the proposed tower will overwhelm the Synagogue. The visual and psychological impact on the courtyard would be catastrophic, equally severe as the previously refused scheme. The serious incursion into the open sky views will fundamentally undermine the intrinsic secluded and dignified quality of the space. The loss of light to the interior of the Synagogue is also a major concern. The

impact on the Synagogue and its courtyard will be both tangible and intangible, as explained in the assessment of significance in paragraphs 15 and 16 above.
33. The applicant's HTVIA includes Views 45A and 45B, deemed by the applicant to be of 'medium' sensitivity, and where the impact is described as 'moderate and beneficial'. Such an analysis demonstrates a complete lack of understanding by the applicant of the significance of the Synagogue and its courtyard.
34. The setting of the east elevation of the Synagogue fronting Heneage Lane will also be harmed, being totally dominated by the new tower, although no view is provided of this in the applicant's HTVIA.
35. Overall, the proposals cause **substantial harm** to the significance of the Synagogue and its setting.
36. The harm caused will also do much to spoil Bevis Marks as a potential visitor attraction which in turn will harm the City Corporation's ambitions to increase tourism.

St Katharine Cree

37. No verified view has been provided by the applicant from the south side of Leadenhall Street looking northwards down Creechurch Lane. (View 46 in the HTVIA does not cover this). This important view is flanked on the right by the charming tower of the church, seen against clear sky, and on the left by Cunard House, with the view terminated by the existing 31 Bury Street. The massive height of the proposed tower will radically alter this view and cause a **moderately high** degree of **less than substantial harm** to the setting of St Katharine Cree.
38. It is unclear whether the proposed tower will also impinge into the existing secluded space of the churchyard to the rear of Mitre Street and Creechurch Lane which is surrounded at present by low buildings. No verified view has been provided from the southern side of the churchyard.

St Botolph's

39. Although some of the HTVIA views presented by the applicant show that the tower and spire of St Botolph's Church is already impacted by the 19 storey mass of One Creechurch Place, it is considered that the much greater height and prominence of the proposal, almost immediately behind, will further erode the landmark qualities of St Botolph's. View 38 has been taken from a position where the new tower will arguably be covered by other proposed tall buildings behind. No view has been provided further west along Aldgate which would show that the proposed tower at 31 Bury Street will rise significantly above One Creechurch Place and challenge the landmark quality of St Botolph's. It will cause a **moderate** degree of **less than substantial harm** to the setting of

this Grade I building and will diminish the skyline presence identified in the Protected View SPD.

Holland House

40. The proposal involves radical alterations to the fabric, plan form and integrity of Holland House. The demolition of most of the east elevation, the insertion of a large new staircase, the capping off and enclosure of the internal lightwell and the opening up of its floor plans to link continuously with the new building at 31 Bury Street and the rebuilt Renown House will greatly change and reduce the individual identity of Holland House. The proposals effectively subsume Holland House into one huge floorplate building running across the entire application site. These appear to be major and irreversible changes.

41. The four-storey roof extension is out of proportion with the original five storey building, appearing top heavy. This is clearly apparent in Views 42, 43 and 60 of the applicant's HTVIA.

42. The setting of Holland House is massively affected by the proposed tower. Despite the vertical format of Views 43 and 60 they do not manage to include the full height of the tower. While One Creechurch Place is visible in the existing View 60, the impact of the proposal, immediately adjacent to Holland House, will be far greater.

43. The immediate setting of the south elevation of Holland House will also be severely harmed by the scale and proximity of the new tower at 31 Bury Street. This is shown in the illustrative CGIs Figures 6.6, 6.8 and 6.10 of the applicant's HTVIA Volume 2. The height and scale of the undercroft is completely out of proportion to Holland House, and the existing forecourt between 31 Bury Street and Holland House is substantially reduced in width. View 58 shows how the existing Bury House is sympathetic in scale to Holland House, whereas in the proposal it will appear visually crushed by the overwhelming scale of its neighbours.

44. Overall, the proposals cause **high** degree of **less than substantial harm** to the significance of this designated heritage asset.

Aldgate School

45. The comparatively modest height (19 storeys) of One Creechurch Place is already visible as a backdrop to views of the school from Aldgate, and has a negative impact. View 41 of the HTVIA, looking down Mitre Street, shows how much taller the new tower will be, having an additional negative impact, by increasing the undesirable sense of enclosure and overlooking. It will cause a **minor** degree of **less than substantial harm** to its setting.

2-16 Creechurch Lane

46. The existing massing of 31 Bury Street, occupying the corner with Creechurch Lane, provides a sympathetic scale and context to the five storey scale of 2-16 Creechurch Lane. The setting of these fine warehouse buildings will be adversely affected by the proposed tower which will become an overpowering presence in the street. It will cause a **moderately high** degree of **less than substantial harm** to the setting of these listed buildings.

Tower of London

47. It is acknowledged that Historic England is the heritage body best equipped to comment on the impact of the proposals on the Tower of London World Heritage Site. Several views provided in the applicant's HTVIA clearly show that the proposal will be a serious incursion into the backdrop which will cause harm to the setting of the Tower of London.

48. The applicant's justification that the new tall building will be part of the northern 'foothills' of the City Tower Cluster seems a tenuous and unconvincing argument. Far from softening the existing edge provided by curved form of 30 St Mary Axe (the'Gherkin') the new tower at 31 Bury Street as seen in View 9 makes a very undesirable intrusion into LVMF 10.1A, reducing the prominence of the south-west turret of the White Tower. Views 25, 26, 27, 28 and 30 show how the existing curved edge of 30 St Mary Axe will be negated and exceeded by the new tower, appearing as a taller outlier to the cluster.

49. The HTVIA also provides views from within the precincts of the Tower. View 23, from the Inner Ward, shows how the proposed tower will intrude into the existing clear sky above the east end of the Royal Chapel. View 24 shows the tower rising above 2 Tower Green. View 49 demonstrates that the proposed tower will fill the existing clear gap between the town houses and the tower of the Royal Chapel, a view of 'high sensitivity'. View 51 shows incursion into the existing clear sky above the Watergate.

50. The applicant's assertion that the proposed tower would signify a new 'edge' to the City Tower Cluster is highly contentious; indeed, the opposite is likely. If approved it would likely set a precedent for allowing further towers in the Conservation Area, including for example 33 Creechurch Lane.

Port of London Authority Building 10 Trinity Square

51. Views 28 and 50 of the HTVIA show how the new tower will impinge on the skyline presence of the landmark tower of the PLA Building. It will cause a **moderately high** degree of **less than substantial harm** to this aspect of its heritage significance.

38 St Mary Axe

52. View 55 of the HTVIA shows that the existing clear sky view above the listed 38 St Mary Axe will be infringed by the proposed tower. No other proposed or approved tall buildings are visible in this view from Clerks Place. Owing to the narrow nature of St Mary Axe this is the only long view of the frontage. The proposal will cause a **moderately low** degree of **less than substantial harm** to the setting of this designated heritage asset.

Lloyd's Avenue Conservation Area

53. The Lloyd's Avenue Conservation Area Character Summary and Management Strategy SPD, adopted in January 2012, identifies various views within the Conservation Area which are important to its character and appearance and its heritage significance : "The double curve of Lloyd's Avenue creates a series of subtly different views north along Lloyd's Avenue, with each building viewed obliquely and collectively in groups. At the top of the street, Furness House, 105-106 Fenchurch Street, has a dominant presence and terminates the view with its imposing central pedimented bay being gradually revealed upon approach".

54. Views 40 and 52 in the applicant's HTVIA show that the proposed tower at 31 Bury Street will form a very prominent backdrop to the existing continuum of views. It will appear as an intrusive and alien element in a remarkably unified existing townscape and will cause a **moderate** degree of **less than substantial harm** to the setting of the Lloyd's Avenue Conservation Area.

Renown House 33-34 Bury Street

55. The proposal involves the retention of only the two stone street facades of Renown House. The existing mansard roof, dormer windows, prominent chimney stack and the complete interior of the building are to be demolished. The proposed additional vertical floor harms the architectural proportions and balance of the original design and appears crudely detailed. The ungainly proportions of the proposal are apparent in View 59 of the HTVIA, seen from Cunard Place. The additional mansard and dormers are also poorly detailed, unsympathetic to the Edwardian character of the building. New floor levels are inserted to line through with the rest of the development and will result in bulkheads crossing the existing window openings, as shown in Figures 6.3, 6.5. 6.11 and 6.12 of the HTVIA.

56. The setting of Renown House will also be overwhelmed by the roof extensions to Holland House and the height of the tower. This harmful impact is illustrated in Figure 6.1 and Views 42 and 60 of the applicant's HTVIA, and although they do no show the full height of the tower. Views 42 and 59 show how the existing chimney stack and pots of Renown House are currently seen against the sky, something that is completely lost in the

proposal. The scheme will cause a **high** degree of **less than substantial harm** to this non-designated heritage asset.

Rabbi's House and Vestry, 2 and 4 Heneage Lane

57. The massive scale of the proposed tower at the southern end of Heneage Lane will dominate the townscape of Heneage Lane whose existing modest scale is an inherent part of its charm. The proposal will result in a **moderately high** degree of **less than substantial harm** to these non-designated heritage assets which front onto Heneage Lane either side of the east end of the Synagogue.

Cree House, 18-20 Creechurch Lane; Fibi House, 22-24 Creechurch Lane; Sugar Bakers' Court; 12-14 and 27-31 Mitre Street

58. This important group of late 19th century warehouses sits directly opposite and very close to the existing 31 Bury Street which at present is a consistent scale with its neighbours. While View 41 of the HTVIA is taken from Leadenhall Street, no closer view down Mitre Street has been provided which would show how the existing 31 Bury Street is an entirely appropriate scale relating to the Mitre Street warehouses. The massive height and scale of the proposed tower and its base will dominate and overpower the existing townscape and will result in a **moderately high** degree of **less than substantial harm** to the setting of these non-designated heritage assets.

COMPLIANCE WITH POLICY

59. It is considered that there is clear conflict with the statutory duties to protect the significance of listed buildings and to preserve and enhance the character and appearance of the Creechurch Conservation Area.
60. The proposal breaches Policy D9 of the London Plan which require the protection of heritage assets
61. The proposal conflicts with Local Plan policies to conserve and enhance the City's conservation areas. The proposal conflicts with Local Plan Policy CS14 (2) which states that tall buildings are not appropriate within conservation areas. While the draft City Plan 2040 proposes to change that policy it can be given very little weight at this stage.
62. The proposal conflicts with Local Plan Policy CS13 (2) to protect City landmarks and skyline features.
63. The proposals conflict with policies that seek to protect the setting of the Tower of London World Heritage Site.

ASSESSMENT OF HERITAGE BENEFITS PROPOSED BY THE APPLICANT

64. The applicant suggest that a number of public benefits will be provided by the development including some that are claimed to be heritage benefits. These are addressed and evaluated below.

65. Repairs and renovations are proposed to internal and external features of Holland House. This should all be regarded as routine repair and upgrading which any responsible owner of a listed building would automatically undertake. The assertion in Paragraph 2.32 of the applicant's Planning Statement that repairs to the faience tiles of Holland House can only be viably funded and delivered through the wider redevelopment of the site seems fanciful and hard to prove. The £ 4 million cost estimated by the applicant for faience repairs, window upgrades and renovation of internal spaces must be tiny fraction of the budget for the extensive works and extensions to Holland House, let along to the scheme as a whole.

66. The applicant claims to be reinstating the southern arm of the original historic Heneage Lane. The proposed ground floor plan shows that the new retail arcade running beneath the new tower does not in fact line up with Heneage Lane, but dog-legs to the east and is at a different angle. The original medieval Heneage Lane ran dead straight from Bevis Marks to Bury Street. No clear view through from the north end of Heneage Lane would be provided by the proposal. Furthermore, the applicant states that it will be gated and closed at night.

67. Similarly, the proposed reinstatement of James Court is both historically inaccurate and misleading. The reality of the proposal is a two-storey undercroft or arcade below the tower, separated from the street by the supporting structure of the tower. It is likely to a singularly unattractive place for the general public. It significantly reduces the size of the existing open courtyard between the existing 31 Bury Street and Holland House, which more accurately sits on the original site of James Court. The bombastic architectural treatment of the new building greatly changes the existing pedestrian townscape of narrow streets and pavements that characterise the area. The height and proportion of this undercroft and its columns is completely out of scale with Holland House. There are no heritage benefits provided here, only harm existing heritage assets.

68. Proposed works to the public highway are outside the ownership of the applicant and are the remit of the City Corporation. Demolition and construction work is likely to severely damage the existing pavements and carriageways, and the developer would normally be expected to pay for their reinstatement to the City's required standards without this being considered a public benefit.

69. The applicant claims that the design of the new tower will be of exceptional quality which will enhance the setting of Holland House, but there is little in the submitted

drawings to support this. No amount of modelling or material finishes can overcome the entirely inappropriate scale and massing of the proposed new building. In any event good design in a fundamental requirement of all development and is not in itself a public benefit.

BALANCING HARM AGAINST PUBLIC BENEFIT

70. Paragraph 205 of NPPF states that "when considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset's conservation (and the more important the asset, the greater the weight should be). This is irrespective of whether any potential harm amounts to substantial, total loss or less than substantial harm to its significance". Many of the heritage assets affected by the proposals are of the highest possible heritage significance and their conservation must therefore be accorded very great weight. Although the applicant repeated states that great weight should be given to the postulated public benefits, there is nothing in NPPF to support that.

71. Paragraph 206 states that any harm to the significance of a designated heritage asset, including development within its setting, should require clear and convincing justification. Substantial harm to grade II buildings should be exceptional; substantial harm to Grade I buildings should be wholly exceptional.

72. Paragraph 207 states that where development will lead to substantial harm to a designated heritage asset, consent should be refused unless it can be demonstrated that the substantial harm is necessary to achieve the substantial public benefits that outweigh that harm.

73. Paragraph 208 states that where development will lead to less than substantial harm to a designated heritage asset, this harm should be weighed against the public benefits of that proposal.

74. It is considered that the cumulative and high degree of harm to a such a large and widespread number of designated heritage assets far outweighs the alleged public benefits that the applicant claims will arise from the proposed development.

CONCLUSION

75. Paragraph 203 of NPPF requires Local Planning Authorities when determining applications to take account of: a) the desirability of sustaining and enhancing the significance of heritage assets and putting them to viable uses consistent with their conservation: b) the positive contribution that conservation of heritage assets can make to sustainable communities including their economic vitality: and c) the desirability of new development making a positive contribution to local character and distinctiveness.

76. The proposed development fails to meet any of these criteria. As concluded above, the scheme is considered to cause substantial harm to the Creechurch Lane Conservation Area and to the Bevis Marks Synagogue. In addition there are multiple cases of less than substantial harm to a wide range of designated and undesignated heritage assets, some of the very highest significance including the Tower of London World Heritage Site. Cumulatively the degree of harm is serious, and must be given very great weight. The public benefits claimed by the applicant, including alleged heritage benefits, go nowhere near to outweighing the harm.
77. There were very good reasons for refusing the previous proposals for 31 Bury Street, namely the adverse impact on Bevis Marks Synagogue and the protected views of the Tower of London. These reasons continue to apply to the current scheme, augmented by the additional harm now caused to the new Creechurch Conservation Area, Holland House and Renown House. It is strongly recommended that the planning and listed building consent applications be refused.

22nd April 2024

Alec Forshaw, together with Esther Robinson, was the author of the Option Three proposal for the designation of Creechurch Conservation Area, the option that was eventually approved by the City Corporation. He was Principal Conservation and Design Officer for the London Borough of Islington, where he worked from 1975 – 2007. He has written widely on historical and architectural matters, including *New City, Contemporary Architecture in the City of London* (2013), *The Barbican, Architecture and Light* (2015), and *Smithfield, Past, Present and Future* (2015). He gave evidence on behalf of SAVE Britain's Heritage in support of the City of London's refusal of planning and listed building consent at the Custom House Public Inquiry in February 2022.

Centrality of Sky View at Bevis Marks to Religious Services and Heritage

Given the concerning plight under which Bevis Marks Synagogue, the oldest continuously used synagogue in the world finds itself, I offer here some core points based in millennia-old Jewish law that is central to the synagogue's function and vitality.

1. The spiritual significance of the sky view at Bevis Marks has been inscribed into the material fabric of the building. In Hebrew, the synagogue is known as Sha'ar Hashamayim (Gate of Heaven). These words – Sha'ar Hashamayim - are carved in stone above the entrance gate, and painted above the synagogue's doors. They originate in the Biblical episode of Jacob's dream of a ladder with angles ascending and descending. Upon waking Jacob exclaimed: 'How awesome is this place, it is none other than the House of G-d and the Gate of Heaven'.[1] For this reason 'Gate of Heaven' is considered a euphemism for a 'House of G-d': Adjacent Aldgate and Bishopgate may have been the gates into the City of London, but the synagogue was the 'Gate of Heaven' for the City's Jews. The experience of 'heaven' is currently felt upon entering the quiet courtyard of Bevis Marks Synagogue, and seeing the sky around it, particularly as it frames the synagogue itself to its immediate south.
2. The sky view in the courtyard at Bevis Marks serves important ritual purpose as the sky view is central to Jewish practice. Jews are always looking up in a sense, to judge their religious timings and rhythms. One which occurs weekly is the Sabbath. The Sabbath does not officially end at any specific time on the clock per se (it was kept for generations before the invention of any clock). Rather, it is determined ended when the average person can see three medium sized stars in the sky[2]. While we do tend to rely on the clock when it is cloudy out, it is still very much part of our conscious inspection regarding the sabbath times. This timing is central for many other aspects of ritual and worship. For example, reciting the *Shema Yisrael* which is an obligation every evening must be done only after 3 medium sized stars are seen in the sky[3].
3. Similarly, the beginning of each new Jewish (lunar) month is marked by the appearance of the new moon. Each month, about a week after seeing the new moon, we then say a

הרב יוסף דוויך | רב הראשי

4. special blessing over the new moon[4]. This is done by going outside and finding the moon in the sky in order to say the prayers. If there is considerable obstruction it renders it impossible to perform this monthly ritual. We pray that as the moon steadily grows more and more full, so should the Jewish people, and so too we should be renewed just as the moon is constantly renewed. If there is constant physical obstruction to the sight of the moon from the synagogue grounds it would severely affect this monthly ritual and cause a great lack in the normal and usual synagogue services. Should buildings block out views of the eastern and southern sky, this ritual would be lost to the synagogue community.
5. Importantly, the sky view is critical to ensuring that enough daylight reaches the interior of the synagogue to enable the community to pray there even on dark winter days, and to retain the existing spiritual qualities of the building. The reading of a large quantity of printed texts by all present is intrinsic to Jewish worship and light levels must be maintained to enable this critical ability.
6. Finally, in general windows with their sky views are essential to a synagogue. This is expressed primarily in the Babylonian Talmud (Berakhot, 31a) in its referencing of verse 6:11 from the book of Daniel. The Talmud states: 'Rabbi Ḥiyya bar Abba said: One should always pray in a house with windows, as it is stated regarding Daniel: "And when Daniel knew that the writing was signed, he went to his house. In his attic there were open windows facing Jerusalem, and three times a day he knelt upon his knees and prayed and gave thanks before his God, just as he had done before." Likewise, the pre-eminent Jewish legal authority Rabbi Yosef Karo (Bet Yosef, OH:90) asserted that windows enable one to see the sky, look heavenward during prayer, and experience humility. If the windows are all obstructed it shuts the synagogue away from the outside world and considerably damages the entire environment and ambience that is meant for a synagogue.
7. This requirement to pray in a house with windows further reflects the fact that the observance of Jewish rituals is shaped by the positions of the sun and moon in the sky across the day, month and year. For example, Jewish prayer times are determined by the daily course of the sun: its journey from east to west over the southern horizon determines the times of our prayers, and is the inspiration for much of our liturgy. For this reason, the morning service (Shahrit) begins with the blessing, 'Blessed are you G-d who is sovereign over the universe, who fashions light and creates darkness…who brings light over all of the land and refreshes creation each day…Blessed are you G-d who creates the luminaries.' Later in the morning, when light currently shines into our

הרב יוסף דוויך | רב הראשי

8. courtyard and penetrates into the synagogue, it casts its glow across the pews, creating warmth on the faces of congregants, and lifting their thoughts skyward. On Yom Kippur, the darkening light and the glow of candles in the evening is a sign that the Gates of Mercy are about to close. In this way, the changing presence of light in the synagogue is intimately connected to the spiritual experience of worshippers. Any change to the current sky view would have profound implications for the religious value of the synagogue as a spiritual space and house of Jewish prayer.
9. Originally, the courtyard on three sides ensured that the synagogue windows were completely unobstructed, maximising the daylight admitted. Since then, the construction of higher buildings in the surrounding area which encroach upon the synagogue's sky view has reduced the amount of direct sunlight and reflected light entering the synagogue through these windows, significantly darkening the interior. Nevertheless, when looking out from the synagogue gallery windows one can still see the sky on both sides. Any further encroachment on the synagogue sky view is likely to make that impossible, blocking direct light and reducing the amount of reflected light that reaches the interior to a dangerously low level that threatens the synagogue's ability to function.
10. Finally, Circumcision is a foundational ritual in Judaism since only after he is circumcised is a Jewish boy considered to have joined the Jewish community: it is a medical procedure carried out on a baby's eighth day by a trained professional called a mohel. Ample light is essential to perform this ritual safely, but recent testimony from mohels who have conducted circumcisions in Bevis Marks confirms that any further reduction to light levels would render this impossible. Bevis Marks Synagogue contains two historic circumcision chairs from the seventeenth and eighteenth centuries, testifying to the long history of circumcision here. Ending the practice of circumcision at Bevis Marks would mark a significant rupture in three hundred years of tradition, harming the synagogue's significance as a place of worship and communal life.

As it is clearly evident, the above is just a selection of a vast legal system that is dependent on a profound connection with the observation of the celestial bodies and the movement of the earth in space and around the sun. For this to be cut off or obstructed, terribly damages and severely inhibits the *élan vital* of the community.

Subject: Bury House 24/00021/FULEIA

THIS IS AN EXTERNAL EMAIL

To whom it may concern,

I note with interest that revised plans have been submitted with respect to the demolition of Bury House, the alteration of the adjoining listed building, Holland House, and the intention to replace the former with a large building. At a time when the perils of antisemitism are so much in the news, are such actions, which could irreparably damage the functioning of the oldest synagogue in the country, really wise? The City of London is tasked with protecting surviving buildings of historic or architectural note; allowing the proposed works seems to me to be flying in the face of such duties.

Moreover, at a time when office space supply is overabundant, just how necessary is this building? Rather than contributing to London's function as a business and financial hub, would it not rather suck the life out of existing properties of that function?

Finally, there is a general duty on the City of London to proceed with an awareness of the implications on sustainability, resource usage and climate change/net zero policy. Is there any evidence at all that the proposed changes will provide any sort of benefit in those areas, or, rather, will they not significantly interfere with the City's responsibilities in those terms?

For all of the above reasons, I wish to express my opposition to the proposed changes.

Yours faithfully,

Gillian M Othen (Mrs)
49, Windy Arbour,
Kenilworth,

THIS IS AN EXTERNAL EMAIL

Dear Anna & team,

Thank you for sharing this notification. It feels somewhat like a groundhog day experience, as I believe that this is the third time I have felt the need to object to building that will disturb, disrupt, and ultimately destroy the Bevis Marks community. My parents were married at Bevis Marks Synagogue, me and my brothers received our bar mitzvahs (coming of age) there, and recently I was able to be part of the baby-naming service for my niece. My family's story is only one of thousands whose lives have been touched by this community. I understand that structurally the building, a listed building, will be unaffected by this development. However, this synagogue has a cultural heritage that is largely unique in global Jewry, and will only survive if the community itself can survive. This community has been through a lot, not least surviving a terror attack in the 1990s. It is all the more reason that it is so distressing that the City of London would be so willing to jeopardise its only synagogue community in this way.

I don't want to be a member of a museum. I want to be a member of a living, breathing, Jewish community. Is yet another skyscraper - when so many are lying empty across the city - worth the risk of destroying Bevis Marks?

Best,

Amos

22 March 2024

Dear Ms Tastsoglou,

I am writing to you to formally **object** to planning application 24/00021/FULEIA.

I am a regular worshiper at Bevis Marks Synagogue and my family history goes back to its opening over 320 years ago. I have been actively involved in the fight for protections and particular in relation to this building for over five years. You will be aware of the history of this building, especially that it was denied planning permission in a historic vote of the Planning and Transportation Committee in 2022. Since then, the synagogue has been actively working with the City of London to ensure that a Conservation Area that will protect the synagogue was implemented.

It is therefore both shocking and horrifying to see that this application has been brought forward. The plan is practically identical to the one previously submitted and would not have been allowed to be built within a conservation area under the current guidelines. It is incredibly transparent, that the City of London is proposing a change to their Local Plan policies in what appears to be a brazen attempt to allow this building to evade the restrictions that would previously have prevented its construction.

This enormous building will overshadow the synagogue courtyard, impacting on the religious and heritage use of the site. I personally have celebrated many community and personal events in the space including part of my own wedding. It is a vital part of our communities shared space and history and it a travesty that this kind of activity will not be possible should this building be allowed to go ahead.

The EQIA erroneously identifies no disproportionate impact based on religion or belief due to the particular need for light and outside activity that is an inherent aspect of the Jewish faith.

It is impossible to believe that such an enormous building would be contemplated near an important Christian house of worship or other important non-Jewish landmark. At a time when antisemitism is at an all time high, the fact that the City is contemplating placing at risk their most important Jewish site must be reconsidered.

Other objections will cover the significant impact that massively reducing light will have on worship and the operation of the new visitors' centre. However, the fact that such a development can be even considered when it has been rejected before and is now being proposed within a Conservation Area must and will be challenged.

I urge in the strongest terms that this planning application be rejected, as it has been previously.

Yours sincerely

To: Ipaburystreet
Subject: Your Refs: 24/00021/FULEIA (Planning Permission) and 2400011/LBC (Listed Building Consent)

THIS IS AN EXTERNAL EMAIL

Dear Sirs,

I refer to the letter dated 14 March 2024 from Anna Tastsoglou of your Development Division relating to the applications for Planning Permission and Listed Building Consent to which your above-mentioned references relate.

I note from Anna Tastsoglou's letter that the application for Planning Permission is for development which does not accord with the provisions of the Development Plan in force in the area in which the land to which the application relates is situated,

I also note from Anna Tastsoglou's letter that not only is the proposal considered to affect a Building of Special Architectural or Historic Interest but that it is also considered to affect the setting of a listed building and the character and appearance of the Creechurch Conservation Area.

Save Britain's Heritage's detailed report dated 1 November 2023 in relation to the then proposed Creechurch Conservation Area included the following statements specifically referring to the Bevis Marks Synagogue under the heading "Managing Development Pressure Positively":-

"The Bevis Marks Synagogue is one of the most important historic synagogues in the world, and of international significance. The sensitivity of its setting was a key reason for the refusal of recent plans to erect a 47 storey tower in place of the building at 31 Bury Street and a 27 storey (sic) immediately adjacent on Henage Lane."

"If the Synagogue is to be a fundamental feature of the proposed conservation area's special interest, including its immediate setting is both logical and necessary if the integrity of its grade 1 listing and the conservation area is to be enforceable."

In the light of all the above, I object to both the application for Planning Permission and the application for Listed Building Consent and I consider that the applications for Planning Permission and Listed Building Consent should be refused.

Please acknowledge receipt of this e-mail and forward it to the members of the Planning Committee.

Regards.

Dear Madam,

Thank you for the opportunity to provide feedback on this planning application.

I am supportive of the planning application for the following reasons

- to support the redevelopment and future landscape of the City of London
- Houndsditch and surrounding areas are full of dilapidated buildings of questionable architectural and historical promise
- the planning application has been revised to accommodate the previous objections concerning a building of special interest

Thank you

THIS IS AN EXTERNAL EMAIL

To whom it may concern

I'm writing to express my strong opposition to this new application (24/00021/FULEIA). I'm appalled to see this new proposal, particularly after its refusal two years ago, and the recent adoption of the Creechurch Conservation Area. This new application, barely changed since the last time it was submitted, is not in keeping with the conservation of a Grade-1 listed building, which is now also in a conservation area, and is the most important Jewish site in the UK. The new tower, to the synagogue's immediate south, would dominate the setting of the synagogue, block out the religiously important southern sky-view, and overshadow the synagogue and its courtyard, dwindling its remaining light. This kind of proposal would never be considered within the vicinity of St Paul's Cathedral, and should certainly not be permitted just metres from British Jewry's Cathedral synagogue, particularly along its sensitive southern exposure. I urge you to refuse this application. Especially considering this extremely sensitive time when British Jews are feeling completely isolated in British society as it is.

Thank you very much,
Jeantique Hommel

Subject: Do NOT permit the contruction of a 40+ story building alongside the Bevis Marks Synagogue

THIS IS AN EXTERNAL EMAIL

Dear Ms. Tastsoglou,

I write to protest, in the strongest possible terms, permission for the construction of a forty-something story building virtually adjacent to the Bevis Marks Synagogue. You are well aware of the historical significance of this synagogue, not just to the Jewish population of London and to

World Jewry, but to the heritage of London as a British and Global city. No need to repeat any of that. But, in light of it, in light of respect for Jews everywhere, in light of respect for the history of London, allowing the erection of a building that would dwarf the synagogue, cut is light, and render its urban geography literally monstrous, it is hard to understand why the plan is being entertained at all. I believe that a version of the plans, slightly higher, were rejected some time back. What has changed -- other than the spurious reduction of three floors from forty-eight -- to make the decision more acceptable now?

I urge you to protect the heritage of your London, one of the world's most historica, most globally significant cities, to recognize and respect the Jewish community that has contributed so much to its history and its contemporary glory, and refuse permission for the construction of the planned building.

Kind regards,

John Comaroff

> I am wri ng, as a resident of the City of London and as a member of, and weekly a ender at, Bevis Marks to object extremely strongly to these plans. I am more than saddened and much angered that this is the second me I am having to do so. The current applica on is virtually the same as the previous one an so all previous objec ons are appropriate.
>
> It seems to me that I cannot trust the Corpora on to keep to its own decisions and processes. Can the Corpora on not wait un l more has been done to iden fy loca ons for tall buildings? It would provide a breathing space to take into account the general commercial and social changes that are currently confron ng the City. Surely these should more greatly inform responses to planning applica ons and issues over at least the coming decade.
>
> As many people explained in rela on to the previous applica on, a tower this high would totally swamp the synagogue. It would cast a shadow over both the synagogue and the courtyard. I know from personal experience that this would make it extremely difficult to read prayers at certain places inside the building. Bevis Marks is not simply 'a historic site'; it is also a living community. But the way it is being treated seems to ignore this fact. The developers' presenta on simply 'listed and cked a number of boxes' that are found on all proposals. There is nothing specifically related to the par cular character of what they themselves recognised to be a historic quarter. Nor is there any recogni on of the fact that that the synagogue is within a Conserva on Area.

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou,

Thank you for your email.

I write as a Freeman of the City of London, and as a regular visitor to Bevis Marks Synagogue, to register my objection to yet another proposed development on the doorstep of this Grade-I listed building.

A Conservation Area has already been agreed to protect Bevis Marks Synagogue, so I am dismayed that this new proposal is being considered, particularly after its refusal two years ago. This new application, barely changed since the last time it was submitted, is not in keeping with the conservation of a Grade-I listed building. The new tower, to the synagogue's immediate south, would dominate the setting of the synagogue, block out the religiously important southern sky-view, and overshadow the synagogue and its courtyard, dwindling its remaining light. Additionally,

there are concerns that construction of this tower could potentially weaken the foundations of the synagogue, and will create noise, mess and disruption for the community.

Bevis Marks Synagogue was built in 1701, and my family worshipped there for generations. It is the ONLY non-Christian place of worship in the City, and recent excavations have shown the site to be of great historical importance. Please protect this wonderful building instead of seeking to destroy it. Do not allow it to become the victim of cultural vandalism.

I urge you to refuse this application.

Yours sincerely,

Mrs Beverley Lawrence

Subject: Reference - 24/00021/FULEIA - Bury House proposal - Objection

THIS IS AN EXTERNAL EMAIL

Dear Ms. Tastsoglou

I again find myself writing to express my serious concerns about development proposals that will, if approved, have a devastating impact on the historic Bevis Marks Synagogue.

A 45 storey tower would completely overshadow the synagogue, which is a Grade 1 Listed building of enormous historic and cultural significance. To the Jewish community this is the equivalent of Westminster Abbey or St Paul's Cathedral and as such should be afforded the same protection.

It would destroy the southern sky view, which is an essential part of the setting of the synagogue and would impact on religious practices that require a view of the sky. It would also further reduce the already minimal daylight that penetrates into the synagogue, making it even more difficult to conduct worship. Because of the historic nature of the synagogue, installing additional electric lighting is not feasible.

The development site is within the Creechurch Conservation Area and whilst the developers may feel that they are providing planning benefits that outweigh the harm to the synagogue, this is simply not the case. The impact on the Synagogue would be catastrophic.

The existing building at 31 Bury Street is capable of being refurbished to provide good service for many more years. The proposed replacement building would damage the setting of other heritage assets in the local area, and would compromise the qualities of the Conservation Area as a whole. The City Corporation has recognised the importance of the synagogue, and should therefore reflect this by providing it with ongoing protection. It should be made clear

to the developers that it will not tolerate unsuitable redevelopment that directly impacts the building.

Thank you

Stephen Gayer MRICS

Subject: Objection

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou,

I am the Deputy for Bournemouth Reform Synagogue and my objection to the proposal is in a communal as well as personal capacity.

The plans obviously exclude a number of buildings in future from natural light, which is not good for the physical or mental well-being of any residents and workers in the area. Concerning Bevis Marks Synagogue, the building is of historic importance to all faiths as the oldest place of continuous Jewish worship in the UK, but it is also a place of regular worship today. The obstruction of natural light restricts the ability of Jews to fulfil certain religious obligations, e.g. sunset and the appearance of 3 stars to mark the beginning and end of Shabbat and holidays; the appearance of the new moon to determine the dates of said holidays. The "settling area", far from extending protection to the synagogue and surroundings, decreases it.

Given the current atmosphere and the incidence of antisemitism, it would be an act of good faith towards the Jewish population of London and a good example of community cohesion if the number of storeys of new buildings were reduced, and, given the decreasing numbers of people who are working in offices, it would also be a good example of protection for the environment and our shared heritage.

Yours faithfully,

Ruth Hart

Subject: Comments for Planning Application 24/00061/

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou

I write to communicate profound objection to Planning Application 24/00061

A 45 storey tower would completely dominate the Grade 1 Listed synagogue skyline. Such a building would be allowed next to St Paul's Cathedral. Judaism observes lunar months: the view of the moon's passage across the sky, and many of the celestial bodies, would be blocked. It would reduce daylight to a trickle. Because of the historic nature of the synagogue, installing additional electric lighting is not feasible. The development site is within the Creechurch Conservation Area. Current planning policy is not to allow tall buildings in Conservation Areas, so there is a direct conflict with the statutory development plan. The plans have been previously turned down and now based on the most cosmetic / superficial amendments being rushed through with an indecent haste. One has to ask why. With the trend to work from home there is no shortage of existing buildings in the locality being repurposed for residential needs. And straight forward applications are also being approved. There is no legal or moral justification for this abomination. It would be a stain on the landscape and also Britain's standing as a tolerant and multi faith society that respects freedom of worship and cultural diversity. It does not sell out on these values which are respected the world over for a cheap buck. Do not permit this unconscionable edifice to go ahead especially as it has been turned down on solid grounds recently.

Sincerley

Dorothy Lampert

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou

I am a member of Bevis Marks Synagogue and have previously objected to 31 Bury Street application to multi story office building, and would like to register my objection to the new design which does not address the following;

1. The 45 storey tower will completely overwhelm a grade one listed building in a conservation area.
2. It would destroy the southern sky view, which is an essential part of setting part of the synagogue and interfere with the conduct of the services during certain parts of each month.
3. It would overshadow the synagogue and its courtyard. As you may well know the synagogue is dependent on day light due to its original classical design and any loss of daylight will have significant effect on its use for praying during day time.
4. The development site is within the Creechurch Conservation Area, and the proposed building will have significant effect on the character of the area.
5. I do not accept what the Developers offering of planning benefits for the area is a substitute for the damage the proposed building will do to the setting of other heritage assets in the area.

I look forward to be updated on your decision

Kind regards

Fuad Kateb

Dear Sir/ madam,

If the synagogue affected by this hugh development was a church with a similar claim to

be the oldest in the country this application would not even be considered.

The effect on this gem of a synagogue is undeniable.

This decision to allow the building is nothing less than antisemitism.

Please reconsider

Alastair Bloom

CONSTRUCTION YOUTH TRUST

Anna Tastsoglou
Principle Planning Officer (Development Management)
Environment Department
City of London
Guildhall
London EC2V 7HH

Thursday 28th March 2024

Dear Ms Tastsoglou,

Re: The future of education and community spaces at Holland House

I am writing to express support for the planning application for the redevelopment of Bury House, Holland House and Renown House (Planning application reference 24/00021/FULEIA), which includes the cultural strategy around supporting the local community.

We were first contacted by the Applicant about the use of the spaces within the historic Holland House on 24th January 2023. We are a registered charity offering support for young people in overcoming the barriers to employment and helping them to discover a career in construction and in the built environment.

We have now held three successful work experience sessions at Holland House on 3rd-5th May, 5th July, and 14th July 2023 (all free of charge). We have been told we can make further bookings to suit our calendar of sessions in 2024; an offer we are hugely grateful for and enthusiastic about.

It is a great benefit to CYT to be able to take the young people we are working with out of their normal school environment and give them a sense of what it's like to work in an office setting. The space at Holland House gives us plenty of scope for activities, with varying room sizes to suit our needs. Our staff found it a pleasure to have such flexibility and to work in this beautiful building that has so much character.

We therefore welcome the proposed application in principle and hope that the City of London will approve the proposals, which will allow our charity to have continued access to a fantastic venue for inspiring our young people into the world of work.

Kind Regards,

Creative Land Trust

Anna Tastoglou
City of London Corporation
Department of Planning and Transportation
PO Box 270
Guildhall
London
EC2P EJ

28 March 2024

Dear Ms Tastoglou,

1-4, 31, and 33-34 Bury Street, London EC3A 5AR – Planning application reference 24/00021/FULEIA

I am writing on behalf of the Creative Land Trust in support of the planning application being brought forward by WELPUT for the redevelopment of Bury House, Holland House and Renown House.

The Creative Land Trust was established to help secure affordable space for artists and creatives to ensure a vibrant and prosperous future for this critical industry. There is a notable lack of affordable workspaces in the City of London and for aspiring artists to show case their work. Additionally London's many studio providers are facing growing difficulty in securing even 'meanwhile' space in the City. Our vision is to address this through acquiring properties and providing long-term, secure, affordable creative workspace.

We were first contacted about the spaces in Holland House on the 8th December 2023 and we enjoyed viewing the historic building and discussing how we could best utilise the opportunity presented through the refurbishment and restoration of Holland House. We have since used the spaces within the building for a variety of events, including our 'Team Day' on the 15th November 2023.

The historic building and spaces within present a unique opportunity to serve unmet demand from local artists and makers, giving them space to collaborate, create and showcase their work, as well as acting as a potential new attraction in the City.

We therefore support the application in principle and believe it will make a positive contribution to the long term cultural success of this part of the city.

Yours sincerely,

EC2V 7HH

Friday 15th March 2024

Dear Ms Tastsoglou,

Re: The future of education and community spaces at Holland House.
Planning Reference: 24/00021/FULEIA.

As an experienced primary school teacher and school leader, I have seen my profession change wildly across the last two decades. We are no longer individuals who impart facts to children from the hours of 9.00am to 3.15pm hoping that something sticks, we are now architects of the future responsible for all aspects of child development. All careers of the future start with a seed or an experience that is nurtured within a school setting. Making links with future careers and giving learning a purpose is the bedrock of successful education hence why our experiences at Holland House with Dr Sharon Wright have made such a difference to our children.

Just travelling to Holland House helped build the cultural capital of our children. Coming from an incredibly deprived part of West London where most of our children are EAL (English as an additional language) and the progeny are part of an insular community that may not venture out the borough, travelling to Holland House was an eye opener. Getting on the Elizabeth Line, going up an escalator, walking through the City, gazing at the polished metal and glass, seeing workers that may look like them – this is inspirational for our children. Knowing that the financial heartbeat of the country can be reached in less than 30 minutes from Southall and becoming increasingly aware of the fact that the City of London could be a place of future employment frames the educational experience we hope to offer.

Then there's the building itself – we teach the skills of comparison all the time in the primary curriculum – nestled next to the Gherkin and dripping in history. Our children had never seen anything like it: the aquatic tiles, the maritime theme echoed throughout, sitting in a boardroom from reclaimed wood – it's the closest some of our children have been to getting on a boat! Couple this with the role of shipping in the founding of Great Britain, it ties in with our fundamental British Values as well as providing a starting point for a conversation on the role of Empire and the

Dairy Meadow
Primary & Nursery School

Swift Road, Southall, Middlesex UB2 4RP
Phone: 020 8571 7925
Email: office@dairy-meadow.ealing.sch.uk

decolonisation of the curriculum. The sheer space within Holland House lends itself beautifully to learning experiences for all ages.

These workshops are what children remember about school, the people who give up their time and energy to actually guide and inspire – Sharon is the embodiment of this. At Dairy Meadow we were fortunate enough to run three workshops together across a two term period. We brought our school council and our Pupil Premium (the most vulnerable of risk of underachievement) children to have a tour of the building and supplement their DT and Skills Builder curriculum by designing sustainable work spaces of the future. The purpose of these visits were to: gain a potted history of London's financial centre, understand the jobs that occur in the city of London and contribute to the positive sustainable changes that they would like to see.

A further workshop involved us taking all 53 Year 6 children for a 'world of work' immersion day. This involved meeting the team from Bentall Green Oak and having a series of presentations from inspiring individuals within the construction industry. All of our presenters were female which was an absolute surprise to our young ladies who are often subjected to cultural boundaries when thinking of further employment. From there we had a CV writing workshop and mock interviews! I don't know of any other primary school that has undertaken such an ambitious project, we really couldn't have completed it without the help of Holland House and Dr Sharon.

I appreciate that this is just the experience of one primary school however you can not underestimate the impact these visits had for our children. Everything in London is getting more expensive and difficult – as a result the day to day worlds our children inhabit get smaller and smaller. It's only through events like I've mentioned that we can give the children the chance to envisage a life beyond their immediate future and encourage our future workers the chance to dream big.

Happy to discuss anything that has been mentioned above, photos and pupil/staff voice available on request.

Yours,

[redacted]

11 April 2024

Ref. Bury Street Cultural Strategy – Planning application ref. 24/00021/FULEIA

Dear Ms Tastsoglou,

I write in my capacity as Chair, Darjeeling Children's Trust, a charity registered in England and Wales, to support the proposed redevelopment of 1-4, 31 and 33-34 Bury Street, EC3A 5AR.

To help you understand why an organisation whose work is focused on a city in West Bengal should be strongly supportive of a redevelopment plan in the City of London, let me provide a brief explanation. Darjeeling Children's Trust (DCT) is a small charity, dedicated to improving the educational opportunities, health and general wellbeing of children and young people who come from families of very limited means. As you may imagine, demand for our support greatly outstrips our capacity to supply it. Nevertheless, a small but excellent team on the ground in Darjeeling, supported by a UK-based Board of Trustees whose principal purpose is to generate funds to finance the work, manages to deliver programmes of a range and quality which belies our modest funding base. We are confident that few charities exceed DCT in terms of wringing the last penny of value from every pound raised.

With this in mind, you will appreciate that support in kind has a direct link to the provision of support to children in Darjeeling. With a month's school or college sponsorship costing in the region of £50 per child per month, facilities provided to DCT *gratis* — when other, equivalent, options were costed at between £400 and £500 — immediately releases funds equivalent to between eight and ten months' of sponsorship.

We have been privileged to use meeting facilities at Holland House for meetings of the DCT Board and we hope to be able to use them again in the future, whether for formal meetings or for events designed to explain our work to potential supporters. Even before the proposed redevelopment, these facilities are unquestionably of a quality rarely enjoyed by small charities who are usually compelled to go for the cheapest available option. If one were to multiply the benefits received by this one, small, charity by the number of charitable, educational, faith-based and other community groups who stand to gain from the proposed redevelopment of the Bury Street premises, the aggregate gain to society in general is surely significant.

It will not surprise you, therefore, when I say that Darjeeling Children's Trust strongly supports Welput in its proposals to redevelop Bury Street in the manner set out in their application.

Dr Graham Cory
Chair, Darjeeling Children's Trust

18 March 2024

Dear Anna,

Re: Application Reference 24/00021/FULEIA

My name is Aslam Baccus and I am a trustee of the charity Halls4Jumuah in London. Our main purpose is to hire halls and venues across the City of London to provide muslim men and women working in the city with a place to perform their Friday prayers.

At present, we are hiring six halls within the city, including Holland House in Bury Street, London, EC3A 3BP. We have been using the hall every Friday since the beginning of January 2024 and we manage the venue with the help of our on-site volunteers. To ensure the venue as well as the attendees are safe and capacity is kept under control, we record the names and phone numbers of anyone coming in to perform their prayers. Currently, we have an average of 40 people attending Holland House each week, using a hall that has the capacity to host 150 people. The venue is in an excellent location in London and our numbers are gradually increasing as more people become aware of its whereabouts.

The owners of the building have been absolutely first class in providing our charity with their support to allow members of our community access to perform their weekly prayers, and we are always rest assured that the venue is clean, spacious and welcoming.

We have benefitted greatly from a review of the proposed development plan and we feel that the idea of turning the Lower Ground, Ground and First Floors into spaces that can accommodate small and local charities as well as community based projects truly inspiring.

We at Halls4Jumuah hope the project with be successful and full credit must go to the management of the building who are always a pleasure to work with.

Kind regards,

Aslam Baccus

Ref: Holland House/ Bury Street Proposals, application reference number 24/00021/FULEIA

Dear Ms Tastsoglou,

I am writing with regards to the development proposals for Holland House, Bury Street. I regard the proposals as an exciting opportunity within the City of London. As an academic working for one of the country's top schools for the study of the Built Environment I am well versed in planning applications across the country and often use the City of London for case studies. Over the last ten years I have brought groups of students to the City of London and in the last 2 have utilised the facilities at Holland House. With the many pressures on University budgets, being able to utilise Holland House has meant that we have been able to continue to bring students to the City and see first-hand how the Eastern Cluster has been transformed and continues to evolve. This has enabled students to enrich their education that will have long lasting public benefits. The potential for further public benefits to be generated by the proposed development is significant and I relish the chance to use the new flexible learning spaces to help educate the next generations of Built Environment professionals.

Yours sincerely,

Dan Sames
Senior Lecturer in Planning
Subject Coordinator for Planning and Property Development

Norvin House

15 March 2024

Dear Anna Tastsoglou,

I am writing to express support on behalf of The Switch for the planning application for Holland House, Bury House and Renown House (application reference 24/00021/FULEIA). The experiences of our organisation, at this venue have been exceedingly positive, and I believe that the proposed enhancements will further contribute to its value as a community resource.

At The Switch we used the meeting rooms for our strategy day as we do not have the appropriate space in our own offices. The availability of additional rooms for breakout spaces allowed for productive discussions and collaborative work, creating an environment conducive to effective strategic planning. The well-equipped kitchen facilities were an added advantage, providing our team with the necessary amenities to ensure a smooth and efficient day.

Furthermore, we were able to collaborate with the Learning Crowd to facilitate a week of Work Experience activities in the construction and engineering sector for 20 Year 10 students from Mulberry Stepney Green School. This was a hugely successful event and we received positive feedback from the students. It is often very difficult to run activities for such a large amount of students but this space made it possible. Again the breakout rooms proved invaluable for group work, and the board room provided a professional setting for presentations. The location of Holland House gave students insight into working in the City of London. Students were able to experience the various buildings and organisations to expand their horizons. Many students commented they would like to work in the city in the future as a result.

The Switch supports the planning application for Holland House, Bury House and Renown House and we look forward to using the multifunctional space in the future.

Yours sincerely,

upReach
Transforming Social Mobility

68-80 Hanbury Street

London, E1 5JL

26th March 2024

Dear Ms Tastsoglou,

I am writing on behalf of upReach Charitable Company in order to express our support for WELPUT's planning application to redevelop Holland House, Bury House and Renown House to the City of London Corporation (Planning Reference 24/00021/FULEIA).

upReach's charitable mission is to support undergraduates from lower socio-economic backgrounds to access and sustain top graduate jobs. Working in close partnership with leading employers and universities, we deliver a programme of 1-to-1 coaching to eligible undergraduates. Our programmes currently provide personalised support to 3,000 students from across the UK, supporting them to discover different career options, and develop the vital skills, networks and experiences needed to succeed in their chosen career and beyond. WELPUT are one of our employer partners, and we are delighted to support this application.

As part of our partnership with WELPUT, we have recently used the space at Holland House on two separate occasions. The first time was on November 9th 2023, in order to provide valuable line management training for a small group (c. 15 members) of our team. The second time was on the 30th January 2024, when we bought our whole London staff team together (c.35 people) for a day of collaboration and team building. On both occasions Holland House provided the perfect venue - the staff were incredibly friendly and welcoming, and we gained huge value as a team. As a charity, there are very few available, affordable or free options in London for this kind of training, and given our responsibilities to ensure all charitable funds are spent for the good of our beneficiaries, places like Holland House make a big difference, not only for our team but for the impact we can have as a charity.

We would love to continue to use the space, and in the future would like to use it for events involving our beneficiaries in addition to our team. Particularly as we work with those who may have very little work experience or, indeed, experience visiting this part of the city and experiencing a workplace, the proposed redevelopment should have a fantastic impact on these students who would have the opportunity to develop their employability skills in such a wonderful setting and great part of the city to learn about different careers.

Please do feel free to contact me if you have further questions or would like more information, I can be reached via [redacted]

Kind regards,

application reference number (24/00021/FULEIA)

To whom it may concern,

This is a letter which outlines the use of Holland House by community interest company Wondering Minds CiC for purposes looking to up lift the community.

Wondering Minds are a community interest company who are committed to finding alternative solutions to the mental health crisis through art, storytelling and nature. We engage people in meaningful creative activities while building community, creating employment and creating radical therapeutic shifts in peoples lives. So far we have used the space at Holland House for a collaborative filmmaking course which bought together people living with complex mental health to engage with filmmaking and storytelling. The space was used to train people with cameras, allow them to shoot their films and create a community filmmaking screening in July where we bought over 50 people together to watch short films and have meaningful discussions around mental health and the importance of collaboration.

Spaces like Holland House are so important to community building as there is very little space available which is free or affordable for people to come together. We have capacity to use HH permanently or on a short term let to create an office and creative hub where we can manage our community wellbeing projects, offer space to people who are in recovery. A space to come and be creative, set up an editing suite for our service users to make work, a location for filming for our participants and create drop in sessions for people struggling with mental health to engage in creative activities.

Regards,

YOUTH LINK NETWORKS
CHANGING LIVES

Anna Tastsoglou, Principal Planning Officer (Development Management)
Environment Department
City of London
Guildhall
London EC2V 7HH

Dear Anna

My name is Karla Simpson, CEO of Youth Link Networks Charity no 1185081.

I write to share my delight and appreciation for the wonderful service from staff and building accommodation/facilities at Holland House.
4 times a year, the charitable trustees at Youth Link Networks convene for quarterly meetings and very timely, a dear friend and supporter of the charity recommended Holland House to us whilst we searched for an appropriate space to host our most recent in person meeting since pre Covid-19.
Our meeting at Holland House took place on Sunday 13th August 2023 and leading up to the day we had a friendly face call introduction where emergency evacuation protocols, building facilities and Q&A session was discussed and I feeling reassured that using Holland House would be the right space for us.

The boardroom was a perfect allocation. In total, 4 trustees were present for the meeting, and we had the entire space to brainstorm ideas across the table, use multiple presenting screens and host lunch whilst utilising the kitchen space and facilities.

We envisage to use the space at Holland House for more trustee meetings and possibly utilise the space for other charitable events in the near future.
Spaces like these being offered to grassroot charity of Youth Link Networks kind is crucial for our developmental growth. To know that we can come together as a team to strategize for worthy and life changing causes without the additional administrative cost pressure makes such a difference and its causes like this that we would hope to see long continue.

YLNETWORKS

Your sincerely

THIS IS AN EXTERNAL EMAIL

Dear Anna Tastsoglou

I am writing in my personal capacity to object to planning application reference: 24/00021/FULEIA.

My place of work is 6 Bevis Marks, very close to Bevis Marks Synagogue.

I accordingly have practical, on the ground, knowledge of the area and interest in the Bevis Marks Synagogue, as a neighbour and also as a member of the Jewish community.

My reasons for objecting to the proposed development are:

1. It would utterly overwhelm the synagogue, a Grade 1 Listed building of major historic and cultural significance.
2. It would block the southern sky view which is important for religious ritual.
3. It would overshadow the synagogue and its courtyard for much of the day, reducing the useability of the courtyard for rituals and celebrations.
4. It would further reduce the already minimal daylight that enters the synagogue, making it yet more difficult to conduct worship. Because of the historic nature of the synagogue, installing additional electric lighting is not feasible.
5. The developers say they will provide planning benefits that outweigh the harm to the synagogue however these do not bear scrutiny. Many – for example, being car free, demonstrating holistic environmental design, having consolidated deliveries – are merely features to be expected in any modern commercial building, and do not represent a gain to the community.
6. The existing building at 31 Bury Street is only 40 years old and is capable of being refurbished and providing good service for many more years. Unnecessary demolition simply squanders the energy embodied in the building.

Please acknowledge receipt.

Yours sincerely,

Raymond Silverstein **(him/his)**

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou,

I'm writing to express my strong opposition to this new application (24/00021/FULEIA). I'm a member of the Spanish & Portuguese Jewish Community of which Bevis Marks is a part of and I'm writing to express my strong opposition to this new application (24/00021/FULEIA). and am appalled to see this new proposal, particularly after its refusal two years ago, and the recent adoption of the Creechurch Conservation Area. This new application, barely changed since the last time it was submitted, is not in keeping with the conservation of a Grade-1 listed building, which is now also in a conservation area, and is the most important Jewish site in the UK.

The new tower, to the synagogue's immediate south, would dominate the setting of the synagogue, block out the religiously important southern sky-view, and overshadow the synagogue and its courtyard, dwindling its remaining light. This kind of proposal would never be considered within the vicinity of St Paul's Cathedral, and should certainly not be permitted just metres from British Jewry's Cathedral synagogue, particularly along its sensitive southern exposure. I urge you to refuse this application. Spanish & Portuguese Jewish community and am appalled to see this new proposal, particularly after its refusal two years ago, and the recent adoption of the Creechurch Conservation Area.

Subject: Objection to Holland House applications 24/00021/FULEIA and 24/00011/LBC
Attachments: YR objection to Holland House applications.pdf

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou,

I am a resident of Algate Ward. Please find attached my detailed objection to these applications.
The online form did not give sufficient space to address all the issues. I would like it to be clear that I am making these comments as a resident. When I previously objected to a planning application for another development, the developer looked me up and contacted me directly. Please make it clear to the developer that I do not wish to be contacted.

Best regards,
Yarema Ronish
Flat 5, 4-8 Creechurch Lane
London, EC3A 5AY

Objection to Holland House applications
24/00021/FULEIA and 24/00011/LBC

My wife and I are residents of Aldgate ward as well as Freemen, and the City is our full-time home. We object to these applications on the following grounds:

HARM TO LISTED BUILDING

This proposal does harm to the curtilage and setting of Holland House and the Bevis Marks Synagogue. Holland House is internationally significant and written up in many books on modernist architecture, while the synagogue is the oldest in the UK.

HARM TO STREETSCAPE & CONSERVATION AREA

Changing the floor levels and glazing of Reknown House, and replacing the existing roof and dormer windows with modern ones adversely affects its character. See Design & Access Statement, page 6 where Reknown House looks like a hollowed-out shell. This should not be permitted within the Creechurch Conservation Area.

It is difficult to see how inward-facing retail shops can survive on a secondary street, moreover these do not contribute active frontages to Creechurch Lane.

LACK OF PUBLIC BENEFIT

The James Court pocket park proposals do not constitute a proper park, as this is located under an undercroft similar to the Cheesegrater, which is only used as a forecourt and for food trucks – no-one ever sits there. A park without sunlight is useless to the public.

Sufficient community facilities already exist in Aldgate Ward at 107 Leadenhall, where Theatre Deli (www.theatredeli.co.uk) provides two floors of low-cost rooms for dance, exercise, martial arts and acting classes, run by a social enterprise and open six days a week from 10am to 10pm. Therefore, the provision of community facilities by the developer is would not provide any additional benefit to residents and workers.

DAYLIGHTING

The Radiance Assessment missed the flats at 4-8 Creechurch Lane. The proposed tower will overshadow the north and west facing windows, and therefore the applicant is required to submit an analysis of this.

The EIA provides a daylight analysis of 4-8 Creechurch Lane, but there a fundamental error in the report. On the north-facing Window Map at page 9, Annex 6, windows W15 are in fact blocked, each bedroom has one window not two. Thus the analysis for R4 of 4-8 Creechurch Lane is wrong and should be resubmitted.

As to 18-20 Creechurch Lane, it is not acceptable to reduce the Vertical Sky Component of nine habitable rooms to under 3% (Radiance Assessment, Part 3, page 44).

As to 2, 10-16 Creechurch Lane, it is not acceptable to reduce the Vertical Sky Component of ALL the habitable rooms to 3% (Radiance Assessment, Part 4, page 63).

LACK OF PUBLIC ENGAGEMENT

The residents of the eight flats in 4-8 Creechurch Lane were not invited to the June 2023 Public Exhibition, despite what is claimed in the Design & Access Statement.

Yours sincerely,

Yarema Ronish

For the attention of Ms. Anna Tastsoglou, Case Officer

Dear Sir,

Re: Development Alongside Bevis Marks Synagogue
Planning Application Reference 24/00021/FULEIA

I am writing with reference to the proposed development alongside the Bevis Marks Synagogue. I understand this comprises a 45 storey building to the south of the Synagogue. We very much hope that this will not be allowed to proceed as we are clear that it will severely limit or indeed eliminate natural light for the Synagogue.

I am a long-standing member of the Spanish & Portuguese Congregation and of the Synagogue concerned, which I attend regularly. I have, in the past been a member of the governing body of the organisation.

We are aware of the initial view that the development would be undesirable but we understand that it is currently being seriously considered. We are informed that it is a speculative development without a commitment from a potential occupant.

We appreciate that you have to consider the matter in relation to planning policy but we do hope and strongly suggest that this should include the preservation of a long established building (dating from 1701) and also a long-standing heritage site which is of benefit to the City of London as a whole.

We ask you to consider the matter in broad terms as in appropriate in heritage terms and to bear in mind the interests of the Congregation and Community, the Synagogue having been in continuous use since 1701. May I also include a reference to the external Memorial Plaque showing the substantial contribution of the Community to Britain in the World Wars, including a VC awarded in the First World War.

I should appreciate your acknowledgment to this letter and your helpful consideration of this matter.

Yours faithfully,

Edward Album

Subject: Re: Objection to Planning Application 24/00021/FULEIA

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou

I am writing to object to the new planning application 24/00021/FULEIA for the proposed tower block at 31 Bury Street. Several of these points are the same as previous applications 20/00848/FULEIA for the proposed tower block at 31 Bury Street and 18/00305/FULMAJ for the proposed tower block at 33 Creechurch Lane (see emails below from November and December 2020).

To supplement my previous objection, I have the following additional comments:

- Last year the Creechurch Conservation Area (CCA) was implemented. In the consultation prior to the CCA, there were several different options. One excluded 31 Bury Street from the CCA, another included 31 Bury Street in the CCA. The City agreed to the inclusion of 31 Bury Street in the CCA. Given that the options were clearly presented and a firm decision was reached, **this application should have been rejected before it even arrived at the consultation stage**.

Best regards
Jonathan

On Sat, 21 Nov 2020 at 21:52, Jonathan Ben Garcia [redacted] wrote:

Dear Mr Richards

I am writing to object to planning application 18/00305/FULMAJ for the proposed tower block at 33 Creechurch Lane for the following reasons:

- Building works for the proposed tower block would impact on the ability of the community of Bevis Marks Synagogue to hold regular services and host weddings. On the Jewish Sabbath and Holy Days, it is forbidden to use a microphone, so it would be impossible to compete with the noise from the building site. It is also important that the synagogue be able to retain its step-free access from the entrance on Heneage Lane.
- The proposed tower block would significantly reduce the synagogue's lighting, by blocking natural light on the eastern side. Rabbi Morris has several videos dedicated to Bevis Marks' architecture (www.youtube.com/channel/UCXBehglz-MVe4TpLDGCNcbg) and how these could be impacted by the proposed tower block. I would commend these to the planning committee when they come to their decision.
- Bevis Marks Synagogue is one of three Grade 1 listed Synagogues in the UK. It has been open for worship every year since 1701. For the Jews of the Spanish and Portuguese Congregation, the Synagogue surviving the Blitz is as much of a miracle as its Christian fellow, St Pauls, which was constructed at the same time.
- On a personal note, Bevis Marks Synagogue is very close to my heart. As a child, we would regularly attend the Synagogue on Sundays for its daily morning service. As a treble chorister, I was invited to sing in the 300th anniversary of the Synagogue. I wrote a project about the Synagogue of the Square Mile when I was eight, which I presented to my class at school (I have attached a copy). More recently, my wife and I were married in the Synagogue.

Best regards

21 April 2024

Dear Ms Tastsoglou

Reference 24/00021/FULEIA

I wish to **OBJECT** to the above planning application, for which I understand you are the case officer.

While the proposed building may be well designed and environmentally sustainable, that is no more than one would expect from any modern building. However, it is in a completely inappropriate position.

The Bevis Marks Synagogue is of huge religious, cultural and historical importance, in the City, across wider London, the UK and beyond. Its setting and operation would be significantly harmed if such a building was allowed to proceed.

The proposed building would bring no significant benefits, but rather cause immense detrimental impact to the Synagogue, as it would overshadow it literally, figuratively and architecturally. It would reduce the already low level of daylight in the Synagogue, making it harder to use for worship. (Of course, due to the historic nature of Bevis Marks electric lighting has to be limited.) It would also reduce the use of the courtyard for a variety of activities.

This is within a conservation area and I understand that current planning policy is not to allow tall buildings in conservation areas, so there is a conflict of interest with the statutory development plan. The existing building at 31 Bury Street is relatively recent and could be refurbished.

As well as supporting development, the City has a duty to protect its distinguished assets, of which Bevis Marks is surely one, so I urge it to reject this absurd proposal.

Please note - I wish my name and address to be withheld, therefore I understand that my comment will be anonymous. Thank you.

Yours sincerely,

Dear Sirs,

Yet another proposal to destroy a bit of historic London in the name of 'progress' (but more rightly called greed). My interest in this is my membership of the Bevis Marks Synagogue, so close to the area under consideration.

What is the point of designating Conservation Areas if you do not preserve their character and appearance? The same consideration goes for designating buildings of Special Architectural or Historic interest, whose environs must not be spoiled..

This monstrous project, with a 43 story tombstone looming over a conservation area is completely wrong-headed, and must be resolutely opposed.

Thank you for your attention.

Yours faithfully,

Dr. Everett M. Jacobs

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou,

It is with great sadness that I find it necessary after such a short time to again need to try and convince the leaders of our beloved London of the importance of preserving such an important heritage as the Bevis Marks Synagogue of 1701.

We hear our leaders proclaim the significance of the Jewish community in the development of our wonderful city over the centuries. But now you propose to reconsider a project that will completely overshadow this beautiful historical

location of worship. Try and image the reaction if a similar plan was considered to overshadow St Paul's Cathedral!!

Not so long ago this project was rejected; should we be spending our scare finances and valuable human resources to reconsider the project following what are in summary very minor changes?

To save you as much time as possible let me briefly enumerate my objections to this project:

1) the courtyard will get no light and be of little use.
2) the monthly prayers for the new moon every month will be compromised.
3) no natural light to this magnificent building
4) direct conflict with current Cree church conservation area
5) the alleged benefit by the developer are misleading and cannot stand up to serious scrutiny.

Please consider the historical importance of the heritage of our city. I realise the difficult task of balancing choices when planning for growth; but please don't be swayed by medium term financial incentives that obliterate historical values of this magnificent City.

Yours sincerely.

Dear Anna,

Re: 24/200021/FULEIA

I refer to the above planning application and the serious issue of "light" for such an old and historic building.

It surely must be the responsibility of the planning office to protect the integrity of such an old building.
And my understanding is that the community should be a priority based on its long lineage.

One wanders if this was a Mosque what parades and disruption the city of London would see?

Thank you.

Comments for Planning Application 24/00021/FULEIA

Dear Sir/Madam,

Mr John Dreyfuss,

You have been sent this email because you or somebody else has submitted a comment on a Planning Application to your local authority using your email address. A summary of your comments is provided below.

Comments were submitted at 29/04/2024 12:22 PM from Mr John Dreyfuss.

Application Summary

Address:	Bury House 1 - 4, 31 - 34 Bury Street London EC3A 5AR
Proposal:	Demolition of Bury House and erection of a new building comprising of 4 basement levels, ground plus 43 storeys (178.7m AOD); partial demolition of Holland House and Renown House; restoration of existing and erection of four storey extension resulting in ground plus 8 storeys at Holland House (48.05m AOD) and three storey extension resulting in ground plus 5 storeys at Renown House (36.49m AOD); interconnection of the three buildings; use of the buildings for office (Class E(g)), flexible retail/café (Class E(a)/E(b)), and flexible community/education/ cultural/amenity (Class F2(b)/ F1(a)- (e)/ E(f)/ Sui Generis) uses; and provision of a new covered pedestrian route, cycle parking and facilities, landscaping and highway improvements, servicing and plant and all other ancillary and other associated works.
Case Officer:	Anna Tastsoglou

Subject: Bevis Marks Synagogue - Planning Application Ref:- 24/00021/FULEIA

THIS IS AN EXTERNAL EMAIL

FOR THE ATTENTION OF THE CITY CORPORATION PLANNING COMMITTEE

Subject: Bevis Marks Synagogue - Planning Application Ref:- 24/00021/FULEIA

As someone who has frequented the Bevis Marks Synagogue for prayer, attended and helped to organise some ceremonial affairs, I am mortified that the City Corporation - known for its environmental sensitivity - could be minded to pass this:-
Proposed planning application Ref:- 24/00021/FULEIA to erect a 43 storey tower block

in Bury Street. IT SHOULD BE REFUSED:-

REASONS FOR REFUSAL:-
A). If this 43 storey tower block is approved it will make a mockery of the City Corporation's very recent listing in 2023 - THE CREECHURCH CONSERVATION AREA - SPECIFICALLY IN ORDER TO PROTECT THIS AREA FROM INAPPROPRIATE DEVELOPMENT CONTAINING:-
Bevis Marks Synagogue - (Grade 1) AND
St. Botolp-without-Aldgate (Grade 11)
It will be contrary to the City Corporation's own planning statutory development plan.

B). The height and bulk of this 43 storey tower block will dwarf, over-shadow and seriously impair forevermore the present narrow sphere of natural sky entering the courtyard of Bevis Marks synagogue.
Lighting is conducive and central to those wishing to pray in a house of worship.
In the case of Bevis Marks Synagogue - it basically relies on that existing shadow of daylight and candle light within this house of prayer.
C). In view of its Grade 1 listing, Bevis Marks Synagogue deserves planning respect and sensitivity to ensure that inappropriate development is not approved.
D). Approval of this planning application will be an architectural and historical travesty!
NB:-
Abigail Green, Professor of Modern European History at Brasenose University, Oxford, is quoted to have said:-
"The heritage value of Bevis Marks Synagogue is not purely architectural. There is a difference between a place of worship of historic beauty being conserved in use, and one
kept open only as a museum.
Bevis Marks is a living community not a museum."

HISTORY
Bevis Marks Synagogue, now a Grade 1 listed building, dates back to 1701 being the
first purpose built synagogue erected in England after the readmission of Jews by
Oliver Cromwell in 1656.
It is the only synagogue building in Europe that has continuously held regular services for more than 320 years.
The architect was a Master Builder called Joseph Avis, a Quaker, who had worked for Sir Christopher Wren, as had his craftsmen.
The architectural significance of Bevis Marks Synagogue is therefore as important as its religious significance.

The developers claim:-
".....to provide substantial planning benefits which will outweigh any harm sustained by the synagogue.'
How many developers make such claims which regrettably become unviable once construction proceeds? It is a known fact that claims made by developer's cannot be guaranteed, therefore in this case, once erected this tower block will damage irrevocably the Synagogue's loss of amenity and purpose.
Bevis Marks could therefore face a closure threat!
NB.
William Whyte, Professor of Social and Architectural History at St. John's University, Oxford is

quoted to have said
”It would be a tragedy for our generation to be the ones who disregarded its significance as both an architectural gem and a precious piece of religious heritage.
Yours sincerely
Eileen Eskenzi. MBE. JP

THIS IS AN EXTERNAL EMAIL

Please do not allow the atrocious building to obliterate the historic Bevis Marks Synagogue. You would not allow it next to Westminster Abbey, St Paul's and I doubt event next to a mosque.

If this goes ahead the cathedral Synagogue of British Jews, which is dependent on natural light would be overwhelmed and made redundant as a place of worship.

Please do not let it happen.

EC2P 2EJ

Dear Anna,

I write to express my grave concern over plans to build a forty-five-story tower block next door to Bevis Marks synagogue (planning application reference: 24/00021/FULEIA).

Bevis Marks, a Grade One listed building, is often heralded by the local community and beyond as Britian's 'Jewish Cathedral'. A building that has thrived for over three hundred years, it is a space of enormous historical and cultural significance. The fact that such a vital community hub is under threat by this development is deeply alarming.

The plans have significant implications for the usability of the synagogue, as the building of a tower block along the southern side would totally destroy the setting. Not only would important elements of religious ritual (the view of the moon's passage and many of the celestial bodies) be blocked, the synagogue's natural light levels would be so obscured that the space would be rendered unfit for conducting worship. The historic nature of the synagogue prevents the installation of additional electric lighting as a feasible alternative, leaving no choice but to consider the space unusable.

The City of London Corporation, as the municipal governing body of the City of London, has a duty to safeguard the right of the Jewish community to freely gather for worship without obstruction or difficulty. Facilitating the approval of such a development, threatening the vitality of such an essential community space, would fall short of recognising the importance of the synagogue, and in turn supporting London's Jewish community. The idea of building something similar next to St Paul's Cathedral would be inconceivable and inappropriate. The same levels of protection and preservation should be attributed to Jewish community spaces like Bevis Marks.

At a time of rising levels of antisemitism, and increased fear and uncertainty amongst the Jewish community, the protection of their places of worship and community could not be more urgent.

I hope you will take these concerns into account and reconsider the plans for this development, to ensure the life and legacy of Bevis Marks synagogue is protected.

Yours sincerely,

THIS IS AN EXTERNAL EMAIL

Dear Anna,
As a community member and user/ participant of Bevis Marks Synagogue and citizen of London, and the UK, I call upon you to respect the Jewish community that is currently at risk on all continents and that fears for its future, to show leadership and respect for this people by refusing the application for disproportionate the tower proposed adjacent to Bevis Marks Synagogue.

It may seem to you, far from the global crisis of global Anti Semitic outpouring that has struck since 7th October 2023, (which pretends to blame every Jewish person and institution for the conflict generated by politicians ON BOTH SIDES in the Middle East, who have misused power and negated their sacred duty to protect and support their people). The relationship of a place of worship to its environment, to earth and to the heavens above, is an important and sacred factor, and the proposed building will interfere with this bond in a disrespectful manner, and indicate the triumph of financial gain over the respect for spiritual values.

This is perhaps a small item in comparison to the Town Planning rulings that limit construction from affecting the prominence of the dome of St Paul's. The iconic photograph of that dome standing alone after bombing raids on the city of London, during and after World War II, is an important symbol and reminder of the spiritual against the idols of racism and cruel domination, of human values against those of the material which lend prestige and value to our great city London.

In a perhaps a less obvious but, even so, important manner, the decision of the elected representatives of The City of London to refuse this application and others like it, will show the world, in these troubling times, respect for the inhabitants of our global city, and uphold its reputation for a unique blend of culture, values and leadership, that face an uncertain future today.

The Town Planning aspects against this application have been recorded in correspondence by others, and I concur with their views and arguments.

Yours sincerely,
Edward Teeger.

> The synagogue has been under threat from then City Corporation over several years. There are always speculators and property developers who cast a greedy eye on the area around Bevis Marks, and propose to build a tower block there. As a Grade 1 listed building it is considered 'of exceptional interest'. Not only the building itself but the courtyard is of importance to the proceedings of the synagogue services and the activities of the community.
>
> From the courtyard of Bevis Marks, it is possible on a clear night to see the moon and the stars, which is of importance to the traditions of Judaism. Because the synagogue is surrounded by larger buildings, the levels of light make a significant difference to the practicability of its use; what is more, the current proposal of a tower block will destroy both the light needed, and block the outlook towards the sky.
>
> I implore you and your team to make it easier for Bevis Marks to be protected from new buildings. The disregard for the needs of the synagogue are an insult to the people who worship there and who have previously managed to protect the synagogue from further greedy speculators. There are some things more important than money. Can not this great building be protected from further assailments?

Your ref: 24/00021/FULEIA

Location: 1-4, 31-34 Bury Street, London, EC3A 5AR

Dear Anna Tastsoglou, Case Officer,

Thank you for writing to me to seek my views on the above planning application.

Reason for writing: the proposed building of 43 above ground storeys will overwhelm the nearby Bevis Marks Synagogue which is the oldest synagogue in Europe in continuous use. I have attended for worship on an occasional basis for the past forty years. The synagogue received a grant of nearly £2.8 million from the National Heritage Lottery Fund for restoration work and the conservation of collections. Work is now almost complete, and will include a museum and heritage exhibition, whilst the synagogue will continue to serve the community through prayer services. Astonishingly, daily worship by the Minister (on his own) was able to continue right through the Covid lockdowns, and the synagogue has remained open during the subsequent building works there. It seems perverse, to say the least, to spend public money on conserving the synagogue and at the same time to destroy its wider setting with a tower block directly to the south 43 storeys high. Reductions in light, described by the developers as 'negligible', will none the less impact the reading capacity of older users of the synagogue with poor eyesight, of whom there are many. In addition, construction of the four basement levels threaten the stability of the synagogue building, since it is 323 years old and like all buildings from that period, has shallow foundations.

Heritage Policies

The published heritage plans for the City state that the surroundings of Bevis Marks Synagogue should not just be preserved, but enhanced. In contrast to this, the enhancements and green features described by the developer will have no impact on the Synagogue at all.

The envisaged City Plan 2040 has a whole section (S11) on 'Heritage and Tall Buildings'. It begins with the words:

1.Celebrating the City's heritage for its contribution to the quality of life and promoting public enjoyment of, and access to, heritage assets;
2. Conserving and enhancing heritage assets and their settings; opportunities will be sought for development proposals to make a positive contribution to, and better reveal the significance of, heritage assets and reflect and enhance local character and distinctiveness

Please note also the following four specific references to the synagogue:

11.1.1 There are a large number of designated heritage assets in the City, with over 600 listed buildings and many structures such as statues, monuments and sculptures. Listed buildings range from a 17th century home on Cloth Fair, the unique early 18th century Bevis Marks Synagogue, and Wren's iconic St Paul's Cathedral and churches, to modern buildings by renowned architects .

On tall buildings:

11.1.7 Applicants will be required to undertake a comprehensive heritage assessment proportionate to the scale of their site and heritage asset to understand ways in which their proposal could contribute towards the enhancement and enjoyment of the historic environment.

11.2.1 The City Corporation has identified 'immediate setting' areas around the Monument and Bevis Marks Synagogue, both of which are Grade I listed heritage assets in the City and require special consideration and protection, given their outstanding architectural and historic significance and, for these particular buildings, the critical contribution of elements of setting to that significance.

Policy HE1 6 Development in conservation areas should preserve, and where possible, enhance and better reveal the character, appearance and significance of the conservation area and its setting. The buildings and features that contribute to the character, appearance, setting or significance of a conservation area should be conserved and opportunities to enhance conservation areas should be considered.

Policy HE1 8 Development in the defined immediate setting of Bevis Marks Synagogue and The Monument should preserve, and where possible,

enhance the elements of setting that contribute to the significance of these heritage assets.

14 The Temple, the Thames Policy Area & the Key Areas of Change

14.6 Ensuring development proposals have regard to the immediate setting of Bevis Marks Synagogue. Developments should form a positive relationship with the Synagogue without dominating or detracting from its architectural and historic value; and ensuring that the historic elements of the Synagogue's setting are preserved and enhanced.

Three of the paragraphs quoted above mention the 'immediate setting' of the Synagogue. A Policy Paper (Policy Paper: Bevis Marks Synagogue – Immediate Setting January 2024 (https://www.cityoflondon.gov.uk/assets/Services-Environment/Bevis-Marks-synagogue-immediate-setting-paper.pdf) explains that the 'immediate setting' means only the buildings adjacent to the synagogue, not those in the wider area, however close by they may be. The paper contains valuable information on the architectural history and significance of the synagogue, which should be drawn to the attention of the Planning Committee.

However, the Policy Paper does also comment on the Synagogue's wider setting and argues that this too must be carefully managed:

the introduction of tall buildings, which is a relatively recent development in the context of the history of the building, has changed the character of the setting above the courtyard by introducing built form and activity into an area that was previously sky space. This has altered the sense of seclusion that is an important element of the significance of the synagogue, both functionally and symbolically.. Additionally, there are recently consented schemes for other tall buildings, some of which are currently being implemented.. further development that has the potential to reduce the sense of seclusion offered by the Immediate Setting of the courtyard framing the Synagogue has to be carefully managed.

Although not technically part of the 'immediate setting' of the synagogue, the Proposed Development is so overwhelmingly tall and close to the Synagogue that in reality it will affect the immediate setting far more than the existing tall buildings visible from the courtyard. The heritage implications are profound. Please see below for my remarks on the importance of daylight and a view of the sky for traditional Jewish worship.

The synagogue was designed by a pupil of Sir Christopher Wren and deserves as much environmental protection as the City's Wren Churches, to which it is comparable in scale and standard. In my travels round Europe I have visited many historic synagogues and seen none hemmed in and overshadowed by such a close and tall building as is here proposed. If they accept this proposal, the planning committee would be ignoring the City's

stated objective and current and past practice of seeking to preserve and to enhance the setting of heritage assets. Aldgate Square, a few metres away, enhances the setting of St Botolph's Aldgate and by providing leisure space, ensures that people stop to admire the Church. On the other side of the synagogue, the setting of St Helen's Bishopsgate has also been enhanced by new open space at the Gherkin Plaza. Contrast the synagogue, which will be hemmed in as if the City were ashamed of it.

I invite members of the Planning Committee to consider how the development will enhance the setting of the synagogue as their policies require. In view of the importance of heritage in the centre of one of the world's oldest cities, and the huge importance of tourism to the city, questions need to be asked about how these considerations are considered by the Planning Committee and in particular whether there is specific heritage representation on or to the group.

Environmental Impact References below are to paragraph numbers in the 'Environmental Statement' by Trium.

The new documents submitted on behalf of the developers repeat the erroneous argument previously used that because the setting and the light levels in and around the synagogue have been compromised in the past, it is somehow acceptable to compromise them still further.

None of the documents submitted discuss the right of the congregation to enjoy freedom of worship in the way they and their predecessors have done at the synagogue for the past 320 years.

Of the three daily Jewish prayer services, two of them, the morning and afternoon prayers, have to take place during daylight. This does not simply mean during daylight hours but in a setting which has natural light. This idea goes back to the Bible, where it is written (Daniel 6:10) **"**Daniel went into his house with the windows open in the upper chamber facing Jerusalem, and three times a day he kneeled upon his knees and prayed and gave thanks before his God.**"** The medieval commentator Rashi explains that through windows we can see the sky, and remind ourselves of our submission to heaven (comment on the Babylonian Talmud Berakhot 34b). From this you can see the importance of not shutting out or inhibiting the view of the sky from a synagogue. It also explains why the architect of Bevis Marks synagogue placed the windows high up, so that eyes could be raised heavenward during prayer. The beauty and purpose of this design will be frustrated and damaged by a view up towards new tall buildings. You cannot measure the value of the setting of a heritage asset with a light meter. None of the statements on behalf of the developers address this point.

The Environmental Impact Statement submitted by the developers has 251 pages and contains over a hundred references to Bevis Marks Synagogue. In spite of the length of the report, there is no mention at all of the view of the new building from the synagogue courtyard. This is a serious omission.

Furthermore, the Environmental Impact Statement was submitted before the Creechurch Conservation Area was established and therefore does not include any reference to the additional protection which one might expect this to provide to Bevis Marks Synagogue, to Holland House, and to the many other listed buildings nearby. The Statement notes that a previous and very similar application was refused in 2020 and details various meetings and proposals which have taken place to ensure that the new application does not carry as much environmental impact. Unfortunately, the slight reduction in height and the slimmer top of the building will make little difference to Bevis Marks Synagogue.

The report notes (9:100) that there will be a vibration impact on the synagogue during construction from pile driving, and that this will be increased when the auger hits the base of the hole However, there appears to be nothing that describes the additional affect that vibrations will have on a building more than 300 years old. This is a serious omission from the assessment, especially considering the depth of the four basement levels. Vibrations spread and so the effect of pile driving at a greater depth can be felt further away. A well written report should give examples of vibrations from different low levels, so that calculations can be made as to how many basement levels, if any, should be permitted in order to ensure that the synagogue's foundations are not damaged.

On the question of sunlight, the report claims that the Synagogue courtyard currently receives less than 2 hours of direct sunlight on March 21st and September 21st each year. However, there appears to be no mention of indirect sunlight reflected from neighbouring buildings. I have noticed myself how much the light level in the synagogue changes suddenly and markedly on a day when there are many clouds coming across the sun, as the light is reflected off the building across the courtyard into the large upper windows at the west end of the synagogue. Indeed, this dappled sunlight, coming and going through the windows and illuminating the dark wood throughout the synagogue creates a very beautiful effect. It is therefore alarming to read an impact assessment which does not even consider this.

On the question of daylight, the report makes the same error as the 2020 report, arguing that because the amount of daylight is already very low, the effect of reducing it further will be high in percentage terms, but negligible in real terms. This is tantamount to saying that because the synagogue is already too dark, it is acceptable to deprive it of even more light. The argument places the legal technicalities above what happens in real life. If I am struggling to read my prayer book on a dark day in the synagogue, even the tiniest further reduction is going to affect my reading adversely. When the light is already below par, there is no such thing as a negligible further reduction. The whole argument is a false one. The fact that the report repeats this same argument many times does nothing to enhance its case. Furthermore, it is a known fact that eye problems increase, and eyesight diminishes, with age. The reduction in daylight woefully described as 'negligible' will therefore have a disproportionate impact on older members

of the congregation, of whom there are many. This constitutes discrimination on the basis of age, which is illegal under the terms of the Equality Act 2010. **It is not sufficient for the developers merely to consider an 'average person' when assessing the light impact on a building with a high proportion of older users.** Furthermore, the higher reduction in light at upper levels is discriminatory against women users of the synagogue; the effect on those with reduced eyesight is discriminatory against less able users; and the whole project disadvantages the Jewish community which has no other Synagogue within the City of London.

Similarly, the question of overshadowing is dismissed on the grounds that the Synagogue courtyard is already in **shadow**, and therefore only a very minimal portion of the Proposed Development shadow hits the ground (10:174) at any time of the year. This ignores the fact that shadows make a difference above ground level as well, and will reduce the amount of light coming through the upper windows, especially those at the western end and the south west corner which currently provide a considerable proportion of the Synagogue's light.

Paragraph 15:9 of the report states that during demolition and construction, the Proposed Development will have significant adverse effects on the Synagogue as a result of the use of heavy machinery and tall cranes and the erection of other infrastructure needed for construction, such as scaffolding, hoarding, mobile cranes, site lighting, temporary site offices and facilities. The section of the report on mitigation does not mention the Synagogue, and there is no assessment at all of whether or not this could cause irreparable damage to such an old and fragile building.

Summary

The Proposed Development application does not take sufficient account of the City's existing and anticipated heritage policies, nor does it take account of Conservation Area policies which require any new development to enhance the setting of the synagogue.

The Proposed Development discriminates against older people and other protected groups by dismissing as irrelevant small reductions in the light in a building used for the reading of books. The new building will have a negative visual and overshadowing impact on the synagogue and its setting and context within the City townscape. Pile driving during construction may cause damaging vibrations.

I am against this planning application.

Yours sincerely

Subject: Planning application reference: 24/00021/FULEIA.

THIS IS AN EXTERNAL EMAIL

Dear Anna,

Many of us in the S & P Congregation were very upset to learn there has been yet another Planning Application for a 45 storey building at 31 Bury Street even though it has been agreed this is now a Conservation Area. This building if allowed will completely overshadow the Bevis Marks Synagogue and take away its light.

I write to express my strong opposition to this new application (24/00021/FULEIA).

I am a supporter of Bevis Marks Synagogue and am appalled to see this new proposal, particularly after its refusal two years ago, and the recent adoption of the Creechurch Conservation Area.

- **A 45 storey tower would completely overwhelm the synagogue, which is a Grade 1 Listed building of enormous historic and cultural significance.**
- It is inconceivable that such a building would be allowed next to St Paul's cathedral, so why is the synagogue not afforded the same protection?
- **It would destroy the southern sky view, which is an essential part of the setting of the synagogue**, and important for the intangible qualities it contributes to religious ritual. The view of the moon's passage across the sky, and many of the celestial bodies, would be blocked.
- The proposed building may be well designed and an exemplar of sustainability, but it is simply in the wrong place.
- **It would overshadow the synagogue and its courtyard** for much of the day, reducing the useability of the courtyard for rituals and celebrations.
- It would also further reduce the already minimal daylight that penetrates into the synagogue, making it even more difficult to conduct worship. Because

of the historic nature of the synagogue, installing additional electric lighting is not feasible.

- The development site is within the Creechurch Conservation Area. Current planning policy is not to allow tall buildings in Conservation Areas, so there is a direct conflict with the statutory development plan.
- The City Corporation is required to identify locations suitable for tall buildings. It has done some work on this, but there is much more work to be done, and their work eventually has to be assessed by an independent inspector. This process is unlikely to be complete before late 2025.
- **The developers are arguing that they are providing lots of planning benefits that outweigh the harm to the synagogue. These benefits do not stand up to scrutiny.** Many –for example, being car free, demonstrating holistic environmental design, having consolidated deliveries –are simply features that would be expected in any modern commercial building, and they do not represent a gain to the community.
- They propose to restore the Listed Holland House[1] and turn it over to various uses which are claimed to be of community benefit. Whilst the restoration of this building is to be welcomed, the claims about the community value of the uses must be viewed with great scepticism.
- The existing building at 31 Bury Street is only 40 years old and is capable of being refurbished and providing good service for many more years. Unnecessary demolition simply squanders the energy embodied in the building.
- The proposed building would also damage the setting of other heritage assets in the local area, and would compromise the qualities of the Conservation Area as a whole.
- The City Corporation is being disingenuous: claiming to recognise the importance of the synagogue, yet simultaneously facilitating this monstrous development. We are entitled to expect much higher standards from Britain's most prestigious local authority.

I do hope you will be able to refuse consent for this unsuitable building

Yours sincerely,

Alfred Magnus (Former Chairman of the Board of Elders of the Spanish & Portuguese Jews Congregation.)

THIS IS AN EXTERNAL EMAIL

Dear Ms. Tastsoglou

I'm writing to express my strong opposition to this new application (24/00021/FULEIA).

I'm not a member of Bevis Marks' Spanish & Portuguese Jewish community but I am the Chairman of the Southend & Westcliff Hebrew Congregation and many members of the Bevis Marks' Spanish & Portuguese Jewish community have retired to live in Southend and Westcliff, just a short train journey away.

I'm appalled to see this new proposal, particularly after its refusal two years ago, and the recent adoption of the Creechurch Conservation Area. This new application, barely changed since the last time it was submitted, is not in
keeping with the conservation of a Grade-1 listed building, which is now also in a

conservation area, and is the most important Jewish site in the UK. The new tower, to the synagogue's immediate south, would dominate the setting of the synagogue, block out the religiously important southern sky-view, and overshadow the synagogue and its courtyard, dwindling its remaining light. This kind of proposal would never be considered within the vicinity of St Paul's Cathedral, and should certainly not be permitted just metres from British Jewry's Cathedral synagogue, particularly along its sensitive southern exposure.

I urge you to refuse this application.

Regards

DENNIS BAUM

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou

I am writing to register my objection to this latest planning application, ref 24/00021/FULEIA.

It is an audacious proposal, barely changed from the application, which was turned down two years ago. The proposed 45 storey tower would be absolutely devasting, overshadowing the synagogue and its courtyard forever by blocking out the light and sky view which is such an essential part of the setting. Not only is the synagogue a Grade 1 Listed building of immense historical and cultural importance –unique among the great cathedrals of London –it is also of significant national and international importance. The Listing status and the recently added Conservation Area status have been granted specifically for the protection of the building and its setting. This new proposal shows blatant disregard for these official protections.

The planning benefits suggested by the developers are weak and a distraction from the main issue. I hope they are not being offered as trade-off, as nothing could ever make up for the potential irreversible damage that would be caused if this proposal is allowed to go ahead. Please, please, please refuse this this application.

Although I am no longer a resident in the area my interest remains strong as both a historian and a regular visitor.

Kind regards

Katharine Copisarow MA Oxon

Dear Ms. Tastsoglou,

I'm writing to beg you to refuse this new application (24/00021/FULEIA). I am very upset to see this new threat to the Bevis Marks Synagogue which is such a historic building as well as an important one in the present day for Jewish worship. Like many people all over the world I have ancestors who celebrated important religious ceremonies there and when visiting U.K. we make a point connecting. The proposed tower would be a disaster for the synagogue cutting out its light and blocking the view. Given the historical and practical importance of the synagogue I find this proposal totally inappropriate and implore you to refuse it.

Yours sincerely,

Christine Hills

(Descendant of the de Costa family, now living in Ireland)

Subject: Objection to Development at 31 Bury Street (Ref: 24/00021/FULEIA)

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou,

I am writing to express my strong objection to the proposed development of a 48-story office building at 31 Bury Street, located just 25 meters from Bevis Marks Synagogue.

As the oldest continuously used synagogue in Britain, Bevis Marks holds immense cultural significance. The unobstructed southern sky view, allowing for the observation of the stars from the courtyard, is an essential part of the synagogue's heritage and spiritual practice.

The previous attempt at this development in 2020 was rightly rejected due to the un impact it would have on the synagogue. I am deeply disappointed that the developers are persisting with this plan, especially considering the recent designation of the area as a Conservation Area.

The proposed scrapping of the ban on tall buildings in Conservation Areas goes agains purpose of such designation –to protect historically and culturally significant sites. Allow development would set a dangerous precedent and threaten the integrity of Bevis Marks Synagogue.

Therefore, I urge the City of London to reject this application (Ref: 24/00021/FULEIA). Protecting Bevis Marks Synagogue and its unique heritage is paramount.

Thank you for your time and consideration.

Sincerely,
Alexander Matthieu

Subject: objection to 31 Bury St. planning application ref:24/00021/FULEIA.

THIS IS AN EXTERNAL EMAIL

Dear Ms. Tastsoglou,

I am a 65-year-old retired Jewish journalist living in north west London and am writing to object in the strongest possible terms to the above-numbered planning application.

I believe it will adversely affect the workings of the historic Bevis Marks synagogue to the point of ruination. I grew up visiting Bevis Marks frequently and also visited on many occasions during my working life in the City of London in nearby Devonshire Square, EC2.

The synagogue is the capital's principal historic Jewish site in regular use, a listed building and the erection of this proposed tower block would obscure its religiously important southern view of the sky and blot out the light on the synagogue's courtyard. It would also shroud religious observance and other activities there in continuous exterior gloom.

Please, please refuse this application.

Yours sincerely,

Jonathan Isaacs

Subject: planning application reference: 24/00021/FULEIA.

THIS IS AN EXTERNAL EMAIL

Dear Mrs Tastsoglou

Please accept my objection to the planning application noted above because it would be extremely damaging to the Bevis Marks synagogue, itself a heritage site. the reasons for my objection are set out below.

- **A 45 storey tower would completely overwhelm the synagogue, which is a Grade 1 Listed building of enormous historic and cultural significance.**

- It is inconceivable that such a building would be allowed next to St Paul's cathedral, so why is the synagogue not afforded the same protection?

- **It would destroy the southern sky view, which is an essential part of the setting of the synagogue**, and important for the intangible qualities it contributes to religious ritual. The view of the moon's passage across the sky, and many of the celestial bodies, would be blocked.

- The proposed building may be well designed and an exemplar of sustainability, but it is simply in the wrong place.

- **It would overshadow the synagogue and its courtyard** for much of the day, reducing the useability of the courtyard for rituals and celebrations.

- It would also further reduce the already minimal daylight that penetrates into the synagogue, making it even more difficult to conduct worship. Because of the historic nature of the synagogue, installing additional electric lighting is not feasible.

- The development site is within the Creechurch Conservation Area. Current planning policy is not to allow tall buildings in Conservation Areas, so there is a direct conflict with the statutory development plan.

- The City Corporation is required to identify locations suitable for tall buildings. It has done some work on this, but there is much more work to be done, and their work eventually has to be assessed by an independent inspector. This process is unlikely to be complete before late 2025.

- **The developers are arguing that they are providing lots of planning benefits that outweigh the harm to the synagogue. These benefits do not stand up to scrutiny.** Many –for example, being car free, demonstrating holistic environmental design, having consolidated deliveries –are simply features that would be expected in any modern commercial building, and they do not represent a gain to the community.

- They propose to restore the Listed Holland House[1] and turn it over to various uses which are claimed to be of community benefit. Whilst the restoration of this building is to be welcomed, the claims about the community value of the uses must be viewed with great scepticism.

- The existing building at 31 Bury Street is only 40 years old and is capable of being refurbished and providing good service for many more years. Unnecessary demolition simply squanders the energy embodied in the building.

- The proposed building would also damage the setting of other heritage assets in the local area, and would compromise the qualities of the Conservation Area as a whole.

- The City Corporation is being disingenuous: claiming to recognise the importance of the synagogue, yet simultaneously facilitating this monstrous development. We are entitled to expect much higher standards from Britain's most prestigious local authority.

Yours sincerely, michael schiller

Dear Anna Tastsoglou,

As a non-practising London Jewess, I'm writing to express my strong opposition to the new application (24/00021/FULEIA). I'm appalled to see this new proposal, particularly after its refusal two years ago, and the recent adoption of the Creechurch Conservation Area. This new application, barely changed since the last time it was submitted, is not in keeping with the conservation of a Grade-1 listed building, which is now also in a conservation area, and is the most important Jewish site in the UK. The new tower, to the synagogue's immediate south, would dominate the setting of the synagogue, block out the religiously important southern sky-view, and overshadow the synagogue and its courtyard, dwindling its remaining light. This kind of proposal would never be considered within the vicinity of St Paul's Cathedral, and should certainly not be permitted just metres from British Jewry's Cathedral synagogue, particularly along its sensitive southern exposure. I urge you to refuse this application.

Kind regards,

Janice Brent

TUESDAY 14/05/2024 MS ANNA TASTSOGLOU - 'NO ACKNOWLEDGEMENT OF MY OBJECTION 13/05/2024 RECEIVED'

Re. Planning Application Reference: *24/00021/FULEIA

FAO: Ms Anna Tastsoglou
*Case Officer
c/o City of London Planning Department
P O Box 270
Guildhall
London EC2P 2EJ

Dear Ms Tastsoglou

Re. Planning Application Reference: *24/00021/FULEIA

Thank you for being the relevant *Case Officer in this, yet another attempt to DESTROY
a most historical and, as far as I know, a **unique portion of the City of London

This not only includes the Grade 1 (one) listed and ***irreplaceable Bevis Marks Synagogue
but, also, what I believed to have become known as the **'Creechurch Conservation Area'

This was certainly the **case when I first looked at the situation on the 5th November, 2023

The latest 'absurd' idea by presumably the same Developer (?) completely goes against the
grain first described by your own City Planners when describing the **Creechurch Conserv-
ation Area encompassing 33 Creechurch Lane, London EC3A 5EB and Bury House, 31 Bury
Street, London EC3A 5AR and, particularly, ***Bevis Marks Synagogue, 2 Heneage Lane, Lo-
ndon EC3A 5DQ

Although now retired, I experienced some 40 (forty) years in Shop and Office agency in the
West End of London W.1., in Piccadilly and Regent Street, after having 'trained' with one of
the largest West End Commercial Agencies. I can honestly say that I have never come acro-
ss such a poorly represented attempt to try and DESTROY such an historic part of the already
famous building(s) together making up the wonderful City of London

My OBJECTION to the Planning Application with Reference: *24/00021/FULEIA is 'heartfelt'

Yours sincerely

Dear Ms Tastsoglou

RE: Planning Application: 24/00021/FULEIA
Address: Bury House 1 - 4, 31 - 34 Bury Street London EC3A 5AR

I am writing to register the Foundation for Jewish Heritage's strong objection to the above application. Our objection relates to the negative impact that the proposed development would have on the Grade I listed Bevis Marks Synagogue (NHLE List Entry Number: 1064745). Bevis Marks is the oldest surviving synagogue in the UK and is arguably the most important Jewish heritage site in the country. The Synagogue is of exceptional significance both to the UK's Jewish community and in the history of the City of London, in which Sephardic Jews played a pivotal role.

In respect of the previous application, our trustee Esther Robinson Wild wrote a comprehensive objection dated 01.02.21. All of the points made in this document apply to the new application.

In addition, we would like to make the following points in support of our objection to the new application:

1. The alterations made to the proposal since the previous application do not address the grounds on which it was refused, including the unacceptable impact on the Synagogue. We welcomed the planning committee's refusal of the previous application and can see no reason for this decision to be undone by the new application. Indeed, the subsequent creation of the Creechurch Conservation Area and the widening of the new proposal's footprint strengthen the case for refusal.

2. The Foundation's previous objection stated that we expected a robust and thorough assessment of the significance of a Grade I listed heritage asset which may be impacted by a major development of this nature and that we were concerned by the absence of such. We remain concerned that no such assessment has been adequately carried out.

   The Environmental Statement Volume 2: Heritage, Townscape and Visual Impact Assessment submitted with this application includes a single page heritage assessment devoted specifically to Bevis Marks Synagogue (sections 8.124-8.139). It includes no attempt to assess the evidential or communal significance of the site, points raised in our previous objection. The assessment is incomplete and inadequate for a Grade I listed site of outstanding historical interest.

We again call for a thorough Statement of Significance for Bevis Marks Synagogue to be prepared along with a robust assessment of potential harms to significance caused by the proposed development.

3. We fundamentally disagree with the assumption of the heritage assessment that the setting of Bevis Marks Synagogue makes no contribution to its significance, and that therefore the proposed development would result in 'no harm' to significance. We fully support Historic England's position that the setting does in fact contribute to the significance of the Synagogue. We believe that the proposed development will cause **substantial harm to the setting of Bevis Marks Synagogue.**

4. The proposed development sits within the Creechurch Conservation Area, which was created in part to achieve '*Fuller recognition of the Jewish history of the locality'* (Creechurch Conservation Area Proposal, City of London Corporation, December 2023). The application must be determined in accordance with the City of London Local Plan 2015. Core Strategic Policy CS14: Tall Buildings clearly states that the City will **refuse planning permission for tall buildings in conservation areas.**

   The proposed development would contravene both CS14 and DM12.2 which states that development in conservation areas will only be permitted if it preserves and enhances the character or appearance of the conservation area.

5. The proposed development would mean that the Synagogue's courtyard would be **overlooked to an unacceptable extent**. The visualisation of the view from the courtyard submitted with the proposal (Environmental Statement Volume 2: Heritage, Townscape and Visual Impact Assessment, View 45a proposed, pp211-212) shows how there would be views into the courtyard from the majority of floors of the proposed Bury House.

   The Synagogue courtyard was designed as a **secluded, peaceful and private space for spiritual practice.** and has been used in this way for three centuries. The overlooking of the courtyard would represent a very substantial change to the privacy and intended atmosphere of the space.

   While we agree with the Environmental Statement that the change to the view from and into the courtyard will be 'large', we **strongly disagree** with the assessment of the view as being of only 'medium' sensitivity, and find it difficult to understand the conclusion that the effect would be 'moderate' and 'beneficial'.

6. The Foundation for Jewish Heritage is concerned with the conservation of Jewish built heritage. It is not a religious organisation; therefore we defer to the congregation of Bevis Marks Synagogue in assessing the impact of the proposal on their religious practice. We fully support the congregation's position that the proposed development would have a **serious, negative impact on their ability to carry out religious rituals**.

We hope that the reasons for our objection will considered in your determination and would welcome the opportunity to provide further comments if needed.

Yours sincerely,

Katherine Findlay

Dear Anna Tastsoglou,

The ancient synagogue at Bevis Marks has been a source of spiritual light to London and the entire country since its opening in 1701. In addition to holding daily and Sabbath services, it is the place where for over three centuries the Jewish community has come to offer prayers to the Almighty in thanks and commemoration of national events, and in recognition of the hospitality shown by Britain towards them.

I implore you not to allow this source of spiritual light to be deprived of the physical light which sustains it and is so crucial to continuing its unique role in the life of the British Jewish community and the country as a whole.

Yours sincerely,

Daniel Halfon

THIS IS AN EXTERNAL EMAIL

Dear Ma'am,

It has come to my attention that a proposal has once again been submitted for a construction project for a 43-storey building at the site of Bury House in the Conservation Area.
While I truly share the value of dense housing to meet the needs of the city of London, I also place immense value on the preservation of the historic synagogue at Bevis Marks, which would be impacted drastically if this skyrise were to be approved.
The synagogue has for literally hundreds of years remained lit only by natural lighting and candles, which would become an impossibility in the shadow of the tower. This would be a tragic loss to the entire community.

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou
Re. Bevis Marks Synagogue (BMS)

Along with others, I should be most grateful if you could note my objection to this planning application.

1. BMS is the oldest synagogue, or certainly one of the very first to be established for Jews coming to England to avoid

persecution. Of this I'm sure you are well aware.

2. It has an unique and emotive place for most Jews in this country. It is if you like the equivalent of the White Cliffs of Dover, or better the iconic photo of St Paul's Cathedral taken during the Blitz 54 years ago.
3. In its long and timeless history many famous Jewish people prayed there, including Benjamin Disraeli, the first and only Jewish Prime Minister, so far.
4. You may possible have heard of Samuel Pepys https://en.wikipedia.org/wiki/Samuel_Pepys he was a well known 17th/18th century diarist who paid a visit to BMS during one of the Jewish Festivals.

Here endeth the history lesson, now back to the future.

You will have already read the long list of objections to this plan and in order not to waste your valuable time I shall not repeat these sound valid objections based both on historical and environmental reasoning.

I do hope you will weigh carefully and considerately my opposition to this proposed development and would like to thank you for reading this E mail.

With all good wishes

Michael Roodyn

PS Our daughter held a senior position like you in planning for the LB's of Barnet and Islington!

Subject: Planning Application Ref. 24/00021/FULEIA

THIS IS AN EXTERNAL EMAIL

Dear Ms. Tastsoglou,

Re: Planning Application Ref. 24/00021/FULEIA - Proposed Development at Bury Street

The Sephardic Genealogical Society ("SGS") is a global network researching the history and genealogy of the Sephardic (Iberian origin) Jewish diaspora. We write to register our objection to the above planning application for the proposed development at Bury Street (the "Proposed Development").

The SGS's primary concern relates to the potential adverse impact of the Proposed Development on the setting and significance of the Grade 1 listed Bevis Marks Synagogue, which is of exceptional historic and architectural importance, both locally and globally. I am some other members of the SGS are members and users of the synagogue, and so write with first-hand knowledge.

Relevant Policy Considerations

In considering this objection, we draw attention to the following policies and provisions under the City of London Corporation's City Plan 2040 which are directly engaged:

1. Policy HE1 (1) - Preserving and enhancing heritage assets and their settings is a core objective. The Proposed Development fails to preserve or enhance the special architectural and historic significance of Bevis Marks Synagogue and its setting.

2. Policy HE1 (2) - There is a presumption against granting consent for developments causing harm or total loss of significance to designated heritage assets, unless the public benefits outweigh such harm/loss. As will be addressed below, the suggested "public benefits" are inadequate and fail to outweigh the heritage harm.

3. Policy HE1 (6) - Developments in conservation areas must preserve and enhance the character, appearance and significance of the area and its setting. The Creechurch Conservation Area was established with the goal of protecting Grade I listed buildings like Bevis Marks Synagogue.

4. Policy HE1 (8) - Development in the defined immediate setting of Bevis Marks Synagogue must preserve and enhance the elements of setting that contribute to its significance as a Grade I listed heritage asset.

5. Strategic Policy S21 (6) - Ensuring development proposals have regard to the immediate setting of Bevis Marks Synagogue and preserve/enhance the historic elements of its setting.

Harm to Heritage Significance

The Proposed Development, by virtue of its mass, scale and proximity, would loom over and overshadow Bevis Marks Synagogue, causing substantial harm to the experience, appreciation and setting of this irreplaceable 1701 heritage asset of the highest grading. The courtyard setting would be permanently compromised.

For congregants with visual impairments, blocking out natural light could render it

impossible to follow religious services, severely undermining the functional role of this "cathedral synagogue." The SGS previously objected to a similar proposal which was rejected.

Failure to Demonstrate Public Benefits

Under Policy HE1(2), if heritage harm is established, the public benefits must be clearly demonstrated to outweigh such harm. The suggested "public benefits" put forward by the developer are entirely inadequate for these purposes:

- Offering inducements to various charities, predominantly located outside the City, does not constitute a genuine public benefit to City residents, workers, user, and taxpayers who would be impacted.

- The developer's approach of engaging a PR firm to solicit support from external parties, rather than consulting the local Bevis Marks community, is cynical and unacceptable.

- No clear public benefits accrue from creating additional office space at this sensitive location.

Conclusion

In light of the above policy conflicts, heritage harm, and lack of substantive public benefits, the Proposed Development clearly contravenes the City Corporation's own policies and objectives under the City Plan 2040 for managing change and protecting heritage assets like Bevis Marks Synagogue.

Furthermore, as a group that models data and works with artificial intelligence, the SGS has concerns that the assumptions underlying the GLA's projections of future office floorspace requirements may be outdated, particularly in light of comments from leaders like Sam Altman of OpenAI regarding potential disruptions to employment in the service sector from AI. Creating substantial new office space risks an oversupply that cannot be easily repurposed, especially given the many other developments already underway in the City. Conversely, not proceeding with this development at Bury Street could prove advantageous by avoiding a glut of vacant office space. This concern is compounded by the imminent opening of a new visitor centre at Bevis Marks Synagogue itself, which will bring more diverse visitors into the area.

We respectfully urge the City Corporation to refuse this application. If, however, they are minded to approve it, the SGS requests a thorough assessment against the policies highlighted, particularly Policy HE1's requirements to (1) demonstrate all efforts to mitigate harm, (2) prove the public benefits outweigh the harm, and (3) show the works are the minimum required.

Please confirm receipt of these representations. We would be grateful if you could keep us apprised of any material developments regarding this application.

Yours sincerely,

David Mendoza

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou,

The overwhelming numbers of well presented, factual objections online against this insensitive, inappropriate building proposal must prevail.

As anyone with knowledge of London is aware, Bevis Marks is a Grade 1 Listed Building of great historical value to London and the UK generally and continues as a vibrant heritage to the Jewish Community, tourists and the internationally interested public. It will be an absolute desecration to allow a 42 storey tower, as proposed, to overshadow the synagogue, which has a profound religious and cultural heritage, with important, historic significance.

Protecting London's heritage buildings is even more incumbent on Decision Makers in the frenzied onslaught of skyscrapers battering London's historic legacy. Your mission and decision-making is to protect Bevis Marks, *like any other valuable religious and heritage building*, from this crude, destructive proposal. Your responsibility, as trusted protectors of London's historic legacy, is to REJECT this damaging, insensitive and unacceptable proposal.

Many thanks for your consideration,
Barbara Rafaeli

THIS IS AN EXTERNAL EMAIL

To whom it may concern.

I'm writing to express my strong opposition to application 24/00021/FULEIA.

I am a member of Southend & Westcliff Hebrew Congregation but residing in the Borough of Islington, just a few miles from Bevis Marks Synagogue.

I am appalled to see the new proposal, particularly after its refusal two years ago. The new application has barely changed since the last time it was submitted. It is not in keeping with the conservation of a Grade-1 listed building, which is now also in a conservation area, and is the most important Jewish site in the UK.

The new tower, which is to the synagogue's immediate south, would dominate the setting of the synagogue, block out the religiously important southern sky-view, and overshadow the synagogue and its courtyard, dwindling its remaining light.

This kind of proposal would surely never be considered within the vicinity of St Paul's Cathedral, and should certainly not be permitted just metres from British Jewry's Cathedral synagogue, particularly along its sensitive southern exposure.

I therefore urge you to refuse this application.

Sincerely,

Deborah Roback

Dear Ms Tastsoglou

I write to oppose the application for 31 Bury St

|Bevis Marks is one of the most important cultural landmarks in the City

It deserves special attention and protection

My family came to this country in c1790 and I believed they would have worshiped there

The building would be dwarfed by this application and its beauty lost

As a President of another Synagogue , Westminster Synagogue we would be horrified if this happened tour building and are confident Westminster Council would protect us

The siting of the moon and stars are important to us and I cannot imagine the security of the building is improved with this over towering it so that projectiles could be launched from a high rise

I look forward to hearing from you

THIS IS AN EXTERNAL EMAIL

24/00021/FULEIA. I am anxious about this proposed development for several reasons, amongst which are the following:

A 45 storey tower would completely overwhelm the synagogue, which is a Grade 1 Listed building of enormous historic and cultural significance.
It is inconceivable that such a building would be allowed next to St Paul's cathedral, so why is the synagogue not afforded the same protection?
It would destroy the southern sky view, which is an essential part of the setting of the synagogue, and important for the intangible qualities it contributes to religious ritual. The view of the moon's passage across the sky, and many of the celestial bodies, would be blocked.
The proposed building may be well designed and an exemplar of

sustainability, but it is simply in the wrong place.
It would overshadow the synagogue and its courtyard for much of the day, reducing the useability of the courtyard for rituals and celebrations.
It would also further reduce the already minimal daylight that penetrates into the synagogue, making it even more difficult to conduct worship. Because of the historic nature of the synagogue, installing additional electric lighting is not feasible.
The development site is within the Creechurch Conservation Area. Current planning policy is not to allow tall buildings in Conservation Areas, so there is a direct conflict with the statutory development plan.

THIS IS AN EXTERNAL EMAIL

Dear Madam,

I am writing to register my objection to the proposed development referred to above, of which I have only recently learned. (I also objected to the development previously proposed on this site, for which permission was refused in 2020).

The 45 storey tower now proposed would, in my opinion, seriously damage Bevis Marks Synagogue, every bit as egregiously as the 48 storey previously proposed. The consequential overshadowing of the synagogue and its immediate surroundings would in my opinion ruin the ambiance and presence of what is widely recognised as a building of immense cultural significance to the Jewish community and it relationship with Britain. The diminution of light within the

Synagogue will also likely adversely affect its use.

I cannot imagine any other religious building in London of comparable significance, age and importance being treated in a similar fashion and I find it impossible to conceive of any benefits which might possibly flow from the new building being reasonably thought to justify the enormous damage and harm that new building will cause.

Yours faithfully

THIS IS AN EXTERNAL EMAIL

Dear Sirs

Ref: Planning Application24/00021/FULEIA

I refer to the planning application for a 45-storey tower overlooking the very historic and the City's only synagogue –" Bevis Marks".

I enjoy the Freedom of The City of London (as did my father and does my son) and a member of two of its Livery Companies. I started my professional career in the City and have been involved with its institutions all my working life.

As such, I object strongly to this application on the grounds that:

a. The proposed structure will limit Jewish worship on the site, in an unacceptable manner.

b. It seriously interferes with the light available to Bevis Marks, which has played its part in the Civic life of The City of London.

c. The proposal will impair unacceptably the Synagogue of Lord Mayors and Sheriffs, endowed by Queen Anne frequented by princes and merchants –and which is open for daily prayer.

d. Send a strong signal that the City does not care about freedom of worship for all –and for Jewish worship in particular –as has been noted by and complained of many clergymen of many denominations.

e. Bevis Marks has provided a focal point for both local and visiting Jews, involved in the City. Limiting Jewish worship now will send a clear message at a difficult time that to the City of London, Jews don't matter.

f. The City should be enhancing its special places (Queen Anne recognised this), rather than destroying them.

g. The proposed development simply does not enhance the City –but rather destroys a special place, open to all, which is a glory of the City and reflects its open nature.

I have to say that if Jewish worship at Bevis Marks is restricted unacceptably –as will be inevitable if this application is approved - then my Freedom of The City will become a bitter and inaccurate label –as I and my co-religionists will not be free to practise our religion peacefully in the City as our forebears have done for over 300 years. The City will be diminished and Jews (and others) will take the obvious hint.

Yours faithfully

Nigel Sloam

Subject: AMENDED COMMENTS FOR PLANNING CONSULTATION 24/00021/FULEIA & 24/00011/LBC (PLEASE IGNORE PREVIOUS EMAIL SENT 30 APRIL 24)

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou

I am responding to an email invitation to comment on a new planning application for the erection of a 43 storey tower block in Bury Street which is situated in the Creechurch Conservation Area.

This application is subsequent to an earlier submission for a similar development which after careful consideration was refused by the City.

I am particularly concerned about this application because of the implications and effects on the area and its immediate vicinity.

I should let you know that I served as a Councilman of the City of London for nearly 50 years and I was very much aware of the improvements and developments taking place in the City. Amongst other appointments, I served as founding Chairman of the City's Property Committee.

I spent my whole career in the City of London and as a Chartered Surveyor was Senior Partner in a City firm.

I began working in the City in 1949 and I have been privileged to have seen the City grow from the devastation of WWII to the present excellent balance of new buildings within the City borders.

I have been most supportive of subsequent development of high rise buildings which have been erected in suitable locations. I have taken the opportunity to study the location of the proposed site of the 43 storey tower block and also subsequently visited other tower blocks situated in the Square Mile and then reviewed the information available as a result of these developments.

I have now come to the firm conclusion, after careful consideration that this new proposal, even though there have been certain modifications, should be refused planning permission.

The City has refused permission for this development for a considerable number of reasons stated. The Creechurch Conservation area is congested and the effects of a new high rise building within these close and narrow streets would have a far reaching and highly detrimental effect on the area.

One example of a high rise development is 20 Fenchurch Street, indeed a very attractive looking building, however, when the drawings and plans were submitted many of us drew attention to the possibility of wind disruption and sounds including whistling as well as glare from the outer shell of the building. We were advised at the time that experts had considered this and we were assured that there would be no problems.

However, as we now know, this was not the case and the concerns raised during the application process now effect this area detrimentally.

It is for this reason that I feel I need to draw attention to these particular issues as others also have, in reference to this application, in simple terms I do not want to see this happen again in relation to this important area and to the adjoining historic building (Bevis Marks Synagogue).

I am particularly concerned that the synagogue itself would be affected by the proposed adjoining high rise building which could degrade the thermal environment due to wind turbulence, cooling, heating together with other negative effects.

If we had similar conditions occur on this site in Bury Street this would have a direct effect on the visitors to the synagogue as they congregate outside the building, also pedestrians on everyday business would be affected.

I hope these concerns will be taken into account regarding this new proposal by the City Corporation and once again refuse this application.

Yours sincerely

Anthony Eskenzi CBE DSc FRICS

THIS IS AN EXTERNAL EMAIL

Dear Anna
Regarding Bevis Marks Synagogue 1701.
It is with great shame that the City of London should attempt to change the nature of the conservation area of Creechurch in its lurch to maximizing profit.

- The conservation area states that the plan for the adjoining site would breaking the City of London's rules on not allowing tall buildings, Surely there are other places where such a building can be erected, or is the City too interested in money that it will give up it's heritage and damage the area for good.
- Whilst the developer may indicate that it would bring benefits such as being car free, or being environmentally designed, these are everyday requirements that every architect and developer has to achieve. A Georgian building side-by-side with a 45-storey glass and steel box can only be said to be faceless, inappropriate, damaging to the area, and of no relevance to the local community and to the Jewish people who use the synagogue.
- The existing building at 31 Bury street is not very old and could be refurbished to be more sustainable, saving embodied energy and time, let alone Bevis Marks and the conservation area.
- When I was in Savannah I was informed of the Jewish contribution to this country's trade right from the word go as the city was being planned by the English army. It was from Bevis Marks that the Jewish merchants spread out to facilitate the nation's trade. Bevis Marks was and still is the centre of gravity for many Sephardi Jews, those that were allowed in after Cromwell's relaxation of the immigration rules. All very relevant to today. So too is the rise in antisemitism.
- Synagogues rely on light and the ability to look up to the sky. That has been compromised already. Please don't compound that by cutting oU the remaining light. The view of the sky so important for prayer (reading from the Torah is a significant part) and for defining night and day, the sabbath and the ordinary day.
- This is one of the core Jewish centres that is recognized worldwide as a symbol of Jewish presence in this country. It has already suUered inappropriate adjacent development. In the same way that St Paul's (not finished till 1710) has been protected, so too should the City of London protect its heritage.

I hope that the City fathers (and mothers) have the strength to withstand the developers plans and, as in 2022, refuse the application.
Regards
J Rowland

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou

I'm writing to express my strong opposition to this new application

My parents were married in Bevis Marks synagogue in 1955 and I'm upset to see this new proposal, particularly after its refusal two years ago, and the recent adoption of the Creechurch Conservation Area.

This new application, barely changed since the last time it was submitted, is not in keeping with the conservation of a Grade-1 listed building, which is now also in a conservation area, and is the most important Jewish site in the UK. The new tower, to the synagogue's immediate south, would dominate the setting of the synagogue, block out the religiously important southern sky-view, and overshadow the synagogue and its courtyard, dwindling its remaining light. This kind of proposal would never be considered within the vicinity of St Paul's Cathedral, and should certainly not be permitted just metres from British Jewry's Cathedral synagogue, particularly along its sensitive southern exposure. I urge you to refuse this application.

I urge you to refuse this application.

Yours sincerely,

Francesca Raphael Lincoln

Dear Anna

I would like to object to this planning permission. It was rightly refused 2 years ago and i cannot see what in principle is that different this time.

This is a grade 1 listed building of significance that will be negatively affected including its right to light will be massively affected by this planning application as well.

Kind regards
Mark Gordon

Dear Ms Tastsoglou,

re: application 24/00021/FULEIA

I was extremely concerned to hear of the revived proposal to build this massively tall building in a sensitive location. As an architectural historian and as a Jew I am appalled that such a completely unnecessary development can even be under consideration in a conservation area which is of national significance. The proximity of Britain's oldest synagogue is of major concern, not only because of the inevitable disruption to its religious use, but also because of the potential structural damage to the building's foundations that could ensue.

Yours sincerely,

Dr. L. Jacobus

Subject: Bevis Marks Synagogue - impact of the planning application for 31 Bury Street

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou

I am writing to raise strong objection to the 45 storey tower proposed for 31 Bury Street.

The tower proposal is just three storeys lower than the 48 storey tower rejected by the Planning Committee in 2021 and the reasons for refusal are as apt today as they were three years ago.

The proposed tower would take natural light away from the synagogue and leave the oldest synagogue in the UK in darkness. You would not permit this desecration of St Paul's Cathedral in this way and you should show the same concern for this historic and much loved City synagogue.

I do not believe that the proposed community benefits' amount to a convincing argument for damaging the setting of this unique City synagogue which is already a centre for both religious and community life.

Finally, Bevis Marks Synagogue is a key part of the Conservation Area and should be afforded full protection. The City Corporation's attempt to water down the Conservation Area as it affects the synagogue is of great concern to many who question the City's motivation for the baffling and highly unusual proposal to protect only the immediate setting' of Bevis Marks Synagogue.

I urge the Committee to reject the planning application for 31 Bury Street.

Yours sincerely

Paul Dinsdalesberg

Sent from my iPhone

ST BOTOLPH
WITHOUT ALDGATE

To: Anna Tastsoglou
Case officer for Bury Street Development

Dear Ms Tastsoglou,

Objection to planning application 24/00021/FULEIA (Bury House 1 - 4, 31 - 34 Bury Street) and 24/00011/LBC (Holland House 1 - 4, 32 Bury Street).

I write on behalf of the St Botolph without Aldgate PCC to object to the above planning application.

Bevis Marks, the only dedicated non-Christian place of worship in the City of London, has been a centre of worship and community for three hundred years. It is more than a 'heritage asset', it has a beating heart of people, many of whose families have worshipped there for generations, some since the synagogue has been built. In recent years the synagogue has been fighting for its very survival.

Building a tower which will cast the Synagogue and its courtyard into shadow, taking away the view of the sky is not merely a matter of light, but also of ritual – of their ability to worship in the building, and of particular importance to the congregation are the prayers at the appearance of the new moon, which they will no longer be able to do if this development goes ahead.

As a neighbouring friend and colleague St Botolph's is keen to support and encourage the congregation at Bevis Marks in their life as a vibrant community, with a future, including their new Education Centre which will bring thousands of school children to the City. We have deep concerns that should this development go ahead, instead of a living community, Bevis Marks will ultimately instead a place of remembrance of the historic Jewish communities in the City.

Yours sincerely,

[redacted]

The Revd Laura Jorgensen
Rector

Planning application reference: 24/00021/FULEIA.

Dear Anna Tastsoglou,

I am sorry to read that the City Corporation is proposing to scrap the ban on tall buildings in Conservation Areas. If the account is accurate, it appears to me that this short-sighted measure will damage the City's invaluable USP – its age and unique architectural landscape. Tall buildings are the norm throughout the world; sites of the historical interest and skyline (even in its present state) of the City of London are rare.

In particular, I am surprised and dismayed to read that the City is considering viewing in a positive light an application for a multi-storey tower to be sited next to the oldest synagogue in continuous use in the UK: Bevis Marks Synagogue. The reasons against this are cultural as well as aesthetic and financial.

Would such a construction be permitted immediately adjacent to St Paul's cathedral (completed 1710)? If not, why is it acceptable to allow one next to this Grade 1 listed building (opened in 1701)?

From the plans, it seems that the multi-story tower would block light from the synagogue – its interior and its exterior. This is a matter of considerable practical, emotional and spiritual import.

Given that the building [at 31 Bury Street] which it is proposed to demolish in order to make way for the multi-story tower appears to be suitable for upgrade at reasonable cost, it is very difficult to understand what practical and reasonable rationale there can be for allowing the construction of the tower.

I trust that the account I have read is mistaken and that the City is not intending to allow the 45-storey tower construction to go ahead.

I write from my present home address, but speak of what I know, having previously spent some years working in the City.

Yours sincerely,

Clare M Brennan

THIS IS AN EXTERNAL EMAIL

I have been unable to complete a comment on your website concerning this planning application – when I pressed submit I was informed that I did not have access**. ["403 - Forbidden: Access is denied. You do not have permission to view this directory or page using the credentials that you supplied.]** Consequently I submit this comment regarding the impact of the proposed building on Bevis Marks Synagogue directly to you. I am a Roman Catholic priest who until recently had responsibility for a Grade One Listed Church building - the Holy Name on Oxford Road, Manchester. In consequence I am aware of how easy it is for the erection of tall buildings to damage the ambience of older places

of worship by reducing the amount of natural light, - and particularly direct light from the sky - entering the buildings concerned. My experience was of 5 or 6 storey buildings adjacent to the Church, and I am astonished that the City of London can be considering approving the construction of a 43 storey building immediately adjacent to Bevis Marks Synagogue.

I hope that this unique and historic building will be maintained in the setting it requires, and not swamped by an inappropriate tower-block. The original decision of the City of London to preserve the setting Bevis Marks deserves was correct, and it should be upheld.

With best wishes

Dear Anna,

Please find my objection below to the scheme at 31 Bury St (24/00021/FULEIA). As I work in mental health, I ask that you withhold my address from the public record for safety reasons. I'm happy for you to have it for the purposes of submission: [redacted]

Best,

Andrea

Re: 24/00021/FULEIA

I am writing today as a City resident, local business owner, and congregant of Bevis Marks Synagogue to state unequivocally my opposition to this development. I have delayed sending this in the hopes that such an ill advised scheme would be withdrawn, but alas, the City continues to try its Jewish community. We have followed the City's procedures in good faith, and at every step the City has changed the goalposts. This scheme in practically the same form was already rejected by the planning committee in 2021, after which we won the protection of a conservation area. (This after the City tried cynically to exclude 31 Bury St from the proposed boundary.) The City is now undermining that conservation area, and all conservation areas, in the new local plan by trying to remove the provision against tall buildings in these protected zones. This shock policy shift of course is wholly in favour of the developers. It calls into question whether any of this has ever been a fair process, or just an ongoing betrayal of the Jewish community's trust.

Bevis Marks Synagogue is the cathedral synagogue of British Jewry, and a site of immense significance both nationally and internationally. It is a 'heritage asset' which the City should be proud of and protect, but it is not only this. It is a living community, unique in the world for its uninterrupted customs, melodies, and traditions, which are specific to this site. The planning committee already determined this scheme would create unacceptable overshadowing and massing in our historic setting. To put us in perpetual shade, make our ritual life difficult if not impossible, and to show our tens of thousands of visitors a year that the City considers us essentially a relic in a glass case, would be a disgrace to the City and a tragedy for the Jewish world.

I urge you in the strongest possible terms to reject this proposal, and to provide real, robust protections for the synagogue in the local plan. Constantly forcing our community to be on the defensive, investing our time, energy and financial resources into fighting ongoing planning battles has begun to feel abusive. The developers will continue to resubmit, trying to exhaust us, and the City has a moral duty of care to prevent this harm, which is now emotional as well as physical. It also has a legal responsibility to protect its minority communities under the Equalities Act.

Towards the end of this year, our new visitors centre will open and tell the story of modern British Jewry, which began here in the City at Bevis Marks. It is a story of partnership and integration, and this should be a story that continues today, and is evidenced to our visitors by the respect shown to us and our historic environment. At a time of soaring antisemitism and hostility, this is more important than ever. Please do what is right and reject this application. Work with us instead to make our community's home a place where we can thrive for centuries to come.

Sincerely,
Dr Andrea Rosen

THIS IS AN EXTERNAL EMAIL

Dear Anna,

Please can you think seriously about the close proximity of the proposed skyscraper. Bevis Marks is the most beautiful and oldest synagogue in the UK and surely should be protected as with any historical building .
My family fled pogroms in Europe to escape to the safety of the United Kingdom and as Portuguese and Spanish Jews the Synagogue offered them a community and security.
The fact that weddings have been held for decades at the synagogue and that guests can pour out after the ceremony into the sunny courtyard where generations have chatted in the sunlight . It will be pitiful to loose this. The entrance will be in the shade and overshadowed which in my opinion is awfully sad.
Please think seriously about an ugly unnecessary skyscraper blocking the light and overshadowing the delightful courtyard for future generations and visitors . There are multi denominational school trips on a regular basis .

Thank you,
Katie Keeney

THIS IS AN EXTERNAL EMAIL

Dear Anna Tastsoglou,

I have a close association to Bevis Marks as I was married there and have regularly attended services at the synagogue.

I wish to object strongly to the proposed development at 31 Bury street. The new application is hardly changed since the previous one was rejected some 2 years ago.

Bevis Marks is a unique, Grade-1 listed building, being the oldest working synagogue in the UK and the Cathedral Synagogue of the United Kingdom.

The massive size of the development will overwhelm the synagogue and block out the sky.

The cumulative effect of this and other developments will be to block out the sun from 9AM to 4PM which will have a very detrimental impact on services including weddings - Bevis Marks is renown for its wonderful stained glass windows which need sunlight to be viewed.

Please reject this inappropriate development.

Best regards,

Subject: Opposition - 24/00021/FULEIA

Dear Anna,

I write to express my strong opposition to the recent development application 24/00021/FULEIA. I have done so years ago with another similar proposal, for the same reason:

The obstruction of natural light to Bevis Marks synagogue due to the proposed development raises legitimate concerns. While it may seem like a minor detail to some, the uninterrupted flow of light into the synagogue is integral to its regular functioning and the overall atmosphere within.

Bevis Marks is not just a historical relic; it's a living testament to the enduring spirit of world Jewry and a symbol of religious tolerance in this country. In too many ways to list, it's a beautiful symbol of redemption with significance that goes beyond the borders of the City and even the UK. It has an underlying emotional and symbolic value to the descendants of those who survived centuries of persecution in Iberia.

Preserving its functionality is essential to maintaining its significance as more than just a museum piece but as a centre of worship and community for centuries to come.

Its elegant discreetness, motivated by historical constraints, should not serve as a green light for authorities to shun its significance. On the contrary, efforts by the City tod elevate its visibility should be undertaken.

For the record, I have no concerns or objections in principle to the development of tall buildings within the City— quite the contrary. However, for the reason mentioned above, this should be considered a no-go area.

My best regards,
André Filipe

THIS IS AN EXTERNAL EMAIL

Ref.: Planning application reference 24/00021/FULEIA - Bevis Marks Synagogue - Objection

I wish to express my objection to the construction of a 45 storey new building immediately adjacent to the historically significant Bevis Marks Synagogue, founded in 1701 and today a Grade 1 Listed Building Bevis Marks has been in serious jeopardy very recently and for the same reasons being addressed in this email; it seems the previous objections may have now been sidelined to give the construction of the new building a second chance.
If I understand the present situation correctly the new high rise building is to be located within the Cowchurch Conservation Area. I also understand that under present rules high buildings may not be constructed in conservation areas, so herein lies an important and serious conflict with the statutory development plan.
There is surely a more appropriate site for the proposed new high building, which, if given the go-ahead, despite the present rules, would all but engulf and overwhelm this historic synagogue and deny adequate sunlight to it and so greatly impair its ability to continue as a functioning religious building. I am completely certain no such consideration would ever arise were a tall building in very close proximity, such as in this instance, to Westminster Abbey or St. Paul's Cathedral proposed. So why here, and in conflict with the rules ? The new building cannot but jeopardise and diminish the nature of the whole conservation area.
I urge the City Corporation to reject this new application for construction of the new high rise building.

Yours sincerely,

Gordon Shiach

THIS IS AN EXTERNAL EMAIL

Good evening Ms Tastsoglou,

I read that development work is planned next to the historic Bevis Marks Synagogue.

I am sure lessons have been learned from past plans which would have had an irrevocable and negative impact on the character of Synagogue.

It would be greatly appreciated if you could share with me what steps are being taken to ensure such mistakes are not likely to occur again.

Many thanks,

Balthazar Florentin-Lee

Dear Ms Tastsoglou,

Objection to the development of 31-34 Bury Street

Having considered the latest application to develop 31-34 Bury Street, I believe it must not be granted permission. The proposal would have an unacceptable impact on the oldest continuous synagogue in Europe, Bevis Marks, while also having a detrimental impact on the wider Creechurch Conservation Area.

It is important to consider the significant impact this development would have on Bevis Marks ability to function. The only artificial light sources within the synagogue are candles and a limited amount of electrical lighting that was installed prior to the building being listed. There are also sensitive issues like the recital of a special prayer at the beginning of each lunar month which would be lost as they require a view of the eastern and southeastern sky.

The previous planning application for this site was refused because "*The development would adversely affect the setting of the Grade 1 listed Bevis Marks Synagogue and its setting and amenities by reason of the overbearing and overshadowing impact of the development*". I do not see any reason why this new proposal would not still adversely affect Bevis Marks.

In the Heritage Assessment of the previous application, it states "*were the proposed development to be allowed it would render the designation of the Creechurch Conservation Area virtually meaningless and to have made the whole designation and consultation process a worthless exercise*".

Now that the site does firmly sit within the newly created Creechurch Conservation Area, and as the plans do not significantly change from the previous application, I do not see how this development can be permitted.

This development would cause substantial harm to the surrounding Creechurch Conservation Area and must not be allowed to go ahead.

Yours,

London NW4 2DX

10th April 2024

Dear Melody Salem,

Bevis Marks Synagogue, 2 Heneage Lane EC3 (HG-16-06740)

I am writing to you to set out the investment that The National Lottery Heritage Fund has made to date in the restoration of Grade-I listed Bevis Marks Synagogue, and our reasons for making this significant financial commitment.

Our Committee for London & South awarded a grant of £2,799,400 in June 2019 to the Bevis Marks Synagogue Heritage Foundation towards a £5.8million, five-year project.

In making a grant award of this magnitude, the Committee recognised the high heritage importance of the building alongside the integrity of its historic setting. As a much loved community asset, the Synagogue is also of huge significance to the story of Anglo-Jewish heritage. The project was considered to deliver a number of heritage and community benefits, which were collectively seen as real strengths in attracting National Lottery funding. For example:

- Repairs to the Grade I-listed Synagogue will help to secure its physical future;
- Access improvements will be made, not only benefiting the congregation but also improving the welcome for visitors, widening and increasing access to the building and sharing its story with new audiences;
- Work to the historic undercroft will provide a secure and atmospheric space to display the Community's treasures including its important and unique silver connection, much of which has never been shown to the public;
- Work to the annexe will create space for an exhibition, enabling the history of the Synagogue and its community to be told through objects, oral histories and a digitised archive. It will also provide a new learning space and a detailed activity plan aims to deliver a schools programme.
- A strong community learning programme will be delivered, both on site and in partnership with other local organisations, and a structured volunteering programme for community members, local residents and city workers;
- The project will also enable an expansion of operations supporting a new, sustainable and resilient business model.

We are pleased that work continues, and that the Synagogue was successful in attracting Government support of £496,900 through the DCMS Capital Kickstart programme, which is helping to cover project cost increases caused by COVID-19 related delays.

We very much look forward to seeing the Foundation progress this hugely important project that will help protect, preserve and welcome new audiences to a key cultural asset and landmark in the City of London.

Yours sincerely,

Stuart McLeod
Area Director, London & South

Subject: R:E: Bevis Marks Synagogue - Opposition to planning application.

THIS IS AN EXTERNAL EMAIL

Dear City Corporation,

R:E: Bevis Marks Synagogue - Opposition to planning application.

I am writing to formally object to the new application (24/00021/FULEIA). As [a member of the Bevis Marks Spanish & Portuguese Jewish community / a concerned citizen], I am profoundly concerned about this proposal, particularly given its previous refusal two years ago and the recent establishment of the Creechurch Conservation Area.

Bevis Marks Synagogue, built in 1701, is the oldest synagogue in continuous use in the United Kingdom and is a Grade I listed building, a status denoting it as a structure of exceptional interest. This status is reinforced by the Planning (Listed Buildings and Conservation Areas) Act 1990, which mandates that any new development must preserve the character and appearance of the area. The proposed development fails to comply with this legal requirement.

The proposed tower, situated immediately to the south of the synagogue, would severely impact its setting, which includes blocking the religiously significant southern sky-view essential for the synagogue's spiritual practices. The synagogue's architecture is designed to maximize natural light, and this new construction would cast a shadow over the synagogue and its courtyard, diminishing the light essential for its function and heritage.

Such a proposal is inconceivable within the vicinity of St Paul's Cathedral and should similarly be prohibited near Bevis Marks Synagogue, often referred to as the "Cathedral Synagogue" of British Jewry. The National Planning Policy Framework (NPPF) emphasizes the importance of conserving heritage assets, and this application starkly contradicts these principles by threatening the very fabric of an irreplaceable cultural and religious monument.

Furthermore, the synagogue has served as a center for Jewish life in the UK for over 300 years, with significant historical figures, including Sir Moses Montefiore and Benjamin Disraeli, having worshipped there. The proposed development would not only disrupt the synagogue's physical integrity but also its historical and cultural legacy, which is a vital part of the UK's diverse heritage.

I urge you to refuse this application in accordance with the statutory protections afforded to Grade I listed buildings and conservation areas, as well as the principles outlined in the NPPF.

Thank you for your consideration.

Sincerely,

Simon H Lyons

THIS IS AN EXTERNAL EMAIL

Dear Ms Tasmoglou

I am writing to object to the proposal to demolish Bury House and erect a new building comprising 4 basement levels, ground plus 43 storeys.

From what I understand this proposal would have a seriously detrimental effect on Bevis Marks synagogue, putting at risk the actual structure of this Grade 1 listed historic building and its functioning as a place of worship, education and cultural activity.

I am familiar with Bevis Marks Synagogue, having attended services there over many years. It is a beautiful building and important for the Jewish community as an active place of worship, in use for the last 300 years, and as a living symbol of the Jewish presence in the UK. It is important for the wider community too, illustrating the history of London and immigrant populations, as well of being of architectural significance.

The synagogue enjoys natural light, and indeed the windows and the quality of the light are an essential part of the aesthetics and functioning of the building , and the building proposal looks as if it will seriously compromise this. The development would also seem to directly contradict the various existing and planned heritage and conservation policies for the City of London. Giving planning permission would make a mockery of the serious attempts to protect London's historic buildings and the environment.

I hope that you will take my concerns seriously and that the planning proposal will be rejected.

Yours sincerely

Hope Samuel

Dear Madam
As a Freeman of the City of London and a longtime worker in the City I strongly object to the plans to overshadow the synagogue with a tower block.
Not only is the synagogue of cultural significance as the oldest synagogue in continuous use but it is also a symbol of the tolerance of the early 18th century that resulted in its existence.
If anything should be done the space around it should be opened up to the general public.
The plan is a form of cultural vandalism.
Yours faithfully

THIS IS AN EXTERNAL EMAIL

Dear Ms. Tastoglou,

I am an American who has heard that the City of London is considering changing its original finding, and allowing the building of a skyscraper behind the Temple that has been in continuous use since the 1700's.

I will also say that although I have been to England several times, there are still trips I want to take there. I had to cancel a British Isles cruise over several consecutive years due to Covid. But what makes it less likely for me to visit your great nation is the attitude that has developed over the treatment of your Jewish citizens.

Although it is not your personal fault, the press that England is receiving is definitely anti-semitic

in nature. [redacted] Then I hear that you will overlook the importance of a symbol of Jewish renaissance in post-racist Britain (I'm referring to the 1300's when Jews were forced out of England) and my mind is filled with rage. Why should I ever again want to visit a country that insults my very existence?

Hopefully, there is a way for you to alter this potential tragedy. Every decision, no matter how small, contributes to a whole. Please analyze your situation, and make a stand for civilization to retain what is best, no matter the cost. Please do not block the sunlight from this historic building.

Sincerely,

Ted Epand

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou,

I am writing to express opposition to application (24/00021/FULEIA).

My ancestors in this country were readmitted into England under the rule of Oliver Cromwell when Sephardi Jews were readmitted in 1656 after being expelled centuries before.

The first synagogue they built after their temporary one was the Bevis Marks synagogue, the oldest continuously used synagogue in Britain and over the centuries, its members have and continue to contribute remarkably to British society.

Bearing in mind the refusal of a previous application a couple of years ago, and the subsequent

adoption of the Creechurch Conservation Area, I am flabbergasted and appalled that this new proposal is now being considered.

Were the site adjacent to somewhere as religiously and historically important and significant as say, St Paul's Cathedral, such a proposal would never be considered, so it follows that this proposal should not be considered, affecting as it would forever, the site of British Jewry's equivalent to St Pauls.

Having read into this application, as an architectural designer myself, I can see that this new application has barely changed since the previous submission, and once again, is not in keeping with the conservation of a Grade-1 listed building, now also in a conservation area. Additionally, as the single most important Jewish site in this country, this submission smacks of a total disregard for precedence and consideration of the Bevis Marks synagogue and its congregation and other visitors.

It is clear and beyond refute that this new tower proposal would totally dominate the site of the synagogue. Crucially, it will block out the southern sky view, something that is an important religious factor. Not only that, but it will also forever cast the entire synagogue site, including the courtyard, into an unacceptably diminished level of light..

As I write above, such a proposal would never be considered if the site were adjacent to somewhere like St Paul's and so I therefore respectfully appeal to you to apply the same standards here and refuse this application.

Yours faithfully,

Steven Winston

Ref: Planning Application24/00021/FULEIA

I write in relation to the above planning application for a 45 storey tower overlooking our much prized synagogue Bevis Marks which I have been attending since December 1967. My objections are fiscal, moral and emotional. Nowadays capital & profit ride roughshod over anything historical & spiritual. There are now so many skyscrapers in London many of them with vacant office space. And with so many people working from home whether part time or full time I really cannot see the need for another monstrosity blighting our environment. Our beloved Bevis Marks where I am proud to say I was Barmitzvah'd in 1968 has existed for 323 years and has seen off Adolf Hitler & the IRA as well as rife anti Semitism from the Moseley era until today. The fight has never been taken away. Does it take ruthless financiers & developers to achieve what the aforementioned could not ? The answer must be a resounding NO. Please do not be swayed by frivolous excuses and arguments. They do not hold water. Fact is this has been an ongoing issue since the original application for a 47 storey edifice was refused. 2 floors do not make a difference. Please refuse the application on the grounds I have set out above and let our one piece of history remain in peace and in place for another 323 years (at least).

THIS IS AN EXTERNAL EMAIL

Hi Anna,

I just wanted to add my comments on the proposed development next to Bevis Marks Synagogue:

Stance: Object

The proposed storey tower next to Bevis Marks Synagogue is a real concern. The towering structure would cast a long shadow over the synagogue and its courtyard, significantly curtailing their use for rituals and celebrations. Bevis Marks is a Grade 1 Listed monument of profound historical and cultural value. It's utterly incomprehensible that we wouldn't shield it with the same zeal as we do St. Paul's Cathedral. If erecting such a colossal building next to St. Paul's is

deemed inappropriate, then it stands to reason that Bevis Marks Synagogue deserves equal protection. The disparity in how we treat these historical treasures should not exist.

Thanks,
Daniel

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou

Re: planning application reference: 24/00021/FULEIA

I am writing to you as the case officer in relation to the above planning application to register my considerable concern over the plans to emasculate this historic, Grade 1 listed building by developing a 45-storey tower, which will completely overwhelm the synagogue and its courtyard. It is also conceivable that this dominance will overshadow both the interior of the synagogue and its courtyard, thereby reducing the ambient light which cannot always be resolved by use of additional electrical installations (which would also not be in keeping with the building's historic nature). It would radically affect the 'atmosphere' such an historic building is

able to create for its religious and social purposes. I note that a previous proposal for a 48-storey building to replace the current five storeys was (rightly) rejected by the City of London planning committee in 2020; this new proposal is no less inappropriate and should be similarly turned down.

Much of central London's development has historically been linked to preserving views of St Paul's Cathedral from different locations. Perhaps you should adopt a similar principle to this proposed development and prevent Bevis Marks Synagogue from being totally dominated by this ill-considered, insensitive and totally inappropriate development?

Yours sincerely

Subject: Objection to planning application reference: 24/00021/FULEIA.

THIS IS AN EXTERNAL EMAIL

Dear Ms Tatsoglou

Please treat this letter as a formal objection to planning application reference: 24/00021/FULEIA on the following planning grounds:

- **A 45 storey tower would completely overwhelm the synagogue, which is a Grade 1 Listed building of enormous historic and cultural significance.**
- It is inconceivable that such a building would be allowed next to St Paul's cathedral, so why is the synagogue not afforded the same protection?
- **It would destroy the southern sky view, which is an essential part of the setting of the synagogue**, and important for the intangible qualities it contributes to religious ritual. The view of the moon's passage across the sky, and many of the celestial bodies, would be blocked.
- The proposed building may be well designed and an exemplar of sustainability,

but it is simply in the wrong place.

- **It would overshadow the synagogue and its courtyard** for much of the day, reducing the useability of the courtyard for rituals and celebrations.
- It would also further reduce the already minimal daylight that penetrates into the synagogue, making it even more difficult to conduct worship. Because of the historic nature of the synagogue, installing additional electric lighting is not feasible.
- The development site is within the Creechurch Conservation Area. Current planning policy is not to allow tall buildings in Conservation Areas, so there is a direct conflict with the statutory development plan.
- The City Corporation is required to identify locations suitable for tall buildings. It has done some work on this, but there is much more work to be done, and their work eventually has to be assessed by an independent inspector. This process is unlikely to be complete before late 2025.
- **The developers are arguing that they are providing lots of planning benefits that outweigh the harm to the synagogue. These benefits do not stand up to scrutiny.** Many – for example, being car free, demonstrating holistic environmental design, having consolidated deliveries – are simply features that would be expected in any modern commercial building, and they do not represent a gain to the community.
- They propose to restore the Listed Holland House[1] and turn it over to various uses which are claimed to be of community benefit. Whilst the restoration of this building is to be welcomed, the claims about the community value of the uses must be viewed with great scepticism.
- The existing building at 31 Bury Street is only 40 years old and is capable of being refurbished and providing good service for many more years. Unnecessary demolition simply squanders the energy embodied in the building.
- The proposed building would also damage the setting of other heritage assets in the local area, and would compromise the qualities of the Conservation Area as a whole.
- The City Corporation is being disingenuous: claiming to recognise the importance of the synagogue, yet simultaneously facilitating this monstrous development. We are entitled to expect much higher standards from Britain's most prestigious local authority.

Yours

THIS IS AN EXTERNAL EMAIL

Dear Anna

Hope all is well

I'm a property developer active in central london. So I appreciate the challenges of urban development and the need for the City to continually evolve! I'm pro development.

But this scheme does not sit right in its context, doesn't respect the history and heritage of the city and would be a major blight. As developers and planners there is always a balance to be struck in dense urban london and I strongly believe this scheme is wrong so would like to flag my objection.

I think the city deserves better! It's far too big, insensitive to the synagogue which contributes a huge piece of history and heritage to the City and needs protecting.

Best
Jacob

Subject: Bevis Mark Synagogue

THIS IS AN EXTERNAL EMAIL

The synagogue was built in 1701. Twelve years later The Bill of Rights was made official in the country, marking a new departure for our Western values of freedom and democracy. Eighty-eight years later the American Constitution was established, which is still known for advocating for religious freedom. More recently, the International Human Rights and European Human Rights were mainly based on these laws.
When this synagogue was built, Jews were openly executed in Spain and Portugal. Even if they were Catholic converts, but they kept any single of the practices of their ancestors, it meant they would be eligible for execution.
It wasn't until 1976, approximately, that many of the descendants of those Jews, in

Portugal, decided to embrace the faith of their ancestors publicly. While in London, more than three hundred years ago, they could build synagogues and enjoy a free life. Even today, our mayor, Sadiq Khan, has installed over thirty thousand lights for Ramadan in Central London, while in so many countries, religious freedom is far from being a reality.

The most interesting thing is that we are in an era of inclusivity, fluidity, and diversity of any kind. Yet, a synagogue that was built one hundred and eighty years before Tower Bridge, and one hundred and fifty years approximately before Big Ben, seems to be less important than those two emblematic buildings. I wonder if our Western values of freedom and democracy matter, as so many people coming from authoritarian countries, where they can be executed for anything that deviates from the official values, find this to be a sanctuary.

But it is nothing new, as it was already happening in 1701 when this synagogue was built.

So, if the mayor spends money on lavishly celebrating Islam, why aren't we allowed to keep a historical building? Older than Tower Bridge and Big Ben?

If a symbol of the city and the values of the West receives such poor treatment, I wonder what is coming next.

Dear Anna, please stop the development of the 2 skyscrapers adjacent to Bevis Marks. This historic gem will be crushed between these two monstrosities. They will block light and the skyline and turn this beautiful heritage space in London into an ugly, disjointed eye sore. It's downright disrespectful to even table such plans.
Many thanks
Naomi

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou

Any one who works or visits the City of London is impressed with the wonderful mix of the old and the new. Bold, newly designed office towers standing next to smaller yet equally noteworthy Wren churches, reminders of an age not entirely obsessed with this worldly concerns.

It is therefore will great concern that I write to object to the construction of a proposed office tower on Bury Street which will forever darken Bevis Marks, the oldest synagogue in London. If approved, the tower will obscure for worshippers and visitors views of the sky.

Of course, London needs to grow upwards to accommodate its labour and commerce but I am sure there are ways to do so without ruining this beautiful synagogue, still in daily use, and a reminder of Anglo Jewry's four hundred year presence in our country and its significant contribution.

Thank you for consideration of this matter.

Yours, sincerely,

William Benjamin

THIS IS AN EXTERNAL EMAIL

Dear Ms Tastsoglou,

It is with great consternation that I pen this missive, denouncing in the staunchest terms the egregious endeavor encapsulated within application 24/00021/FULEIA. As a stalwart member of the esteemed Bevis Marks' Spanish & Portuguese Jewish community, I find myself aghast at the audacity of this renewed proposal, particularly in light of its previous rebuff and the recent enshrinement of the Creechurch Conservation Area.

This resubmitted application, bearing scant alteration from its antecedent iteration, flagrantly disregards the imperative tenets of preservation, as behooves a Grade-1 listed edifice, now encompassed within a sanctified conservation locale and holding the mantle of paramount

importance as the quintessential Jewish bastion in the United Kingdom. The looming tower, proposed for erection in close proximity to the venerable synagogue's southern precincts, threatens to subjugate its august ambiance, obscuring the celestial vista revered by the faithful and casting a pall over the hallowed grounds, thereby attenuating their luminal sanctity.

Such an affront to the architectural and spiritual integrity of this revered institution would be unimaginable in the environs of St. Paul’s Cathedral and should unequivocally be deemed intolerable in the immediate vicinity of the oldest continally used synagogue in Europe, the epicenter of British Jewry. I implore you in the strongest terms to rebuff this application forthwith, lest we allow the sacrilege of our heritage and the desecration of our sacred spaces to proceed unchallenged.

Yours faithfully,

Michael Ross

As a listed building and also the place of worship for my family (Saqui) for several generations, I'm horrified that the overdevelopment of this site is being reconsidered. St Paul's post dates this synagogue and development of this type right there would never be considered. Don't be pressured by commercial concerns and rejects this development. A more appropriate site should be found or none at all. Once permission is given you've lost important heritage for ever . Don't allow this and respect this country's past.

Dear Anna,

Re: Bury House 1 - 4, 31 - 34 Bury Street London EC3A 5AR, Planning Ref. 24/00021/FULEIA

I have been contacted by constituents from the Jewish community in London about this planning application and its potential impact on the Bevis Marks synagogue. Please accept my apologies for sending this letter after the deadline for comments – I was newly elected to my role as an Assembly Member just three weeks ago.

The sole synagogue in the City of London and the oldest in the country, Bevis Marks synagogue has a totemic significance for Jewish people living locally, across London and in the rest of the UK. As one constituent in the neighbouring borough of Islington told me: "as an Islington Jew I sometimes attend myself but in any case have an emotional attachment due to its place in the community's history." Preserving the character of the synagogue is vitally important in making the City of London a truly inclusive place for people of all faiths.

While I appreciate that neither the synagogue or the proposed buildings are in conservation areas, the synagogue itself is a Grade 1 listed building of immense social and cultural value and as such should be protected from harm.

My constituents, however, fear the proposed development will irrevocably impact the character of the synagogue, both during construction and once the development has been completed. These objections have been laid out by concerned residents and groups, as well as by the Protect Bevis Marks campaign.[1]

[1] Protect Bevis Marks, https://protectbevismarks.co.uk/ [accessed 23/05/24]

I urge you to give due regard to the many objections raised and recommend you do not approve this application.

Kind regards,

Thursday 23rd May

Applications for Planning Permission (24/00021/FULEIA) and Listed Building Consent (24/00011/LBC)

Dear Ms. Tastsoglou,

We are writing to you on behalf of the Applicant – 'Welput' – on the above applications, regarding a number of non-planning related issues which have been raised during the statutory planning consultation period, which has now closed.

For the avoidance of doubt, the Agent - 'DP9' – will shortly be writing, on behalf of the Applicant, in response to planning issues which have been raised through the City of London's planning portal. In the meantime, we wish to outline our serious concerns – and our response – to the non-planning related matters which have sought to discredit our planning application, the Applicant & developers' reputation, as well as the integrity of the planning system and decision-making process.

The basis of our concerns highlighted below, have either been included within objections to the application or via emails distributed by representatives (including consultants) of Bevis Marks Synagogue (the 'Synagogue'), Trustees of the Synagogue, the Heritage Foundation, or objectors who have submitted comments in response to inaccurate information provided by the Synagogue.

We have observed the series of actions which have been taken as part of a clearly premeditated objection campaign, rolled out from the time of the application being validated, and continuing throughout the statutory consultation period. These have included the following:

1.Employment or appointment of consultants who employee elected members of the City of London Corporation

The Applicant, the Developer or the WELPUT fund has not appointed or employed any consultant who has elected members of the City of London Corporation on their professional team. Specifically, and to clarify, JBP has had no involvement with this Site or project, as is suggested in a public objection letter submitted by Sir Michael Bear (appended to this letter). We have now been contacted by a number of journalists who have received a copy of this letter of objection, and we have confirmed to these journalists that the statement is incorrect and that we would be pleased to be quoted to set the record straight.

The objections have suggested that, as a result of the fabricated statement, we have such consultants, we have influenced or have influence over the planning process in the City of London. This is wholly inaccurate. Furthermore, we would suggest that, without doubt, making these statements has influenced and encouraged objections to our planning application. This is clearly

inappropriate, and we would ask that the City of London treat such objections, based on inaccurate information, accordingly.

We were made aware of the above fabricated story via an email sent from a Synagogue representative a few weeks ago but we assumed that this would not be formally submitted as an objection. However, subsequent actions demonstrate that this is clearly a pre-considered campaign to discredit the Application and Applicant in writing, as well as verbally at presentations. This has resulted in this inaccurate claim being included in the reasons for objection both by the Synagogue representatives and objectors who have submitted comments following the same dialogue with representatives of the Synagogue.

Before making such unfounded allegations, at no point did any representative of the Synagogue contact us via email or telephone to seek to establish whether there was any truth in the allegation.

It is worth noting that throughout the pre-application and planning process, we have engaged with the City of London's planning team and Committee Members in full accordance with the City of London Corporation's adopted Statement of Community Involvement and Developer Engagement Guidance 2023, as well as the National Planning Policy Framework 2023. Such engagement with local representatives is actively encouraged, to help shape the future of planning applications, with regard to planning policy and other considerations.

Throughout our engagement, we have ensured that all meetings with Committee Members have taken place with at least one officer present, to ensure full transparency throughout the process. As part of this commitment to transparency and behaving with integrity, we repeat that we have no consultants on our professional team who employ Members of the City of London Corporation and we remain committed to maintaining transparency about all meetings and interactions that we have with Members and wider employees of the City of London Corporation.

2.Objection campaign and misinformation

Whilst the principle of objecting to any planning application (or listed building consent application) is due process within the statutory period after an application has been validated, we would ask how objections can be considered as valid when the objection campaign has purposely issued misinformation; namely details from a different planning application, or information that has not been included within the actual application and is purposely inaccurate and misleading. In addition to this, there are large number of objections that have repeated the exact words issued as part of the objection campaign – directly quoting such inaccurate and misleading information.

- A 'Call to Arms' pdf issued by Bevis Marks Synagogue via email (appended to this letter), which included images of the previous planning application and a photo of the Synagogue that was taken over 4 years ago and does not reflect its current setting (including the now largely complete 40 Leadenhall Street building).
- A 'Call to Arms' pdf updated to 'Protect Bevis Marks Synagogue' included within further emails including incorrect information that does not form the planning application and then uploaded to a website (www.protectbevismarks.co.uk) which remains live today and accessible by the City of London.
- This information was further distributed in April to the "Friends of the Bevis Marks Synagogue Heritage Foundation" under the title "Call to Action: protect Bevis Marks Synagogue". We made

contact with the heritage foundation to highlight the inaccuracies and misrepresentation in the email and offered to meet to discuss this further. No response has been received to date.

- There is now a third iteration, that includes an image, suggesting that it is our application, which is inaccurate and does not represent the massing proposed in our application. However, it does show the implemented 100 Leadenhall Planning application in yellow, which was not objected to by the Synagogue during its recent Planning process.
- None of the images show the recent planning approvals visible from the Synagogue courtyard (that have not had sustained objections from the Synagogue), nor do they show the significant and very relevant changes made to the courtyard since the last 'Bury House' planning application – including a new ramp access to the museum, a new security booth at the entrance and a ticket booth in the courtyard. This is in addition to the new museum design wrapping around the southern side of the Synagogue (and not shown in the images).
- The above-mentioned documents include clearly contradictory (and inaccurate) references to the number of storeys proposed as part of the new application (and compared to the refused application). These height references are copied (without understanding or verification) in a number of objections. To clarify, the proposed tower element of the building is ground plus 43 storeys.

Whilst comments included within these above documents in relation to Daylight / Sunlight / Overshadowing will be covered by the response on planning matters, being prepared by DP9 and GIA, the Synagogue representatives continue to imply through their objections that it is "not feasible" to install new lighting "Because of the historic nature of the synagogue", and that our proposed development will result in the Synagogue being "...plunged into darkness".

Contrary to the above statements, as part of the objection campaign, the Synagogue's May 2024 newsletter (appended to this letter) refers to the installation of new artificial lighting, suggesting firstly that lighting conditions are an existing, operational issue / problem; and secondly that it is in fact possible to install new lighting (with or without securing permission for this type of work in a listed building).

It should be noted that during pre-application discussions with the Synagogue representatives, we jointly reviewed the existing condition of the internal lighting with a specialist lighting consultant who has worked within many religious and listed buildings. The City of London and Historic England were in attendance and it was agreed that an artificial light solution is required today. An outline report was offered to be commissioned (and paid for) by the Applicant, but not taken up by the Synagogue.

The above series of factual inaccuracies, misleading statements and out-of-date information - circulated through these, and other, channels - are subsequently reflected in many (if not the vast majority) of the letters of objection. This is clearly inappropriate, and we would ask that the City of London to treat such objections, based on inaccurate information, accordingly.

3. Targeting application supporters

We have been made aware that a new pdf has been developed titled 'Letter to Friends' (appended to this letter), which the Synagogue's representatives have sent directly to numerous community groups, charities, educational establishments and individuals who have publicly voiced their support for our proposals, urging them to re-consider and rescind their support for our planning application

based upon some of the same inaccurate or misleading information outlined above, particularly regarding the inaccurate information about the proposals' impact upon Bevis Marks Synagogue.

We have also been made aware that representatives of the Synagogue have also followed up with telephone calls to such individuals or groups that have submitted letters of support for the application.

Support for the proposed community spaces within Holland House and Creechurch Hall has largely come from charities, community groups and educational establishments across London and the UK, who have expressed an urgent need for more affordable and accessible spaces in the City of London, and who see our application as filling an urgent gap and meeting this need in the long-term.

Each letter is clearly individually written, explaining their thoughts on the benefit of the Cultural Strategy included as part of the planning application and it is incredulous that an objector to our application would seek to contact those supporters with misleading information, in fact with any information, to ultimately seek to persuade them into withdrawing their support. This is wholly inappropriate and puts the integrity of the entire planning process in jeopardy.

It is well known that members of the public or organisations often hold reservations about formally sharing their support for proposed developments due to concerns about the potential targeting by opponents, and such activities, targeting misinformation at supporters, underlines this point.

The individual letters of support promote the benefits of the Applicant's Cultural Strategy, which re-enforces the requirement to respond to the Destination City Policy through the delivery of a multi-functional space in the heart of the City. The majority of supporters have used the existing office space for various activities that provides actual test cases to confirm the need and the community benefits proposed to be brought forward through the Application. Even without any letters of support, the Cultural Strategy of the Application is the most tested benefits package included in any application to the City of London.

4. Dialogue with the Synagogue

Over the past 5+ years, we have continuously sought to engage with the Bevis Marks Synagogue as our direct neighbour. Our efforts continued following our previous, unsuccessful planning application and at the time of submission of this planning application, the Applicant has met or held discussions with Trustees and representatives of the Synagogue at least 13 times. Whilst dialogue and conversations with wider representatives of the Synagogue, were particularly constructive after the refusal, during the past year, the Synagogue has provided no recent meaningful response to our attempts to engage with them. To clarify, and addressing comments made by the Synagogue in various press releases, that at no point does our application (specifically the Statement of Community Involvement) infer that we have addressed the Synagogue's concerns and / or gained their support to the applications.

Most recently the Applicant advised the Synagogue Trustees that a new application had been submitted and also confirmed that it was validated in writing. We offered to meet to discuss the application or print copies for the Trustees. We have still not received a response.

Our respective planning advisors recently met without representatives of the Applicant or Objector, which re-confirmed that the Synagogue will be formally issuing their objections to the planning application, which once received we will review and respond, through DP9.

5. Social media

Whilst we, as the Applicant, have chosen not to use social media (Twitter or X / YouTube/ Instagram / etc.) to promote the applications during the statutory consultation, the objection campaign has extensively used this range of media outlets which has provided the opportunity for the Applicant to review and record all statements and messages that have generated objections. We have also reviewed all the historical statements and videos made and released on these platforms which are not part of the objection campaign that provide differing (and clearly contradictory) views than those included in the reasons for objections distributed. We will include this information in a further letter responding to the non-planning objections

Conclusion

We urge you to consider these observations in response to non-planning matters which have been raised as objections to our application and seriously consider those objections generated as a result of the above actions, accordingly.

Yours sincerely,

[redacted]

Alexander Morris
Development Director

To: City of London Planning Department 11th May 2024

P.O. Box 270, Guildhall, London, EC2P 2EJ.

Email: anna.tastsoglou@cityoflondon.gov.uk

Dear Anna,

Re: Planning Application Reference: 24/00021/FULEIA.

I have delayed my response to this Planning Application as it is so inappropriate and in such conflict with its surroundings that I was hoping that the applicant would see sense and withdraw this ridiculous application. Disappointingly as this is not the case, I would firstly draw your attention to the fact that this application is no better in its negative impact than the last application by this applicant, refused only two years ago by the City. The reasons for that refusal are abundantly clear and just as relevant to this current application.

Consequently, I write to object in the strongest terms to the application for the proposed redevelopment of 31 Bury Street ("the Scheme"). The construction of a 45-storey tower on this site will cause wholly unacceptable "substantial" harm to the neighbouring Grade I listed Bevis Marks Synagogue and the Creechurch Conservation Area within which both the Synagogue and the application site now sit..

The main points of my objection and opposition to the Scheme are as follows:

The proposed 45-storey tower on this site would result in substantial harm both to the setting of the Grade I listed Synagogue and to the wider Creechurch Conservation Area. This tall office tower, so close to the synagogue, would both block the sky view and overshadow the Synagogue and its courtyard. The sky view is of great importance for reasons of religious ritual. Adequate daylight and sunlight are vital to enable the building (which largely relies on natural light and candles) to function as a place of worship; and to enable both the building and its courtyard to continue to support the many community activities which have been ongoing for over three centuries. This is totally unacceptable.

The Scheme is in direct conflict with the Statutory Development Plan. The application site is within the recently created Creechurch Conservation Area. Local Plan Policy CS14 provides that planning permission for tall buildings should be refused within inappropriate areas, which specifically includes Conservation Areas. The benefits claimed by the Developer for what is an ordinary office redevelopment, do not begin to outweigh the fundamental conflict with the Development Plan.

As noted above, the City rejected a very similar scheme at 31 Bury Street only two years ago. The Scheme makes only a modest reduction in height to 45 storeys and has a larger footprint than the previous scheme which was rejected. On a point of principle, the City must show consistency in its decision-making by refusing this latest scheme. The principle and desirability of consistency in planning decision-making is well established, and the City should always set an example in such matters.

To add weight to this point, since the previous Bury Street application was refused, the City has adopted the Creechurch Conservation Area. That decision, supported by the Conservation Area Appraisal, reflected the uniqueness of the Synagogue and purported to protect it and its setting. The City specifically decided that the boundary of the Conservation Area should include the Bury Street site and recognised the importance of the Synagogue's wider setting. This point was accepted by the Chairman of Planning in answer to a question from Alderman Jones at the Court of Common Council on Thursday 7th March 2024.

To approve this Scheme, in conflict with the Development Plan and these previous decisions, would be inconsistent and undermine confidence in the planning process.

With regard to its Public Sector Equality Duty, the City must consider the disproportionate negative impact this Scheme would have on the Jewish Community of Great Britain which worships at the Synagogue and for whom the Synagogue and surrounding Jewish sites hold incalculable religious and historic value. This point is reinforced by the strength of objections received so far.

In conclusion, to approve this scheme would be an act of vandalism and heathenism, seemingly reflecting a lack of historical, cultural and religious understanding by the Corporation, and its failure to appreciate the significance of the Synagogue as the oldest and most important Sephardi Jewish Synagogue within the UK, as well as the most important Anglo-Jewish site within the UK, which has been in continuous use as a place of worship for over 300 years.

The Jewish Community has been forced to fight repeated planning battles through no fault of its own. If the City wishes to uphold its legal duties and stand by its Jewish community it will reject the proposal.

It is a matter of outrage that the Chair of Policy, the "Political Leader" of the City, has recently declared a pecuniary interest in this development as a Director of JBP, a public affairs and lobbying company, employed on this project by the Developer. Although the Policy Chair does not sit on the Planning and Transportation Committee, he is highly influential within the Corporation, chairs the Policy and Resources Committee and is a member of the Local Plans Sub-Committee. These oversaw both the creation of the Conservation Area (which was originally intended to exclude the 31 Bury Street site, until there was overwhelming consultee rejection of that approach) and draft new City Plan (which seeks to undermine the importance of Bevis Marks as a historic place of worship, by limiting its protection only to an artificially concocted "immediate setting" - a term which is not recognised in Conservation and Planning Law - and by removing the general presumption against tall buildings in Conservation Areas).

The Corporation's international reputation hinges upon it behaving with the utmost probity, and holding itself to the highest standards. What is happening here is in danger of seriously undermining that reputation.

Yours sincerely

Sir Michael Bear

THE NEW THREAT TO BEVIS MARKS SYNAGOGUE
A CALL FOR WIDESPREAD OBJECTION

Bevis Marks Synagogue is the oldest continuously used synagogue in Britain, dating from 1701. It has enormous cultural significance, being in effect the cathedral church of Judaism.

It is located in the City of London, where it has over the years suffered tall buildings being erected around it. However, the very important southern sky view remains unobstructed, enabling the moon and the stars to be viewed from the courtyard.

In 2020, a 48 storey office building was proposed just 25 metres away at 31 Bury Street. After a worldwide campaign which generated more objections that the City Corporation has ever experienced before, the Corporation refused permission in 2022, primarily because of the unacceptable impact on the synagogue.

The developers are audaciously trying again, with a building that is to all intents and purposes the same.

Tireless work by the Synagogue community has led to the area now being designated as a Conservation Area. However, the City Corporation has given with one hand and is taking away with the other - it is proposing to scrap the ban on tall buildings in Conservation Areas and indications are that the leadership is now supportive of the proposed building.

We therefore need even more people to join the campaign to defeat this latest attempt.

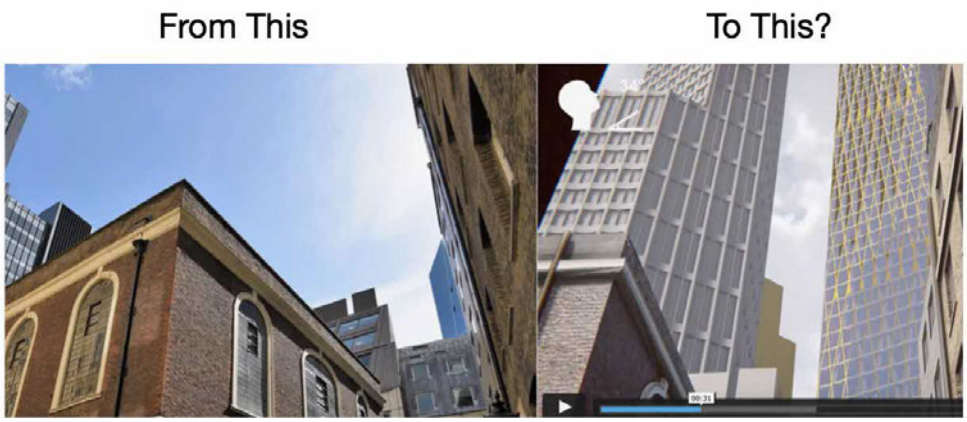
WHAT YOU CAN DO

Please go on the City Corporation's website: https://www.planning2.cityoflondon.gov.uk/online-applications/applicationDetails.do?keyVal=S6YBENFHH1E00&activeTab=summary
Click on "Make a Comment" and say what you wish to say.

Alternatively you could write to the case officer, Anna Tastsoglou, either at anna.tastsoglou@cityoflondon.gov.uk or at P.O. Box 270, Guildhall, London, EC2P 2EJ.

Please quote the planning application reference: 24/00021/FULEIA.

=====



POINTS YOU MAY WISH TO MAKE

It is important you use your own words, but things you might like to comment on are these:

- A 45 storey tower would completely overwhelm the synagogue, which is a Grade 1 Listed building of enormous historic and cultural significance.

It is inconceivable that such a building would be allowed next to St Paul's cathedral, so why is the synagogue not afforded the same protection?
It would destroy the southern sky view, which is an essential part of the setting of the synagogue, and important for the intangible qualities it contributes to religious ritual. The view of the moon's passage across the sky, and many of the celestial bodies, would be blocked.
The proposed building may be well designed and an exemplar of sustainability, but it is simply in the wrong place.
It would overshadow the synagogue and its courtyard for much of the day, reducing the useability of the courtyard for rituals and celebrations.
It would also further reduce the already minimal daylight that penetrates into the synagogue, making it even more difficult to conduct worship. Because of the historic nature of the synagogue, installing additional electric lighting is not feasible.
The development site is within the Creechurch Conservation Area. Current planning policy is not to allow tall buildings in Conservation Areas, so there is a direct conflict with the statutory development plan.
