Committee: Financial Investment Board	Date: 9 December 2013
Subject: Cash investment portfolio – Performance measurement	Public
Report of: The Chamberlain	For Information

Attached to this covering report are:

- Cash portfolio performance measurement report for the period 1 July 2013 – 30 September 2013 provided by Capita Asset Services. The Board will note the maximum percentile returns of 0.32% for the previous quarter, and the 1, 2 and 3 year returns of 2.18%, 2.37% per annum and 2.46% per annum respectively.
- A list of current borrowers showing their respective investment limits and the current levels of borrowing.
- A month by month repayment profile; and
- An analysis of loans showing interest rates applicable and the end dates.

The data is provided for the information of the Board. It is also confirmed that the re-investment of £90m cash into three new, higher earning asset classes, as agreed by the Board on 11 September 2011 has now been transacted.

Quarterly Economic Review

During the quarter ended 30th September:-

- Indicators suggested that the economic recovery accelerated;
- Household spending growth remained robust;
- Inflation fell back towards the 2% target;
- The Bank of England introduced state-contingent forward guidance;
- 10-year gilt yields rose to 3% at their peak and the FTSE 100 fell slightly to 6460;
- The Federal Reserve decided to maintain the monthly rate of its asset purchases.

After strong growth of 0.7% in Q2, it appears that UK GDP is likely to have grown at an even faster pace in Q3. On the basis of past form, the CIPs/Markit business surveys for July and August point to quarterly growth of potentially over 1.0% in the third quarter of 2013. Similarly, the official data have continued to improve. Admittedly, industrial production was flat in July. But even if it held steady in the rest of the quarter, it would still be 0.9% higher in Q3 than in Q2. In addition, the

service sector expanded by 0.2% m/m and the construction sector grew by 2.2% m/m in July after growth of 1.8% q/q in Q2.

Consumer spending also continued to rise and may beat the increase seen in Q2. While the 1.1% monthly rise in retail sales in July was almost entirely offset by a 0.9% fall in August, the unusually warm weather in August is likely to have had a part to play in this. The retail surveys also painted a positive picture for household spending growth, with the Bank of England's Agents' Scores, BRC and CBI retail sales indicators showing stronger growth in Q3. And while growth in non-high street spending may have slowed, it probably remained robust. For example, although annual growth in new car registrations eased from the 24% rate seen in Q2, it was still a strong 15% in August.

The run of good news on the labour market continued, with the ILO unemployment rate falling to 7.7% in July from 7.8% in June. Employment rose by 80,000 in the three months to July, supported by an even bigger rise in full-time employment. This meant that the ratio of full-time to part-time workers continued to rise after it troughed last summer. The timelier claimant count measure of the unemployment rate also fell. Indeed, the cumulative fall in unemployment of 68,900 in July and August – the biggest two month fall since May and June 1997 – brought the claimant count unemployment rate down from 4.4% at the end of Q2 to 4.2% in

August. Despite this, the headline (3 month average of the annual) rate of pay growth fell from 2.2% in June to just 1.1% in July. Excluding bonuses, earnings growth ticked up slightly to 1.1% v/y, but this remained well below the rate of CPI inflation at 2.7% in August, meaning real wages continued to fall.

Meanwhile, the cost of new credit has continued to fall, perhaps in response to the extension of the Bank of England's Funding for Lending Scheme (FLS) earlier this year. The quoted interest rate on a 5-year fixed mortgage at a 75% loan-to-value ratio was 3.34% in August, 7 basis points lower than in June and 77 basis points lower than when the FLS was introduced in July 2012.

Demand in the housing market continued to grow at a fast pace, supported by the FLS and the Government's Help to Buy scheme, which provide equity loans to credit-constrained borrowers. The RICS housing market survey reported that new buyer enquiries hit their highest level on record in August. Mortgage approvals for new house purchase rose to their highest level since February 2008 in August. Consequently, house prices continued to rise, with the Halifax and Nationwide measures recording 6.2% and 3.5% v/y rises in August, respectively. ONS data, though, shows that in real terms only London experienced year-on-year price rises in July. All other regions saw modest falls.

The economic recovery may finally be feeding through to the public finances. Although the government registered a surprise deficit in July (a month that normally delivers a surplus), in August net borrowing was 'just' £13.2bn, compared to £14.4bn in August 2012.

The new Governor of the Bank of England, Mark Carney, took office in July. Alongside the August Quarterly Inflation Report, the Bank introduced its new policy of forward guidance in which the Monetary Policy Committee (MPC) pledged not to raise official interest rates, or reduce the size of the asset purchase facility, until the ILO unemployment rate falls to 7%. At this point, the MPC would discuss whether or not to alter official policy. This guidance was subject to three 'knockouts' which, if breached, would invalidate the guidance. These are that the MPC forecasts inflation at or above 2.5% in 18-24 months' time, inflation expectations are no longer sufficiently well anchored or financial stability is threatened by the stance of monetary policy. On the MPC's current forecasts, the unemployment rate is most likely to reach 7% in late 2016.

However, financial markets continued to price in increases in Bank Rate by mid-2015, with overnight index swap rates and gilt yields rising after the announcement of forward guidance. Members of the MPC subsequently appeared at the Treasury Select Committee and three gave further speeches to clarify the guidance, but there was little

market impact. However, the Bank of England's surveys suggest the message may have got through to the public as the balance of people expecting interest rates to rise over the next 12 months fell from 29% in May to 24% in August.

Meanwhile, CPI inflation fell from a 2013 peak of 2.9% in June to 2.7% in August. The fall was primarily the result of a drop in the contribution from petrol prices and a reduction in core inflation from 2.3% in June to 2% in August. CPI inflation looks likely to have edged down again in September, perhaps to about 2.5%, reflecting a further fading of both energy prices and core inflation.

The big news in financial markets was that the Federal Reserve unexpectedly decided not to taper its asset purchases in September. In announcing its decision to maintain monthly purchases at \$85bn, the Fed explained that it wanted to "await more evidence that [the economic recovery] will be sustained before adjusting the pace of its purchases." This came despite previous hints of tapering from the Fed and the fall in the unemployment rate in both July and August. It currently stands at 7.3%.

Across the quarter as a whole, advanced economy bond markets sold off, suggesting the rise in UK gilt yields was not solely down to markets' scepticism about domestic forward guidance. Gilt yields tracked US Treasury yields up, with ten-year gilts rising by around 60

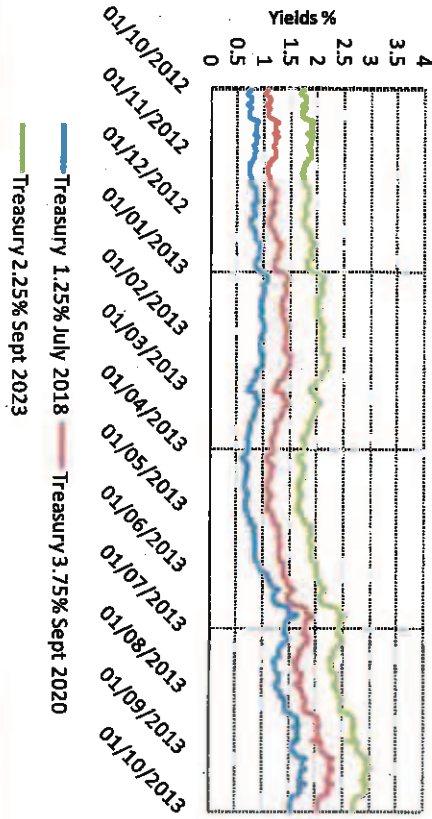

basis points to reach 3% in early September for the first time since mid-2011. After the Fed's decision not to taper, gilt yields fell back, although not enough to offset the previous rise. Ten-year gilts finished the quarter at 2.7%. Equity markets stayed relatively flat over the quarter. While the FTSE 100 rose from 6470 to 6620 over the first few weeks of June, the index closed the quarter at 6462.

Meanwhile, Eurozone business surveys suggested that the economy continued to expand in Q3, albeit at a moderate pace. There was also a general election in Germany in which the incumbent Chancellor, Angela Merkel, performed better than expected by winning 41.5% of the vote. She is now likely to form a coalition, but it remains to be seen what form this will take.

Brief glossary of terms

Duration	A term used to express the average number of years an investor will have to wait to receive the interest and capital cash flows associated with an investment, usually a bond. Duration takes into account the relative value and time value of these cash flows. Therefore, if the discounted cash flow associated with a bond is made up of high proportion of interest payments (i.e. it has a higher coupon) then it will have a shorter Duration. A bond with a lower coupon will have a longer Duration.
Portfolio	A collection of assets which are managed as a whole.
Median	A median value locates the middle item in an ordered, or ranked, list of data. The median will have 50% of all values above it and 50% below it.
Percentile	A percentile value is a measure of location intuitively similar to the median. The 25th percentile will have 25% of all values above it and 75% below it.
Standard deviation	The most commonly used statistical measure of dispersion. It describes the degree of variation, or volatility, in a set of data about its arithmetic mean. In portfolio measurement in general, a high degree of volatility in a portfolio's returns is assumed to be the result of the acceptance of a correspondingly high degree of risk.
Volatility	This is a measure of a bond's price sensitivity to interest rates. It is typically calculated by dividing a bond's Duration by one plus its yield to maturity (Duration / (1 + yield)). This technique is used more commonly than simple Duration as managers frequently find that it is a more accurate, or a least more appropriate, measure of volatility.

Notes

1. Universe

For the quarter ended 30th September 2013 data has been collected in respect of more than 23 funds with an aggregate value of over £600 million. The following fund managers have provided Sector quarterly returns data on all of their local authority's cash funds under management.

Fund Manager	Fund Code
Invesco	INV
Investec	IAM
Scottish Widows Investment Partnership	SWIP
Payden & Rygel	P&R
City Deposit Cash Manager	CDCM
Royal London Asset Management	RLAM

A number of Local Authority internally managed funds have also been included within the relevant Universes.

2. Rates of return charts

The chart represents, in simple graphical form, the return generated by the portfolio during the most recent quarter and the financial year to date, compared with the distribution of returns generated by all portfolios.

3. Annualised returns

These charts illustrate the annualised returns for the last 12-month, 24-month and 36-month period. By annualising returns over two or three years, unusually good (or bad) short term performance is evened out, providing a better illustration of how your manager has performed over the medium-term.

4. Risk / return scatter graphs

These charts express the relationship between risk and return in a format, which makes it possible to compare these results with those of other portfolios.

- The vertical axis plots the annualised rate of return.
- The horizontal axis shows the quarter-on-quarter variability in return, as measured by standard deviation.

The optimum position on the graph, therefore, would be the top left hand corner, which would represent the highest return coupled with the lowest risk; conversely, the bottom right hand corner represents low returns and high risk. The natural tendency is for portfolios to fall in a broad band running from bottom left to top right, demonstrating that returns tend to increase in proportion to the increase in risk.

In portfolio measurement in general, a high degree of volatility in a portfolio's returns is assumed to be the result of the acceptance of a correspondingly high degree of risk
